Dhyana.

TAYLOR (ALFRED EDWARD), M.A. (Oxon.), D.Litt. (St. Andrews).

Professor of Moral Philosophy in the United College of SS. Salvator and Leonard, St. Andrews; late Fellow of Merton College, Oxford; Fellow of the British Academy; author of The Problem of Conduct (1901), Elements of Metaphysics (1903), Varia Socratica (1911). Continuity.

THOMPSON (R. CAMPBELL), M.A., F.S.A., F.R.G.S. Formerly Assistant in the Department of Egyptian and Assyrian Antiquities in the British Museum (1899–1905); formerly Assistant Professor of Semitic Languages in the University of Chicago (1907–1909).

Demons and Spirits (Assyro-Babylonian), Disease and Medicine (Assyro-Babylonian).

THOMSON (J. ARTHUR), M.A.

Regius Professor of Natural History in the University of Aberdeen; author of The Study of Animal Life, The Science of Life, Heredity, The Bible of Nature, Darwinism and Human Life.

Consanguinity, Development (Biological).

THRAEMER (EDUARD), Dr. Phil.

Ausserordentlicher Professor für classische Alterthumswissenschaft an der Universität zu Strassburg, seit 1909 emeritiert.

Disease and Medicine (Greek and Roman).

THURSTON (HERBERT), B.A., S.J.

Joint-Editor of the Westminster Library for Priests and Students; author of Life of St. Hugh of Lincoln, The Holy Year of Jubilee, The Stations of the Cross.

Confirmation (Roman Catholic), Councils (Modern Christian).

Top (DAVID MACRAE), M.A., B.D. (Edin.). Minister of St. James' Presbyterian Church, Huddersfield; formerly Cunningham Fellow, New College, Edinburgh.

Covetousness.

TRAILL (JOHN).

Late Missionary of the United Free Church of Scotland at Jaipur, Rajputana. Dadu, Dadupanthis.

TROELTSCH (ERNST), Dr. theol., phil. jur. Geheimer Kirchenrat; Professor der Theologie an der Universität zu Heidelberg. The state of the state of the Contingency.

WADDELL (L. AUSTINE), C.B., C.I.E., LL.D., F.L.S., F.R.A.I., M.R.A.S., Lt.-Colonel, I.M.S.

Late Professor of Tibetan in University College, London; author of The Buddhism of Tibet, Tribes of the Brahmaputra Valley, Lhasa and its Mysteries.

Death and Disposal of the Dead (Tibetan), Demons and Spirits (Bud-dhist, Tibetan), Divination (Buddhist).

WALKER (WILLISTON), Ph.D., D.D., L.H.D. Titus Street Professor of Ecclesiastical His-tory in Yale University. Congregationalism.

WALSHE (W. GILBERT), M.A.

London Secretary of Christian Literature
Society for China; late 'James Long' Lecturer; author of Confucius and Confucianism; editor of China.

Confucius, Cosmogony and Cosmology (Chinese), Crimes and Punishments (Chinese), Death and Disposal of the Dead (Chinese).

WATT (WELLSTOOD ALEXANDER), M.A., LL.B., D.Phil.

Author of An Outline of Legal Philosophy, The Theory of Contract in its Social Light, A Study of Social Morality. Contract.

WENLEY (ROBERT MARK), D.Phil., LL.D. (Glasgow), D.Se. (Edinburgh), Litt.D. (Glasgow), D.Se. (Edinburgh), Litt.D. (Hobart). Professor of Philosophy in the University of Michigan; author of Modern Thought and the Crisis in Belief, Kant and His Philosophical Revolution. Conscientiousness, Cynics.

WHITLEY (WILLIAM THOMAS), M.A., LL.D., F.R. Hist.S., F.T.S.
Secretary of the Baptist Historical Society; formerly Principal of the Baptist College of Victoria, and Secretary of the Victorian Baptist Foreign Mission.

Connexionalism.

WILDE (NORMAN), Ph.D. Professor of Philosophy and Psychology in the University of Minnesota. Doubt.

WILLETT (HERBERT LOCKWOOD), A.M., Ph.D. Associate Professor of Semitic Languages and Literatures, and Dean of the Disciples' Divinity House, in the University of Chicago. Disciples of Christ.

WILSON (GEORGE R.), M.D., M.R.C.P. (Edin.). Late Medical Superintendent of Allanton House; author of Drunkenness, Vice and Insanity.

Delusion.

WISSOWA (GEORG), Dr. jur. et phil. Ordentlicher Professor an der Universität zu Halle; Geheimer Regierungsrat. Divination (Roman).

WOODS (FRANCIS HENRY), M.A., B.D.

Rector of Bainton, Yorkshire; late Fellow
and Theological Lecturer of St. John's College, Oxford. Deluge.

WORKMAN (HERBERT B.), M.A., D.Lit.
Principal of Westminster Training College;
Member of the Board of Studies in the
Faculty of Theology, London University;
author of The Dawn of the Reformation,
Persecution in the Early Church, and Christian Thought to the Reformation.

Constantine, Crusades.

Wünsch (Richard), Dr.Phil. Ordentlicher Professor der Klassischen Philologie an der Universität zu Königsberg. Cross-roads (Roman).

Youngert (Sven Gustaf), Ph.D., D.D. Professor of Philosophy and Greek New Testa-ment Exegesis at Augustana College and Theological Seminary, Rock Island, Ill. Cosmogony and Cosmology (Teutonic).

. . . .

# CROSS-REFERENCES

In addition to the cross-references throughout the volume, the following list of minor references may be useful:

### III. FOR THE LITERATURE

1. The following authors' names, when unaccompanied by the title of a book, stand for the works in the list below.

Baethgen = Beiträge zur sem. Religionsgesch., 1888. Baldwin = Dict. of Philosophy and Psychology, 3 vols. 1901–1905. Barth = Nominalbildung in den sem. Sprachen, 2 vols. 1889, 1891 (21894). Benzinger=*Heb. Archäologie*, 1894.

Brockelmann = Gesch. d. arab. Litteratur, 2 vols. 1897-1902.

Bruns - Sachau = Syr. - Röm. Rechtsbuch aus dem

fünften Jahrhundert, 1880.

Budge=Gods of the Egyptians, 2 vols. 1903.

Daremberg-Saglio=Dict. des ant. grec. et rom., 1886-90.

De la Saussaye = Lehrbuch der Religionsgesch.3, 1905.

Deussen = Die Philos. d. Upanishads, 1899 [Eng. tr., 1906].

Doughty=Arabia Deserta, 2 vols. 1888.

Grimm=Deutsche Mythologie<sup>4</sup>, 3 vols. 1875-1878,
Eng. tr. Teutonic Mythology, 4 vols. 1882-1888.

Hamburger=Realencyclopädie für Bibel u. Talmud,
i. 1870 (\*1892), ii. 1883, suppl. 1886, 1891 f., 1897.

Holder=Altceltischer Sprachschatz, 1891 ff.

Holtzmann-Zöpffel=Lexicon f. Theol. u. Kirchenungen 1865.

wesen<sup>3</sup>, 1895. Howitt=Native Tribes of S. E. Australia, 1904. Jubainville=Cours de Litt. celtique, i.-xii., 1883 ff. Lagrange = Études sur les religions sémitiques2,

1904.

Lane=An Arabic-English Dictionary, 1863 ff. Lang=Myth, Ritual and Religion<sup>2</sup>, 2 vols. 1899. Lepsius=Denkmäler aus Ægypten u. Æthiopien, 1849-1860.

Lichtenberger = Encyc, des sciences religieuses, 1876. Lidzbarski=Handbuch der nordsem. Epigraphik,

McCurdy = History, Prophecy, and the Monuments, 2 vols. 1894–1896. Muir = Sanskrit Texts, 1858–1872.

Muss-Arnolt=A Concise Dict. of the Assyrian Language, 1894 ff.

Nowack=Lehrbuch d. heb. Archäologie, 2 vols. 1894.

Pauly-Wissowa=Realencyc. der classischen Alter-

tumswissenschaft, 1893–1895. Perrot-Chipiez=Hist. de l'Art dans l'Antiquité, 1881 ff.

Preller = Romische Mythologie, 1858. Réville = Religion des peuples non-civilisés, 1883. Riehm = Handworterbuch d. bibl. Altertums<sup>2</sup>, 1893-1894.

Robinson = Biblical Researches in Palestine 2, 1856. Roscher = Lex. d. gr. u. ròm. Mythologie, 1884.
Schaff-Herzog = The New Schaff-Herzog Encyclopedia of Relig. Knowledge, 1908 ff.
Schenkel = Bibel-Lexicon, 5 vols. 1869-1875.
Schürer = GJV<sup>3</sup>, 3 vols. 1898-1901 [HJP, 5 vols.

1890 ff. ].

Schwally = Leben nach dem Tode, 1892. Siegfried-Stade = Heb. Worterbuch zum AT, 1893. Smend = Lehrbuch der alttest. Religionsgesch. 2, 1899.

Smith (G. A.)=Historical Geography of the Holy Land 4, 1896.

Smith (W. R.)=Religion of the Semites 2, 1894.

Spencer (H.)=Principles of Sociology 3, 1885-1896.

Spencer-Gillen = Native Tribes of Central Australia,

Spencer-Gillen b = Northern Tribes of Central

Australia, 1904.

Swete=The OT in Greek, 3 vols. 1893 ff.

Tylor (E. B.)=Primitive Culture<sup>3</sup>, 1891 [41903].

Ueberweg=Hist. of Philosophy, Eng. tr., 2 vols. 1872-1874.

Weber=Judische Theologie auf Grund des Talmud u. verwandten Schriften<sup>2</sup>, 1897. Wiedemann = Die Religion der alten Ægypter,

1890 [Eng. tr., revised, Religion of the anc. Egyptians, 1897].

Wilkinson = Manners and Customs of the Ancient Egyptians, 3 vols. 1878.

Zunz=Die gottesdienstlichen Vorträge der Juden<sup>2</sup>, 1892.

# 2. Periodicals, Dictionaries, Encyclopædias, and other standard works frequently cited.

 $\mathbf{C}$ 

CONFIRMATION. - I. Names. - The word 'confirmation,' as used in this article, indicates an act, closely connected with baptism, in which prayer for the Holy Spirit is joined with some ceremony, such as the laying on of hands or anointing, through which the gift of the Spirit is believed to be conferred. So long as confirmation continued to be administered at the same time as baptism, the two forming a single rite, the need of a special name for the former was not much felt. as a whole was known as baptism, and the part of it which was associated with the gift of the Spirit it which was associated with the gift of the Spirit was designated by terms derived from its most prominent ceremony, such as 'laying on of hands' (ἐπῶνεις χειρῶν, He 6²; ἡ χειροθεσία, Clem. Alex. Exc. Th. 22; Const. Ap. ii. 32, iii. 16, vii. 44; cf. Firmilian, ap. Cyp. Ep. 75; impositio manus) and 'chrism.' The word 'scal' (σφραγίs), originally, it seems, applied to haptism (Hermas, Sim. IX. xvi. 2.4. From Tem. 3), was early used of confirmation. 2-4; Iren. Dem. 3), was early used of confirmation, with reference to the signing of the baptized with the cross (Clem. Alex. Strom. ii. 3; Cornelius, an. Eus. HE vi. xliii. 14f.; cf. Const. Ap. iii. 17). Confirmation,' now universally accepted as the name of the rite in the West, does not appear to have been so used before the 5th century. It occurs in Faustus, Bishop of Riez, formerly Abbot of Lérins, de Sp. S. ii. 4 (ed. Engelbrecht, Vienna, 1889, p. 143), hom. in die Pent. (Bigne, Max. Bib. Pat., Paris, 1677, vi. 649), and the cognate verb is similarly applied by St. Patrick (Ep. 2), who spent some years at Lérins. It appears, therefore, to have originated in Gaul, and probably at Lérins, though it was perhaps not fully established as a name of the rite at Lérins when St. Patrick left that monastery c. A.D. 415 (Bury, Life of St. Patr., 1905, pp. 204, 336 ff.), since in his Confession (38, with reference to the signing of the baptized with 1905, pp. 204, 336 ff.), since in his Confession (38, 51) he uses the word consummure instead of confirmure. St. Ambrose had at an earlier date used the latter verb with a similar but not identical meaning (de Myst. 42); and in the middle of the 5th cent. Pope Leo I. (Ep. 159) applies it to the laying on of hands on those who had been baptized in heresy. In Egypt at the present day the rite is called tutlibit—a word exactly equivalent to confirmation.' In the 9th cent, when confirmation was deferred, the newly baptized were said to be 'confirmed' by the reception of the Holy Communion

(Alcuin, Ep. 90; Jesse Ambian. Ep. de bapt.; Amalarius, de Cer. Bupt. 4; Raban. Maur. de Cler. Inst. i. 29).

2. Confirmation in the Apostolic Age.—A study of Ac 191-6—the account of the twelve disciples who had been baptized into John's baptism—seems to yield the following results. St. Paul's first question implies that a reception of the Holy Spirit usually, though not always, synchronized with admission to the Christian Society, and that in the case of disciples whose conversion was not due to the preaching of him or his immediate companions (v.² ελάβετε πιστεύσαντες). It is also implied in what follows that the outpouring of the Spirit was not a result of the act of baptism (v.³), but that it was mediated, at least in St. Paul's practice, by a laying on of hands which normally followed immediately upon baptism (v.°). Since apparently St. Paul, in accordance with his rule (1 Co 114-17), which was also that of other Apostles (Ac 1048, cf. 238), did not himself baptize the Ephesian disciples, though he laid his hands upon them (v.\*. εβαπτίσ-θησαν . . . επιθέντος τοῦ Παύλου), it may be inferred that, while baptism was commonly administered by persons of lower ministerial rank, confirmation was reserved for those who had a higher place in the ministry, if not for Apostles.

These conclusions are confirmed by the narrative of the planting of the Church in Samaria (Ac 812-17). From it we learn that the practice of the older Apostles coincided with that of St. Paul. Baptism by itself did not convey the gift of the Spirit. That was mediated by a laying on of hands by Apostles, with prayer for the Holy Spirit (vv. 15-17), the baptisms having been previously performed by Philip, and perhaps by others of inferior ministerial office who accompanied him. It is hinted that, at least when St. Luke wrote, according to established usage the bestowal of the Holy Spirit was not separated in time from the administration of baptism (v. 16).

In each of these cases the reception of the Spirit was manifested by the exercise of miraculous powers (8<sup>18</sup> 19<sup>6</sup>). But it would be contrary to the teaching of the NT as a whole to suppose that such manifestations were of the essence of the gift. If we may suppose (Chase, Confirmation in the Apostolic Age, p. 35) that 2 Ti 1<sup>68</sup> refers to

VOL. IV.-I

Timothy's confirmation, rather than to his ordination, it proves that the graces looked for as a result of the laying on of hands were such as 'power and love and soberness' (cf. Ac 2415, where 'wonders and signs' are confined to the

Apostles).

The inferences which have here been drawn from Ac 8<sup>12-17</sup> 19<sup>1-5</sup> are corroborated by many references in the Epistles to a reception of the Holy Spirit on admission to the Church (Ro 5<sup>5</sup>, 2 Co 5<sup>5</sup>, Eph 1<sup>13t</sup>. 4<sup>30</sup>, 1 Jn 2<sup>27</sup> 3<sup>24</sup>), in some of which St. Paul uses the very phrase ascribed to him by St. Luke, as pointing to a laying on of hands, πνεθμα ελάβενε (Ro 815, 1 Co 212, 2 Co 114, Gal 324), while others appear to indicate that the bestowal of the gift was an act distinct from and following the washing (1 Co 6<sup>11</sup> 12<sup>13</sup>, 2 Co 1<sup>21t</sup>. Tit 3<sup>4π</sup>). To these may be added He 6<sup>2</sup>, where βαπτισμοί ἐπίθεσίς τε χειρῶν must at least include a laying on of hands closely connected with a Christian act of lustration.

3. A review of the evidence afforded by the NT, therefore, leads to the belief that in the Apostolic age a rite of confirmation was widely, if not universally, used, the main parts of which were prayer and imposition of hands. But it has been held that at this period, as in later ages, with the held that at this period, as in later ages, with the laying on of hands was associated an anointing of the neophytes. In support of this view it has been urged (Chase, op. cit. p. 53): (a) that unction and imposition of hands are 'closely related symbolical acts' in both OT and NT (cf. Nu 810 with Ex 2841, etc.; and Mk 65 823 and Ac 288 with Mk 613 and Ja 514); (b) that anointing is associated with confirmation in the earliest sub-Apostolic records (Iren. Hær. I. xxi. 3; Tert.; Can. Hipp. 134-136; to the authorities cited by Chase may be added Theophilus of Antioch; see below, § 6 a); (c) that the supposition adds force to such passages

(c) that the supposition adds force to such passages as 2 Co 1<sup>21</sup>L, 1 Jn 2<sup>20, 27</sup>.

It must be noticed, however, (a) that no Scripture evidence has been produced that unction was used along with the laying on of hands; while, on the other hand, it was, among both Jews and Gentiles, an accompaniment of the bath (Swete, The Holy Spirit in the NT, 1909, p. 386, citing Ru 38, Ezk 169, to which add Sus 17); (b) that neither Irenœus (loc. cit.) nor Theophilus makes any reference to the laying on of hands; and both Tertullian and Cun. Hipp. connect the unction not with it but with the immersion (see below, §§ 21, 26, cf. § 22); (2) that, if 2 Co 1216 enumerates in order the acts of the initiatory rites, σφραγισάμενος is naturally regarded as indicating baptism (see above, § r), and the implication, therefore, is that the unction preceded haptism, and was separated by it from confirmation. The connexion of the unction with the gift of the Spirit in 1 Jn 2<sup>20, 27</sup> does not by itself establish the contention. It may, however, in part account for the close relation which subsisted in later times between the unction and the imposition of hands, leading in some cases to the overshadowing, or even the superseding, of the latter by the former.

On the whole, the reasonable inference from the facts appears to be that unction was a primitive accompaniment of baptism rather than of con-

tirmation.

4. The passages of the NT examined in § 2 point to confirmation by laying on of hands after baptism. Nevertheless, it must be remarked that there is no indication that any feeling of incongruity was occasioned by the outpouring of the Holy Spirit upon Cornclius and his friends before they were baptized (Ac 10<sup>44-48</sup>), and it is recorded that Ananias laid hands on Saul that he might be 'filled with the Holy Ghost, and afterwards baptized him (Ac 917). These facts suggest the possibility that confirmation may regularly have preceded baptism in some regions, concerning whose customs in this

matter the NT supplies no information. It will be found that this suggestion has some bearing upon peculiarities of the early Syrian rite of

initiation (§ 7).

5. References to confirmation in the sub-Apostolic period.—It was not to be expected that Apostonic period.—It was not to the postumental the scanty remains of the earliest extra-canonical Christian literature would supply many references to confirmation. In the *Didache* and Justin Martyr's 1st Apology, both of which contain accounts of the baptismal rite, explicit mention of it might, indeed, have been looked for. absence of such mention in the former may, however, be accounted for by supposing that its adwinistration belonged to apostles and prophets, for whose guidance the *Didache* was not intended. In Justin, on the other hand, but few details of the baptismal rite are given (1 Apol. 61), and we are told (ch. 65) that, after the washing, the neophyte told (ch. 65) that, after the washing, the neophyte was brought into the assembly, where prayer was made for him and others, followed by the kiss of peace and the Eucharist. That this is a vague account of the confirmation is rendered probable by its resemblance in general outline to Can. Hipp. 135 ff. (see below, §§ 26, 28). Irenœus seems to imply that a laying on of hands followed the immersion, both being included in the rite of baptism. Thus in Har. III. xvii. 1, 2 he seems to distinguish the grace of baptism from the gift of the Spirit; and in Dem. 3 he describes the former as foreiveness of sins and regeneration, while in as forgiveness of sins and regeneration, while in Dem. 41f. he speaks of the Apostles as baptizing their converts and giving them the Holy Spirit, and connects this with the present life of the Church, by describing believers as the habitation of the Spirit given in baptism (cf. Hær. IV. xxxviii. 1, 2).

6. The ancient Syrian rite.—About the ceremonies of baptism used in Syria in earlier centuries

6. The ancient Syrian rite.—About the ceremonies of baptism used in Syria in earlier centuries there is a considerable amount of evidence, which must be set out as briefly as possible.

(a) From Theophilus, Bishop of Antioch (c. 180), we learn (ad Autol. i. 12, ii. 16) that anointing with the 'oil of God' was, when he wrote, an important feature of the initiatory rite; and his statement that the name 'Ohristian' was derived from it implies (see Ac 1129) that he believed it to date from the Apostolic age. According to him, the immersion conveyed re-birth and remission of sins.

(b) Clementine Recognitions, iii. 67 (Gersdorf, p. 110; Lagarde, p. 119) (c. 200 [7]). A description of baptism is put into the mouth of St. Peter. It includes anointing with oil sanctified by prayer, immersion in the threefold Name, and Holy Communion.

(c) Didascalia, In. xii. 21, (Funk, p. 208) (c. 280). When speaking of the duties of deaconesses at the baptism of women, the writer mentions anointing by the bishop with the oil of unction on the head 'at the laying on of hands.' An anointing of the rest of the body by deaconesses or other women follows, and then the baptism by the bishop or by deacones or presbyters, at his command. Funk accounts for the absence of reference to a post-baptismal unction by supposing that the deaconesses had no share in it; but it must not be assumed that there was any unction after the baptism.

(a) Syr. Acts of Judas Thomas, in Wright, Apoc. Ac. of Ap. (vol. ii. Eng. tr.), 1871 (3rd cent.). This work contains five detailed accounts of baptisms (pp. 165, 183, 257, 267, 289), which, combined, give the following results: After the blessing of the oil, the candidates are anointed with the seal on the head, the men first. Their bodies are then anointed, in the case of the men by Judas, in the case of the women by a woman. They are subsequently baptized and communicated. There is no intimation of a consecration of the water, and apparently no recognition of a distinction between the grace conveyed by the anoi

'with the seal of the Holy Spirit' on the head was followed by unction of the members of the body. In the commentary on 12 24 (6, 25%) mention is made of the oil and fragrant solow with which the 'midle' are sealed and put on the armour of the Holy Spirit. (In this passage 'midle' may mean' baptizandi,' in accordance with the order implied in the Briphany Hymnis (see the passage quoted in Dietatrich, p. 63, n. 16.). The prinst is the minister both of the unction and of the baptism (Epiph. Hymns, iv. 4, v. 81.).

(g) History of John the son of Zebedes (thi cent. [7]), in Wright, op. cit. Two baptisms are described in detail (pp. 38, 53). The 'fine scented' oil was first consecrated, and then the water, fire appearing over the former after consecration. Afterwards the candidates were signed on the forchead, and their bodies anointed. Then followed the baptism, the vesting in white, the giving of the kiss of peace to the neophytes, and the communion. The immersion was 'for the forgiveness of debts and the pardon of sins,' while the appearance of fire on the oil may indicate that the unction convey of the grif of the Spirit.

(h) Apostotic Constitutions (c. 330). The Orde Baptism agrees closely with that of the contemporary Church of Jerus, Chlow, 's 26). But that the compiler, in introducing a second, post-baptismal, unction, was consciously innovating upon Syrian of the rits does be comment, and his remark upon it is polemical in tone (vit. 44): rearra and review of the contemporary of the part of the spirit with the compiler, in introducing a second, post-baptismal, unction, was consciously innovating upon Syrian of the rits does be comment, and his remark upon it is polemical in tone (vit. 44): rearra and review of the part of t

By the oil the Spirit was imparted (Connolly, in TS viii. 40, 43, 45, 50-55).

(m) Baptism of Constantine, in Overbeck, op. cit. p. 355 (c. 500 [f]). After the blessing of the font, Constantine is said to have been anointed with oil, baptized, and communicated.

(a) Severus, Patriarch of Antioch (Monophysite, 512-510), habitually speaks of anointing with chrism as following and completing baptism. Since he quotes the Testamentum Domini as authoritative on the subject of baptism, it may be interred that the rite, as he practised it, resembled that which is described in that work. See especially Epp. ix. 1, 8 (ed. E. W. Brooks).

(a) The catholicos Isô Yāhb 1. (Nestorian, 580-596). In his Questiones (Diettrich, Die nestor. Taujiturgie, p. 94 ft.) directions are given for the baptism of adults by a priest, and for the baptism of a sick person by a deacon. In each case a signing with oil (of men on the breast, of women on the forehead) is followed by the baptism. The only acts mentioned subsequent to baptism are the clothing of the women by the deaconesses and their crowning by the priest, and the administration of the Eucharist, if it is customary, by the deacon to the person baptized by him.

7. From this evidence some important inferences may be drawn. It would seem that throughout Syria up to the 5th cent., and among the Nestorians to the end of the 6th cent., the initiatory rite included three principal acts—unction, baptism, and communion of the baptized. The unction consisted of two parts—the signing of the head (3rd and 4th cents.), forehead (4th and 5th cents.), and later in the constant of the cents.) and later in the case of women), or breast (6th cent.), and the anointing of the body. The gift of the Holy Spirit is usually associated with the unction (see above, § 6 f, g, h, i, k, l, and cf. c, where the unction is 'at the laying on of hands'); and in this connexion it should be noticed that the evidence for the consecration of the oil is earlier than for the consecration of the font (see b, d). There is no trace, apart from the Apostolic Constitutions, of any important act following the immersion except the communion of the baptized. Thus, according to the earliest known custom of the Syrian Christians, confirmation preceded baptism. It is not difficult to believe that this usage was simply a development of local primitive practice. In places where the laying on of hands for the imparting of the gift or the Spirit took place before baptism (above, § 4), if the baptismal unction also preceded the immersion (see § 3), the laying on of hands and the unction would in time come to be closely associated. Thus the confirmation would become the unction 'at the laying on of hands' ( $\S 6 c$ ). Finally, in accordance with a tendency of which there are many examples, the unction would supersede the laying on of hands, except so far as the signing of the person with oil could be so described (cf. § 6 k).

In the early part of the 3rd cent. (§ 6 c) con-

firmation was reserved to the bishop, but, according to all later authorities, the entire rite is administered by one person—bishop or priest—assisted by a deacon or deaconess. It will be observed that there is early evidence for three minor ceremonies between the immersion and the baptismal Eucharist—the kiss of peace (§ 6 g, l), vesting in white (§ 6 f, g, j, l, o), and crowning

(§ 6 f, o).

8. Modern Nestorian rite.—The Syrian ritual was re-cast shortly after the middle of the 7th respectively. Tså vähb III. (652-661), cent. by the catholicos Isô'yāhb III. (652-661), and the office of baptism drawn up by him is the basis of the rite as now practised by the East Syrians. He allowed the pre-baptismal anointing to remain; indeed, he seems to have restored the ancient custom of an unction (that is, probably, a signing with oil) on the head, followed by an anointing of the body. The result of this change has been much confusion, through the persistence of 6th cent. customs, in the existing MSS. But in one point all agree. In the formula pronounced at this unction there is no reference to the gift of the Spirit. No special grace seems to be connected with it, and in a rubric it is described as a symbolic act indicating that 'the acknowledgment of the Trinity is imprinted on the heart' of the person about to be baptized. It no longer corresponds to confirmation.

The distinguishing feature of Isô'yāhb's ritual is, in fact, confirmation after baptism. It consists of two main acts—the imposition of the hand upon the head of the baptized with an appropriate prayer, and the signing of the forehead with oil (not ointment), accompanied by a formula. Some of the MSS omit mention of the use of oil Some of the MSS omit mention of the use of oil in this signing, but there is good evidence that it was ordered by Iso yahb, and it is apparently still customary (A. J. Maclean, Recent Discoveries illustrating early Christian Life and Worship, 1904, p. 68). In the present Nestorian rite, as everywhere in the East, the priest is the minister

of confirmation. But it is characterized by several unusual features. The priest (not the bishop) consecrates the oil at each performance of the rite, the laying on of the hand is separated from the signing, and there is no use of ointment, as distinct from olive oil, at any part of the rite.

That post-baptismal confirmation was actually

introduced by Isô'yāhb III. follows almost certainly from the evidence given in § 6, for there seems to have been no catholicos between Isô'yāhb I. and Isô'yāhb III. who was a liturgical reformer. The supposition is confirmed by the fact that Isô yāhb III, was a traveller, who must have had some knowledge of non-Syrian rites (Connolly, op. cit. p. xlix), and by the number and magnitude of the variations of existing rituals from each other, and from the *Ordo* drawn up by him—a natural consequence of so startling an innovation.

tion.

One or two of these may be mentioned. Isô'yālıb seems to have given no direction about the ceremony of crowning. Hence in some MSS it is omitted. In one it is described as a custom in some places. In another it appears in its original position after the vesting, and therefore before confirmation (Diettrich, op. at. p. 87). Its present place is after the final signing (Maclean-Browne, The Catholicos of the East, 1892, p. 272). Again, Isô'yāhbī, ordered that the water should not be let out of the font till after the mysteries—i.e. apparently the Eucharist—had been administered (Diettrich, op. cit. p. 91). Isô'yāhb III., on the contrary, ordered that it should be let out before the confirmation (ib. p. 92). Nevertheless the older usage persisted, and is still followed (ib. pp. 50f., 82, 101f.)

The post-baptismal Eucharist was retained by Isô'yāhb III., and apparently still remained in the time of Elias III. (1176-1190; see Diettrich, op. cit. p. 101); but it has long fallen into desuetude (ib. p. 91f.).

(ib. p. 91 f.).

9. Rites of the Syrian Monophysites.—We have seen (§ 6 n) that post-baptismal confirmation with chrism is implied in the letters of Severus of Antioch. It is, in fact, probable that its introduction into Syria was due to him. Tradition ascribes to Severus a Gr. Ordo Bentismi which was translated into Syr. by James of Edessa in the latter part of the 7th cent., and received the approbation of Gregory Barhebraus six hundred years later (Denzinger, Ritus orient. i. 266, 279, 280). Four of the existing rituals, of which two bear the name of Severus and one that of James, while the fourth is anonymous (ib. p. 267), resemble one another closely, and are apparently all derived from the Syr. Ordo of James of Edessa, and thus ultimately from the Gr. of Severus. The anonymous ritual probably represents a recension subsequent to that of Barhebraus. There is also a short office for the baptism of the dying (ib. p. 318), attributed to Severus' contemporary Philoxenus, Bishop of Mabug or Hierapolis (c. 485–519). All these Orders contain a post-baptismal signing or unction. In two respects they stand apart both from ancient Syrian and from modern Nestorian usage: they have no form for the blessing of the oil, which is consecrated, not by the priest at the baptism, but by the bishop (ib. p. 361); and at the final unction unguent, likewise

consecrated by the bishop, is used instead of oil.

10. On the other hand, among the liturgical reforms attributed to Peter the Fuller, Patriarch of Antioch (471-488), by Theodorus Lector (Valesius, Hist., ed. Reading, 1720, iii. 582), was the consecration of the μύρον in the church before the whole people. This might seem to give colour to the supposition that post-baptismal confirmation was introduced among the Monophysites by him. But Peter, Bishop of Edessa (498), appears from the Chronicle of Joshua the Stylife (32, ed. Wright, p. 23), written during his episcopate, to have adopted the principal reforms of the Fuller about A.D. 500: among other things, 'he [prayed] over the oil of nuction on the Thursday (before Easter) before the whole people.' From

this passage it would seem that Theodorus quoted the actual words of the Fuller, and that the latter used  $\mu\nu\rho\rho\nu$  as equivalent to oil (cf. § 6 k). It may be inferred that what the Fuller did was to reserve the consecration of the oil of unction to the bishop, and that post-baptismal chrismation had not come into use at Antioch in 488, or at Edessa by the end of the century.

II. The post-baptismal confirmation consisted of a prayer followed by a threefold signing of the baptized with chrism on the forehead and other parts of the body, with the formula, 'N. is signed with the holy chrism, the sweetness of the odour of Christ, the seal of the true faith, the comple-ment of the gift of the Holy Ghost, in the Name,' etc., followed by an anointing of the rest of the body, the vesting in white, and prayers, one of which contained a petition for the sending forth

of the Holy Spirit upon the neophytes.

That this form of confirmation is a later addition is perhaps already sufficiently clear. this becomes still more evident when we consider the portion of the office which immediately pre-cedes the immersion. Here the Monophysite rituals seem to follow ancient usage more closely than the Nestorian. Before buptism the candidates are signed on the forehead with oil, and their bodies are anointed. The connexion between these two acts is obscured in all the MSS by the interpolation between them of the consecration of They are accompanied by prayers the water. which distinctly associate with them the gift of the Spirit.

the Spirit.

The first prayer has the petition: 'Vouchaste to send upon them thy Holy Spirit.' The second begins: 'Holy Father, who by the hands of thy holy Apostles didst give the Holy Spirit to those who had been baptized, send now also, using the shadow of my hands, thy Holy Spirit on those who are about to be baptized. . that they may be worthy of thy holy anointing.' This is evidence that a laying on of hands once preceded this unction, though no mention is made of it in the extant rituals (cf. § 6 c, k). The third runs: 'Thou who didst send upon thy only-begotten Son. . thy Holy Spirit ... and didst sanctify the waters of Jordan, may it please thee that the same thy Holy Spirit may dwell upon these thy servants ... and do thou perfect them ... purifying them by thy holy laver,' etc. This extract seems to indicate (1) that the consecration of the font originally followed the anointing, and (2) that the indwelling of the Spirit preceded the purification of the laver.

Thus the Monophysite rite is strangely anomals.

Thus the Monophysite rite is strangely anomalous. It has two distinct anointings, one before and the other after baptism, by both of which it is implied that the gift of the Holy Spirit is mediated. The former was at one time accompanied by an imposition of hands, and the references to the gift of the Spirit in immediate connexion with it are still much more precise and emphatic than in connexion with the latter, which is now

regarded as the confirmation.

12. Of the attendant ceremonies, the vesting, the crowning, and communion follow the chrismation. All are omitted in the anonymous ritual. mation. All are omitted in the amonymous ritual. It has not been thought necessary to take account here of two rituals used by the Monophysites, hearing the name of St. Basil, since they are not of Syrian origin. One is a mere translation of the Gr. Ordo, the other incorporates some Syrian elements (Denzinger, op. cit. p. 318).

13. Maronite rite.—It is probable that the two closely similar early Maronite baptismal rituals

(Denzinger, op. cit. pp. 334, 351) are derived from an Order drawn up by James of Serug († 521), whose name appears at the head of one of them. But that they have been subjected to considerable revision is evident; e.g. the baptismal formula is not in the third person, as in all other Eastern Orders, but in the first, as in the Latin rite. This assimilation to Western standards was carried much further about the year 1700, when the Order now in use was composed (ib. pp. 334, 350). Till that revision, however, some ancient Syrian characteristics were preserved. The oil was consecrated at each haptism, and at the consecration

the deacon bid the prayers of the people that those who were to be baptized might be made 'pure temples for the habitation of the Holy Spirit.' Again, the pre-baptismal unction was Spirit.' Again, the pre-baptismal unction was divided into two parts, as in the Monophysite rite, by the consecration of the water. Before this consecration the candidate was signed with oil on the forehead, the prayer following, 'Let thy Holy Spirit come and dwell and rest upon the head of this thy servant, etc.; after it the priest again signed him with oil, this time on the head, and the deacon anointed his body. After the baptism the candidate was signed with chrism, and tism the candidate was signed with chrism, and then his body was anointed (*ib.* p. 349), or the principal members were signed (*ib.* p. 357), a formula being used similar to that of the Monophysite rite. In an accompanying prayer (not in all MSS) the words occur, 'Grant us by this seal the union of thy Holy Spirit.' Thus in this rite there is the same anomaly as in the Monophysite, proving that the nost-bandismal confirmation had proving that the post-baptismal confirmation had no place in the ancient Syrian Order from which it was derived.

14. The attendant ceremonies are the vesting—which in one Order retains its original place im-

which in one Order retains its original place immediately after baptism (ib. p. 357), and in the other (ib. p. 349) is postponed till after the chrismation—the crowning, and the communion.

15. Armenian rites.—The Armenian baptismal ritual is said to have been drawn up by the catholicos John Mandakuni (c. 495). It was revised at the end of the 9th cent. (Conybeare, Rituale, p. xxvii ff.). The extant office obviously differs much from the original from which it was differs much from the original from which it was derived. After the consecration of the 'holy oil,' the filling and consecration of the font takes place, and then the baptism. After this there is a prayer for the baptized, and an anointing with the 'holy oil,' with which the forehead and several members of the body are signed, in each case with an appropriate formula. In these formulæ no mention is made of the Holy Spirit.

The consecration of the oil at the beginning of the baptismal office proper seems to imply an unction before immersion, which has fallen into desuetude (cf. Denzinger, op. cit. pp. 35, 57). At present simple oil is not used at all, and this prayer of consecration is said over the chrism prayer or consecration is said over the chrism which has been already consecrated by the eath-olicos at Etchmiadzin (ib. p. 34; Neale, Hist. East. Ch., 1850, Introd. p. 967). The single petition for the grace of the Holy Spirit in the prayer before the anointing is so wanting in definiteness that this act can scarcely be regarded as a confirmation. It is less emphatic than the clause in the prayer of consecration. Send the grace of the the prayer of consecration, 'Send the grace of thy Holy Spirit into this oil, to the end that it shall be to him that is anointed therewith unto holiness of spiritual wisdom,' etc. On the whole, it appears that this rite is of Syrian origin, and that it once had two unctions, with each of which the gift of the Spirit was associated (cf. §§ 11, 13). As in the modern Nestorian rite, the unctions were probably performed, not with chrism, but with oil consecrated by the priest in the course of the office; though the use of chrism consecrated by the catholicos was certainly in vogue to some extent as early as the 7th cent. (Denzinger, p. 55).

16. After the unction follow the vesting, crown-

ing, bowing to the altar, and communion. The prayer used at the lowing to the altar has no special appropriateness to this ceremony; but it contains words which imply a laying on of the hand ('Stretch forth thy unseen right hand and

bless him'), and is perhaps misplaced.

17. The baptismal office of the Paulicians of Armenia (Conybeare, Key, p. 96) has neither anointing nor imposition of hands, but after the (ib. pp. 54, 248 f.).

affusion there are prayers for the gift of the Holy Spirit to the baptized, interspersed with lessons (Mt 3<sup>18-17</sup>, Ac 2<sup>1-4</sup>, Mk 1<sup>9-11</sup>, Gal 3<sup>21-29</sup>, Lk 3<sup>21f</sup>, Ac 8<sup>26-40</sup> [with the 'Western' additions in vv. <sup>27, 30</sup>], Jn 20<sup>10-23</sup>; but not Ac 8<sup>140</sup>, 19<sup>10</sup>.). One of the the prayers seems to imply that communion followed (ib. p. 98, cf. p. xlix). The minister is the 'elect one.' This rite cannot be said to include an act of confirmation, but it was probably derived from one in which confirmation followed baptism.

18. Orthodox Eastern rite.—The baptismal office of the Orthodox Church (Goar, Εύχολόγιον,

1647, p. 350) closely resembles that which was used at Constantinople in the 8th cent. (Conybeare, Rituale, p. 389), and both belong to a group which comprises the Ordo Baptismi in Const. Ap. vii. 39-45 (cf. iii. 16 f.) and the rite as described by St. Cyril of Jerusalem (Cat. Myst.) and ps.-Dionysius (Hier. Eccl. ii. 2, 3). The Ordo in Const. Ap. seems to represent an attempt to bring the Syrian rite into agreement with that of the Church of Jerusalem. It accordingly preserves

some Syrian features.

Combining the testimony of all these docu-ments, we learn that the following series of acts in the modern office has descended from the 4th cent.: anointing with exorcized oil, consecration of the font, baptism, vesting in white, anointing with chrism on the forehead and other parts of the body (the vesting follows the chrismation in St. Cyril), and communion. In St. Cyril and ps.-Dionysius the second unction is associated with the gift of the Spirit, and in the present rite it is accompanied by the formula, 'The seal of the gift of the Holy Spirit' (cf. the spurious can. 7 of C. Constantinop. I.). It is, therefore, rightly described as confirmation. It is said, however, that the chrism is now administered with a spoon (Maclean, Rec. Discoveries, p. 68); thus no vestige of the primitive laying on of hands remains at this point of the rite. That c. A.D. 325 it was still an act distinct from the chrismation is shown by the evidence of Macarius, Bishop of Jerusalem (Conyleare, Key, pp. 183, 186).

Among the Orthodox the chrism is consecrated

by the Patriarch apart from the administration of baptism. The practice of the 4th cent. in this matter is somewhat obscurely described by Ma-

carius (ut supra).

It is possible that the rite of the Church of Jerusalem with its modern Greek derivative was developed from an ancient Syrian rite in which confirmation preceded baptism. But however that may be, it is highly probable that many of the more modern features of the Monophysite,

Maronite, and Armenian rituals—especially post-baptismal confirmation with chrism—were bor-rowed from it (cf. Conybeare, Key, p. 179). 19. The Egyptian rite,—The baptismal rituals of the Alexandrian Copts (Denzinger, op. cit. p. 191) and the Abyssinians (ib. p. 222) vary so slightly from each other that they may be treated as one. There are two unctions, but the first is performed outside the baptistery and is separated from the baptism by a long interval. Immediately after the baptism comes the confirmation. The priest, standing before the altar, prays for the bestowal of the Holy Spirit on the baptized, and signs his forehead or head with chrism in the threefold Name. Other parts of the body are then signed, each with an appropriate formula. This is succeeded by the laying on of the hand with a formula in which the words occur, 'Receive the Holy Ghost,' and another prayer for the neophyte, including a petition for the sending forth of the Spirit upon him. Both oil and chrism are consecrated by the Patriarch of Alexandria

By means of the newly recovered Sacramentary of Serapion and the evidence of contemporary writers, it has been shown that an Order of confirmation identical with this in its main features was in use in Egypt in the 4th cent. (Brightman, in JThSt i. 252 f., 263 ff., 268 ff.). Indeed, some of its elements can be traced much further back. Origen alludes to the final unction in several places (Hom. in Lev. vi. 5, in Rom. v. 8; Scl. in Ezk. 16). The laying on of hands seems also to be implied by him, and if so, he certainly regarded it as of Apostolic origin (de Princ. I. iii. 27; cf. Clem. Alex. Exc. Th. 22). In Egypt alone has the laying on of hands been preserved, apart from the signing with chrism, by an unbroken tra-dition, as part of confirmation. In the 4th cent., indeed, it preceded instead of following the chrismation (Brightman, loc. cit. p. 265); but in Abyssinia at present there is laying on of hands with prayer for the Holy Spirit, before as well as after the chrismation. In early times, as now, the the chrismation. In early times, as now, the priest administered the chrism, but only as the delegate of the bishop (Ambrosiaster, Qu. Veteris et Novi Test., ci. 5; in Eph. iv. 12).

20. After confirmation follow the vesting, crowning, and communion of the baptized. In Abys-

ing, and communion of the baptized. In Abyssinia and, until comparatively recent times, at Alexandria, they received milk and honey in the Eucharist. At Alexandria only milk is now given. No early evidence has been discovered for the crowning; but the vesting is alluded to in the 4th cent., the baptismal Eucharist is referred to by Origen (Sel. in Ex. [PG xii. 283]), and apparently the giving of milk and honey is mentioned by the writer of the Ep. of Barnabas (6) and by Clem. Alex. (Pæd. i. 6).

21. The African rite.—In several passages (de

21. The African rite.—In several passages (de Præsc. Hær. 36, 40; de Bæpt. 6 ff., 17; de Res. Carn. 8; adv. Mærc. i. 14; de Cor. 3; de Pud. 9) Tertullian alludes to the ceremonies of the rite of initiation. From them we learn that immediately after the immersion the baptized was anointed, perhaps over the whole body ('perungimur,' de Bupt.
7). He was afterwards signed with the cross, apparently on the forchead. The laying on of the hand followed, and finally the Eucharist. At some point of the wife the property of the propert of the rite the neophyte received a mixture of milk and honey. The exact position of this ceremony is doubtful; but it was certainly between the anointing and the Eucharist, and probably immediately after the former. It is possibly hinted in one place that the baptized was crowned (de Præsc. 40).

The imposition of the hand is separated from the unction by the signing, and probably the giving of milk and honey. Moreover, while the spiritual effect of baptism is remission of sins, of unction consecration, and of the signing protection, the gift of the Holy Spirit is attributed to the imposition of the hand. The unction, therefore, is position of the hand. The unction, therefore, is connected with baptism rathler than with confirmation (cf. Baptism [Early Chr.], vol. ii. p. 387\* ( $\beta$ )). The proper minister of the entire rite is the bishop, but with his authority it may be performed by a presbyter or a deacon. Tertullian holds that in each of processity a large serious processing the serious pro holds that in case of necessity a layman may baptize (and confirm); but it seems to be implied that this opinion was not generally accepted. Since Tertullian (de Cor. 3) claims the authority of long-standing tradition for several of the ceremonies, it is probable that he describes the rite as it was practised in Carthage at least as early as the middle of the 2nd century.

22. The letters of Cyprian on the baptism of heretics confirm and supplement the information given by Tertullian. According to him, the special gift of baptism is remission of sins (Ep. lxix. 11, lxx. 1, lxxiii. 6, lxxiv. 5) and regeneration (lxxiv. 7); but the regeneration is not com-

plete without the gift of the Spirit (lxxii. 1, lxxiii. 21), which is conveyed by the laying on of the hand (lxxii. 1, lxxiii. 6, lxxiv. 5). Thus haptism and confirmation are distinct, yet closely related as parts of the same rite (lxx. 3, lxxiii. 9). The immersion was immediately followed by unction (lxx. 2), and it is implied that the unction was connected rather with bantism than with confirmation of the confirmation of connected rather with baptism than with confirmation. The gift of the Spirit is not associated with it in the one passage in which it is mentioned; and in that passage, arguing against the validity of heretical baptism, as distinct from confirmation, Cyprian makes a point out of the invalidity of the unction which accompanied it. It is to be added that he speaks of sanctification (sanctificatio) as one of the benefits conferred by baptism, in the narrower sense (e.g. lxix. 1, 8, 11, lxx. 2, lxxiii. 18 f., lxxiv. 5, 7), just as Tertullian had connected the same (consecratio) with unction. The act by which the Holy Spirit was communicated was, therefore, the imposition of the hand. But this act was accompanied by prayer for the Holy Spirit and signing of the baptized on the forehead (lxxiii. 6, 9; ad Demetrian. 22). At some time in the course of the rite, probably after confirmation, the kiss of peace was given (lxiv. 4). The bishop confirmed, but apparently he did not usually baptize (lxxiii. 9). The oil used in the unction was consecrated on the altar at the Eucharist, and therefore not at the administration of baptism (lxx. 2).

23. The mode of administration of the rite remained much as it was in the 2nd cent. till at least the beginning of the 5th; but the giving of milk and honey was transferred to the baptismal Euchar-

ist (C. Carthag. III. c. 24, longer form).

For the order, see St. Augustine, Serm. 324; for consecration of oil at the Eucharist, de Bapt. cont. Don. v. 28; for conferring the Holy Spirit by imposition of hand with prayer, vb. iii. 16, de Trin. xv. 46, Retract. i. 12, 9, Truct. in Ep. Jo. vi. 10; for communion, Serm. 224, 227, 228; for the bishop as minister, de Trin. xv. 46, and for the presbyter acting in his stead, Serm. 324.

By the second half of the 5th cent, the unction had become a more prominent feature, and closely connected with the imposition of the hand, for which it was a preparation (Optat. Milev. iv. 7, vii. 4; Aug. contra litt. Pet. ii. 239), though it still always followed baptism (Avitus Vienn. Ep. 24). The material used seems to have been no longer simple oil (Optat. loc. cit.; Aug. de Trin. xv. 46, conf. litt. Pet. ii. 104). The unction, though not apparently held to convey the Spirit, is the 'sacramentum Spiritus sancti' (Aug. Scrm. 227, Tract. in Ep. Jo. iii. 5, 12). During this period attempts were made to abolish the consecration of the chrism by priests, which appears to have been the older custom; but the practice still continued (C. Carth. II. c. 3, III. c. 36; C. Hipp. c. 34; Joan. Diac. En. ad Senar. 8).

24. The Gallican rite.—The rite which prevailed most widely in the West in early centuries was that known as the Gallican, which was used in North Italy, Gaul, Spain, probably Britain, and Ireland. The earliest descriptions of it are found in Ambrose, de Mysteriis, and another tract founded upon it, viz. ps. Ambrose, de Sacramentis. These witness to the use of North Italy c. A.D. 400. In this rite baptism was immediately followed by an anointing with chrism on the head or forchead (Prudent. Psychom. 360; Patr. Ep. 3; Missal. Bobbien.; cf. Stove Missal), with the formula 'Deusoien.; cf. Stove Missal), with the formula 'Deuson', qui te regeneravit... ipse te unget,' etc. After the chrismation the feet of the candidates were washed (Maximus Taurin. Tract. iii.; Casarius, Caralliii.) Casarius, Caralliii. Serm. clxviii. 3, celvii. 2 [PL xxxix. 2071, 2220], Serm. de unct. cap. [PL xl. 1211]; C. Elib. c. 48; and the Orders), and they were vested in white. They then received the signaculum spirituale—apparently a signing with the chrism (cf. Greg.

Tur. Hist. Franc. ii. 31)—which was accompanied by a prayer for the septiform Spirit, no doubt similar to that which occurs in all later Western rites, including the Anglican (Isidor. de Eccl. Off. II. xxvii. 3; Ildefons. de Cogn. Bapt. 127). Finally, they communicated (Sac. Gall.; Sac. Goth.; Stowe Missal; Zeno Veron. Tract. ii. 38, 53). Since there is early evidence that confirmation consisted of two acts—chrismation and 'imposition of the hand' or 'benediction' (Gaul: C. Araus, I. c. 1 f.; Gennadius Massil. de Eccl. Dog. 52; Avitus, Ep. 24; Spain: Isidor. op. cit. II. xxv. 9, xxvii. 1; Ildefons. op. cit. 121-125, 128 f.)—it may be inferred that both the unction and the signaculum, though not in immediate sequence, belonged to it. In some Ordines the signaculum, or laying on of hands, disappeared as a separate act (Gaul: German. Paris. Ep. 2; Sac. Gall.; Sac. Goth.; North Italy: Maximus Taurin. ut supra; Missal. Bobbien.; Ireland: Patr. Ep. 2f.; Stowe Missal), and with it the invocation of the septiform Spirit. Thus the 'confirmation' was reduced to an anointing with chrism, perhaps including a signing, without any direct prayer for the Holy Spirit. If this was the use of the Irish Church in the 12th cent., the statement of St. Bernard (Vita S. Mal. 3), that confirmation was not practised in Ireland, is not only intelligible but justified.

25. It is clear that about the end of the 4th cent. baptism and confirmation were ordinarily administered by the same person (Ambr. op. cit.; ps. Ambr. op. cit.; Pacianus, Serm. de bapt. 6, Ep. i. 6; Zeno Veron. Tract. ii. 53). This, according to Ambrose and Pacianus, was the bishop; but ps. Ambrose seems to make the presbyter the minister of both (Wordsworth, Ministry of Grace, 1901, p. 80). A century earlier the Synod of Elvira (cc. 38, 77) implies that if a presbyter baptized he also confirmed, and that presbyterial confirmation prevailed widely in later times, in spite of continual efforts to suppress it, there is abundant evidence (Gaul: C. Araus. I. c. 1f.; C. Arel. II. c. 26 f.; Gallican Statutes [C. Carth. Iv.], c. 36; Leo, Ep. de priv. Chorep.; C. Epaon. c. 16; C. Autisiodoren. c. 6; C. Hispal. II. c. 7; Sac. Gall.; Sac. Goth., cf. C. Vasen. c. 3; North Italy: Missal. Bobbien.; Ireland: Stowe Missal; Spain: C. Tolet. I. c. 20; Mart. Bracar. Capitula, 52; Isidor. op. cit. II. xxvii.; Ildefons. op. cit. 128, 131; cf. Montanus, Ep. 1 [Mansi, viii. 788]; C. Bracar. II. c. 19].

This summary of the evidence will suffice to show that between the Gallican and the Eastern confirmation rites there are many points of resemblance. Gallican usages gave place to Roman in France at the end of the 8th century. They had a more prolonged existence in Spain, Milan, and Ireland (Duchesne. Orig. p. 97 ff.).

They had a more prolonged existence in Spain, Milan, and Ireland (Duchesne, Orig. p. 97 ff.).

26. The Roman rite.—If the Gallican rite resembled those of the Eastern Church, the baptismal rite of Rome was akin rather to that of Africa. According to the Canons of Hippolytus (134 ff.), in the Rom. use of c. A.D. 200, the priest, immediately after administering baptism, signed the haptized on the forehead, mouth, and breast with the xpioua eixapiorlas, or oil of unction, which had been consecrated by the bishop at an earlier stage of the office, and then proceeded to anoint his body. The baptized was then vested and brought into the clurch, where he was confirmed by the bishop. The confirmation consisted of imposition of the hand and a prayer, in which there was a thanksgiving for the outpouring of the Holy Spirit, and a petition that the neophyte might receive the earnest of the Kingdom, followed by the sign on the forehead without oil.

That this represents early Rom. practice is confirmed by Hippolytus, in Dan. i. 16, where the oil used in the bath is said to signify the powers (δύναμις [read δυνάμεις?]) of the Holy

Spirit wherewith (as) the believers are anointed after the layer, as though  $(\omega_s)$  with ointment,' the implication being that oil was not actually used in conferring the Holy Spirit.

Thus the unction was connected with baptism, not with the laying on of hands.

The imposition of the hand continued to be the principal act in confirmation till at least the end of the 4th cent., when it was accompanied by the prayer for the septiform Spirit (Jerome, cont. Luc. 9; Siricius, Ep. ad Himer.). But by that time the unction on the forehead seems to have come to be regarded as closely associated with it, and as belonging, like it, rather to the bishop than to the priest. In 416, Pope Innocent I. permitted an additional unction, which must not be on the forehead, by the priest after baptism. This is the first notice of the double chrismation, which soon afterwards became the regular practice of the Roman Church (Innoc. Ep. ad Dec. 6, cf. 9; Joan. Diac. Ep. ad Senar. 6, 14). A signing of the head with chrism after baptism, with a formula almost identical with that of the Gallican rite (§ 24), is enjoined in the Gelasian Sacramentary and in later Rom. books.

27. The development of the Rom. order of confirmation is instructive. In the Gelasian Sacramentary (which agrees with the description of the Rom. rite in the Epistle of Jesse of Amiens, A.D. 812), and the 9th cent. Ordo of St. Amand (Duchesne, op. cit. p. 453)—as in the much later Liber S. Cuthberti (C. Wordsworth, Pontif. S. Andrew, 1885, App. 5)—the imposition of the hand, with the prayer for the septiform Spirit, is preserved, and at the subsequent chrismation a special formula is used. In the Gregorian Sacramentary the laying on of the hand gives place to the raising of the hand. In later orders the raising or extending of the hand is sometimes accompanied by the formula 'Spiritus sanctus superveniat,' etc., the prayer for the septiform Spirit following, and a formula more or less resembling the Gelasian being used with the signing. Of the latter the latest form is that which Pope Eugenius IV. (Decr. pro Armen.) declared to be the 'form' of the sacrament.

28. In the Canons of Hippolytus, and in most later Orders in which confirmation immediately

28. In the Canons of Hyppolytus, and in most later Orders in which confirmation immediately follows baptism, the communion of the neophytes is enjoined. The communion commonly followed baptism when confirmation was deferred, though it is sometimes ordered with the reservation that it is to be administered only if the neophytes are of suitable age. Two ceremonies anciently followed confirmation (Can. Hipp.)—the kissing of the neophyte, with the words, 'The Lord be with you,' and the giving of milk and honey. The former has disappeared from all later Orders, but the memory of it is preserved in the words 'Pax vobiscum' after the chrismation. The latter continued till the 6th cent. (Joan. Diac. op. cit. 12). The bishop has always been the minister of confirmation in the Rom. Church, though apparently Innocent I. (ut supra) permitted priests to confirm in cases of necessity if authorized to do so by the bishop. The bishop has also always consecrated the chrism (but see Joan. Diac. op. cit. 8).

29. The mingling of Roman and Gallican rites.

—In early centuries the Rom. rite was used only in the immediate neighbourhood of the city. That it had not been adopted in the Gr. district of Lucania at the end of the 5th cent. is easily understood (Gelas. Ep. ix. 6, 10); but it is more surprising that at the beginning of the same cent. Pope Innocent I. should find it necessary to urge a bishop of Umbria to bring the customs of his diocese into conformity with those of Rome. From his letter to Decentius (416) it may be gathered that at Eugubium (Gubbio) the consecration of the chrism was not reserved to the bishops, and that presbyters anointed the baptized with chrism (apparently on

the forehead) and laid hands upon them, with an invocation of the Spirit. Thus in Eugubium (c. 400) the baptismal rite was of the Gallican type (cf. Leo, Ep. 168). Innocent compromised matters with Decentius by suffering the chrismation by the priest to remain, provided it was not on the forchead, and provided the baptized was subsequently confirmed in Rom. fashion by the bishop. One result of his letter, which was widely quoted as an authoritative document, was, no doubt, the modification of Gallican usage in a Romeward direction in many places; another was the introduction into the Rom. The Western rite, in fact, combines the Gallican and the earlier Rom. confirmation Orders, which suffices to explain the anxiety of Gallican writers like Rabanus Maurus (de Cler. Inst. i. 28-30; cf. Theodulf. de Ord. Bapt. 14; Jesse of Amiens, Ep. de bapt. [PL ev. 700]), not long after the suppression of the Gallican customs, to distinguish the spiritual effect of the two chrismations, assuming that each of them conveyed a gift of the Spirit. The phenomenon is not unlike that which presents itself in the rites of Western Syria (above, §§ 11, 13, 15). The consequence of the interaction of the Rom. and Gallican rites, exemplified in this striking case, is that the present Latin confirmation rite is not purely Roman, though it is not now possible to distinguish in all cases those features which were developed within the Rom. Church from others which may have been imported from without. Cf. the following article.

30. The separation of confirmation from baptism. For many centuries in the West, confirmation has been divided from baptism by a considerable interval. The beginning of this separation of the rites may be traced to the 3rd cent., when the validity of heretical confirmation was denied even by those who admitted the validity of heretical baptism (but see E. W. Benson, *Cuprian*, 1897, p. 420). By them persons baptized in heresy, when they joined the Catholic Church, were admitted by a ceremony analogous to, if not identical with, confirmation. Later on we find cases contemplated in which confirmation at the time of baptism was impossible, either because the minister was a deacon or a layman, or because the baptizing priest had no chrism (C. Elib. cc. 38, 77; C. Araus. I. c. 2). But the practice of administering confirmation apart from baptism in ordinary cases had a different The Rom. tradition of restricting the administration of confirmation to bishops involved its postponement in the case of all persons baptized by a priest in the absence of the bishop. This, of course, became more frequent as the Church spread beyond the cities, as bishops became fewer in proportion to the number of Christians, and infant baptism became the rule. It was already common at the end of the 4th cent. (Jerome, loc. cit.; cf. Anon. de Re-baptismate, 4f.). But the separation of the rites did not become universal in the West for many centuries, and, when confirmation was postponed, it was usually only deferred till the offices of a bishop could be had. If it was not administered in infancy, the delay was due to the negligence of parents or of the bishops themselves. On the eve of the Reformation, infant confirmation was still the normal practice (see, e.g., Tindle Assume to Mars 1521 ed Pouler See Tindale, Answer to More, 1531, ed. Parker Soc., 1850, p. 72). At a much earlier period, however, there was a movement towards admitting to confirmation only those of more mature age (Gratian, Deer, III, v. 6; Syn. Colonien. 1280, c. 5), and in the latter part of the 16th cent. it became the rule, both in the Rom. and in the Anglican Communion, that candidates for confirmation should have come to years of discretion (Eng. Pr. Bk.; Cat. ad paroch. ii. 3, § 8; cf. CQR xxiii. 72 ff.).

For information about modern offices of confirmation and substitutes therefor, in the Reformed Communions, it must suffice to refer to the works named at the close of the following list of authorities and to art. RAPTISM (Later Chr.), vol. ii. v. 404.

CONFIRMATION (Roman Catholie).—As a

CONFIRMATION (Roman Catholic).—As a supplement to the data furnished in the preceding article, the following points illustrating the position of Confirmation in the present teaching and practice of the Roman Catholic Church seem worthy of note:—

r. Dogmatic tenets.—The doctrine according to which Confirmation is named as the second of seven Sacraments is clearly enunciated at least as early as the middle of the 12th century. In a sermon which is put into the mouth of St. Otto, Bishop of Bamberg († 1139), by his biographer Herbord (c. 1159), the preacher, addressing the newly baptized Pomeranians, discourses at some length of the seven Sacraments. Enumerating them in their order, he says:

length of the seven Sacraments. Enumerating them in their order, he says:

'The second Sacrament is Confirmation, that is, the anointing with chrism on the forehead. This Sacrament is necessary for those that are to conquer, to wit, that they be protected and armed by the strengthening of the Holy Spirit, as they will have to fight against all the temptations and corruptions of this present life. Neither is this rite to be deforred until old age, as some suppose, but it is to be received in the vigour of youth itself, because that age is more exposed to temptation' (Pertz, MGH xxii, 73).

Most, of this doctring including the content of the second of the content of the second of t

Most of this doctrine, including the sevenfold number of the Sacraments, can be shown to have been taught by Radulfus Ardens fifty years carlier, in his as yet unprinted Speculum Universale (see Grabmann, Gesch. der scholast. Methode, i. 259), but much vagueness still prevailed regarding the nature and definition of a Sacrament. A decretal of Innocent III. in 1204, included in the Corpus Juris Canonici (Friedberg, Leipzig, 1876-80, ii. 133), outlines further the main points upon which stress was leid by scholastic theologians both before and after the Council of Trent.

after the Council of Trent.

'By the unction,' he says, 'of the forehead with chrism (per frontis chrismattonem) is denoted the imposition of hands, which is otherwise called Confirmation, because by this means the Holy Spirit is bestowed for increase and strength. Hence, while a simple priest (sacerdos vet presbyter) may perform other unctions, this ought not to be administered by any one but a high priest, that is to say a bishop, seeing it is recorded of the Apostles alone, whose vicars the bishops are, that they conferred the Holy Spirit by the imposition of hands' (cf. Ac 81467).

During the Council of Florence (1438-1445), a bull was issued by Eugenius IV., known as the Decretum pro Armenis. This, taken as a whole, was not so much a dogmatic decree, defining points of faith, as an instruction to secure uniformity of practice. A portion of it, which consists of a compendious treatise on the Sacraments, is taken almost word for word from an opnsculum of St. Thomas Aquinas, De fidei articulis et septem sacramentis. The 'matter' of the Sacrament is declared to be chrism, i.e. oil mixed with balsam, and the 'form' to be the words, 'I sign thee with the sign of the cross, and I confirm thee with the chrism of salvation in the name of the Father and

of the Son and of the Holy Chost,' spoken both then and now by the bishop in administering the unction. In view, however, of the imperfectly dogmatic nature of the Decretum pro Armenis, this decision is not held to be an infallible pronouncement. On the contrary, the more commonly accepted view regards the act of unction as itself constituting an imposition of hands, so that the 'matter' comprises both the unction with chrism

and the laying on of hands.1

The most prevalent theory, then, concerning Confirmation regards the 'outward sign' of the Sacrament as consisting in the act of the bishop, who makes the sign of the cross with chrism upon the candidate's forehead, whilst he pronounces the words already quoted. The Council of Trent, in its systematic review of Sacramental doctrine, is very guarded in its affirmations concerning Confirmation. It contents itself with declaring that it is 'truly and properly a sacrament,' and 'one of the seven, all of which were instituted by Jesus Christ our Lord.' It denies that 'it was in olden days nothing else but a sort of catechism in which those who were entering upon youth gave an account of their faith in the presence of the Church.' It condemns those (Reformers) who had declared that to attribute any virtue to the chrism used in Confirmation was an outrage to the Holy Ghost. It also rejected the view that every simple priest could administer the Sacrament; but, by pronouncing that a bishop was 'the ordinary minister,' it tolerated the practice by which simple priests in special cases receive from the Holy See faculties to confirm. Finally, the Council declares (Sess. vii. can. 9) that 'in Confirmation a character is imprinted in the soul, that is, a certain spiritual and indelible sign, on account of which the Sacrament cannot be repeated.' It will be observed that this leaves many questions open. In particular, nothing is said as to the time and manner of the institution by Christ, whether direct or in-direct; and no definition is given regarding the matter and form—for example, as to whether the use of chrism is essential to the validity of the Sacrament.

Of late years another pronouncement, which, however, is not usually regarded as possessing infallible authority, has been made in the decree of the Inquisition, Lumentabili sane, of 3rd July 1907. This, in its 44th heading, condemns the following proposition as an error, viz., 'there is no proof that the rite of the Sacrament of Confirmation was employed by the Apostles; while the formal distinction between the two Sacraments, Baptism and Confirmation, has no place in the history of primitive Christianity (Denzinger-Bannwart, Enchiridion<sup>10</sup>, Freiburg, 1908, n. 2044).

Lastly, it should be noticed that, according to the teaching outlined in the above-mentioned Decretum pro Armenis, and universally held by Catholic theologians, the Sacrament of Baptism is with spiritualis janua, and consequently no other Sacrament can take effect except in the case of those who have first been admitted to the life of supernatural grace through these portals. Hence it follows that, if Confirmation should precede Baptism, it would be invalid.

2. Adjustment of theory to historical fact.—It must be sufficiently obvious that, accepting the foregoing as a summary of approved Roman teaching upon the Sacrament of Confirmation, some

ing upon the Sterament of Confirmation, some 1 This point of view may be curiously paralleled by some of the prayers of the early coronation rituals, in which the sovereign is described by the officiant prelate as receiving his crown ver impositionen natura nostrae (e.g. in Legg, Three Curonation Orders, Henry Bradshaw Soc., 1900, p. 62); and it is supported by the wording of the Professio Fidel of Michael Paleologus, drafted at the Second Council of Lyons (1274), which speaks of the sacramentum confirmations quod per manuum impositionem episcopi conferunt chrismando renatos.

explanations are needed to bring these tenets into accord with the facts of early Church history set forth in the preceding article. Attention may be

directed, in particular, to the following points:

(1) Although Trent teaches that Confirmation, like all the other Sacraments, was instituted by Christ, nothing is positively laid down concerning the manner of that institution, i.e. whether immediate or mediate, whether in genera or in specie.

Modern theological opinion seems to favour the
view that Christ did Himself immediately institute all the Sacraments (i.e. that we do not owe their institution to the Church, acting upon His general commission), but that He did not Himself give them all to the Church fully constituted. As a recent authority puts the matter:

'On some Sacraments particularly essential to Christianity, Baptism and Holy Eucharist for example, Christ explained Himself completely, so that the Church has had from the very beginning full and entire consciousness of these sacramental rites. As to the rest, the Saviour laid down their essential principles, leaving to development to show the Apostles and the Church what the Divine Master wished to accomplish.

In other words, Jesus instituted immediately and explicitly Baptism and Holy Eucharist; He instituted immediately but implicitly the five other Sacraments' (Pourrat, Theol. of the Sacraments, Eng. tr. p. 301 f.).

(2) It would be readily conceded that, in the case of such a Sacrament as Confirmation, the historical evidence is in some respects imperfect and obscure. The Church does not claim to clear up all the dark passages, but she claims to supplement by supernatural guidance and theological reasoning the data which we owe to natural research.

(3) With regard to the early recognition of the gift of the Holy Spirit as a distinct rite following Baptism, great stress is usually laid by Roman Catholic theologians, and deservedly, upon the opening of the heavens and the descent of the Holy Ghost in the heavens and the descent of the Holy Ghost in the form of a dove upon our Saviour after His baptism in the Jordan. This, taken in combina-tion with the NT passages cited in §§ 2 and 3 of the preceding article, seems to provide a sound historical foundation for such an immediate but implicit institution of the Sacrament by Christ as

has just been spoken of.

(4) The extensive treatment which, following Connolly's *Homilies of Narsai*, pp. xlii-xlix, has been given to the peculiarities of the ancient Syrian rite in the preceding article (§§ 7 and 8), tends to obscure the very local character of the observances by which the gift of the Spirit seems to be connected with unctions preceding baptism. At Jerusalem itself, where the testimony of St. Cyril is explicit, as well as at Constantinople, Alexandria, Northern Africa, Rome, and through-out the West, we find full and clear historical evidence which not only establishes the practice of conferring the Holy Spirit after baptism, either by unction or by imposition of hands, but points to a very marked consciousness of the distinction between the two rites; in other words, to the recognition of Confirmation as a sanctification of a separate order, often conferred by a separate minister. For a discussion of this subject the reader may be referred to Dölger, Das Sukrament der Firmung, while the same writer, in an article in the Röm. Quartalschrift (1905, pp. 1-41), has dealt with the archæological evidence of early date, which establishes the existence in many places, e.g. at Naples, Rome, and Salona in Dalmatia, of a separate Confirmation chapel (consignatorium, chrismarium) distinct from the baptistery. In the Syrian Church, however, the accounts given of the unction, e.g. the lengthy discussion of Narsai himself, do not seem to remove it from the category of a mere ceremony subsidiary to baptism, while the effort made in the Apostolic Constitutions to alter the Syrian practice, introducing an unction with chrism after baptism (see Connolly, p. xlvii), points to a consciousness that the former practice was fundamentally incomplete. the former practice was fundamentally incomplete. Or, can it be that, after all, a post-baptismal unction was in use, although for some unaccountable reason it is not formally spoken of in the Syrian texts? It is certainly strange that, as has been pointed out by A. J. Maclean (JThSt, Jan. 1910, p. 316), 'in the present East Syrian rite the post-baptismal anointing is not explicitly mentioned, though it is usually administered in practice.'

(5) With regard to many other points as a the

(5) With regard to many other points—e.g. the alleged re-administration of Confirmation when heretics were reconciled to the Church (see previous article, §§ 22 and 30), the reservation to the bishop of the power of consecrating the chrism, or, again, the history of the introduction of the unctions with the 'oil of catechumens' and chrism, which now precede and follow the administration of baptism in the Roman rite—it is submitted that our ancient authorities do not speak with sufficient clearness to warrant any certain conclusions. Much difference of opinion upon such matters exists even among writers of the same theological sympathies.

3. Modern liturgical details.—Two or three details of the ritual prescribed in the *Pontificale Romanum* call for brief comment.

(1) The bishop holds his hands out over the candidates while saying certain preliminary prayers. This action was formerly considered by some to constitute a manuum impositio, and to be

of the essence of the rite.

(2) The candidates—it is not now the custom to confirm children before they are seven or eight years old—are presented to the bishop by a god-father or godmother, according to sex. This practice seems, however, to date back to the time when Confirmation was administered immediately after Baptism, at which period the same god-parents served for both ceremonies.

(3) A curious rubric, still printed, though obsolete in practice, directs that the candidate who is not an infant shall place his foot upon the foot is not an infant shall place his foot upon the foot of the godfather. This seems to be a vestige of some feudal practice of commendation, and may be compared with a similar practice in Teutonic marriages (cf. Grimm, Deut. Rechtsalterthümer, Berlin, 1881, pp. 142, 155-156, and Weinhold, Deutsche Frauen<sup>3</sup>, Vienna, 1882, ii. 40 ff.).

(4) After the unction, the bishop is directed to give the newly confirmed a slight blow on the

give the newly confirmed a slight blow on the check, with the words Pax tecum. This is most probably an imitation of the blow by which knighthood was conferred (cf. the Ordo De Benedictione Novi Militis,' in the Pontificale Romanum; and Martene, de Antiq. Eccles. Ritibus, Venice, 1783, ii. 240). But there is perhaps something also to be said for the view that the blow may have originally been given to the child to impress upon his mind the fact of his confirmation of Hardens mind the fact of his confirmation (cf. Tougard in mind the fact of his confirmation (cf. rought in Précis historiques, Jan. 1888; Heuser in Amer. Eccles. Review, May 1889; and F. Brenner, Verrichtung der Firmung, p. 68), much as the boys of the parish were formerly whipped at specified places on the occasion of the beating of the bounds? An early instance before 1900, of the bounds.' An early instance, before 1200, of the mention of such a blow in administering confirmation occurs in the Life of St. Hugh of Lincoln (Giraldus Cambrensis, Opera, vii. 95).

Leterature.—The best historical account is that of F. J. Dölger, Das Sakrament der Firmung, Vienna, 1906. A very full treatment of the subject is also given by various critics in Vacant-Mangenot, Dict. de théol. cathol., Paris, 1905, iii. 975—1103. Consultalso Chardon, Hist. des sacraments, Paris, 1745; N. Gihr, Die hell. Sakramente, 2 vois., Freiburg, 1899; B. HERDERT THURSTON.

CONFORMITY.—The ethical question regarding conformity is, How far may a man, from regard to the feelings or authority of others, consent in outward action to what, apart from such regard, he is not inwardly convinced is right or true, or what he is even inwardly convinced is not right or true—more shortly, How far may a man conceal or act against his own inward conviction, in deference to the feelings of other persons or to external authority? Such a question cannot be simply set aside as illegitimate, unless we are prepared to assert for certain abstract formulæ of duty (e.g. that we ought to speak the truth) a kind of absoluteness which ignores the social ends to which all duties are relative, and ignores also the way in which a general rule, valid under ordinary and tacitly assumed conditions, may be modified or abrogated by the presence of extraordinary conditions not contemplated in the general statement. No one would seriously contend, e.g., that the duty of promise-keeping requires the promiser not to stop even to save a drawning mark life if hyperstandard and the same advantage and the same all the same and the same as t stop even to save a drowning man's life, if by so doing he would have to break an appointment. On the other hand, it is evident that our question is, as it has been called (Morley, On Compromise), 'a question of boundaries,' a question involving a conflict of duties. And, so far as the decision of such questions turns upon the infinite variety and subtle details of personal relations between in-dividuals, ethical science can have nothing to say beyond the vaguest generalities, such as that, on the one hand, we ought not unnecessarily to wound other people's feelings, or that, on the other, we ought not to suppress our convictions except for grave reasons. It is difficult, e.g., to see how the grave reasons. It is difficult, e.g., to see how the writer just quoted is entitled to say, so emphatically as he does, that 'one relationship in life, and one only, justifies us in being silent where otherwise it would be right to speak; this relationship is that between child and parents' (op. cit. p. 165). If we take a duty such as that of a son to support and early for his parents in all one it is directly. care for his parents in old age, it is obvious that the duty is one which falls upon a son as such: the relationship is the very basis of the duty. But we can hardly say the same of the duty of suppressing one's convictions: here the relationship seems to require only that added degree of deference which a son will naturally pay to his parents' opinions in all relations of life. And, if so, it is surely paradoxical to contend that a like deference is not equally obligatory in the more intimate relation of husband and wife.

It would seem, then, that the only cases in which we can look for a definite development of ethical doctrine in regard to conformity—as distinguished from mere casuistical discussion—are those in which some external authority has a peculiar claim upon our conformity, in a sense analogous to that in which parents have a peculiar claim to their boy's obedience or to their adult son's to their boy's obedience or to their adult son's support. The two authorities which most evidently possess such a claim, and whose claims most need discussion, are the State and the Church. How far is a citizen morally permitted or obliged to obey legal injunctions of whose nature or objects he disapproves? How far, e.g., is military service to be obligatory upon a Quaker, payment of Church rates upon a Dissenter? And the question of obligation is, of course, both acthe question of obligation is, of course, both ac-centuated and modified when the citizen is himself an official of the State acting as such; e.g., how

far is a soldier or a subordinate officer, when ordered to fire upon a mob, relieved from all moral responsibility by the fact of his superior's command? Very similar questions are raised by the Church's claim to authority. How far may a layman, and still more a clergyman, subscribe a creed which he does not fully or literally believe?

All that can be attempted here is to point out some of the more general considerations which must be kept steadily in view if these questions are to be adequately discussed. In the first place, we must put aside as an empty truism—irrelevant or even question-begging—the assertion that a man must at all costs obey his conscience. For our problem is precisely to determine what, in the above cases, conscience really commands. We above cases, conscience really commands. We cannot, then, from the ethical point of view, start with a deliverance of conscience as a fixed datum. (From the political point of view, the ruler must needs take the conscience of any section of his subjects as a datum to be reckoned with. Not that he is obliged to give way to their conscience if he thinks them wrong, -for the sanctity of conscience can extend, in any ultimate sense, no further than the amount of moral truth which it apprehends,—but he must take it into account as one of the data of his problem. A Christian ruler might be very unwise in trying to enforce monogamy on a Muhammadan population, and yet the United States be entirely justified in putting down Mormonism.) In the second place, we must be on our guard against a fallacy into which we are likely to fall, if we begin by considering what the individual's duty would be, apart from his relation to the external authority, and then bring in this relation as a modifying circumstance. For we are then apt to think of the relation as merely a modifying circumstance, in the sense of being essentially subordinate to the abstract rule of duty. That is to say, we are apt to assume beforehand that the relation to the external authority cannot be important enough to alter the whole character of the duty. And thus, by the very form in which we put our question, we already go far to prejudge the answer. It would be absurd, e.g., to begin the consideration of the duty of military service in time of war by laying down that we may not kill a man who has done no wrong, and then go on to ask whether we may break this rule at the com-mand of the State. If, with Tolstoi, we begin by putting the question in this form, we have already committed ourselves, tacitly or by implication, to that denial of the value and authority of the State as an institution to which he proceeds to give open expression (Kingdom of God is within you, 1894, ch. vii.). But, on any loss extravagant view than his, it is impossible for the citizen of a State, that is to say, the institution on which the whole system of law and order in life practically depends, to treat his relation to the State in any matter of public duty as a mere qualifying circumstance to be taken into account after his duty has been otherwise determined. In any matter of public duty the real question at issue as regards conformity is always this, Do I think the particular human interest that is endangered by conformity so vital, that I, with others of like mind, am prepared to endanger, by our refusal of service or our passive resistance or our active rebellion, the institution on which the whole fabric of human interests depends? This, at any rate, is the question of principle. To say, with regard to a par-

1 It might be objected that what is endangered by war is, not a particular human interest, but the sanctity of human life in general. But the objection simply repeats the original fallacy. There is no World-Empire which could assert the sanctity of human life against warring States, and therefore we have to choose, not between a cosmopolitan and a civic patriotism, but between a civic patriotism and anarchy.

ticular case, that no such danger to the State is likely to ensue, is (1) to admit that the interest, however important in itself, is a narrow one; and (2) to ignore the fact that the State depends on a universal habit of obedience, which is undermined in some degree by every example of disobedience. If, then, the citizen cannot answer the above question of principle in the affirmative, he does no wrong by conformity—provided always, of course, that in his capacity as a citizen he uses all lawful means to secure the particular interest endangered.

We have illustrated the duty of conformity, as regards the ordinary citizen, from the supposed case of a citizen required to serve in the army. It is worth while to illustrate the duty of an official of the State from the corresponding case of a soldier required, e.g., to fire on a mob. For it is interesting to observe that our English system of law commits in practice, and in an even aggravated form, the same mistake as that to which we have objected in theory. It treats the soldier's special duty of obedience to military law as a mere qualifying circumstance in relation to his general civic duty to obey the ordinary law of the land; or, rather, it says he must obey both laws, and choose as best he can which to obey when they conflict. Hence 'he may . . be liable to be shot by a court-martial if he disobeys an order, and to be hanged by a judge and jury if he obeys it' (Dicey, Law of the Constitution, 1902, p. 298, and cf. case cited p. 297, note 4). In the actual working of the legal machinery the absurdity of this situation is, of course, largely relieved by reliance on the common sense of a jury and by the power of the Crown 'to nullify the effect of an unjust conviction by means of a pardon' (Dicey, p. 301). But the situation illustrates very well

the practical consequences of the theoretical error.

The question of religious conformity differs from that of civic in this respect, that membership of a Church is voluntary in a sense in which citizenship is not. We ought not, indeed, to exaggerate this difference, for in the case of a person of strong religious convictions, and of (what may be roughly called) 'high' Church views, it may amount to very little in practice. We can hardly wonder, e.g., at the submission with which Roman Catholic disbelievers in Papal Infallibility received the decree, when the choice lay between submission and excommunication. Provided that we recognize, however, that Protestants and Nonconformists are, in the very nature of the case, disposed to take a less grave view of schism in the ecclesiastical sphere than the secular moralist must take of rebellion in the civic sphere, the question of principle and the general considerations to be kept in view are otherwise similar. If we begin by assuming that the repetition of a creed in a church service is to be judged like an ordinary assertion made with reference to a simple matter of fact in words chosen by ourselves, and that subscription to a creed is to be judged like an ordinary promise made with reference to a particular act in terms chosen by ourselves, and that the only question as regards conformity, accordingly, is whether and how far we may relax the ordinary rules of truth-speaking and promise-keeping in church matters without and Churches altogether, as Tolstoi repudiates the State. Argument about the function of a creed and the adequacy of actual creeds does not fall within the scope of this article, any more than argument about unity and schism. So it will here be simply assumed that the kind of creed with which we are practically concerned is to be regarded as a traditional symbol of the Church's

faith, and is to be interpreted by the authority of the present-day Church itself. From the point of view thus assumed we must regard such an accusaview thus assumed we must regard such an accusation as that of 'hard, flat, unmistakable falsehood' (Sidgwick, in the controversy referred to in literature below), brought against elergymen who do not accept certain propositions in the Apostles' Creed in their literal sense, as analogous to the accusation of murder brought against relative who make reflater fire an experience. soldiers who, under orders, fire on an enemy or on a riotous mob. The only objective definition of the extent of the clergyman's obligation is that which is given to it by the authoritative organs of the Church's government. And if he satisfies his own ecclesiastical superiors, outsiders have no right to apply to his action a standard which implicitly sets aside the Church's authority. We need not, of course, deny that a Church would do well to revise a creed which in any considerable measure has ceased to afford an adequate expression of its faith. But this is a question of the Church's obligation rather than of the individual clergyman's. Just as a citizen may—within wide limits—rightly conform to a law which he thinks unjust, so too a churchman may—within corresponding, if perhaps narrower, limits—rightly conform to a creed that contains propositions which he thinks untrue (whether in a historical or in a religious sense) — provided always, of course, that the churchman, like the citizen, has used all lawful means to have the evil remedied.

A special difficulty is caused by the fact, just alluded to, that propositions may be true in a religious sense, while false in a literal, historical, or scientific sense; or, to put the distinction in a less objectionable or ambiguous way, a proposition intended to express a genuine religious truth, which the believer does accept, may express it in a form which he is unable to accept, not because of any religious reason, but because the propositions of the proposition of tion so formulated combines the genuine religious truth with other statements neither true nor retruth with other statements neither true nor religious; c.g., to very many religious persons the Divinity of Christ is inconceivable apart from His miraculous birth, but to others 'it is just blasphemy to suppose that the divinity of a man who comes nearer to God than other men consists in some abnormality of his physical organization' (Nettleship, Philosophical Remains, 1897, p. 105; ef. whole Letter). If the Church at large enforces the former view, while the individual takes the the former view, while the individual takes the latter, the case is specially hard, because the individual then finds himself expelled from the communion of the Church, although he is not conscious of any real or religious divergence from its faith. See also art. Nonconformity.

its faith. See also art. NONCONFORMITY.

and T. O. Smith, IJE, vol. x. HENRY BARKER.

CONFUCIAN RELIGION.—The Confucian religion is the ancient religion of China, the worship of the Universe by worship of its parts and phenomena. In the age of Han, two centuries before and two after the birth of Christ, that Uni-versalism divided itself into two branches—Taoism versalism divided itself into two branches.—I colsm and Confucianism, and simultaneously Buddhism was grafted upon it. Buddhism probably found its way into China principally in the universalistic form which is called Mahayāna, so that it could live and thrive perfectly upon the congeneric stem. And so we have in China three religions, as three branches upon one root or trunk, which is Universalism.

The Chinese Empire was created in the 3rd cent. B.C., when the mighty Shi Hwang, of the Tsing B.C., when the mighty Shi Hwang, of the Ts'ing dynasty, which had ruled in the north-west since the 9th cent. B.C., destroyed in streams of blood the complex of States which, up to that time, had existed in the birthplace of higher East Asian culture, the home of Confucius and Mencius. But the House of Ts'ing did not exist long enough to organize the great creation of this first Emperor of China. It collapsed after a few years, giving place to the glorious House of Han, which maintained itself and its throne till the 3rd cent. A.D. This dynasty, in organizing the enormous young This dynasty, in organizing the enormous young Empire, built up a political constitution, naturally and systematically taking for its guide the principles, rules, and precedents of the old time, that is to say, the ancient literature, in so far as it was not irrecoverably lost in the flames which Shi Hwang, in a frenzy of pride, had kindled to dovour it. With a view to the completion of this gigantic task of organization, this classical literature was sought for, restored, emended, commented upon, and thus there arose a classical, ultra-conservative State-constitution, which, handed down as an heirloon to all succeeding dynasties, exists to this day. The religious elements contained in this day. The religious elements contained in the classics were necessarily incorporated with that constitution, together with the political, seeing that everything contained in the classics was to be preserved and developed as a holy institution of the ancients; in other words, those religious elements became the State religion. This is, in consequence, now fully two thousand years old. Its basal principle, Universalism, is, of course, older, much older than the classical books by which it has been preserved. As is the case with many origins, that of China's Universalism is lost in the darkness of antiquity.

With the classical books the name of Confucius is inseparably associated. Five are called King; the others are called Shu. Certainly Confucius did not write them all; they belong partly to a much older, partly to a later, period. He is held to have written only one King, the Ch'un-ts'iu. Three other Kings, called the Shu, or Book of History, the Shi, or Songs, and the Yih, or Natural Mutations, he is said merely to have compiled or edited; and even this may not be true. In the books which constitute the fifth King, entitled Li-li, or Memorials on Social Laws and Rites, he and his disciples are mentioned so frequently that this classic appears to have been composed from information about him, and from sayings originating with himself. The four Shu originated almost entirely with disciples of the sage; they contain sayings, doctrines, and conversations of their master, mostly of an ethical and political complexion. The titles are: Lun-yü, or Discourses and Conversations; Chung-yung, or Doctrine of the Mean; Tai-hioh, or Great Study; and Meng-tsze, or (Works of) Meneius.

tsze, or (Works of) Meneius.

We may then just as well call Confucianism Classicism, and the classics the holy books or bibles of Confucianism. Universalism, which it represents, is known by the name of Taoism. Indeed, its starting-point is the Tao, which means the 'Road' or 'Way,' that is to say, the road in which the Universe moves, its method and processes, its conduct and operation, the complex of phenomena recularly recurring in it—io short. phenomena regularly recurring in it—in short, the Order of the World, Nature, or Natural Order. Actually, it is in the main the annual rotation of the seasons, the process of renovation and decay of Nature and it was accordingly. and decay of Nature; and it may, accordingly, be and decay of Practice; and to may, accordingly, so-called Time, the creator and destroyer. Accord-ing to the classics, Tao is the Yang and the Yin, the two cosmic souls or breaths which represent the male and the female part of the Universe, assimilated respectively with the fructifying Heavens, and with the Earth which they fructify, as also with heat and cold, light and darkness. The vicissitudes of these souls, indeed, every year

produce the seasons and their phenomena.

Universalism defines the Yang as a supreme universal shen, or deity, living, creating, which divides itself into an infinite number of shen, and deposes them into beings; and it delines the Yin as a universal kieci, likewise divisible into myriads of particles, each of which, in a man, may form his other soul. Accordingly, creation is a continuous emanation or effusion, and destruction a never ceasing re-absorption, of particles of the Yang and the Yin. These particles, the shen and kwei, are innumerable. The Universe shen and kwei, are innumerable. The is crowded with them in all its parts. being a part of the Yang, or the beatific half of the Universe, is a good spirit or a god, and a kwei, belonging to the Yin, is, as a rule, a spirit of evil, a spectre, a devil, or demon. As there is no power beyond the Tao, there is no good in the Universe but that which comes from the *shen*, no evil but that which the kwei cause or inflict.

We may, accordingly, say that Confucianism is a universalistic Animism, polytheistic and polydemonistic. The gods are such shen as animate heaven, the sun and moon, the stars, wind, rain, clouds, thunder, the earth, mountains, rivers, etc.; in particular also the shen of deceased men are gods. And kwei swarm everywhere; this is a dogma as true as the existence of the Yin, as true also as the existence of the Tao, or Order of the World. They perform in that Order the part of distributers of evil, thus exercising a dominant influence over human fate. But, since the Yang is high above the Yin, as high as heaven which belongs to it is above the earth, Heaven is the chief shen, or god, who rules and controls all spectres and their actions; and so theology has this great dogma, that no spirits harm men without the authorization of Heaven or its silent consent. They are, accordingly, Heaven's agents for punishing the bad; and this dogma is a principal still in the Confederation accounts the confederation. article in the Confucian system of ethics.

1. Because the Emperor stands at the head of the realm, nay, of the whole earth, he is the head of the State religion. He acknowledges the superiority only of Heaven, whose son he is. Heaven is the natural protector of his throne and house, which would unavoidably perish if, by wicked conduct, he forfeited Heaven's favour. Heaven is the highest god that exists, there being in the Chinese system no god beyond the world, no maker of it, no Jahweh, no Allah. It bears to this hour its old classical names, Ticn, Heaven; Ti, Emperor; or Shang-ti, Supreme Emperor (cf.

also vol. iii. p. 549 f.).

The most important sacrifice offered to this god takes place on the night of the winter-solstice, an important moment in the Order of the World, when Heaven's beneficent influence is re-born, because the Yang, or light and heat, then begins to increase after having descended to its lowest ebb. The sacrifice is presented on the so-called Round Eminence (yuen khiu), also known as the Altar of Heaven (Tien tan), which stands to the south of the Tatar eity. This altar, quite open to the sky, is composed of three circular marble terraces of different diameters, placed one above the other, all provided with marble balustrades, and accessible by staircases which exactly face the four chief points of the compass. At the northern and eastern sides there are buildings for various

the Emperor proceeds to the altar, escorted by princes, grandees, officers, and troops, to the number of many hundreds. Everybody is in the richest ceremonial dress. The spectacle, illuminated by the scanty light of large torches, is most imposing. Every magnate, minister, and mandarin has his assigned place on the altar and its terraces. or on the marble pavement which surrounds it. On the upper terrace, a large tablet, inscribed 'Imperial Heaven, Supreme Emperor,' stands in a shrine on the north side, and faces due south. In two rows, facing east and west, are shrines which contain tablets of the ancestors of the Emperor. Before each tablet a variety of sacrificial food is placed—soup, meat, fish, dates, chestnuts, rice, vegetables, spirits, etc., all conformably to ancient classical precedent and tradition. On the second terrace are tablets for the spirits of the sun, the moon, the Great Bear, the five planets, the twenty-eight principal constellations, and the host of stars; furthermore, there are those of the winds, clouds, rain, and thunder. Before these tablets are dishes and baskets with sacrificial articles. Cows, goats, and swine have been slaughtered for all those offerings, and, while the ceremonies are proceeding, a bullock or heifer is burning on a pyre as a special offering to high heaven. The Emperor, who has purified himself for the solemnity by fasting, is led up the altar by the southern flight of steps, which on both sides is crowded by dignitaries. Directors of the cere-monies guide him, and loudly proclaim every action or rite which he has to perform. The spirit of Heaven is invited, by means of a hymn settle in the tablet. Before this tablet, and subsequently before those of his ancestors, the Emperor offers incense, jade, silk, broth, and rice-spirits. He humbly kneels, and knocks his forehead against the pavement several times. grandee reads a statutory prayer in a loud voice, and several officials offer incense, silk, and spirits to the tablets of the sun, moon, stars, clouds, rain, wind, and thunder. Finally, the sacrificial gifts are carried away, thrown into furnaces, and burned.

This Imperial sacrifice is probably the most pompous worship which ever has been paid on this earth to a divinity of Nature. It is attended by a large body of musicians and religious dancers, performing at every important moment.

In the same vast altar-park there is, to the north of the Round Eminence, another altar of the same form, but of smaller dimensions, bearing a large circular building with dome or cupola, called ki nien tien, or 'temple where prayers are sent up for a good year, that is to say, for an abundant harvest throughout the Empire. Here a sacrifice is offered by the Emperor to Heaven and to his ancestors, in the first decade of the first month of the year; while, to obtain seasonable rains for the crops, a sacrifice is presented in the same building, in the first month of the summer, to the same tablets, as also to those of rain, thunder, clouds, and winds. This cere-mony is repeated if rains do not fall in due time or sufficiently copiously. These sacrifices are mostly performed by princes or ministers, as proxies of the Son of Heaven.

The ritual for all the State sacrifices is similar.

to that for Heaven, but the pomp and offerings

vary with the rank of the gods.

Next to Heaven in the series of State divinities is Earth, called officially Hu-t'u, or 'Empress Earth,' whose square altar of marble, open to the sky, is situated in a vast walled park, outside the northern wall of Peking. Here a solemn sacrifice purposes. A wide area, partly a park with gigantic trees, and surrounded by high walls, lies around this altar, which is the largest in the world. On the longest night of the year,

of Earth and to those of the Imperial ancestors, and, on the second terrace, to the tablets of the chief mountains, rivers, and seas.

From the fact that the Emperor, in performing

the sacrifices to Heaven and Earth, allots a second place to the tablets of his ancestors, it follows that they stand, in the system of the State religion, next to Heaven and Earth in rank. Solemn sacrifices are offered to them by the Emperor in the Tai miao, or Grand Temple, on the south-east of the Palace grounds, and at the mausolea, in temples erected there, one in front of each grave-

Next in rank to the Imperial ancestors in the pantheon of the State are the Siê-Tsih, or gods of the ground, and of millet or corn. They have their large open altar in a park to the west of the Grand Temple. The Emperor sacrifices there in spring and autumn on sands a many to perform spring and autumn, or sends a proxy to perform

this high-priestly duty.

2. The above are the so-called Ta-sző, or 'Great Sacrifices.' Next in rank are those of the second category, the Chung-sző, or 'Middle Sacrifices.' These are presented at various altars or temples erected in or about Peking. The Sun-god has his large walled park, with round, open altar-terrace, outside the main east cate to the recion of sun outside the main east gate, to the region of sunrise; the Moon-goddess has her square altar outside the west gate, because the west is the region in which the new moon is born. Sacrifices are offered there to the sun by the Emperor or his proxy, at the astronomical mid-spring, when the sun conquers darkness; the Moon receives her sacrifice on the day of mid-autumn,—autum being, in China's natural philosophy, associated with the

west, where the new moonlight is born.

The other State-gods of this Middle Class are the famous men of fabulous antiquity who introduced the Tao, or Order of the Universe, among men, thus conferring on them the blessings of civilization, learning, and ethics. They may be

enumerated as follows :-

(1) Shen Nung, the 'divine husbandman,' the Emperor (28th cent. B.C.) who taught people husbandry. He is worshipped by the Emperor, or his proxy, with a sacrifice on an auspicious day in the second month of the spring, when the works of husbandry are supposed to begin, this rite being performed by an open source all rites are the death

of husbandry are supposed to begin, this rite being performed on an open square altar in a walled park, situated west of the great Altar of Heaven.

(2) Sien-ts'an, or 'the first breeder of silkworms,' supposed to have been the wife of the Emperor Hwang (27th cent. B.C.). In the first month of spring, the Empress, followed by a great train of court-ladies, presents a sacrifice to her on an altar in the park of the Palace.

(3) 188 Imperial and princely rulers of the past. The five Emperors of the oldest mythical period receive special sacrificial worship in a temple in the Palace, viz. Fuh Hi, Shen Nung, Hwang-ti, Yao, and Shun, together with the founders of the house of Cheu, and Confucius.

(4) Confucius. He is worshipped together with his nearest ancestors, and over seventy earlier and later exponents of his doctrine and school, all of whom have tablets in his temples throughout the

(5) State deities also are the men and women who, in the course of the centuries, have been distinguished for Confucian virtue and learning. Four temples are built for them near every Confucius temple.

(6) The Tien Shen, or 'deities of the sky,' that is to say, of the clouds, the rain, the wind, and

thunder.

(7) The Ti-ki, or 'earth-gods,' are the ten principal mountains of the Empire, besides five hills and ranges of hills which dominate the site of the

mausolea of the present dynasty; further, the four seas or oceans at the four sides of the Empire or of the earth, and the four main rivers of China, viz. the Hwang-ho, the Yang-tze, the Hwai, and the Tsi; and, finally, the mountains and streams in the neighbourhood of Peking, and various others within

the Empire.

(3) Next comes Taisui, or 'the Great Year,' the planet Jupiter, whose path in the heavens governs the arrangement of the almanac which is annually published by Imperial authority, and gives the various days considered suitable for the transaction of the various business of life. This god thus rules the Tao, or revolution of the Universe, and consequently the Tao of human life, which is order to be transaction. which, in order to bestow happiness and prosperity, must fit in with the Universal Tao, or course of Time.

3. The third section of the Confucian State religion embraces the Kiun-sze, or 'Collective Sacrifices.' 3. The third section of the Confucian State rengion embraces the Kiim-szė, or 'Collective Sacrifices.' These are all offered by mandarins to the gods in the following lists: (1) the Sien-i, or 'physicians of the past,' patriarchs of the art of promoting and preserving human health: Fuh Hi, Shen Nung, and Hwang-ti; (2) Kwan-yū, the war-god of the present dynasty, a great hero of the 2nd and 3rd cents. A.D.; (3) Wen-ch'ang, a star in the Great Bear, the patron of the classical studies on which is based the selection of State officials, who by their rule maintain the Tao among men; (4) Peh-kih kiūn, 'the ruler of the north pole'; (5) Huo shen, 'the god of fire'; (6) P'ao-shen, 'the cannongods'; (7) Ch'ing-hwang shen, 'gods of the walls and moats,' that is to say, the patron divinities of walled cities and forts throughout the Empire; (8) Tung-yoh shen, the 'god of the Eastern Mountain,' i.e. the Thaishan in Shan-tung; (9) four Lung, or dragons, gods of water and rain, for whom temples exist in the environs of Peking, apparently for the management and regulation of the fung-shui of the city and the Imperial palace; (10) Ma Tsu-p'o, the goddess of the ocean and water; (11) Hu-t'u-shen. or 'god of the granud': and Szè-kung shen. the goddess of the ocean and water; (11) Hu-t'u-shen, or 'god of the ground'; and Sze-kung shen, the patron of architecture, to each of whom, before any building works are undertaken, sacrifices are offered on altars erected on the site of the building; (12) Yao shen, 'the gods of the porcelain kilns'; (13) Men shen, the gods of certain Palace doors and gates of Peking; and (14) Ts'ang-shen, 'the gods of the store-houses' of Peking and Tung-

Many of these State sacrifices are also offered by the authorities throughout the provinces, on altars or in temples which have been built for this purpose district—namely, those of the gods of the ground and of millet; those of Shen Nung, Confucius, and the gods of clouds, rain, wind, and thunder; those of the mountains and rivers in the country; those of the walls and moats of the city; and those of Kwan-yii. In Peking, as in the provinces, there are, moreover, temples, built with the same official design, for a great number of historical persons who have rendered services to the dynasties and who have rendered services to the dynasties and the people. They have, on that account, received titles of honour from the Emperors, and have their special temples in the places where they lived and worked. There are also similar temples for former wise and faithful princes, nobles, and states-men; for men who have sacrificed their lives in the service of the dynasty etc.

the service of the dynasty, etc.

4. Lastly, three sacrifices are prescribed to be offered annually by the authorities all through the Empire for the repose and refreshment of the souls of the departed in general.

All the State sacrifices take place either on certain fixed days of the calendar, or on days which are indicated as favourable and felicitous.

This synopsis of the State pantheon shows that the Confucian religion is a mixture of Natureworship and worship of the dead. It is the rule to represent the gods who are believed to have lived as men, by images in human form, and the others by tablets inscribed with their principal divine titles. Images as well as tablets are inhabited by the spirits, especially when, at sacrifices, these have been formally prayed to or summoned, with or without music, to descend into those objects. Confucian worship and sacrifice, then, being actually addressed to animate images, is idolatry. Certainly it is quite inconsistent with the Chinese spirit to think of such tablets and images as mere wood and paint.

The religion of the State, performed by the Son of Heaven as high priest, and by ministers and mandarins all through the Empire as his proxies, is thoroughly ritualistic. Since, during the Han dynasty, under the auspices of Emperors and by the care of illustrious scholars, the classics were rescued from oblivion, an elaborate ritual, based on those classics, was at the same time called into existence in the form of rescripts, regulating in minutest detail every point in the State religion. Subsequent dynastics framed their institutions in general, and their ritual of the State religion in particular, on those of the House of Han, though with modifications and additions of more or less importance. Instances of eminent statesmen presenting memorials to the throne, in which they criticized rituals and proposed corrections, abound in the historical works; and these instances prove that formal codifications of rites have always been in existence since the reign of the House of Han.

These codifications have for the most part been preserved in the dynastic Histories, but it is not possible now to decide whether they are given in their entirety or in an abridged shape. None of them equals in elaboration that of the Khai-yuen period (713-741). This vast compendium of statutory rites of the T'ang dynasty is a systematic compilation of nearly all the ceremonial usages mentioned in the classical books, with a few additional elements borrowed from the House of Han. It was drawn up by the statesman Siao Sung, assisted, as we may admit, by a body of officials and scholars, and it has been the medium through which the most ancient religious institutions of China have held their place as standardrites of the State religion to this day. The Ta Ts'ing have tien, or Collective Statutes of the Great House of Ts'ing, are moulded on it. It is also the prototype of the Ta Ts'ing t'ung li, or General Rituals of the Great Ts'ing dynasty, which is an official codification of the rites proper for the use of the nation and its rulers. Therefore, whoever is able to read and interpret Chinese texts has it in his power to study and describe in its details the State religion from official printed documents.

The conclusion is, of course, ready to hand, that the State religion is instituted for no other purpose than to influence the Universe by the worship of gods who constitute the Yang, in order that happiness may be ensured to the Emperor and his house and to his people. It is, in other words, a religion purporting to secure the good working of the Tao, or Universal Order, thus naturally to frustrate the work of the Yin and its spectres. Thus the exercise of that religion is reasonably the highest duty of rulers, whom that Tao has assigned to secure that good working among men. The people are not allowed to take part in it, except by erecting the State temples and altars, and keeping them in good repair at their own cost and by their own labour. The only religion allowed to them by the State is

the worship of their own ancestors, which is classical and therefore Confucian.

Yet, as everywhere in the world, religious instincts in China go their own way, in spite of official rescripts. Not content with the worship of their ancestors, the people freely indulge in the worship of Confucian deities. In villages and in other localities they have temples for the worship of mountains, streams, rocks, and the like. The god of the earth in particular enjoys much veneration; in all quarters the people have erected temples or chapels and shrines to him; they regard and worship him as the god of wealth, and the patron divinity of agriculture. And everywhere the people resort to certain State temples in the chief towns of provinces, departments, and districts, and worship the idols there after their own fashion.

This popular worship of Confucian divinities being practised all through the Empire, the images of gods exist by tens of thousands, the temples by thousands. Almost every temple has its idol gods which are co-ordinate or subordinate in rank to the chief god, so that China fully deserves to be called the most idolatrous country, in the world. This religion is also practised in private houses, many of which have altars for gods and goddesses, to whom, on fixed days, sacrifices are annually presented.

The worship of ancestors is mentioned in the ancient classics so often, and in such detail, that we cannot doubt it was also the core of the ancient religion. It has assumed the form of a most elaborate system of disposal of the dead. Washing and dressing of corpses, coffining and burial, and grave-building are matters of the greatest solicitude. The erection of large tunuli for princes and nobles was always the rule in China, and the mausolea built for emperors and princes were magnificent structures. Those of the present ruling dynasty certainly belong to the greatest and grandest which the hand of man ever produced.

The ancestral cult is regulated in the State ritual by special rescripts for all classes of the Chinese people. Many a well-to-do family possesses its ancestral temple, where the soul tablets of its older generations are preserved, and where sacrifices are offered to them. In the dwelling-house a part of the altar is set apart for the worship of the latest generations. A temple in front of the altar serves for the offerings, which are presented by the family on various fixed days in the calendar, with the father or grandfather at their head. Besides, there is an altar on each grave, which has been built with some outlay, and the mausolea of the great of this earth have even a temple, containing an altar with the tablet of the soul which rests with the body in the grave. In the first months and years after the burial, certain sacrifices are offered on the grave; later on there is one sacrifice in every year, in spring, in the Ts'ing ming season, reserved for visits to the family tombs, and for cleaning and repairing them. Of course the tombs are visited on many other occasions (cf., further, art. Communion with the Dead [Chinese].

No doubt ancestor-worship has some value as an atticle demont. The prescriptions and of the form

No doubt ancestor-worship has some value as an ethical element. The punishing hand of the forefathers is always present on the house-altar and in the temple of the family, and will deter many a son or daughter from evil. Ancestor-worship strengthens the ties of family life, as it supplies the descendants with a rallying point in the common ancestral altar. It thus fosters a spirit of mutual help in the emergencies of life, and it has excreised a powerful influence upon Chinese family life and social institutions.

LITERATURE.—See end of next article.

J. J. M. DE GROOT.

CONFUCIUS.—The system which is known in the West as Confucianism is described in China as Ju-kiao, or 'School of the Learned,' and professes to conserve the teachings of K'ung Futsu, the philosopher Kung, whose name is familiar to Westerns under the Latinized form of Confucius. Jit-kiao represents orthodoxy in China, all other systems being nominally heterodox, though Taoism and Buddhism have, as a result of long association, been popularly admitted to a place among the 'three Schools.' Buddhism is, of course, exotic in its origin, but Taoism is based upon the same ancient materials as Confucius requisitioned. Laosan a Taoism to many is attributed the system. known as Tao-kiao, or 'School of the Way,' commonly known as 'Taoism,' was a strenuous reformer, who boldly applied the teachings which had discovered in the ariginal the teachings which he discovered in the ancient Chinese records to the amelioration of existing conditions, making non-interference and the suppression of personal ambition the keystones of his system. Confucius made no profession of original thought, and confessed himself to be but a transmitter of the manners and maxims of the 'good old times.'
What he attempted to do was to apply to the degenerate days in which he lived the best elements of the accumulated wisdom and experience of the past, which he found locked up in the ancient pass, which he round notice up in the ancient records, and reflected in the time-honoured ceremonials. These he endeavoured to elucidate and emphasize, not only viva voce to the ardent disciples who flocked to him from all quarters, and to the feudal lords whom he interviewed in the course of his wanderings from State to State, but also by carefully prepared and annotated editions of the early writings for the benefit of posterity. His highest hope was to lead the rulers of the feudal kingdoms, by easy stages, to the gentler manners of the past, and thus to initiate a reign of peace. In order to appreciate the standpoint of Confucius and his contemporary Laccius, it is necessary that the political circumstances of their times should be carefully considered times should be carefully considered.

I. The times in which Confucius lived.—The Chow dynasty, established by King Wu (1122 B.C.), was in a declining condition at the time when Confucius was born, and the central authority, which gave its name to the Central State, or 'Middle Kingdom,' as the Chinese call their Empire even to-day, was powerless to enforce its dicta upon the turbulent States which were its nominal yassals. Constant war, with its dreadful concomitants, was the 'sign of the times.' The soldier was in the ascendant, the schoolmaster unemployed. Agriculture languished for lack of manual labour, and plague, pestilence, and famine wrought untold horrors upon the feudal kingdoms. In the midst of scenes such as these a son was born (551 B.C.) to an ancient officer of the K'ung family, who had distinguished himself by commanding physique and martial powers in the wars of his times, and who was then living a retired life in the State of Lu, situated in the modern province of Shantung. The infant was given the name of K'in ='a hillock' (in allusion to certain circumstances of his birth and appearance), with the alternative Chung-Ni, or 'second Mount Ni,' there being another 'Mount Ni' in the person of an elder stem-brother, the offenting of a complying

= 'a hillock' (in allusion to certain circumstances of his birth and appearance), with the alternative Chung-Ni, or 'second Mount Ni,' there being another 'Mount Ni' in the person of an elder step-brother, the offspring of a concubine.

The life of K'ung K'in, or, as we know him, Confucius, may be divided into 5 periods: (1) 551-531, covering his early boyhood, his marriage at the age of 19, and his appointment to the office of keeper of the State granaries, and, a year later, to that of guardian of the common lands; (2) 530-501, when he devoted himself to the work of teaching, and gradually collected around him an enthusiastic band of disciples, at the same

time completing his own education and labouring at a new edition of the ancient Odes and Historical Records; (3) 500-496, when, for a short period, he acted as magistrate in his native State, and, as a result of the signal success of his methods, was promoted to the office of Minister of Works, and, subsequently, to that of Minister of Justice, resigning his office only when he found his counsels unavailing to turn the reigning Duke from the evil ways he had adopted; (4) 496-483, when he wandered over a large number of the feudal States, vainly endeavouring to induce their rulers to reform their manners and return to the ancient ways; and (5) 483-478, the last period of his life, spent in his native State, during which he devoted himself to the completion of his literary labours in connexion with the ancient records, and to the production of his one original work, the Ch'un-ts'iu=
'Spring and Autumn' annals.

'Spring and Autumn' annals.

2. The Confucian library.—The materials upon which the system known as Confucianism is based are to be found in the various King, or Canons, and the Shu, or Writings, which are attributed to Confucius and his disciples. These have been variously tabulated at different periods of history, but are nowadays generally described as the 'Four Shu' and the 'Four Shu' and the 'Four Shu' and the 'Four Shu' and the 'Four Shu' are nowadays generally described as the 'Four Shu' and 'Four S

but are nowadays generally described as the 'Four Shu' and the 'Five King' (see preceding art., p. 12b).

3. The doctrines of Confucius.—When the condition of the feudal kingdoms in Confucius' time is borne in mind, it will be seen to follow naturally that the great object towards which he directed his efforts was the tranquillizing of the Empire. The possibility of effecting this aim he demonstrated in three ways: (1) by his redactions of the ancient historical records and poetry, showing, to the present and to all future ages, the method by which the great rulers of antiquity, Yao, Shun, and others, had succeeded in controlling and directing the 'black-haired people'; (2) by his personal instructions and counsels to the various nobles—mon fire terviewed in the course of his journeyings through the feudal kingdoms, and to the ardent students who delighted to sit at his feet; and (3) by his own example in the small spheres which were entrusted to him, and where his methods are represented as being entirely successful. This, indeed, was the cardinal principle which he so frequently emphasized, viz., that, if Sage and Sovereign could be combined in one person, the difficulties of empire would disappear. The force of example was the great motive power he sought to apply to every exigency; if the lord paramount would but imitate the ancient worthies, the various princes would be excited to emulation, and thus, through every grade of society, the process would be continued until the whole nation was reformed. The stages by which this process was to be completed are thus described in the 'Great Learning' ['Great Study']:

Great Learning' ['Great Study']:

'The ancients who wished to illustrate illustrious virtue throughout the Empire first ordered well their own States. Wishing to order well their own States, they first regulated their families. Wishing to regulate their families, they first cultivated their persons. Wishing to cultivate their persons, they first receified their hearts. Wishing to rectify their hearts, they first sought to be sincere in their thoughts. Wishing to be sincere in their thoughts. Wishing to be sincere in their thoughts, they first extended to the utmost their knowledge. Such extension of knowledge lay in the investigation of things. Things being investigated, knowledge became complete. Their knowledge being complete, their thoughts were sincere. Their thoughts being sincere, their hearts were thus rectified. Their hearts being rectified, their persons were cultivated. Their persons being cultivated, their families were regulated. Their families being regulated, their states were rightly governed. Their States being rightly governed, the whole Empire was made tranquil and happy.'

As to extraneous aids to the effecting of this

As to extraneous aids to the effecting of this purpose, Confucius could only propose the illustrious examples of antiquity, which he delighted in discovering and popularizing; he could promise no assistance from above. Heaven might commis-

sion men to perform certain tasks, and protect them whilst in the execution of them, but, for the carrying out of those commissions, man must depend upon his own unaided abilities, upon that 'nature,' predisposed towards goodness, which Heaven had conferred on him, and to which he himself must allow its full development, in harmony with the observed course of Nature and the examples of the great sages of the past. The gifts of nature vary in different individuals. There are four great classes of mankind: (1) those who possess intuitive knowledge; (2) those whose natural abilities enable them to learn with ease; (3) those who though naturally dull, are able by earnest application to become learned; and (4) those who decline the attempt to acquire knowledge because of natural incapacity and indifference. Yet, in spite of the diversities of natural gifts, it is possible for every man, by means of self-culture, to reach the highest development of which his nature to reach the highest development of which his nature is capable; and nothing less than this should satisfy the aspirant. 'Rest in the highest,' or 'Cease only when the acme is reached,' is the key-note of the 'Great Learning.' Confucius himself aimed high; he did not expend his strength in the interests of common men, but concentrated his efforts on the education of rulers, either those who were already in office or those who were likely to attain to power, believing that, if he should succeed in implanting his opinions amongst the highest classes, planting his opinions amongst the highest classes, the regeneration of the masses would follow as a matter of course.

There is practically nothing of a religious nature in Confucianism pure and simple. Religion, in the strict sense, existed in China long before his day, and survives even to the present in the sacrifice to Shang-ti, described on p. 13, which the Emperor offers as the representative of the myriad people. Confucius seems to have directed all his energies to the promotion of self-culture, adopting an attitude of strict reserve on the question of religion. He certainly countenanced the religious observances of his time so far as they were consonant with the ancient rites, and did not openly rebuke the extravagances which existed, as, for instance, the travagances which existed, as, for instance, the burial alive of human victims, which was not unknown in his day. Perhaps in this matter he was guided by a principle which he enunciated, viz., 'When good government prevails in a State, language may be lofty and bold, and actions the same. When had government prevails, the actions may be lofty and bold, but the language may be with some reserve.' It may be that he had but little sympathy with the religious decadence of his own times and the abuses which were then prevalent, but he evidently considered it no part of walent, but he evidently considered it no part of his mission to attack them in any iconoclastic spirit, and he preferred to adopt an attitude of strict reticence towards the question of religion, recommending the observance of the accustomed recommending the observance of the accustomed ritual, but deprecating a too close inquiry into the spiritual phenomena. He evidently regarded the offering of sacrifice as of great subjective value, but professed ignorance of the meaning of the great sacrifice to Shang-ti. He certainly added nothing to the contemporary knowledge of God or of spirits; he had nothing to say with regard to death or the hereafter; the 'present distress' was a sufficient occasion for the exercise of his disciplinary methods; the present life was the only theatre in which he sought to inspire men to act their part. The existence of the Empire was imperilled through the unceasing struggles of the feudal States, and his great endeavour was to induce feudal States, and his great endeavour was to induce their several rulers to suppress their overweening ambitions, and to cultivate that moderation, that harmonious balance, which is comphasized in the Doctrine of the Mean'; so that the various

parts of the social organism might work together smoothly and with mutual profit, like a perfectly fitted and well-oiled machine, each State furnishing its quota of Imperial service, each ruler and officer occupying his appointed place, and all friction being avoided, so that the Middle Kingdom might become once more a model to the barbarians on its frontiers, and a power which no alien combination might venture to impugn.

Confucius was, above all things, a political reformer, but one who founded his political principles upon moral bases. He wished the harmony of Nature to be reflected in the world of men, and hence the very first essential in his system was the cultivation of knowledge, especially natural science. But, by a strange irony of fate, the chapter of the 'Great Learning' which was supposed to deal with this fundamental question has been lost, and what remains is occupied with the lesser details which appear as branches detached from the tree. abortive attempts of later philosophers to deal with the phenomena of Nature are described in art. Cosmogony and Cosmology (Chinese). The steps in the process of self-culture have already been enumerated; the completion of know-

ledge leads to sincerity in thought, for the reason that the scholar who has thus attained enlightenthat the scholar who has thus attained enlightenment can no longer be deceived by outward appearances or inward imaginings. Being thus freed from the deceptive influences of passion, emotion, fear, etc., he is able to rectify his heart, i.e. to restrain wayward thoughts, feelings, and tendencies; as a consequence, his outward actions are conformed to the highest ideals of propriety, i.e. the cultivation of the person; and, from this point, he becomes a centre of influence which extends to his family, his State, etc., so that the whole Empire is made tranquil and happy.

whole Empire is made tranquil and happy.

This may be said to be the Confucian gospel in a word, and it will be evident that it is based upon the conviction that man's nature is originally good, and merely requires cultivation on right lines to bring it to its highest perfection. Confucius admitted that 'by nature men are nearly alike; by practice they get to be wide apart.' It follows, therefore, that what is prescribed for

alike; by practice they get to be wide apart.' It follows, therefore, that what is prescribed for rulers should also apply, in a measure, to the mass of the people; they may not have the opportunity of pursuing their studies to the same degree, but all must share in the process of self-culture, and thus bear a part in the tranquillizing of the Empire, which is to be brought about by the regulation of the individual State, family, and person.

In the family and social relations the recognition of a common brotherhood is to be the inspiration and obligation of all corporate life. 'Within the four seas all are brethren,' and this is the idea which underlies (1) the principle of 'Benevolence,' which is the first of the five cardinal virtues. Upon this follow: (2) 'Uprightness of Mind,' i.e. the exhibition of moral excellence, as the word seems to denote; (3) 'Propriety in Demeanour,' the observance of convention, including the orthodoxies of religious worship, etc.; (4) 'Practical Sagacity,' or 'Knowledge of Affairs'; and (5) 'Good Faith.' The whole may be combined in the word which may serve as a rule of life—Reciprocity word which may serve as a rule of life—Reciprocity or Considerateness, i.e. 'What you do not want done to yourself, do not do to others.' These were to be regarded as the special characteristics of rulers; but the five cardinal relations, upon which the whole social structure is based, were required of all classes, and were defined as those existing between sovereign and subject, father and son, elder brother and younger, husband and wife, friend and friend. Filial conduct and its correlate of fraternal subordination may be described as the corner-stones of the system, for upon them depend

VOL. IV.--2

not only self-culture, but also the regulation of the family and the government of the State. It may have been for this reason that Confucius was willing to overlook the extravagant attention paid to ancestor-worship, because it served to emphasize his own doctrines of Divine right and the paramount importance of acquiescence in the prevailing order. He anticipates St. Paul in saying, 'Let every soul be in subjection to the higher powers . . . the powers that be are ordained of God' (Ro 131). The appointment of a new ruler is described as the 'receiving of Heaven's decree'; every subject of the State must, therefore, accept every subject of the State must, therefore, accept his ordered place, and every member of the family, in like manner, must fulfil his part with loyal submission. There must be 'no contrariety' in the home or in the State; no trespass beyond the appointed limits, no disruption of the social harmonies. This is the teaching of the 'Doctrine of the Mean,' which follows on the 'Great Learning'; i.e. the avoidance of all accentricity or departure i.e. the avoidance of all eccentricity, or departure from the normal course as exemplified in Nature. Equilibrium and Harmony are the two essentials to happy social relations and a contented empire, Equilibrium being the negative side when the mind is not aroused by feeling or emotion, and Harmony the positive side when feeling is excited but acts in due accord with its environment.

Amongst the factors which conduce towards correctness of conduct are included Poetry, which inspires to the attempting of noble deeds; Ceremonials, by which the habit of correct action is established; Music, which, if orthodox, produces an atmosphere congenial to the cultivation of virtue and gives a firible to characters and Archery virtue, and gives a finish to character; and Archery, which is recommended as exercising a moral dis-

cipline.

From the above it may be seen how little of a transcendental character there is in the teachings of Confucius. The process of self-culture must proceed independently of any spiritual aid, except in so far as the conventional rites of sacrifice may be considered as of such a nature—a supposition which appears to be negatived by the fact that to Confucius they were evidently of little objective

The doctrines thus enumerated find illustration in the Analects, or Counsels, of Confucius—a collection of acts and sayings attributed to him by his immediate disciples; and they are represented in concrete form in the person of the 'princely man,' or ideal scholar, who is constantly held up as a standard of imitation, and a criterion of control of the princely man,' or ideal scholar, who is constantly held up as a standard of imitation, and a criterion of control of the princely man, ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the princely man ideal scholar by the standard of the st duct-an ideal which, by the way, Confucius himself disclaimed having attained.

The principles of Confucius found further exposition in the writings of Mencius (Mêng k'o, 372-289 B.C.), who is accorded the title of 'Second Sage,' or the next in order of dignity to Confucius himself. The work which bears his name enlarges on the topics of Benevolence and Righteousness, which formed the subject of his discussions with the rulers of the several States he visited and the disciples he gathered. But the most popular exponent of Confucianism was Chu Hsi, or Chucius (A.D. 1130-1200), whose commentaries on the classical books are now generally accepted as the highest standard of orthodoxy. Like Confucius, he pro-ceeds upon the assumption that human nature is originally good, but applies his speculations to the hitherto unsolved problem of the origin of evil. So great has been the influence of Chucius upon modern thought in China, that 'Clucianism' might be substituted for 'Confucianism' as descriptive of the later development of the tenets of Confucius and his followers.

4. Secret of the success of Confucianism. -In yiew of what has been stated above as to the

absence of religious motive in Confucianism, it may be asked how the system which is thus denominated attained its present popularity and general acceptance. As a matter of fact, Contucius utterly failed to convince his generation of the value of the methods he so ardently advocated. Outside of the circle of those who formed his school of disciples he appears to have had few admirers. No ruler of his day was prepared to put his opinions to the test; only in the small sphere which he himself occupied, for a short period, in his own State of Lu, was he able to demonstrate their practical character. His personal influence over his immediate followers must have been immense, though his family life was unfortunate; but, when his despairing complaint of the non-appreciation of his doctrines and non-recognition of his character had been silenced by death, and after his favourite disciples had passed away, it seemed as if the very memory of the sage was about to perish. Many years elapsed before any national attempt to commemorate him was initiated, but succeeding ages and dynasties have vied with one another in elevating him in the scale of posthumous dignities, until, at the beginning of the present century, he was at last raised to the pre-eminent position of 'Co-assessor with Heaven and Earth.'

No doubt the intense patriotism of Confucius was a feature which won the hearts of those who delighted to learn from him; everything was subordinated to the well-being of the distracted Empire, and to this end he was prepared to sacrifice his personal ambitions, and to subject himself to ignominy and even physical danger. His doctrine of the Divine right of virtuous sovereigns, even though usurpers, was entirely congenial to the founders of later dynasties, such as the Han line of rulers, who were anxious to conciliate the student classes that had suffered so severely under the regime of the short-lived Ts'ing dynasty, and who sought to find justification for their claim to the supreme authority in the literature which their predecessors so greatly feared. The masses were well content with the abolition of the severe measures with which the first Empire (the Ts'ing) had familiarized them, and were prepared to accept the new conditions. Hence it was the policy of the new rulers and the scholars to come to an understanding and are strongly the severe conditions. understanding, and an active endeavour was made to restore the Confucian literature which survived the fires of Ts'ing, for such writings were now almost the sole survivors of the ancient records, and were regarded with a new interest and an ever growing veneration. The course of time served only to deepen the impression, though Confucianism did not succeed in obtaining exclusive recognition until long ages of conflict with Tacism and Buddhism had passed. The masses, too, were predisposed in favour of the Confucian system, not only because of its intrinsic excellence, but because it advocated the rights of the people, and aimed at individual happiness as well as at the larger issue of national tranquillity. Hence it was to the interest of all classes—the newly established rulers, the scholarly classes, and the majority of the people—that the system of Confucius should be accepted as a moral code, even though the feudal accepted as a moral code, even though the teudal conditions to which it owed its birth, and for the amelioration of which it had been designed, had long passed away. The establishment of the Hanlin academy and of the system of literary examinations, during the Tang dynasty (A.D. 755), had the effect of encouraging the study of the Confucian classics amongst all sections of society, since a complete knowledge of the text was required by those who presented themselves for examination by those who presented themselves for examination with a view to official employment.

5. Defects of Confucianism.—The failure of

Confucianism to satisfy the cravings of man's spiritual nature, its attitude of reserve on questions affecting the unseen world, its silence with regard to sin and its remedy, and its equivocal references to the possibility and value of prayer all these have had the effect of paving the way for the introduction of Buddhism, with its doctrines of an All-merciful One, its spiritual aids and conand All-Indicated and the control of a 'Western Paradise,' and its recognition of woman's place in its propaganda (cf. art. China [Buddhism in]). Here also is offered a field where Christianity, when once relieved of the prejudice and suspicion which now encompass it, will find a place and a welcome, and the true Sage whom Confucius dimly outlined, the true 'Coming One' of whom the Buddha prophesied, will be recognized in Jesus Christ, in whom alone the highest definition of brotherhood is exhibited, and in whom alone fatherhood, in the ultimate sense, is propounded—the Fatherhood of God, whose offspring is not limited to the confines of the four seas, but embraces 'all nations of men' who 'dwell on all the face of the earth' (Ac 1729); in whom also is found that motive power which can compensate for the weaknesses and disabilities of a corrupted human nature, and can enable men to attain to the highest perfection-a standard far transcending that which Confucius had in mind when he enunciated his great axiom, 'Rest in the highest excellence.'

CONGREGATIONALISM.—I. The name.—

CONGREGATIONALISM.—I. The name.—The term 'Congregational' came into general use about the beginning of the great Civil War in England, and contemporaneously in New England, as descriptive of a form of Church polity in which the local congregation is the unit of organization and the source of ecclesiastical government (e.g. Richard Mather, An Apologie, London, 1643 [written 1639], p. 6, and generally in the literature of the succeeding years). From the last decade of the 16th cent. its adherents had been nick-named 'Brownists,' from Robert Browne (see Brownism). Against this name they protested (e.g. A True Confession, Amsterdam, 1596, title; An Apologeticall Narration, London, 1643, p. 24). They were also called 'Separatists,' because of their withdrawal from the English Establishment. The title 'Independency' was attached to the system at about the same time as that of 'Congregationalism' (in 1642), and, though an object of early protest (e.g. An Apologeticall Narration, p. 23), long remained its usual designation in Great Britain, though it is now generally supplanted by 'Congregationalism,' in America it was never in use. 'Congregationalist,' as a title of the adherents of the polity, is encountered in 1692 (C. Mather, Blessed Unions, Boston); and 'Congregationalism,' in 1716 (I. Mather, Disquisited, J. 1942, 1943, p. 1124.

tion on Ecclesiastical Councils, Boston, p. vi). As a polity, Congregationalism is much more wide-spread than the Congregational name. The Baptists, the Plymouth Brethren, the Disciples of Christ, the Unitarians of the United States, as well as certain sections of the Adventists and of the Lutherans, are congregationally governed. In this article, however, only that group of Churches to which the name 'Congregational' is attached by historic, popular, and official usage, will be considered.

2. Fundamental principles.—Early Congregationalism was a product of the devotion of the Reformation epoch to the Bible. That period exalted the Bible as the only rule of faith and practice. If the Scriptures teach fully all that it is requisite for men to know or believe, and all duties of the Christian life, it was but logical to raise the question whether they did not also contain a complete and authoritative guide as to the nature, organization, officering and administration of the Christian Church. It was the conviction that the Bible contains such a pattern that gave rise to Congregationalism.

'The partes of Church-Government are all of them exactly described in the word of God . . . soe that it is not left in the power of men, officers, Churches, or any state in the world to add, or diminish, or alter any thing in the least measure therein' (Cambridge Platform, 1648, ch. i.; see also A True Confession, 1596, of the London-Amsterdam Church, ch. xx.).

Examining the Scriptures, therefore, in the light of the knowledge of their age, and under a profound conviction of an inspiration which made every portion a word of God, the Congregationalists of the 16th and 17th cents. denied the existence of national or territorial Churches; and, while holding that the invisible Church 'contexpent in it all the Elect of God that have bin, are, or shal be' (A True Description, Dort, 1589, p. i), affirmed that none but local associations of experiential Christians are visible Churches. Each of these Churches has Christ as its immediate and only Head. Each 'hath powre and commandement to elect and ordeine their own ministerie,' as well as 'to receive in or to cut off anie member' (A True Confession, chs. xxiii. and xxiv.). Each local church is therefore a completely self-governing body.

There can be no doubt that early Congregationalism telt a mystical conviction, not now characteristic of it, that Christ is in so real and true a sense the Head of each church of His disciples, and they are so one with Him by covenant, that the acts of such a church, though those of human agents, are in vital reality His acts, whether in the admittance of members, the choice of officers, or the administration of discipline.

That which distinguishes between a chance assemblage of Christian people and a church is that the members of the local congregation are united into church-estate by 'a willing covenant made with their (hod' and with one another (R. Browne, A Booke which sheweth, Middelburg, 1582, p. 3). 'A company becomes a Church, by joyning in Covenant' (R. Mather, An Apologie, p. 5). Yet this covenant is not necessarily formal, though it is more desirable that it be so, for 'wee conceive the substance of it is kept where there is a real agreement and consent of a company of faithful persons to meet constantly together in one congregation for the publick worship of God and their mutuall edification' (Cambridge Platform, ch. iv.). The only fit persons to enter into such a covenant, and hence the only proper church-members, are those of personal religious experience; but, by a comparison with the Abrahamic covenant of Gn 17?, early Congregationalists argued that the children of such covenanting members were included in the parents' covenant and were themselves therefore church-members. The status of such children, when grown to maturity and not conscious of a personal religious

faith, was a sore puzzle to New England Congregationalism from the middle of the 17th to the end of the 18th cent., and led to the strenuous controversies known as the Half-Way Covenant discussions; but the belief of Congregationalism has always been that the true material of churchmembership is to be found only in conscious and purposeful Christian discipleship.

Such a local church as has been described should have no officers but those of NT example have no officers but those of NT example—
'pastors, teachers, elders, deacons, helpers' (A True
Confession, ch. xix.). The 'pastor' 'hath the
guift of exhorting and applying especiallie';
the 'teacher' that 'of teaching especiallie' (R.
Browne, A Booke which sheweth, p. 32). Both
preached, though the teacher gave special attention to doctrinal exposition. Both administered
the sacraments. The 'ruling elder' was a disciplinary officer, reckoned to the ministry, whose
'work is to joyn with the pastor and teacher in
those acts of spiritual rule which are distinct from
the ministry of the word and sacraments' (Camthe ministry of the word and sacraments' (Cambridge Platform, ch. vii.). Only in the absence of pastor and teacher could the ruling elder preach, pastor and teacher could the ruling elder preach, and in no case could he administer the sacraments. All three officers, known as 'teaching' and 'ruling' elders, were chosen by the congregation they served, and, in earliest Congregationalism, were ordained by representatives of the congregation. Ordination, being considered but the recognition of a charge in a particular church, was to be repeated at each fresh entrance into office. But by the time that the Cambridge Platform was adopted, in 1648, custom was changing, and ordination was passing from the member-Platform was adopted, in 1648, custom was changing, and ordination was passing from the membership of the particular church to the hands of those already in the ministry. 'In such churches where there are no elders, and the church so desire, wee see not why imposition of hands may not be performed by the elders of other churches' (ib. ch. ix.). Ordinations by the membership of the local church ceased soon after the middle of the 17th century. Two other classes of officers were recognized as to be chosen by the church. Of these the century. Two other classes of omeers were recognized as to be chosen by the church. Of these the more important were 'deacons,' whose work was 'to receive the offrings of the church, gifts given to the church, and to keep the treasury of the church, and therewith to serve the tables which the church is to provide for as the Lord's table. the church is to provide for, as the Lord's table, the church is to provide ior, as the Lord's table, the table of the ministers, and of such as are in necessitie' (Cambridge Platform, ch. vii.). Theoretically desirable were 'helpers' or 'widows' 'to minister in the church in giving attendance to the sick' (ib.); but, though an instance or two of their appointment may be found in early English Congregational practice, none held office in New England

New England.
Each local church was from the first free to express its faith in its own language, and to make such tests for admittance to its membership as it chose. Congregationalists from the beginning felt, however, that churches had relations of fellowship one with another, which were generally pictured as those of sisterhood in a common family of God.

'There he synodes or meetings of sundrie churches, which are when the weaker churches seeke helpe of the stronger, for deciding or redressing of matters, or else the stronger looke to them for redresse' (k. Browne, A Booke which sheweth, p. 30). 'Allthough churches be distinct, and therfore may not be confounded one with another; and equal, and therfore have not dominion one over another; yet all the churches ought to preserve church-communion one with another' (Cambridge Platform, ch. xv.).

The two principles of local autonomy and fellowship have always been the foel of Congrega-tionalism, and the latter has preserved it from Independency. The principle of fellowship gave rise almost at the settlement of New England to the occasional council-a meeting of pastors and A STATE OF THE STATE OF THE STATE OF , 4

lay delegates from such churches as the church seeking advice chooses to summon, called to give counsel in such matters as the ordination, installation, and dismissal of ministers, cases of discipline beyond the power of the local church to control, and similar ecclesiastical exigencies. Such councils have always been a feature of American Congre-gational practice, though not employed in Great Britain.

3. Present Congregational principles and organization.—Early Congregationalism, as thus described, has undergone much modification in detail, though its essential features still remain unaltered. Modern Congregationalism, like its prototype, still conceives of the Church as a local company of experiential Christians, autonomous, yet owing fellowship to sister churches. But it does not find, as its early leaders did, any hard and fast pattern of the Church in the Scriptures. It would emphasize the congregational as a desirable, rather than as the only rightful, polity. Congregationalism sees the merits of that polity in its democracy, its voluntaryism, its capacity to develop full, rounded, Christian manhood and womanhood, its freedom, and its flexibility. The number of officers supposed by early Congregationalism to be required by Scripture proved long ago beyond the power of a small congregation to maintain. Though instances of the 'teacher' and ruling elder' continued late into the 18th cent., and a single example of the 'ruling elder' may be found in the 19th, most Congregational churches, on either side of the Atlantic, had before the close of the 17th cent. reduced their officers to a pastor and even a constant of the 17th cent. and several deacons. These are the chief officers of a Congregational church at the present time. Of comparatively modern growth are such addiditional officers as a superintendent of the Sunday School, a treasurer, a choir-master, and the like. Only the pastor is now ordinarily ordained. In a few churches deaconesses have been recently introduced, and, in most, several members are chosen, usually annually, to serve with the pastor and deacons as an executive committee by which the admittance of members and other ecclesiastical business are primarily considered, though with ultimate reference, on its recommendation, to the whole body of the church.

The larger fellowship of the churches is expressed not only in the occasional councils, characteristic of the United States, of which mention has been made, but in a close-knit network of regularly recurrent meetings in which larger or smaller groups of churches are represented. 'Associations' came into existence in Great Britain in the time of the Commonwealth, and probably survived the vicissitudes of the Restoration; but, beginning with that of Devonshire, organized in 1785, county 'Associations' spread rapidly through England. The desire for a larger expression of fellowship found embediment in the additional organization of a 'Union' for Scotland in 1812, and for England and Walca in 1822 (1912 letter). organization of a 'Union' for Scotland in 1812, and for England and Wales in 1832. The latter now meets twice a year. In the United States, the first voluntary ministerial 'Association' was formed in Cambridge, Mass., in 1690. In Connecticut, 'Consociations' of ministers and lay delegates were organized in 1709. The system of meetings representative of churches by pastors and lay delegates was not generally introduced, however, till the early years of the 19th century. It is now universal in American Congregationalism. A variety of nomenclature exists, but uniformity is now being sought, so that the local groups into which churches are confederated shall be known as 'Associations,' and the larger Statewide organizations as 'Conferences.' After preliminary gatherings representative of the Congreliminary gatherings representative of the Congre-

gationalism of the United States as a whole, held in Albany, N.Y., in 1852, and in Boston, Mass, in 1865, the 'National Council of the Congregational Churches of the United States' was formed in Oberlin, Ohio, in 1871, and has met triennially since. Similar organizations exist in Canada and the British colonies. In 1891, an International Council, representative of world-wide Congregationalism, niet in London, and subsequent sessions were held in Boston in 1899, and in Edinburgh in

None of these representative boards, composed of delegates from the churches, possesses judicial or legislative authority. Their action is purely advisory; but such action, in action is purely advisory; but such action, in actual practice, carries great weight. An important function discharged by the local Associations in Great Britain and America is that of certification of ministerial good-standing; and efforts are being made in America to constitute the local Association the regular ordaining body instead of the acceptance.

instead of the occasional council.

4. Relation to the State.—Original Congrega-tionalism denied the existence of a State Church, and practised voluntaryism in church maintenance and ministerial support. As a party of protest it could not do otherwise. At the same time it held, with Calvinism in general, that civil rulers ought "to establish and mayntein by their lawes every part of God's word, his pure relligion and true ministerie" (A True Confession, ch. xxxix.). It was natural, therefore, that wherever Congregationalism became the dominant faith, it entered into an intimacy of association with the State, not whell; intrifice perhaps have a state of the confession with the State, not wholly justified, perhaps, by a strict construction of its principles. The political history of England afforded few such opportunities. Under Cromwell, anorded few such opportunities. Under Cromwell, Congregationalists enjoyed some State patronage; and, in 1658, a council of the Congregational Churches of England, the 'Savoy Synod,' met in London with Governmental approval, though not directly called by the Government, its work being a revision of the Westminster Confession and a statement of polity. From the Restoration to the present day Congregationalism has not been in a position to receive Governmental support in Greet position to receive Governmental support in Great Britain, and therefore counts voluntaryism among its cardinal principles.

In the New England colonies the situation was widely different. In Massachusetts the political franchise was from 1631 to 1664 confined by law to members of Congregational churches. In New Haven Colony it was similarly restricted from 1639 to 1665. Between 1638 and 1655 all the Congregational colonies of New England passed with outward conformity the restoration of a universal faxation. The colonial legislatures, though mainaining the theory of ecclesiastical autonomy, were really the ultimate bodies of appeal in reclesiastical controversies. By civil authority Synods' were called, composed of ministers and epresentatives of churches, to discuss doctrinal and administrative problems in 1637, 1646, 1662, 679, 1708, and 1741. The Congregational churches were a real 'Establishment,' from the support of which Episcopalians were not relieved in Massa-husetts and Connecticut till 1727, and Baptists and Quakers not till 1728 and 1729. This contexion with the State continued in Connecticut till 1818, and in Massachusetts till 1834. Since hen, in America, Congregationalism has had aurely voluntary support; but voluntaryism has never been a fundamental contention in America is in Great Britain. American Congregationalists ave, however, cheerfully acquiesced in the separation of Church and State characteristic of the Inited States.

5. Continental antecedents.—It is difficult to statutes basing ministerial support on universal taxation. The colonial legislatures, though maintaxation. The colonial legislatures, though maintaining the theory of ecclesiastical autonomy, were really the ultimate bodies of appeal in ecclesiastical controversies. By civil authority 'Synods' were called, composed of ministers and representatives of churches, to discuss doctrinal and administrative problems in 1637, 1646, 1662, 1679, 1708, and 1741. The Congregational churches were a real 'Establishment,' from the support of which Engennelians were not relieved in Massa. which Episcopalians were not relieved in Massachusetts and Connecticut till 1727, and Baptists and Quakers not till 1728 and 1729. This connexion with the State continued in Connecticut till 1818, and in Massachusetts till 1834. Since then in America Congregationalism has bed. then, in America, Congregationalism has had purely voluntary support; but voluntaryism has never been a fundamental contention in America as in Great Britain. American Congregationalists have, however, cheerfully acquiesced in the separation of Church and State characteristic of the United States.

estimate the possible influence of the more radical Continental parties of the Reformation age in the origin of Congregationalism. Their direct connexion it is impossible to demonstrate, and English Congregationalism seems far more a radical growth out of English Puritanism than any effect of Continental discussions. Nevertheless, the fact deserves notice that many of the most characteristic positions of Congregationalism were anticipated by the radicals of the Reformation age, notably the Anabaptists (see art. ANABAPTISM).

istic positions of Congregationalism were aniucipated by the radicals of the Reformation age, notably the Anabaptists (see art. ANABAPTISM).

Originating in Switzerland in 1523 or 1524, and apparently arising nearly contemporaneously in other parts of the Continent, the Anabaptists were known chiefly for their rejection of infant baptism, their chiliastic hopes, their condemnation of oaths, their opposition to war, their denial to Christian disciples of the right to hold civil office, and their criticism of the Augustinian theology. Congregationalism followed them in none of these things. But they also held that the Church is made up of local congregations of experiential Christians, and that each congregation is self-governing, and is empowered in democratic fashion by the suffrages of its members to choose and ordain its own officers and administer its own discipline. They held that the Bible is the all-sufficient rule of faith and practice. In these principles Congregationalism agreed with them. Drawn mostly from the ignorant lower orders of the population, though not without a few educated leaders, the Anabaptists were severely persecuted by Catholics and Protestants allike; and, in the opinion of their opponents, the movement bore its appropriate frutage in the frightful fanaticism in Munster in 1534–1535. The fanatical element was only a fraction of the Anabaptist party, however, and notably under the lead of Menno Simons (1492–1559) it grew in orderly fashion, especially in the Netherlands, where it obtained protection from William the Silent, and became wide-spread among the artisan classes. The terrible wars with Spain through which the Netherlands independence was achieved drove thousands of Protestant Dutch and Walloon working-men to England, where they constituted a not inconsiderable element in the population of London, and more than half the inhabitants of Norwich—cities intimately identified with the beginnings of Congregationalism and the series were Anabaptists, but there were Anabaptists among

cussion arose, it was forced by practical rather than by theoretical considerations. England pre-sented a most difficult problem at the beginning of the reign of Elizabeth. A clergy and a popula-tion, a great proportion of whom, while eager to maintain England for Englishmen, were averse to any considerable doctrinal changes, had accepted with outward conformity the restoration of a uniform service in the English tongue, and admitted

Church of England itself, and urging its further reformation along lines essentially borrowed from Presbyterianism as it had been developed under the influence of Calvin and his disciples. This seemed to him and to his party the Scriptural model of what a Church should be. Cartwright held to the existence of a national Church. The disaffected Puritan was not to separate from it; but to labour in it to introduce as much of what he believed to be Gospel order and discipline as he might, and to wait for the strong hand of civil authority to reform the often-altered Church of Bugland into full conformity to what he deemed the Divine pattern. To come out from it and to found different churches was no part of the duty of a Christian. These views of Cartwright represented the opinions of the vast majority of Puritans down to the Great Rebellion.

To the more radical thinkers of the time this condition of things seemed intolerable. They would dition of things seemed intolerable. They would come out from the Church and organize at once as they believed the Church should be organized. They were 'Separatists.' Such was an obscure company of which Richard Fitz was pastor, which was arrested in Plumber's Hall, London, 19th June 1567, and has often been called 'the first Congregational Church.' But their Congregationalism, though evident, was not systematically developed. The first careful theoretic exponent of Congregationalism was Robert Browne (1550 ?-1633), whose life and doctrines are considered in art. Brownism. Whether through the influence of his books, or as an independent illustration of the same tendencies which led Browne to separation, a similar movement soon showed itself in London, under the leadership of a radical Puritan clergyman, John Greenwood (?-1593), and a lawyer of ability, Henry Barrowe (1546?-1593). Arrested in 1587, they were yet able to write from their prison treatises of which Barrowe's A Briefe Discount of the Following Associated with the Colombia of the Barrowe's A Briefe Discount of the Following Associated with the Colombia of the Barrowe's A Briefe Discount of the Following Associated with the Colombia of the Barrowe's A Briefe Discount of the Following Associated with the Colombia of the Barrowe's A Briefe Discount of the Barrowe's coverie of the False Church, 1590, is the most important. Their sympathizers increased, however, and, in 1592, a Congregational Church was formed in London, or, if organized four or five years earlier, as is possible, was then more definitely established, with Francis Johnson (1562-1618) as its 'pastor' and Greenwood as its 'teacher.' This activity excited the authorities. On 6th April 1593, Barrowe and Greenwood were hanged for denying the queen's ecclesiastical supremacy, and the rest of the church was gradually driven into exile. It found a refuge in Amsterdam, where its experience proved stormy owing to exaggerated attempts to enforce discipline.

The same causes which had resulted in the movements in which Browne and Barrowe were leaders induced a company of advanced Puritans in Gainsborough and the region about Scrooby to organize two Separatist churches, probably late in 1605 or early in 1606. Of that in Gainsborough, Rev. John Smyth (?-1612) was the leader; and in that meeting in the home of William Brewster (1560?-1644), postmaster in Scrooby, Rev. Richard Clyfton, Rev. John Robinson (1576?-1625), and the youthful William Bradford (1590-1657), in addition to Brewster himself, were the most prominent. Compelled to leave England, both congregations found a refuge in Amsterdam, where Smyth and his associates adopted Baptist principles. The Scrooby exiles, under the lead of Robinson, removed, in 1609, to Leyden; but, being anxious to live on English soil, even across the Atlantic, a minority of the church, under the spiritual oversight of 'ruling elder' William Brewster, made the voyage in the Maylover, and established the colony of Plymouth in New England in 1620. Meanwhile, in 1616, a Congregational church, which still exists, was founded in the Southwark district of London by Rev. Henry Jacob (1563-1624), who had been a member of the Leyden congregation.

It may be doubted, however, whether Congregationalism would have developed in power on either side of the Atlantic had it not been for the stimulus of the great Puritan struggle with Charles I.

Puritan thought, despairing of securing the reforms desired in England, inclined to seek the New World to which the Scrooby-Leyden Pilgrims had already shown the way. In 1628 the advance-guard of Puritan emigration, under John Endicott, landed in Salem, Massachusetts. On 4th March 1629 the royal charter creating the 'Governor and Company of Massachusetts Bay' was sealed. The same year the Salem colony was largely reinforced. In 1630 no fewer than 1000 persons left old England for the new, and the emigration ran full tide till the advent of the Long Parliament in 1640 changed the political situation in the homeland. To the Massachusetts colony of 1629, Connecticut was added in 1635–1636, and New Haven in 1638. These settlers were Puritans, not Separatists. They were, many of them, men of wealth and position, and they had among them a large proportion of well-educated, influential ministers. Yet the remarkable fact is that, on their arrival in the new land, they organized their ecclesiastical institutions, beginning with the church in Salem in 1629, essentially on the model of Separatist Plymouth. The explanation is that the Scripture model of Church government seemed to them that which Separatism had already anticipated, and, under the freedom of the plastic conditions of new settlements, they created churches of practically the same type as the earlier Separatist congregations. But, as has been indicated in the section on the relations of Congregationalism to the State, these New England churches became a real Establishment, and enjoyed State support in a manner for which the earlier Separatism never had opportunity, and which it repudiated in principle. The history of Congregationalism in 17th-cent. New England was largely that of growth in numbers by reason of the slow increase of the population, of a declining religious enthusiasm, and of discussions arising from the development of polity. Education was fostered not only by lesser schools, but by the founding of Harvard College in 1636, and of Yale College in 1701. There was little doctrinal division, all the churches representing the current Puritan Calvinism, and there was remarkable uniformity in organization, worship, and method.

Congregationalism made slow progress in England from its permanent establishment in Southwark in 1616 to the meeting of the Long Parliament in 1640. Its chief representatives found refuge in New England or in the Netherlands. But, with the outbreak of the struggle between King and Parliament, and the return of a number of the exiles, it grew very rapidly. Though the Westminster Assembly, which began its sessions in 1643, was overwhelmingly Presbyterian, it included five determined Congregationalists and several at least partial adherents. The desire of Cromwell and the army for a large toleration was favourable to the spread of Congregationalism. Congregationalists were appointed to many important ecclesiastical and educational posts under the Protectorate, and enjoyed the cordial favour of Cromwell. The Savoy Synod, held in London in 1658, gathered the representatives of 120 churches. Congregationalists suffered with other Nonconformists from the repressive policy of the Restoration, but their churches were not extinguished, and at the Revolution in 1689 the Toleration Act secured them legal standing, under rather onerous conditions, in common with other Dissenters. The enthusiasm of the epoch of the struggle between King and Parliament and of the Commonwealth was spent, and Congregationalism shared in the spiritual decline of the first half of the 18th century. It was touched, however, but slightly by the Arian and Socinian defection that made such inroads on contemporary English Pres-

byterianism. During the latter half of the 18th cent. it felt with increasing power the stimulus of the great Evangelical movement which the Wesleys and Whitefield had initiated, and experienced a profound spiritual re-awakening which led to rapid growth. County Associations were generally estab-lished between 1785 and 1810. The London Missionary Society, nominally an undenominational organization for carrying the gospel to the heathen, but increasingly Congregational in constituency, came into being in 1795. The Home Missionary Society was organized in 1819, and the Colonial Missionary Society in 1836. The year 1832 saw the formation of the Congregational Union of England and Wales. The period from that time to the present has been one of healthful growth and spiritual fruitfulness.

In Scotland, Congregationalism did not gain a permanent foothold till the last decade of the 18th cent., when it won its way as the supporter of a warm, evangelical type of piety and preaching. Its hold on the Scottish people has been relatively small, but it has proved a vigorous force in the religious life of the nation.

The earlier part of the 18th cent. witnessed a decline in the spiritual vigour of Congregationalism in America as in England. From this condition in in America as in England. From this condition in America it was powerfully aroused by the 'Great Awakening' in 1740-1742, through the preaching of George Whitefield, Jonathan Edwards, and other promoters of the revivals. The 'Awakening' led to division of sentiment, though not to actual separation, in the New England churches—the 'Old Lights' opposing its methods, which the 'New Lights' favoured. With Jonathan Edwards (1703-1758) a great theological development began, essentially Calvinistic in fundamentals, but with essentially Calvinistic in fundamentals, but with no little modification of historic Calvinism. This no little modification of historic Calvinism. was continued by Joseph Bellamy (1719-1790), Samuel Hopkins (1721-1803), Jonathan Edwards the younger (1745-1801), Nathanael Emmons (1745-1840), Timothy Dwight (1752-1817), Nathaniel W. Taylor (1786-1858), and others, and produced the most distinctive school of theology that America has originated. In the Revolutionary War the Congregational churches sympathized warmly with the colonial cause. The year 1792 saw the beginning of a great epoch of revivals, which continued to recur at intervals till 1858. By 1800, Congregationalism, which had been practically confined to New England, began to spread westward with the settlement of the country, and the process was initiated which has resulted in the establishment of nearly three-quarters of the present Congregational churches of the United States beyond New England borders.

By 1815 a Unitarian movement, the roots of which ran back into the 18th cent., was felt especially in Massachusetts, and resulted in a separation, which still continues, from the main Congregational body. The American Board of Commissioners for Foreign Missions was organized in 1810 to do the work indicated in its title. Home missionary work was begun by State bodies, commencing with Connecticut in 1774, and resulted, in 1820, in the formation of a Home Missionary Society of national scope. The American Missionary Associational which has laboured chiefly among the Negroes and the Indians, came into being in 1846; and the Congregational Church Building Society dates from 1853.

World-wide Congregationalism has expressed its fellowship in International Councils, of which

previous mention has been made.

7. Beliefs.—Congregationalism has been a system of Church polity rather than a peculiar form of faith. In its early history it stood, in common with Puritanism in general, on the basis of

Calvinism. The Cambridge Synod in New England, in 1648, approved the doctrinal portions of the Westminster Confession; and the Savoy Synod in London, ten years later, expressed a like concurrence, except for slight modifications. The 'New England Theology' of the 18th and 19th cents., whatever its departures from earlier Calvinism, belonged to the Calvinistic school. It regarded itself as an improved or 'consistent' Calvinism. The Declaration adopted by the Union of the Congregational Churches of England and Wales in 1833 is distinctly, though mildly, Calvinistic. The National Council of the Congregational Churches of the United States, held in Boston in 1865, was with difficulty prevented from adopting a declaration that the faith of the Churches was 'that which is commonly known among us as Calvinism.' The Declaration was frustrated by the determined efforts of those who deprecated any party shibboleth. But the later years of the 19th cent. witnessed a rapid decline of interest in the older doctrinal discussions. The 'Declaration' adopted by the National Council at Oberlin, in 1871, was designed by its omissions to make the way easy for those of Arminian sympathies. The Creed, prepared in 1883 by a commission appointed by the National Council, maintains the same neutrality between Calvinism and Arminianism. It will be remembered that these various expressions of belief have the value only of testimonies, each local church being free to declare its faith in its own way. Since the last of them was set forth, however, the Congregational churches, in common with Protestantism generally, have been passing through a period of theological re-statement—the result of Biblical criticism, of the wide prevalence of an evolutionary view of history, of the new emphasis on the Divine immanence, and of a quickened conception of social service as a main aim of the Christian life, whether of individuals or of Churches. No body of Christians has on the whole been more willing to welcome these newer views than the Congregationalists, but the degree in which they have been accepted varies widely in different churches. It is not sufficient, however, to disturb their sense of fellowship and of continuity with their historic past, or the broad fundamental outlines of their conception of the meaning of the Gospel.

8. Worship.—The Congregational churches, at their origin, shared to the full the Puritan objections to ceremonies and vestments which seemed to savour of Romanism, and, like the more radical Puritans in general, they rejected fixed forms of prayer. They long confined the hymns of their services to rhymed portions of Scripture. It was not till the first half of the 18th cent., through the influence of the English Congregational hymnwriter, Rev. Isaac Watts (1674–1748), that this prejudice against hymns 'of human composition' gradually broke down. The typical Congregational service of the 17th cent becan with a mayer tional service of the 17th cent. began with a prayer in words of the minister's own choosing, followed by the reading of Scripture, generally with comments verse by verse, then the singing of a psalm, the sermon, a second free prayer, a second psalm, and the benediction. This order was slightly modified, very possibly through the influence of the Westminster Directory, so that the sequence became commonly a brief prayer of invocation, reading of the Scriptures, usually without comment, singing, a 'long prayer,' the sermon, prayer, singing, and the benediction. This remained the almost universal order till within half a century, and still constitutes an approximate outline of Congregational worship. The last few decades have witnessed a large use of responsive readings, anthems, and other efforts at the 'enrichment' of

service, and the individual freedom of each congregation makes possible a considerable variety of gregation makes possible a considerable variety of usage. Opposition to some use of fixed forms of prayer is waning, but Congregational worship is still non-liturgical in its fundamental character. The Lord's Supper has been observed since the early days of Congregationalism at intervals of a month or two months. Till near the close of the 18th cent. Congregational worship involved two corriects such as here been described, each Sunday. services, such as have been described, each Sunday, and in large towns a mid-week 'lecture,' which was really another sermon. About the end of the 18th cent. the 'prayer-meeting' was generally introduced for the cultivation of the Christian life -by prayer, Scripture exposition, singing, and informal addresses, under the presidency of the pastor, but with free participation by the laity. It has been ever since a feature of congregational worship, but its successful maintenance, save in times of unusual religious interest, is generally regarded as one of the most difficult of pastoral problems.

9. Characteristics.-Congregationalism has alo. Characteristics.—Congregationalism has always favoured education, both in the pulpit and in the pew. In England many 'academies' were founded after the Toleration Act and throughout the 18th century. A number of these have become flourishing 'colleges,' their aim being to train a learned ministry and to provide the higher education for laymen which ecclesiastical tests, now abrogated, then made unattainable in the Universities. In the Universities of the Congregationalists sities. In the United States the Congregationalists have been foremost among religious bodies in planting colleges and fostering schools. The Congregational spirit has not been sectarian, however, and these institutions have been freely opened, and have not been used as a means of denominational

propaganda.

Congregationalists have been greatly interested home and foreign missions. The efforts of the in home and foreign missions. The efforts of the Rev. John Eliot (1604-1690), begun in 1646, for the conversion of the Massachusetts Indians, led to the incorporation by the Long Parliament, in 1649, of the first English Foreign Missionary Society, the 'President and Society for the Pro-pagation of the Gospel in New England.' The establishment of the London Missionary Society in 1795 and of the American Board of Commissioners for Foreign Missions in 1810 has already been noted.

The flexibility of Congregationalism has made it easy to try experiments in methods of Christian work, and these churches, as a whole, have always been ready to welcome novel activities which seemed to promise greater usefulness in

Christian service.

10. Problems.—The problems of Congregationalism are those of democracy generally. That which is most pressing is how to secure efficiency without sacrificing democratic liberty. Congregationalism has proved itself admirably adapted to rural conditions among a homogeneous population of intelligence. It has been less successful in cities where contrasts in wealth and education are extreme. Each church being a self-governing, democratic community, there is always denorer that these community. community, there is always danger that those congregations in the more needy parts of a city will be unduly weak in resources both of money and of men of ability. Congregationalism endeavours, with partial success, to counteract this tendency by Home Missionary aid and superintendence. There is also the peril, in city communities, where congregations are gathered largely by elective affinity, that a church may become essentially a religious club. As in all democratic bodies, union for strategic advance is often accomplished at the cost of undue effort, or is not achieved at all. order to make itself more efficient in these re-

spects, without forfeiting the essential autonomy of the local church, Congregationalism, both in Great Britain and in America, is at present dis-Great Britain and in America, is at present displaying a centralizing tendency. The advisory powers of Associations are being extended and increased, and a system of superintendency, by committees or individuals, without judicial or mandatory powers, but with large advisory influence, is in process of development. The watchword of this movement, now felt on both sides of the Atlantic, is 'a more efficient Congregationalism.' tionalism.

II. Statistics.-In the statistics of Congregationalism only those who have become church-members by a profession of personal Christian experience are included. The figures, it is usually thought, must be multiplied five-fold to represent

the total number of adherents.

In the following table only church-members are included:

Countries.	Churches, Chapels, and Stations.	Church Members.	Sunday- School Scholars.
England and Wales Scotland Ireland Channel Islands Conada— Nova Scotia New Brunswick Ontario Quebec Newfoundland British Gniana New Sonth Wales Queensland South Australia Victoria Western Australia Victoria Western Australia South Affica American Zulu Mission Natal Japan Syria United States Independent and Mission Sunday Schools American Foreign Mission Sunday Churches	4,652 211 40 12 21 8 88 56 13 53 82 50 63 87 43 49 49 47 45 33 49 47 45 94 47 45 94 47 45 94 49 49 49 47 45 49 49 49 49 49 49 40 40 40 40 40 40 40 40 40 40 40 40 40	459,147 35,920 2,262 333 831 277 5,538 3,725 5,146 4,950 2,227 3,388 4,219 1,189 2,241 902 17,605 2,406 503 600 3,422 2,406 503 600 3,422 57 608 73,071	675,785 34,521 4,621 444 733 73 4,574 2,959 4,663 8,443 4,594 6,011 7,448 2,281 2,033 1,897 7,938 2,225 408 10,044 600,367 49,776 73,085

LATERATURE.—The literature of Congregationalism is enormous, but a substantially complete hibliography to 1879, embracing 7250 titles, may be found in H. M. Dexter. The Congregationalism of the last Three Hundred Tears as seen in its Literature, New York, 1880. The following works will be found of special value:—

(1) POLITY.—Robert Browne, A Booke which sheweth the Life and Manners of all true Christians, Middelburg, 1682; Henry Barrowe, A Briefe Discoverie of the Fulse Church, Dort, 1590; John Robinson, various treatises between 1610 and 1625, collected in R. Ashton's Works of John Robinson, London, 1851; Richard Mather, Church-Government and Church-Covernant Discussed, London, 1643; John Cotton, The Keyes of the Kingdom of Heaven, London, 1644; Thomas Hooker, Survey of the Summe of Church Discipline, etc. (The 'Cambridge Platform'), Cambridge, Mass. 1649, and twenty-five later editions; A Declaration of the Futth and Order consed and practiced in the Congreg. Churches in England (The 'Savoy Declaration'), London, 1668, and eleven later editions; Heads of Agreement Assented to by the United Ministers in and about London, London, 1691, and many later editions; A Confession of Faith, etc. (The 'Saybrook Platform'), New London, Conn. 1710, and six later editions; John Wise, A Vindication of the Government of New England Churches, Boston, 1717; Cotton Mather, Ratio Disciplinae, Portland, Maine, 1829; Woodbury Davis, Congreg. Polity, Usages, and Lava, Boston, 1865; H. M. Dexter, Congregationalism: What it is; Whence it is; How it Works, Boston, 1865, also A Handbook of Congregationalism, Boston,

1890, and The Council Manual for a Congreg. Church, Boston, 1896; Edgar L. Heermance, Democracy in the Church, Boston, 1906. The more important documents relating to Congregational polity have been collected and annotated by Williston Walker, The Creeds and Platforms of Congregationalism, New York, 1898.

(2) HISTORY.—Champlin Burrage, The Truc Story of Robert Browne, Oxford, 1906; F. J. Powicke, Henry Barrow, London, 1900; O. S. Davis, John Robinson, Boston, 1903; William Bradford, Hist. of Plymouth Plantation, Boston, 1895; John Brown, The Plygrim Fathers, London, 1895; E. Arber, The Story of the Pulgrim Fathers, London, 1897; John A. Goodwin, The Plygrin Republic, Boston, 1888; Cotton Mather, Magnatia Christi Americana, London, 1702; Benjamin Hanbury, Historical Memorials relating to the Independents, London, 1839+44; William B. Sprague, Annals of the American Pulput, New York, 1857; George Punchard, Hist. of Congregationalism, Boston, 1805-81; John Waddington, Congrey, Hist., London, 1880-78; H. M. Dexter, The Congregationalism of Walker, Hist. of the Congreg, Churches in the last Three Hundred Years as seen in its Literature, New York, 1880; Williston Walker, Hist. of the Congreg, Churches in the United States, New York, 1894; Albert E. Dunning, Congregationalists in America, New York, 1894; George Leon Walker, Some Aspects of the Religious Life of New England, Boston, 1897; James Ross, A Hist. of Congreg, Independency in Scotland, Ghasgow, 1900; Williston Walker, Ton New Fragland Leaders, Boston, 1901; R. W. Dale, Hist. of Eng. Congregationalism, London, 1907. An official Congregational Year-Book is issued annually by both the British and the American bodies.

CONNEXIONALISM .- There are many systems of Church organization in which itinerant evangelists link together scattered congregations, and maintain a strong corporate feeling by regular meetings among themselves, when they as a body arrange the sphere of work for each, and often exercise other functions of government. Such systems are usually styled 'Connexional,' and although that name is also employed more loosely, it is such systems that are here compared with one another. They flourish where a democracy, or an oligarchy, is inspired with a zeal for propaganda, and especially where a revival is prompted and supported by Bible study.

Connexional elements may be traced even in the Apostolic era, when the Apostles allotted among themselves their fields of labour, and when St. Paul and his comrades travelled widely, and kept in touch with the churches they founded, both by visits and by letters, and by delegates to supervise, such as Timothy, and Tychicus, and Titus. But the Greek churches brought over the Greek love of independence, and the Third Epistle of John shows at the close of the Apostolic age a local minister revolting against the mere presence of any visiting missionary. This tendency was reinforced by a jealousy between the officers of business, appointed primarily to 'serve tables,' and the gifted brethren, including those who were set apart to give themselves to the ministry of the word. The local administrators steadily gained in esteem at the expense of the travelling evangelists, and, when the Montanist movement failed. the reaction within the Catholic Church practically ended the career of the evangelists. They survived only on the frontiers of Christendom, and we shall see that connexionalism flourishes best in the mission stage of a church, and in communities which emphasize evangelism.

While a bureaucracy of church officials developed, on lines suggested by the Roman civil service, there was no room for connexionalism in this diocesan system. But among the laity there arose a new plan of organization, whereby those who were in thorough earnest about their Christian life put themselves under severe discipline as monks. Basil for the East, and Benedict for the West, produced bodies of rules to order the community life, and these were widely adopted. But neither the one nor the other contemplated evangelism as a leading feature; salvation of self rather than salvation of others was the chief aim. Although the Iro-Scottish monks had a loftier conception, yet they

conspicuously lacked the faculty of organization, and their foundations remained isolated. races have displayed a genius for method and order—the Roman and the English,—and certain developments of the Benedictine scheme due to these nations show signs of connexionalism.

Thus Stephen Harding in 1119 inspired the Cistercian method, whereby the religious belonged to an Order rather than to a single House. Year by year the Abbots of the Houses met in consultation, and in theory not only the humbler members, but the Abbots themselves, could be transferred from convent to convent. Since, however, no systematic plan of rotation was adopted, or even any rule that rotation should take place, there was in practice much inertia. And as the aims of the Order did not exalt evangelism, there was no special motive for circulation.

A century later the English Benedictines moved in the same direction, but the Italians evolved farthest, producing the Silvestrine, the Celestine, and the Olivetan organizations. Instead of officers being appointed for life, they had fixed terms of duty; a General Chapter chose a nominating committee which selected them. This line of committee which selected them. This line of evolution culminated in 1432, with the approval of the Cassinese constitution. Details of these schemes are given by Abbot Gasquet in his Introduction to Montalembert's Monks of the

West (Eng. tr. 1861-79).

It night have been expected that the friars would show more originality, that their ideal of brotherhood would express itself in a democratic rule, and that their ideal of service would impel them to steady organized work for others. But the movement was soon captured by the Roman Curia, and the time-honoured diocesan pattern was adopted, with the slight changes needed for definitely local groups of professed Christians instead of areas within which a professed clergy ministered to a population nominally Christian. Thus friaries were grouped into congregations under a provincial, and all were ruled by a minister-general. The Roman monarchical ideal prevailed in the plan of government.

But a similar inovement, originated by Peter Waldo of Lyons, being discountenanced by the authorities, was free to elaborate its own machinery (Newman, Manual of Church History, i. 571-8). In 1218 a conference was held at Bergamo, when, amongst other matters, the polity came up for discussion. An annual meeting was held, usually in Lombardy, when probationers were admitted to membership after long training and testing. They made promises of celibacy, poverty, and readiness to evangelize, quite on the Franciscan model. But, once the initiate was admitted, he found himself a member of a governing corporation, which not only recruited itself and saw to the purity of the whole body, but also required reports from every part of the field, and administered the funds of part of the field, and administered the funds of the community, gathered during the year. The Lombards, indeed, with the Italian instinct, decidedly preferred a single head, chosen for life; and they favoured a general life tenure of all offices. The Germans, again, upheld the plan of Waldo, that all offices should be terminable, and that there should be no single head, but several rectors. In this matter the two parties apparently agreed to differ, maintaining their own customs and recognizing the legitimacy of each others' officers. But the unique feature is that the annual meeting had full powers, and actually exercised them in the appointment of all officers, in allotting to each member his work, and in determining its nature and sphere. To some extent this scheme influenced the Bohemian Brethren and the Anabaptists, though these bodies Moravian

adopted the Italian plan of a single head holding office for life

In1527 an important conference was held at Augsburg, when delegates from the 'Brethren' organized on new lines (Lindsay, Hist. of Reformation, Edinb. 1907, ii. 435). All the officers of all the congregations within a convenient district chose a committee of themselves to act for the group, and the committee chose a president. The districts associated on the same principle, and thus a pyramid of committees was erected. To these people, popularly known as 'Anabaptists,' is therefore due not only the machinery of a single congregation, which was presently taken over by Calvin in his Institutio, and put in practice at Geneva, but also the machinery for an alliance of congregations, adopted in France during 1559, and in Scotland next year, and so well known as the Presbyterian scheme. But the 'Brethren' had one feature which was dropped by the French, the Scots, and the Dutch—an order of evangelists whose business it was to travel and propagate the faith. It is not quite clear how these were appointed, or how their routes were determined—if, indeed, appointment and travelling were not spontaneous rather than systematic. And, although several conferences were held, the persecutions of the next few years were enough to disorganize any machinery.

A year after the fall of Münster, an important meeting was held a few miles away at Bockholt, when the Anabaptists of Lower Germany and England re-organized and adopted the connexional plan (Barclay, Inner Life of the Religious Societies of the Commonwealth, 88). Each congregation sent delegates to an annual meeting, which stationed the ministers and arranged for the support of those who itinerated, besides aiding poor congregations and members. This system was developed in the Netherlands and up the Rhine, and, though many divisions occurred,—into Mennonites, Waterlanders, Doopsgezinden, Flemings, Old Flemings, Frisians, etc.,—yet each body held to the connexional type. As most of these Connexions held the doctrine of passive resistance, and objected to bearing arms or taking oaths, they found their position extremely awkward during the Napoleonic era; and the renewed conscriptions of the last forty years have caused their practical disappearance from Europe, and their enigration to America (Barclay, op. cit. 243). In the New World may still be found the remnants of these ancient bodies, and of kindred organizations like the Schwenkfeldians, true to the connexional type in that the annual meeting governs; but, as the numbers have greatly diminished, the vote is exercised not by officers alone, but by all male members.

Recurring to the Reformation period, we find forty churches in Lombardy and Switzerland acting together; and a special convention was held at Venicein 1550 (Newman, Hist. of Anti-Pedobaptism, Philad. 1896, pp. 327-9). The Waldensian plan so well known in the vicinity had been adopted in general outline, and the government lay in the hands of the itinerant preachers, who associated with themselves candidates under training, and not only visited all the congregations, but also ordained the local ministers. These clurches mostly adopted anti-Trainarian views, and were persocuted till they left the district; but many members went to Moravia and Poland, where they spread their tenets, so that the 'Socinians' were indebted to them for hints on ecclesiastical polity as well as on doctrine.

as well as on doctrine.

The Reformed Churches took over from the Anabaptists the general scheme of organization, and especially the principle that, whether in a

single congregation or in a court supervising several congregations, the power was vested entirely in the officers. Ordinary members might have a voice and vote in electing an elder, but his ordination rested with the existing elders, who thus tended to become a self-perpetuating caste. Ruling elders were usually local, but preaching elders or ministers were liable to move; in Germany and Scotland the authority of the State was interposed in various matters, extending occasionally to the location of a minister, and thus the autonomy of the Churches was crippled. Owing partly to the high educational qualifications of the Reformed ministry, and partly to general inertia, long tenure of a pastorate became customary, and thus one frequent feature of a Connexion was obscured. But in theory the whole spiritual government of a Presbyterian church resides with the ordained members, and they have at least a veto on any increase of their number, or on the translation of any minister; nor is his personal preference a decisive factor any more than the wish of a single congregation. While these theories are still upheld, the connexional element is not extruded, however little certain powers may be actually exercised. Yet there has been much specialization, so that ruling elders hardly rank themselves with ministers on the ground of their common ordination; and their interests are so local that they hardly consider themselves a class apart from their fellow-members, with a corporate life of their own; still less do the officers as such pursue systematically a policy of extension, a policy which seems closely linked with the vigour of connexionalism.

In England, voluntary sects were unable to organize till the general relaxation of government in 1640. Then the General Baptists, who for thirty years had been in close contact with the Waterlanders of Amsterdam, entered on a vigorous campaign of evangelism. As churches were gathered in different parts of the country, they were kept in touch, and the earliest minutes that survive testify to some plan of organization. Thus, thirty congregations in and near Leicestershire and Lincolnshire sent delegates to a conference in 1651, which stated the faith and order which they held in common: in concise terms they set forth that gifted men are set apart for preaching, and are maintained by voluntary gifts. Five years later a 'General Assembly' was held in London, attended by delegates from Surrey, Kent, Sussex, Bucks, Northants, and other parts. The constitution of the Assembly is not stated, but the minutes show two classes of superior officers: Elders are explicitly said to be local, bound to serve their own congregations for life, and having no status in other congregations; Messengers exercise a general superintendence over whole districts, but are forbidden to choose other Messengers without the unanimous consent of the Churches. The minutes are signed by ten Messengers and eight Elders (Brit. Museum, Add. MSS 36709).

In 1678, Thomas Grantham published a folio on primitive Christianity, and, when expatiating on the officers of the Christian Church, he put in the forefront the Messengers or Apostles, whose per-

In 1678, Thomas Grantham published a folio on primitive Christianity, and, when expatiating on the officers of the Christian Church, he put in the forefront the Messengers or Apostles, whose permanent functions were to succeed the original Apostles 'as Travelling Ministers, to plant churches, and to settle those in order who are as Sheep without a Shepherd.' These, like the Bishops (or Elders) and Deacons, were to be elected by the free choice of the brotherhood and then ordained; and it is expressly laid down that the power of ordination is not limited to those who were already ordained, but is shared by all who have received the gifts of God's Holy Spirit. Then, in discussing General Assemblies, which were proved to be Scriptural, and were therefore

held regularly by the General Baptists, not only the Messengers and Elders who signed were admitted to the meetings, but also any gifted brethren who chose to attend. The office of Messenger was evidently regarded askance by rome. So, from the analogy of Timothy and Titus, it was claimed by Grantham that, while they had a larger circuit, had business in many places, and so were greater servants than the places, and so were greater servants than the fixed ministers, yet they had no jurisdiction over other bishops (Grantham, Ancient Christian Religion, 186). Then, in a special treatise, Grantham showed that the actual practice of the Brethren was to 'send forth Men to act Authoritatively, both in preaching to the World, and setting things in order to remote Congregations, to exercise Discipline by Excommunication of Offenders and remitting the Penitent; by ordaining them Elders, and dispensing to them the Holy Mysteries or Ordinances' (op. cit. 160).

Grantham wrote on his own authority only, but probably expressed the feeling of the Fen districts
—Lincoln, Hunts, and Cambridge. In the same
year a meeting of the General Baptists, near Bucks and Oxon, adopted a Confession, drawn up by Monk, another Messenger, in which Article xxxix.

and Oxon, adopted a Confession, drawn up by Monk, another Messenger, in which Article xxxix. is very explicit:

'General Councils,' or assemblies, consisting of bishops, elders, and brethren, of the several churches of Christ, and being legally convened, and met together out of all the churches, and the churches appearing there by their representatives, make but one Church, and have lawful right and suffrage in this general meeting or assembly, to act in the name of Christ, it being of Divine authority, and is the best means under heaven to preserve unity, to prevent heresy, and superintendency among or in any congregation whatsoever within its own limits or jurisdiction, etc.

In a long article, xxxi., 'Of Officers in the Church of Christ,' we see a slight difference of opinion as to the power of ordination:

The bishop or messenger is to 'be chosen thereunto by the common sufrage of the Church, and solemnly set apart by fasting or prayer, with imposition of hands, by the bishops of the same function, ordinarily; and those bishops, so ordained, have the government of those churches that had suffrage in their election, and no other ordinarily; as also to preach the word or gaspet to the world, or unhellevers. And the particular pastor, or elder, in like manner is to be chosen by the common suffrage of the particular congregation, and ordained by the bishop or messenger God hath placed in the church he hath charge of, 'etc. (Hauserd Knollys Society, Confessions of Futh, pp. 159, 169.

When after 1689 the organization comes into full light, and its records become continuous, we find not only this order of Messengers fully wooted in the esteem of the Connexion, but

we find not only this order of Messengers fully rooted in the esteem of the Connexion, but numerous Associations established, each of which was supposed to have one Messenger at least, while all sent representatives to the General Assembly. As everything depended on voluntary consent, the choice of a new Messenger was a matter of careful negotiation between the Assembly and the Association concerned, usually extending over more than a year, and generally the consent was sought of the church where he was a member. Ordination was by authority of the Assembly, or of the Association concerned, and was usually performed by the existing Messengers. In practice the office was maintained by voluntary subscription, which, however, was not large enough to free the officer from the necessity of supporting himself, often by manual labour. The Messenger usually resided for life within his district, and visited all the churches there freely. The order was considered superior to the Eldership, both priority and presidency being conceded. But there are no signs that the Messengers ever met together apart from the Elders of local churches, or that they acted as a corporate body. The Elders were so far from any system of itinerancy, that in 1696 it was resolved that no Elder might leave his own people and be established as Elder over another people in another place (T. Goadby, By-paths of Baptist History, London, 1871, p. 244). The funds of the Connexion were vested in lay trustees, on trusts so loosely expressed that the Messengers never tried to assert any legal claim to them. (The Minutes of Assembly are published

by the Baptist Historical Society.)
As the Connexion lost vitality during the 18th cent., whole Associations ceased to meet, and therefore their Messengers died out, while the local churches, in many cases, asserted their independence. Then the foundation of the New Connexion of General Baptists effectually stopped the revival of the Old Connexion, and attracted some of its component parts. Yet, even at the present day, there are about a score of churches, unobtrusively pursuing their way, with their Messengers, keeping up their General Assembly, and showing still this primitive connexional system, though completely devoid of that which inspires it, the spirit

of propagandism.

In the 17th cent. this organization had been copied and developed by the Society of Friends, who were also in direct contact with the Dutch Mennonite Connexion (Barclay, op. cit. 342). While a group of local Friends formed a church for local purposes, the provision of evangelists was clearly beyond the power of such a group. At first George Fox organized, then associations of local churches recognized, ministers and certified them as fit to travel; these then shared his responsibility, both gathering converts and organizing them into churches, even appointing the first Elders (ib. 388). By 1661 a regular Yearly Meeting was established in London for the whole Society (ib. 392). As custom became settled, it was agreed that the Travelling Ministers were exofficio members of this Yearly Meeting, and Fox even applied to them the term 'Apostles,' which the General Baptists also had borrowed from Scripture. The other members were to be chosen by the quarterly meetings out of the local Elders, but these did not always sit with the 'Public Labourers' (ib. 404). These Travelling Ministers retained for themselves the right to organize and control their own work of evangelization, which fell entirely into their hands when Fox passed away. They met regularly on Monday and Sunday to arrange where they would preach; they discussed openings for new work, and the character of those who wished to be recognized as ministers, and they kept a roll of their own membership (ib. 381).

The fervour of the age died down, and propagandism became of less importance, so that the Travelling Ministers lost their pre-eminence. In 1735 the Yearly Meeting forbade their meeting to control its own membership, and within twenty years they were brought under the direction of Mixed Meetings, in which the dominant element was a new kind of Elder, whose main business was to administer, not to preach. with the cessation of evangelizing came the transformation from the connexional type in the Society. The pyramidal series of courts remains, but the Travelling Ministers now form a very small element

The general decay of the 18th cent. was met by the vigorous evangelism of Whitefield and Wesley; and, as crystallization took place, it was on the connexional system. In 1744 six clergymen and five lay preachers met, and traced the foundations of the Methodist polity; forty years later, Wesley enrolled a deed in Chancery which settled the government of the Connexion, while in the same year a Conference at Baltimore organized the Methodist Episcopal Church in America. The United Empire Loyalists laid the foundation of Methodism in Canada, while from

England other Methodists spread throughout the British dominions. Questions of Church polity, however, have been fiercely debated, and have led to many secessions in both England and America, which have only partially been offset by reunions; the very principle of these secessions calls in question the connexional scheme. As Wesley preparited it the body with supreme authority organized it, the body with supreme authority in spiritual matters was a Conference of a hundred ministers. These, however, he desired to act in harmony with the whole number of mutually rebeen respected. Thus all questions of doctrine, of discipline, and of ministerial standing and employment, are settled by the ministers in full conclave. It was against the exclusion of other members that revolts chiefly occurred, and the resulting bodies, such as the Primitive Methodists and the United Methodists, temper their Conferences with laymen in at least an equal proportion. Even the Wesleyan Methodists now have a Representative Conference, with equal numbers of ministers and laymen meeting first and dealing with all matters of policy and finance. But here it is to be noted that the trust deeds on which chapel property is held ensure that the enjoyment is secured to the ministers stationed by the Pastoral Conference. The Methodist Episcopal Churches have moved on similar lines; but here the bishops retain their exclusive powers, and when met as a body they define the duties of each member. While an increasing deference is paid to local wishes, the supreme authority technically resides in the Conference, and in England at least the Conferences regularly exercise their powers. The itinerant system is being encroached upon by the claims of central offices or by the new system of Central Missions, in which continuity of service is regarded as important. Wesley's three year rule is also being relaxed, both in the parent body by ingenious constructions of the Deed Poll, and in the offshoots by open legislation.

The title of 'Connexion' was adopted by other bodies, such as the Calvinistic Methodists of Wales, the Countess of Huntingdon's chaplains, and the New Connexion of General Baptists. Historically these originated almost independently of one another and of other bodies, and in their gradual organization they have profited by the experience of Methodists and Presbyterians, besides steadily rejecting the central feature of the everpresent Episcopal system; thus they have given new extensions to the term 'Connexion'. laymen in at least an equal proportion. Even the Wesleyan Methodists now have a Representa-

present Episcopal system; thus they have given new extensions to the term 'Connexion.'

The Leicester preachers, who formed the nucleus of the New Connexion of General Baptists, had retained all power to themselves at first, and so had the Verkshire preachers who joined with them. had the Yorkshire preachers who joined with them; but soon the local officers were associated, and, when negotiations were undertaken with the Lincolnshire churches of the Old Connexion, they explicitly repudiated the office of Messenger as not of Divine institution, although they were ready not of Divine institution, although they were ready to discuss its expediency. The first rules were drafted by ministers alone, who advised that the Association should be open only to ministers and elders; but the separate churches made steady efforts to secure local control by the whole body of local members. Thus in 1817 their historian summed up to the effect that they were in their discipline strictly congregational, that each society allowed no foreign control even from its own Conferences or Association, and that the rights of church members were sacred against the encroachments of their own officers (A. Taylor, Hist. of Eng. Gen. Baptists. Lond, 1818, ii. 468). In that year Gen. Baptists, Lond. 1818, ii. 468). In that year also the basis of representation in the Association was settled on such terms that the pastors were far outnumbered by the lay delegates. Twenty years

later a new constitution was drafted, but was carefully emended, to ensure the independence of the churches; and the united action was reduced carefully emended, to ensure the independence of the churches; and the united action was reduced to the consideration of cases referred spontaneously by Conferences, churches, or individuals, to the management of the academy and of some publications, to the conduct of home and foreign missions (J. H. Wood, Hist. of the Baptists, Lond. 1847, p. 278). Even as regards the ministry, the advisory committee to report on applicants had equal numbers of laymen and ministers, while the ministers had no joint function peculiar to themselves. When we note, also, the disappearance of any itinerant system, it will appear that the mere name of Comexion survived the reality in this case; and since 1891, in order to establish more intimate relations with Baptists of another school, the meetings of the Association have been reduced to a mere formal gathering.

Similarly, the Countess of Huntingdon's Connexion has long ceased to show any connexional vitality, and the methods of its churches and ministers approximate to the Congregationalists. In the Principality, however, the Calvinistic Methodists have moved the other way, as is shown in their adoption of the title 'Presbyterian Church of Wales'; yet, while the ministers are ordained only with the approval of an Association.

Church of Wales'; yet, while the ministers are ordained only with the approval of an Association, and have part of their time claimed by the whole body rather than by the local congregation, there is a feature of Connexionalism still discernible.

Many mission fields present good examples of connexional principles. Often the whole body of foreign workers are associated into a Synod or Conference, which reviews the progress of the band, decides on plans, and allots the individual members to their departments. Rarely, indeed, do the native converts have any voice at all in such a meeting, though a native minister may have a seat in Conference as a worker. Some-times the decisions of the Conference are subject times the decisions of the Conference are subject to review by a committee chosen by the subscribers who defray the expenses, and by this feature a special complication is introduced into the connexional machinery. This power of the purse is one of the most important factors in the modification of Connexionalism. Not only may a committee sitting in Britain tend to regard the workers abroad rather in the light of civil servants, to be moved about at the will of an ecclesiastical Foreign Office; but also in home affairs a rich Methodist circuit often appears to obtain the methodist circuit often appears to obtain the particular ministers it wishes, even against the apparent good of the whole Connexion. Yet this same power of the purse can manifestly be used to stereotype connexional methods in the drawing up of trust deeds, so that all ecclesiastical property, buildings and endowments alike, can be placed under the control of the Conference of workers, and not of local supporters. and not of local supporters.

Another menace to Connexionalism, as to all other organizations, is the irrepressible ambition of some men to wield power. In the early days, an outside autocrat like Constantine was able to capture and transform the machinery of the Church. For many centuries within Christian circles, a steady claim to supremacy has been put forth from Rome by an oligarably of Power and forth from Rome by an oligarchy of Pope and cardinals, who have succeeded in rendering nearly cardinals, who have succeeded in rendering nearly every revival subservient to their concentrated rule. Nor is it needful to look outside connexional circles: the corps of ministers most readily arranges to perpetuate itself, excluding the mass of members from all direct influence; it reaches out beyond the stationing and supervising of its own members, to the control of all activity, on which it can at least interpose a veto. Such encroachments have more than once excited revolt,

and led to the formation of other bodies in which such domination is expressly guarded against. Within the body of active self-governing workers there has often arisen some commanding figure, whose actual influence extends far beyond the nominal position he holds; but such a phenomenon is equally common under any system of management, and no such leader has proved able, or even desirous, to found a dynasty which may subvert

the general principles.

In estimating the permanence of the type, we have to bear in mind that details of organization are not prescribed in the New Testament, but a few principles are insisted upon as fundamental. None is more urgently reiterated than : 'All ye are brethren; one is your Master, even the Christ.' Again, the primary object of the Church is evangelization: Go everywhere, tell all peoples, enlist the converts, instruct them in the ways of Christ; such are the purposes for which the Church was called into being. Propagandism and brotherhood are thus to be inwrought in any scheme. Now, as a matter of history, every great revival of religion has been marked by an appreciation of these elements, and has fashioned its machinery on somewhat connexional lines. True, the Franciscans were brought under the control of the Curia, but the very struggle against of Francis, show the natural relation of Connexionalism to these principles, so that the disappearance of the one imperils the existence of the other. Similarly the transformation of the connexional type among the old General Baptists and the Friends reflects the decay of the spirit of propaganda in those bodies. But the great Methodist Churches, with their firm grasp on the evangelistic purpose of their existence, and their warm fraternity, hold fast to the connexional system as the best embodiment of their principles. And whenever a revival takes place, even on a microscopic scale, it seems natural that those who are actively concerned shall meet simply as brethren to consult and arrange mutually as to the division of labour.

the division of labour.

W. T. WHITLEY.

CONSANGUINITY.—By 'consanguinity' is meant blood-relationship, and more particularly, close blood-relationship. When we speak of a consanguineous union, we mean that the two organisms are near relatives; when we speak of a high degree of consanguinity in a herd or in a conmunity, we mean that there has been much inbreeding or endogamy. It is desirable to know what the biological facts are in regard to the results of the sex-union of closely consanguineous organisms, but it must be admitted that clear-cut facts are few. It should also be noted that, as the range of living creatures expresses a very long gamut, we must be very careful in arguing from one level to another. What is normal and apparently wholesome at one grade of organization may not be desirable at another.

It seems to have been securely established that some hermaphrodite animals habitually fertilize their own eggs. This autogamy has been proved in some tapeworms and flukes—not auspicious illustrations; it seems sometimes to occur in the freshwater hydra and a few other free-living

animals. There are numerous self-fertilizing flowers, though there is no case known where cross-fertilization is impossible. It may also be that one hermaphrodite liver-fluke sometimes inseminates another, so that the habitual autogamy may be interrupted. In the great majority of hermaphrodite animals, such as earthworms and snails, cross-fertilization is the invariable rule. It is also relevant to recall the fact that in many of the small Crustaceans, in many Rotifers, and in some insects, such as Aphides, there may be longcontinued parthenogenesis—generation succeeding generation without loss of vitality, although the eggs develop without any fertilization. In some of the Rotifers the males are still undiscovered; Reaumur kept Aphides breeding parthenogenetically for over three years (50 consecutive generations), and Weismann kept females of a common water flea (Cypris reptans) breeding in the same way for eight years. This shows that at certain levels of organization a vigorous life may be kept up for many generations, not only without any introduction of 'fresh blood,' but without the presence of any males.

made on in-breeding, but there is imperative need for more. Weismann in-bred mice for twenty-nine generations, and his assistant Von Guaita continued the experiment for seven more generations, but the only notable general result was a reduction of the fertility by about thirty per cent. Some experimenters, such as Crampe, have found that the in-breeding of rats resulted in disease and abnormality, but this was not observable in the equally careful experiments of Ritzema-Bos. He in-bred rats for thirty generations; for the first

A number of careful experiments have been

four years (twenty generations) there was almost no reduction in fertility; after that there was a very marked decrease of fertility, an increase in the rate of mortality, and a diminution of size. These and other experiments on mammals, though insufficient to be satisfactory as a basis for generalization, suggest that very close in-breeding may be continued for many generations without any observable evil effects, and, on the other hand, that there are limits beyond which in-breeding becomes

observable evil effects, and, on the other hand, that there are limits beyond which in-breeding becomes disadvantageous. It is certain that, if there be well-defined hereditary predisposition to disease in the stock, then in-breeding soon spells ruin.

'Extensive experiments by Castle and others [see Proc. Amer. Acad. xli. 731-786] on the inbreeding of the pomace-fly (Drosophila ampelophila) led to the general result that "inbreeding probably reduces very slightly the productiveness of Drosophila, but the productiveness may be fully maintained under constant inbreeding (brother and sister) if selection be made from the more productive families" (J. A. Thomson, Heredity, 1908, p. 393).

Some of the histories of domesticated breeds are

Some of the histories of domesticated breeds are so well recorded that they may be ranked as carefully-conducted experiments, and it seems that some very successful breeds of cattle—such as Polled Angus—have in their early stages of establishment involved extremely close in-breeding. When we examine the pedigree of famous bulls and stallions, we find in some cases an extraordinarily close consanguinity. Valuable results have often been attained by using the same stallion repeatedly on successive generations.

From breeding experiments four general results seem to be clear: (1) that progressive results have usually followed mating within a narrow range of relationship; (2) that close in breeding has a great utility in fixing characters or developing prepotency; (3) that close in breeding may go far without any injurious effect on physique; and (4) that, if there be any morbid idiosyncrasy, close in breeding tends to perpetuate and augment it.

Darwin paid much attention to the question of in-breeding (see Variation of Animals and Plants under Domestication [London, 1868], etc.), and his

general conclusions were:

general conclusions were:

(1) 'The consequences of close interbreeding carried on for too long a time are, as is generally believed, loss of size, constitutional vigour, and fertility, sometimes accompanied by a tendency to malformation '(2)' The evil effects from close interbreeding are difficult to detect, for they accumulate slowly and differ much in degree in different species, whilst the good effects which almost invariably follow a cross are from the first manifest.' (3) 'It should, however, be clearly understood that the advantage of close interbreeding, as far as the retention of character is concerned, is indisputable, and often outweighs the evil of a slight loss of constitutional vigour.'

From his researches on flowering plants, Darwin concluded that there was 'something injurious' connected with self-fertilization; and although he came to recognize that self-fertilization was more frequent and more successful than he had at first

frequent and more successful than he had at first believed, he adhered on the whole to the aphorism, 'Nature abhors perpetual self-fertilization.' In his book on *Cross and Self Fertilisation* (1876), however, he says: 'If the word "perpetual" had however, he says: It the word perpetual have been emitted, the aphorism would have been false. As it stands, I believe that it is true, though perhaps rather too strongly expressed.' The fact perhaps rather too strongly expressed.' The fact is that self-fertilization in flowers is for the most

part relatively, and not absolutely, injurious.

In the present state of our knowledge, it seems fair to say that there is little biological evidence to show that there is anything necessarily disadvantageous or dangerous in close consanguincous unions. These seem often to occur in nature in isolated and restricted areas, and they are frequent in successful breeding. It must be admitted that evil effects *sometimes* follow prolonged consanguineous pairing in the artificial conditions of stockbreeding, but it must not be hastily inferred that these evil effects are necessarily due to the consanguinity. There may be persistence of unwhole-some conditions of life which have a cumulative evil effect as generation succeeds generation, or there may be some organic taint in the early members of the stock which becomes aggravated, just as a desirable organic peculiarity may be enhanced.

Bateson expresses the view of most biologists

when he says:

when he says:
 'It should perhaps be pointed out categorically that nothing in our present knowledge can be taken with any confidence as a reason for regarding consanguineous marriages as improper or specially dangerous. All that can be said is that such marriages give extra chances of the appearances of recessive characteristics among the offspring. Some of these are doubtless bad qualities, but we do not yet know that among the recessives there may not be valuable qualities also '(Mendel's Principles of Heredity, new ed., London, 1909, p. 226).

When we take into account such evidence as there is from animals and from plants and such

there is from animals and from plants, and such studies as those of Huth (Marriage of Near Kin<sup>2</sup>, 1887), and the instances and counter-instances of communities with a high degree of consanguinity, we are led to the conclusion that the prejudices and laws of many peoples against the marriage of near kin rest on a basis not so much biological as social.

J. ARTHUR THOMSON.

## CONSCIENCE.

Introductory (J. H. HYSLOP), p. 30. Babylonian (T. G. PINCHES), p. 33. Egyptian (G. FOUCART), p. 34.

CONSCIENCE.—The term 'conscience' is derived from the Lat. conscientia, which meant originally 'joint knowledge,' or the knowledge which we share with others. It soon came to denote, howshate what we mean by concomitant knowledge, that is, consciousness or self-consciousness, and only in later literature had it the meaning which we attach to 'conscience.' Even then it was not exactly what we mean by it as the arbiter and motive power in right and wrong. The equivalent of Lat. conscientia was overeionous. The Greek was in use by Plato and the Stoics, and denoted joint knowledge, and with the Stoics it also denoted the knowledge of right and wrong. In Cicero conscientia can often be translated indifferently 'conscience' or 'consciousness.' It is the same with the French term conscience.

It is more distinctively in modern times that a radical difference is marked between the idea of consciousness and that of conscience. Consciousness with us is a purely intellectual function, a generic term for the phenomena of mind, or for that concomitant act of mind which Hamilton has well called the 'complement of the cognitive energies.' 'Conscience' is a term with a moral import, though complicated with the intellectual, and implies an emotional content at the same time. 'Consciousness' is thus a term for Psychology, and 'conscience' one for Ethics, with the distinction, however, that consciousness is implied in the problems of Ethics, while conscience is not necessarily so implied in those of Psychology. 'Conscience' is thus a name for the function of distinguishing between right and wrong, and of enforcing the one or preventing the other. The difference between the ancient and the modern conception of it is determined by the difference between their ideas of morality, and may be said to reflect the whole Greek and Roman (W. H. S. Jones), p. 37. Jewish (M. GASTER), p. 41. Muslim (D. S. MARGOLIOUTH), p. 46.

difference between their ethical and religious civilizations. The morality of antiquity, in so far as it was a subject of reflexion, hardly got beyond the conception of prudence-except, perhaps, with the Stoics. That of modern times involves the idea of duty or devotion to a law which may require sacrifice. There is no doubt a perfect reconciliation between these two points of view when we come to make a concrete examination of the facts to which they are supposed to apply; but in their abstract formulæ they seem opposed to each other. In its conception of rational conduct antiquity sacrificed a proximate to a remoter interest; modern ideas assume to deny all interest or happiness, and to demand unswerving obedience to law. But when this is carefully scrutinized it often turns out to be a sacrifice of the interests of the present life to a remoter interest in a life to come. The Christian remoter interest in a life to come. came to express inflexible obedience to duty; but this system was based on the immortality of the soul, and on the rewards and punishments appor-tioned to the nature of one's conduct in this life. tioned to the nature of one's conduct in this life. Hence, when its moral conceptions are subjected to analysis, they do not differ absolutely in kind from those of antiquity, but they take two worlds into account where the ancient took only one, namely, the present world. The difference, so far as it is a difference, was between a materialistic and a spiritualistic view of the present life, and also between merely intelligent action and such action as involved duty with personal sacrifice.

The difficulty of comparing our modern conception of conscience with that of the ancients is apparent in the philosophy of Plato. Though he used the etymological equivalent of the modern term 'conscience,' this was not the term for one of the main functions of conscience with us.

of the main functions of conscience with us.

'Reason' was the function which did service for conscience, and even this was not the motive agency in the direction of the will, but the guide for other influences. The myth of the chariot with the two steeds represents Plato's conception of the moral nature. Plato's distinction was between 'rational' and 'irrational' conduct, by which he meant the distinction between intelligent and 'greatest conduct. ignorant conduct. Irrational action was under the influence of desire and passion, two unruly steeds which in their behaviour never looked before and after, but rushed into action without deliberation or reflexion. Reason was the charioteer whose function it was to direct these two steeds or inpulses towards an end which represented knowledge of what the subject does, instead of blind passion. In this conception, however, reason furmishes light but not power. The motive agency was in the desires and passions, and reason only gave counsel or directed them, without providing any other end than these impulses offered. It took a more spiritual age to supply an end which was distinct from that of sense and passion, and so to modify the conception which gave rise to the more modern idea of conscience. The distinction between right and wrong with Plato, and, for that matter, with all Greece, was that between the prudent and the imprudent, between what was best for the individual and what was injurious to him, and the judge of this was intelligence, not conscience in our use of the term. The nearest conception to ours was the Stoic obedience to law, a law too which sacrificed the impulses and started the reflective mind towards the later Christian doctrine. But it was still an appeal to reason, and tried to reconcile its opposition to passion by insisting upon traditional ethics in details. But other Greek thinkers conceived reason as the director, not the commander, of the impulses, and so the Greek point of view was not that of the supremacy of conscience, but the supremacy of reason, thus making prudence instead of law its standard of morality. The emotional element of conscience the ancients did not recognize. The influence the ancients did not recognize. The influence which introduced this factor into the conception was partly the Christian idea of sacrifice, and partly the idea of respect for an inner law of life and conduct, suggested by the Stoic ethics, and made effective in the Christian system by the necessity of eschewing politics. This conception was explicitly formulated in later thought, and especially in the ethics of Immanuel Kant, as represented in his 'categorical imperative,' an unbending sense of duty, regardless, in some thinkers, of all consequences, and in others of pleasure and pain. Here it denotes not only the consciousness of moral distinctions, but also an impelling motive or influence towards the execution of the right and the evasion of the wrong.

The Furies, or Erinyes (q.n.), are often regarded as mythological representations of the Greek idea of conscience. But this interpretation of them is due to certain analogies with the more modern conception of remorse as a punishment for sin inflicted by conscience on the transgressor. The Furies were not inner monitors, but external agencies punishing the individual for the violations of the moral law. Remorse is an inner punisher. In the rationalistic stage of Greek reflexion there was a tendency on the part of some thinkers to give a subjective interpretation to the idea of the Erinyes, but this never availed to suggest to them the modern idea of conscience as a distinct function of the mind. There was no tendency in Greek thought to combine the ideas of reason, self-consciousness, and pentience for sin so as to form the complex idea which has done so much service in modern times. The consciousness of sin was not a characteristic of the Greek mind.

It was the general character of Christianity that gave rise to the new conception of conscience, and this was because it created a new morality. The Greek never got away from the secular view of things. Whatever his talk about the Divine, he associated it with the asthetic and political view

of the world; his ethical interests were confined to the present life and its joys. But Christianity extended the horizon of human hope beyond the present, and created the brotherhood of man, a new social feeling and interest. At the same time it brought a doctrine of personal salvation, based upon the idea that the present life was a probation for a better, and that man's only hope of happiness in the next life was his conformity to duty here. With this new social ideal, the extension of man's horizon of hope, and the strenuousness of his conception of or nope, and the strenuousness or his conception of duty and limited probation, the idea of morality was formed with a direct reference to a spiritual as opposed to a material or carnal world. Morality was conceived as possibly demanding a sacrifice of all that the Greek mind valued in life, namely, the world of sense, or the intellectual world of speculation—which was only the grosser sense-world a little refined. The transfer of happiness to a spiritual world forced morality to neglect that end here, and gave a very abstract meaning to duty. It also laid so much stress on the moral law, and so became the important characteristic of the man who was to be saved; that is to say, his morality and not his wisdom saved him. This, too, was little on mere intellectual culture, that morality and not his wisdom saved him. This, too, was the consequence of the democratic as opposed to the aristocratic view of social relations involved. In all, however, it substituted moral for intellectual virtues, and started civilization on a new tack, which was to make conscience more important than culture, while it gave a larger content to the conception of man's moral nature. conduct rather than knowledge came to be the condition of salvation, the idea of conscience took root as the most important part of man's constitu-tion, and it was appealed to not only to secure individual salvation, but also as the characteristic in man which reflected his lineage with the Divine.

The early Fathers defined conscience as the director of man's spiritual nature, and the distinguisher between right and wrong. Apparently not until Descartes did it take on the special import of an inner faculty to punish the soul for its sins. The function of remorse was recognized long before, but it took philosophic reflexion to introduce the idea into the scholastic conception of conscience. The same conception prevails in Spinoza. But this is entirely altered when we come to Kant. He identifies conscience with the function of the 'categorical imperative,' or sense of duty. Conscience, he says, is not the product of experience, but an inherited or original capacity of the soul, and is identical with the law of duty. This was equally a departure from the ancient idea that it was an intellectual function, and from the Cartesian idea that it was the after-emotion of the soul in regard to conduct. It was not, with Kant, a faculty of judgment determining means to end, or deciding when any particular course was right or wrong, but the faculty which impelled the right attitude of mind towards any course which the judgment made right or wrong. The consequence was that conscience was convertible with the inner sense of duty or the compulsory nature of the moral law.

of duty or the compulsory nature of the moral law. Bishop Butler's view preceded that of Kant historically, but was much the same as that of the great German. It did not have the same development, but it reflected the logical consequence of the age toward this view. Butler expounds his conception of conscience in his Sermons, which are an analysis of human nature. There is a tendency to emphasize the emotional element, but the intellectual is admitted as essential to it. He says:

'There is a principle of reflection in men, by which they distinguish between, approve and disapprove their own actions. We are plainly constituted such sort of creatures as to reflect upon our own nature. The mind can take a view of what passes within itself, its propensions, aversions, passions, affections, as respecting such objects, and in such degrees; and of the several actions consequent thereupon. In this survey it approves of one, disapproves of another, and towards a third is affected in neither of these ways, but is quite indifferent. This principle in man, by which he approves or disapproves his heart, temper, and actions, is conscience ('Serm. i. § 71.).

He is careful subsequently to insist that the function involves 'reflexion,' and distinguishes it from the appropriate of the subsequently of the approximation of the superior of

from the appetencies or natural affections, as the agency which can give their promptings stability and rationality. The conception at this point takes on some resemblance to that of Plato, with additions from the course of Christian development. But in completing his conception of it he

ment. But in completing his conception of it he assigns a supremacy to conscience which is based not on its power but on its right to prior judgment in questions of right and wrong.

'Thus,' he says, 'that principle, by which we survey, and either approve or disapprove our own heart, temper, and actions, is not only to be considered as what is m its turn to have some influence; which may be said of every passion, of the lowest appetates: but likewise as being superior; as from its very nature manifestly claiming superiority over all others—insomuch that you cannot form a notion of this faculty, conscience, without taking in judgment, direction, superintendency. This is a constituent part of the idea, that is, of the faculty itself: and, to preside and govern, from the very economy and constitution of man, belongs to it. Had it strength, as it has right; had it power, as it has manifest authority; it would absolutely govern the world '(Serm. ii. § 19).

In respect of the idea of authority, this view is strikingly like that of Kant, but it contains an element of judgment and emotional attitude after the act which does not appear to make a part of

the act which does not appear to make a part of Kant's conception. Kant starts with a law of rational action which is to hold good for all rational beings, and makes this an imperative duty which is to regulate conduct without regard to con-sequences or external relations and conditions. External deeds are with him neither good nor bad. The only good or bad thing in the world is a good or bad will, and any will governed by the categorical imperative, or sense of duty, is moral, regardless of what the external act is. One does not need to know the means to an end or to reflect on consequences in order to be virtuous in this conception. Neither the amount of intelligence or wisdom nor the after-emotional effects of approval or disapproval have anything to do with virtue, but only the right attitude of the will and reverence for the law. The motive or mere sense of duty was sufficient to determine the whole character of conduct, and this motive constituted the nature of conscience.

Both these schools or tendencies resulted in the conception that conscience is a simple and unique faculty of the mind. This was especially indicated in the simplicity of its function in the Kantian system, and in the view that it was not a product of experience, and with the English thinkers it was further favoured by the emphasis placed upon its presence in man as an evidence of the Divine. The Kantian argument for immortality and the existence of God pointed in a similar direction, as it rested on the moral nature of man. Both schools treated conscience as an implanted power and not the result of experience, and accordingly their conception came into conflict with the implica-tions of the doctrine of evolution. This theory attempted to derive conscience from various ele-ments in man's social nature, and refused to regard it as an implanted and unique faculty of the mind. The controversy between the two schools was made clear by the relation of the idea of conscience to the theistic interpretation of the cosmos. The last resource of the theologian for the proof of a Divine existence had been the unique and moral character of conscience. Evolution had assumed that it had proved its claims in all other matters, and was reluctant to make an exception of conscience. It was only natural that it should so treat the question, and it was unfortunate for the theistic

view of things that it seemed to stake its claims on the integrity of its argument regarding the

origin of conscience.

This controversy, however, is not the best setting for the consideration of conscience. We should first see what we think it is as a fact, and we can then discuss its origin. The tendency since the rise of the controversy has been to consider conscience not as a unique or simple faculty, but as a complexus of mental phenomena organized with reference to moral ends. Instead of being made a separate faculty—the 'faculty' Psychology having been abandoned—it is considered as the mind occupied with moral phenomenu. This enables us to conceive it as the organization of all that intelligence and feeling which are connected with the actions called moral or immoral. There was an approximation to this view in the conception of Butler, but it was concealed by the prevailing interest in other questions. But, taking conscience as a complex instead of a simple function, the present writer would recognize three general elements in it: (1) The intellectual or cognitive element, which is concerned with the perception of the means to ends, and the fact of some end which we agree to call the good as distinct from the merely true. Other mental functions are called in to estimate what shall be the good as distinct from the true, but the intellectual judgment and perceptions are involved in determining both the fact of this ideal and the necessary means to its realization, and on these means rests a part of the judgment of right and wrong. In fact, right and wrong hardly have any meaning without this conception of means to ends. (2) The *emotional* element, which is primarily the valuation of facts and things in relation to our welfare, whether they represent retrospective or prospective feelings. Hencethey divide into what we shall call the *judicial* and the *legislative* feelings. The judicial feeling represents the approval or disapproval of self or actions in their relation to the moral law. The legislative feeling is the sense of duty, or 'categorical imperative,' and commands obedience as the retrospective feelings pass judgment on acts already done. (3) The desideratine element, or that mental state which may be called reverence, good-will, or conscientiousness, and is representative of respect for law, where the sense of duty represents a sense of compulsion often against the desires. The highest condition of conscience is that in which respect for law is substituted for the imperative which feels a struggle against natural desire.

These various elements will include all the social instincts which figure so prominently in the social instincts which agains so prominently in the theories of Darwin and Spencer and the evolutionists generally. The important point, however, is that they show the moral nature or conscience to be complex and not simple. The view solves some perplexities in the evolutionist controversy. The difficulty proposed by the older view, in its effort to utilize the distinction between man and the enjoyed in respect of morality was that early the animal in respect of morality, was that evolution could not account for this new increment in the process of creating man, and that, since it was not derived from anything like it in previous organic life from which man was supposed to be developed physically, a special creative act was necessary to account for it in man. But with the analysis of conscience into elements which may be found in all consciousness, animal or otherwise, we may suppose that the process of evolution has only organized or consolidated elements otherwise organized or consonnated elements ownerwise separate into a systematic tendency to act in the direction we call conscience. In this manner we may admit the uniqueness of the function, and so its distinction from animal life, while we at the same time accept the evolution, if not of the elements, certainly of the organic whole for which the term stands. The distinction as a whole between man and animal is preserved, while the identity of their elements is maintained, evolution

being formative, not creative.

The consequence of this view is that conscience is no more simple than the æsthetic faculty or any other function of the mind. It receives a distinct name merely because of the importance attaching to certain fixed relations between men and their conduct. All the functions of the mind are employed in the determination of action, and it seems simple only because we are in the habit of seizing some one particular mark in the whole for denominating the process; and, in any case in which a single term is used to denominate a fact, a natural tendency arises to consider that fact a simple one. But in matters of moral character there are many mental states and many external relations involved, and so long as conscience is a term to denote the moral nature it must include all these factors.

The problem, however, of its origin is not so important as its validity as a function of mind. The perplexity created by the controversy of the religious mind with the evolutionist was caused by the original conception that its meaning and value as a function of mind depended on its origin. assumption was that, unless it had a Divine origin, its authority was impaired. In other words, its validity was made to depend on its creative origin instead of upon its judgment of facts. The con-sequence was that evolution only enforced the conclusion which the theist admitted hypothetically. But once realize, as we do in all other scientific and philosophic problems, that historical origin does not determine validity, and the authority of conscience will depend on the same criteria as those which determine ordinary truths, and not upon any contingency of its remote source, whether it be a simple or a complex faculty. We do not make any other scientific truth depend on the cause of its origin but upon its conformity to facts and the law of things. It must be the same with the dictates of conscience. They are valid or invalid irrespective of the mode of their origin, and because

irrespective of the mode of their origin, and because of their relation to the welfare of the individual.

I. ch. iii. 2nd div. 2nd sect.; H. Paulsen, Syst. of Ethics (Eng. tr. 1899), bk. II. ch. vi.; see also Butler, Sermons, ed. W. E. Gladstone, Oxf. 1806; Darwin, Descent of Man, Lond. 1871; and H. Spencer, Principles of Ethics, Lond. 1898.

CONSCIENCE (Babylovien).—As is indicated

CONSCIENCE (Babylonian).—As is indicated in the art. Confession (vol. iii. p. 825), the Assyro-Babylonians felt strongly the consciousness of the commission of sin and wrongdoing, and herein the idea of conscience appears plainly, and must have presented itself with all its force to their minds. Confession of sin, in fact, can exist in all sincerity only when conscience speaks to a man, and tells him that he is in fault-when,

at he is in fault—when,

Sitting in lamentation,
In bitter mutterings and pain of heart,
In evil weeping, in evil lamentation,
He mourns like a dove; tearfully night and day,
To his merciful god like an ox he lows, (and)
Bitter lamentation he constantly makes, 1

The Assyr. Bab. conception of sin, however, differed from that prevailing in a Christian community, as the failings of a religious man belong-ing to those ancient nationalities might be due to causes over which he had no control-the effects of the actions of evil spirits, or the ritual uncleanness brought about by acts of forgetfulness or by the effects of illness. The disadvantage arising from this consisted in the disfavour of the gods, or of the king as the gods' representative, and there was a desire to avoid such disfavour in future by 1 WAI iv.2 pl. 26, 50 ff.

refraining from the commission of the misdeeds which brought it about. This, though not the Christian idea of conscience (including, as it does, the feeling of remorse), may have tended to bring about the frame of mind which we understand thereby, or something akin to it.

An excellent example of the heart-searchings of the Babylonians and their remorse of conscience is given by the 2nd tablet of the Surpuseries. Here the afflicted man has not only to ask himself whether he has committed the sins of blasphemy, uncleanness, bribery (?) to thwart the ends of justice, used false balances, removed his neighbour's landmark, etc., but must also put to himself searching questions as to whether he has separated father and son (or other near relatives), refrained from freeing the captive, failed to enable the imprisoned to see the light of day, whether, being 'upright of mouth,' his heart was nevertheless fatthless, and whether, while saying 'Yes' with his mouth, 'No' was in his heart.\(^1\) As these queries run to about 80 lines, it will easily be recognized that the Babylonian, in his conscientional in the saying 'Yes' with his mouth, 'No' was in his heart.\(^1\) As these queries run to about 80 lines, it will easily be recognized that the Babylonian, in his conscientions of the saying 'Yes' with his mouth, 'No' was in his heart.\(^1\) tiousness, was exceedingly thorough.

In fact, we may, perhaps, see in the last of the following lines something expressing the idea which the word 'conscience' contains:

On account of his eye, which is filled with tears, [accept thou

his] lamentation; On account of his troubled face, [accept thou his] lamenta-On account of his troubled face, [accept thou ms] immensation;
On account of his mind (?), from which tears depart not, [accept thou his] lamentation;
On account of his lips, on which a bridle is placed, [accept thou his] lamentation;
On account of his hands, which rest spread abroad, [accept thou his] lamentation;
On account of his breast, which complains like a resounding flute, [accept thou his] lamentation.'3
In this extract the breast, the seat of the feel-

ings, may be regarded as the inner conscience of a man, and as practically synonymous with the heart, when used in the same sense. In the Laws of Hammurabi, the person who had a complaint to make was recommended to go before Merodach and Zērpanîtum in prayer, 'with perfection of heart.' 'Perfection of heart' would, therefore, seem to have been an expression equivalent to freedom from the consciousness of sin-a clear conscience. In the fullest sense of the words, therefore, the great gods of Babylonia exacted, for their favour, not only that rectitude in the sight of the world which every right-minded person desires, but also a good conscience, such as would urge one to repentance, contrition, recon-ciliation, and restitution when the interests of his fellow-men were involved.

Numerous inscriptions, mostly of the nature of penitential psalms and litanies, might be quoted in illustration of the above, but very little fresh information is to be obtained from them.4 Their cumulative evidence, however, shows the Babylonians in a most favourable light, notwithstanding that the objects of their worship were the gods and goddesses of their national pantheon. Religious in the extreme, the constant aim of the believer among them was a clear conscience, without which there was no hope of happiness, but, on the contrary, pain and grief in this world, and, to all appearance, separation in the world to come

from the deity whom they worshipped.

Interature.—This is given in the notes.

CONSCIENCE (Egyptian).—The actual word 'conscience' does not occur in the indexes of Egyptological works—which is a priori a significant fact. For not only must we suppose that the word has no exact equivalent in the Egyptian vocabulary (any more than have the terms 'sanction,' 'morality,' 'remorse,' etc.), but we must also conclude that the literature of ancient Egypt has nothing to say on the subject. Of course, we find numerous writings on propriety, on duty, on everything connected with the vast domain of ethics in general; but there is nothing that bears directly upon the phenomena of conscience in themselves. Since, on the other hand, we still find most delicate manifestations of what we might call an organized conscience in Egypt, in its literature and religious works, we must presume that the Egyptians had quite a different conception of conscience from ours for both of the senses in which the word is used to-day. Psychologically, they connected it with very different phenomena, and with methods of perception of the 'ego' which are no longer ours. Morally, conscience was regarded as playing a part in concepts grouped in a different way from that followed by our method. Or, rather, Egyptian thought arranged the operations of the moral conscience in separate and independent categories, whereas we make them a unity. It would take too long to investigate whether this fact is due to the general inability of the Egyptians to make abstract definitions, or, on the other hand, to the method whereby Egyptian intellectual civilization originally formed the foundations of its knowledge. The latter is probably the more correct view.

These radical differences of terminology explain, at any rate, why the question has never yet been entered into in modern works of Egyptology. These speak very often of the moral culture of Egypt, but never of its conscience or of the possible formation of the same (the work of Flinders Petrie, Religion and Conscience, is the only exception at present; but note also the restriction made in the Literature at the end of this article). In fact, the complete absence in ancient Egypt of definition or treatment of the subject forces us to a long process of reconstruction of the Egyptian conscience by means of the direct study of whatever implicit manifestations of conscience can be seen in the whole collection of Egyptian writings. Thus, inscriptions such as a prayer, a hymn, a biography, or a copy of a deed of division or a lawsuit; or testamentary or epistolary papyri; or even magical incantations may supply a detail here or there; and the sum of such contributions may gradually make it possible to reach a knowledge of Egyptian conscience. This study is necessarily a very intricate one; but it is indispensable for our ultimate understanding of the duties and divisions of Egyptian morality, of which so much has been said. What follows cannot be any more than a first attempt, of provisional character.

This a common thing to read that the Egyptians

It is a common thing to read that the Egyptians 'had a conscience superior to that of the other peoples of classic antiquity.' Such an expression is ambiguous. Its actual meaning, as Petrie rightly notes (op. cit. 86), must be that the theoretical standards were nowhere so well defined and apparently so high as in Egypt. The gradual development of these standards can be followed in a long historical series of documents.' But the

1 Especially if we use documents very much neglected as a rule, such as: the 'Negative Confession' of the Roman era; the 'Duties of the Governor' (Rekhmara inscription), and, generally, the biographies of the first Theban empire. Hitherto we have made too exclusive a use of the celebrated ch. cxxv. of the Book of the Dead and of the 'Treatises on Wisdom' (inaccurately called 'Treatises on Morality').

study of this evolution constitutes an inquiry which belongs to moral and social history. It amounts, in short, to an attempt to disentangle the notion of the co-ordinate moral system, with its sanctions and its more or less successful attempts at a codification of duties—the whole being organized on the standards of which we have just spoken. An investigation of this nature must be accompanied by that of the word 'duty,' because it is connected logically with the conception of moral obligation, and with the various questions attached thereto (nature of duty, categories, origins, sanctions, etc.). This has been the treatment followed in almost all the works occupied with the word 'conscience' in general.

It appears, then, to have been a mistake to study the 'duties' of Egyptian morality in connexion with conscience, as Petrie has done (op. cit.); and an examination of his work shows precisely that, among the hundreds of obligations and prohibitions figuring among the duties, the majority (food tabus, ritual and sexual tabus, etc.) arise from sources quite apart from the true domain of conscience.

We must, consequently, occupy ourselves exclusively with the phenomenon 'conscience' considered by itself, i.e. that immediate intuition of good and bad, that inward feeling, instinctive (from its appearing innate), which shows itself contemporaneously with an action. There is in it a quasi-spontaneous disposition of the mind to make the judgment (which it forms on actions and intentions) subordinate to an idea that appears to be sui generis.

Applying as it does to a dead race, and to a race which has left no didactic matter of its own on the subject, our study must be cautious, and should begin by limiting our field of inquiry as much as possible. Thus we must dismiss as too wide the definition that 'conscience is the mass of intuitions as to what is good or bad,' because an apparent intuition may be an acquisition that has become so rapid by force of habit that it seems instinctive (either by individual education or by hereditary transmission of the tendency). This suggests the subject of physical movements (e.g. 'struggling' movements) which seem instinctive, but are not necessarily innate. Petric (op. cit. 92) shows very clearly that similarly the body of intuitions which we call conscience is the accumulated heritage of centuries. Not one of the apparent 'intuitions' brought to light by Egyptian writings can be classed with any degree of certainty among the primordial phenomena. They must be studied as one of the fundamental elements of a social morality composed of all the individual consciences brought together, and it belongs to ethics to investigate how heredity has impressed them little by little until they have the force of instinct (of. A. Leroy, Religion des primitifs, Paris, 1909, p. 211).

Thus limited, the question comes to be whether

Thus limited, the question comes to be whether there is in the body of Egyptian literature a means of defining the initial element (we must avoid the words 'innate' and 'acquired'), or the earliest possible elements from which the Egyptian moral conscience seems to proceed. In a question of this type, if we do not want it to extend indefinitely, it is a good method of procedure to apply to Egypt the principal theories relating to the origin of conscience among primitive peoples, and to investigate whether what we know of Egyptian religion and ethics agrees with them.

At the very outset, it seems certain that the Egyptian conscience cannot be brought into connexion with the Divine world of the nation. The literary expressions employed in the question as to 'whether conscience is the herald of the Lawgiver or the Lawgiver Himself' have no precise meaning here. If we can prove that social morality is the product of the body of individual

consciences, and show the initial separateness of morality and any given religious system, we see that this separation naturally affects the origin of conscience. Now this separation of morality from religious beliefs has been attempted time after time, since Tylor, in all the religions of uncivil-ized or semi-civilized peoples. But nowhere is this phenomenon more scientifically clear than in Egypt, where, from the time of the pre-historic texts of the Funerary Books to the Roman Empire, the accession of the gods to the domain of morality was a slow process. Right down to near the latter period, Osiris was almost the only god connected with a moral idea (Ptah of Memphis is perhaps an exception, if we judge by the latest discoveries, in his temples, of stelle to the name of (Ptah who hears the plaint of the preschold) of 'Ptah who hears the plaint of the wretched' [cf. Petrie, Memphis, i., Lond. 1908, p. 17ff.]]. The other gods neither prescribed nor taught anything of morality. They only punished those who did them wrong, and blessed their benefactors. It may even be remarked, as one of the strongest characteristics of Egyptian religions, that this neutrality of the gods persists throughout the whole domain of ethics.

The systems which base conscience on 'sympathy' seem incapable of explaining its manifestations in Egypt. Not one of the texts of the monuments, e.g., or of the moral or popular literature, makes any mention of, or even allusion to, anything of the nature of the Shinto doctrine of anything of the nature of the similar docume of kami. In Egypt, 'to follow the dictates of the heart' would lead to very different results from those of a fundamental concept that 'the heart is good.' On the contrary, the total impression given by Egyptian writings may be summed up in two remarks which do not favour this system. (1) We find a great lack of those ideas which are often regarded as indications of the 'sympathetic' origin of conscience. These are the feelings which are usually qualified with 'temporary sanction,' and are called the pleasure and joy of doing good, and the remorse, regret, and repentance for evildoing. Inversely, certain chapters of the Pyramids and the Book of the Dead, and certain reflexions of the popular tales, offer lamentable analogies, in point of 'sympathy,' with the present mental status of the very lowest races among those studied in the Congo (cf. Notes sur la vie familiale et juridique de quelques populations au Congo Belge, ser. iii. fasc. i. [Brussels, 1909]). (2) The study of 'sanctions' properly so called (of very different kinds, of course) reveals an organization (i.e. a formation) which shows its connexion with fundamental elements that are quite different, and perhaps even totally opposite.

and perhaps even totally opposite.

The history of this will be examined elsewhere (see Ethics). Here, however, we should note this tangle—at first sight inextricable—of the most various fundamental sanctions. The lowest of these are based on violation of 'tabus,' and have no possible connexton with any moral action whatever; the others show themselves as consequences, conceived from a utilitarian point of view (and recognized as such by experience), of incoherent series of actions which are not arranged in any kind of rational groups. We see this in the absolute and persistent inability of the Egyptians to compase any kind of reasonable list of sanctions. All that we find (Treatises on Wisdom, Book of the Dead, Maxims, Proverbs, Instructions, etc.) are lists formed in reference, not to classes of duties, but to the individuals or forces whence these sanctions proceed: the gods, chiefs, the dead, the family. Sometimes, indeed, there is a suggestion of the motives of command or prohibition. But then we find a vast confusion: the career, renown, long life, the gratifued of men, business gains and losses, eschatological conditions, reciprocity, etc. Few documentary sources give the idea of a moral conscience with any other basis better than that of 'innate goodness' or 'sympathy.'

The innute appreciation of right and wrong, which many regard as the irreducible, constitu-tive element of the moral conscience, seems at first sight a good theory for Egypt. There is prob-ably no other ancient literature so impregnated

with ideas of right and justice. Discourses like the one supposed to be addressed by the king to his vizier on the duties of the guardians of justice (cf. Newberry, *Rekhmara*, Lond. 1900, p. 33), the statements of ch. cxxv of the Book of the Dead, and especially the constant references of the biographical invariance to confirm and better the confirm and the confirmation and the confirm graphical inscriptions to equity and hatred of wrong in all its moral and social forms, would seem to picture the very inmost mental state of the race. A critical examination of the texts, however, makes this tempting hypothesis untenable. In eschatology, we find that the idea of 'retribution' or that lofty idea of the 'average of years of good fortune' (cf. Griffith, Stories of the High Priests, Oxford, 1900, pp. 41-66) is of very late appearance, and the most perfect injustice preceded it, for—as has been noticed—the famous 'Negative Confession' confines itself to a magical affirmation without proofs. Finally, the moral concept which it supposes in relation to the actions of this life is not present in report of the inof this life is not ancient in respect of its in-sertion in the Book of the Dead; there is no getting over the plain fact that, while we have for several years been in possession of about two hundred specimens of the Book of the Dead of earlier date than the XVIIIth dynasty, we have not one containing a single line of the only moral chapter of this literature. It is the same with the ordinary inscriptions, where the development can be followed from the mastabas of the IVth dynasty. Right and wrong do not appear at first except in the form of affirmations of the lawful ownership of various goods, or the absence of wrong done to those things of which the deceased has need-which those things of which the deceased has need—which is quite a different thing. Even reducing it to its humblest form (as conceded, e.g., by Réville, Prolégomènes<sup>3</sup>, Paris, 1881, p. 276), we cannot reach the evidence of a primordial, irreducible element, consisting of an innate feeling of right, for any one of the ancient Egyptian cases. On the other hand, it is not easy to find satisfaction in a system like that taken up lately by Leroy (or cit 2051) which that taken up lately by Leroy (op. cit. 205), which posits at the outset an irreducible innate idea of right, while admitting the infinite and contradictory variety of practical applications. It is an evident paralogy to make, from the establishment of a connexion by mental operation, an entity existing by itself. The philological examination of the texts that one would apply to this special exposition might arrive some time at the evidence of the primitive confusion of the notions of goodness and utility, but never at an abstract conception of right; such a process would lead rather to conclusions remarkably like that suggested by the examination of the moral ideas of the races recently examined in Equatorial Africa, in the basin of the Congo, or in British East Africa.

basin of the Congo, or in British East Africa.

Petrie's conclusion is the theory of utility brought to perfection by heredity (op. cit. 88).

His views may be summed up as follows: The conscious idea of right and wrong conforms at its basis with what is useful or the reverse for the community. Passing centuries have gradually done away with this idea, and have imposed on the individual, and thereafter on his descendants, respect for it (if not intelligence); so that his manner of appreciating it has, like hereditary movements, become instinctive. In fact, the primitive reasoning of the ancestor has been transmitted to his posterity in the form of propensities to conscience.

This theory of Petrie's is a remodelled form, to suit Egypt, of the conception that we find elsewhere in all sorts of analogous forms; e.g. 'le précepte devient axiomatique dans la conscience par hérédité' (Réville, op. cit. 276); or the elementary principles are 'Putilité, Popinion, les sentiments affectis, i herédité' (G. Le Bon, Pramières civilisations, ed. 1905, p. 95), etc. The whole idea seems well adapted to the Egyptian world, so well organized in all its workings for social co-operation and utility.

But this is a narrow basis, and must be broadened. Such a system does not explain why Egypt, having the same constitutive elements of conscience as the other African peoples, should have developed its moral conscience further than

A more precise and intricate mechanism must be found, and can be found-in the present must be found, and can be found—in the present writer's opinion—in a careful examination of Egyptian literature. A total of 500 or 600 proverbs, maxims, precepts, ideas, or thoughts of a moral type, extending from the IVth dynasty to the Christian era, will suffice for this inquiry, the business of which is not to define the idea of duty or its working out (see ETHICS), but to find the elements of formation of what we call conscience in Egypt. The development of the utilitarian and social datum will annear as the result of the combination of two chief elements.

The first consists essentially in the feeling that

there is no indifferent action, and that every is by no means of the same nature as that of right and wrong. It is not even the idea of responsibility, but it contains the latter in embryo. It also includes the future idea of reciprocity, applied to the doer of the action. It thus reduces itself to the form: 'If I do this, the same will be done to me (or will happen to me); then to the form: 'I shall not do that, so that the same may not be done to me (or happen to me).' A comparison of the mentality of the black African of to-day with the Egyptian texts makes it possible to hold that this idea of the necessary consequences of every good or bad action is a truly innate idea, or, if not innate, at least the most primitive instinctive idea that can be found. It does not presuppose, so far as appears, a developed intelligence or a long education. The African—to continue our illustration—is surrounded by an infinite number of forces and spirits of such importance that every human action and movement affects them, for good or ill—we might almost say, most often for ill. And this pessimism, rightly remarked as a characteristic of the African mind, is still visible in Egyptian literature. The action, with its consequences, agreeable or harmful or displeasing to one or other of those innumerable spirits and one or other of those innumerable spirits and forces, begets the immediate perception of a good or evil consequence for the doer. This is clearly seen in the case of numerous interdictions of a ritual nature, or in the mysterious vengeance of spirits and gods offended unawares, or in violent deaths. The famous ch. cxxv. itself, looked at from this point of view, shows itself to be composed from the very same elements as those of a Kavirondo or Ubangi native's conscience. And the idea that other men, neighbours and fellowmen, are linked, by their death or by their guardian-spirits, to this sum of mysterious forces brought into motion by every action, seems to have supplied the natural means for the ex-tension of this primitive feeling.

tension of this primitive feeling.

Whether the original mental operation is innate or not will not be discussed here. The positive fact is that what, in every case, is described as the first manifestation of the feeling of conscience among the 'non-civilized' Africans is at the foundation of Egyptian mentality. Experiment naturally gave this feeling definiteness and precision, and, low as we may judge it from the moral point of view, it started a great forward movement on the day when it became the idea of necessary reciprocity, attached to the actions or intentions. We can still detect that stage very clearly in Egypt (especially in the popular tales), when this idea is embodied in the vague form of a sort of 'fatality,' whose consequences man lets loose by his own action. It is only later, and in a very imperfect form, that this mechanism is connected with precise interventions: (1) with the dead as punishing or rewarding (cf., e.g., the expression 'your gods it.e. your delified dead] will bless you if you do,' etc.); (2) with the guardian-deities of the dead. And yet, even in historic times, the perception of the results of the evil action is attached to forces that are quite vague and undefined, such as chance, misfortune, and accident. These are the survivals, modified by time, of the 'spirits' of the most ancient Egyptian beliefs. Never have national religions been able to rise higher.

If we find at the base of Egyptian thought first fear, and then, with progress, the idea of personal responsibility, we must demonstrate why finally

. . . .

this sort of 'conscience' later developed so differently in Egypt and among the African peoples of whom we have been speaking. A peoples of whom we have been speaking. A second factor came into play, which was indispensable to the evolution, and it seems that it was this factor which organized the Egyptian conscience, with its special traits, with its imperfections—but also with its nobility. The second element consists very probably in the idea second element consists very probably in the idea of order, or the idea of the harmony of the world—later designated by the word κόσμος. The first knowledge of 'order' in the progress and forces knowledge of 'order' in the progress and forces of the world naturally began as purely material order, in the domain of physics and geography. We have explained in art. CALENDAR (Egyptian) the important part played in this question by the observation of the stars, and the idea that the Divine influences of the stellar powers governed the world. As the heavenly vault set the example of order, and directed events on earth, the know-ledge of the laws and harmonies of the sensible world followed. A relation of this kind between the astral world and the earth seems to have been made very much more natural in Egypt by the character of the climate, in which the regularity of certain rhythms and the well-defined character of certain opposites were noticeable (the periodicity of the Nile's rise, the fixity of the seasons and winds, the contrast between the desert and the valley, etc.). The knowledge of this supposed co-relation helped the Egyptians to establish the first ideas of the correspondence that could exist between this regular rhythm of the material world and the individual efforts of men to associate their own activity therewith in a beneficial manner. Hence arose a more and more clear comprehension of the identity of what is useful for man with what is indicated by the order of astral powers. Such a conviction must in its turn engender gradually, as the foundations of intuitive conscience, the ideas of the necessity of all uniting together for the common struggle of the prescript. of solidarity, of the superiority of the necessity of solidarity, of the superiority of the general interest over the particular, and of the dependence of the individual upon the community.

of the individual upon the community.

The whole question, then, in the special case of Egypt, turns upon the theory that the origin of conscience 'se rattache aux efforts faits par l'homme depuis la préhistoire pour se civiliser par la coopération et la solidarité' (G. Le Bon, Origines, 1906, p. 191). But, instead of general hypotheses, we have here documentary evidences of this evolution; e.g. in the very frequent references in the ancient texts to the important rôle, from a moral standpoint, filled by the questions relating to water, irrigation, and the struggle against the desert (cf. ch. cxxv. of the Book of the Dead; certain passages in the panegyrics of the lords of Syut in the Xth dynasty; or of Beni Hasan in the XIIth, etc.). The idea of a higher authority and an earthly hierarchy being necessary in this world, as they are in the celestial world, for the common good, is also a result of a conscience based on the vision of the κόσμος; this vision has likewise impregnated all the literature of the 'moral' type.

In conclusion, from the vague fear common to

In conclusion, from the vague fear common to all primitive societies, the nature and climate of Egypt developed the more fertile and definite idea of an arrangement of the forces and beings of the sensible world into regular armies, some of which are man's allies and preside over the progress of the world, while others try to harass the world and so hurt man. The comprehension of consequences was followed by the comprehension of the necessity of social order, the comprehension of sequences was followed by the comprehension of the necessity of social order, the comprehension of social interest, etc. Owing simply to its complex origin, Egyptian conscience never succeeded, in its reasoned elaboration of duties, in separating ritual tabu from the obligation of the moral domain. These were for the Egyptian two different forms of the necessary co-operation of men for the maintaining of the order requisite to society.

A satisfying counter-proof of this view is sumpled by a

A satisfying counter-proof of this view is supplied by a comparison with a certain number of living races in the uncivilized parts of Africa. It might be concluded that the degree of organization of the moral conscience in Africa is

usually proportionate to the clearness of the conception of order in the terrestrial world, meteorological or astronomical (of. e.g., the comparative series of the collection of Monographies descriptives by Van Overbergh, Brussels, 1907 ff., with what is said of the Bavili and of Benin by R. E. Dennett, At the Back of the Black Man's Mind, London, 1906, and Nigeria Studies, 1910, for the various manifestations of conscience among these peoples).

The Egyptian idea, then, ends in something very analogous to the statement of Chinese wisdom, that the natural order of the world is bound up with its political, social, and moral order, and is even quite identical with it. Only—in spite of passages of certain texts—the Egyptians do not seem to have been able to formulate this view with the same theoretical clearness. It is in any case curious to notice—and here we have probably more than a simple coincidence—that, just as the sanctions of Taoism in China are of late date, so in Egypt the organization of definite sanctions (rewards and punishments in permanent categories) did not appear until well after the actual organization of the moral conscience.

moral conscience.

The history of this organization will be discussed in art. ETHICs. We need only observe here (1) that the material κόσμος has become harmony, equity, and moral and intellectual truth by a series of evolutions which can be shown philologically by the series of Egyptian texts, and that this series is analogous to the series which has gradually transformed the data on the human voice, cry, or vibration, into concepts where the word 'voice' is taken to mean the spoken word, and then becomes the equivalent of λόγος; and (2) that the appearance of the moral conscience, based on the comprehension of the κόσμος, does not in any way assume the attribution of a properly so-called moral character to the beings or forces directing the κόσμος. These simply did their own work in this world, without ever making any express demand upon the Egyptian's co-operation; and the latter simply sought, for his own good, to bring his efforts into harmony with those of the directors of the supposed order. Hence he derived, among innumerable other acquisitions, a certain number of ideas on conscience, morality, interdictions, obligations, etc. A significant fact in this respect is that, in the majority of cases, the sanctions of these obligations and interdictions are tacked on to all possible kinds of beings and things, except beings of a Divine character.

Literature.—As was said at the beginning, the only work

or beings and things, except beings of a livine character.

LITERATURE.—As was said at the beginning, the only work really dealing with the subject is W. M. Plinders Petrie's little book, Religion and Conscience in Ancient Egypt, London, 1898. Even here we must observe that the real question of conscience is treated only on pp. 86-109, the rest of the book being practically given up to a summary of Egyptian mythology (pp. 1-85), and an examination of the various categories of duties (pp. 109-163).

GEORGE FOUCART.

CONSCIENCE (Greek and Roman).—I. GREEK.—I. Definition.—Conscience operates when the individual passes an intellectual judgment on definite acts, accomplished or purposed, of his own, and decides whether these acts are right or wrong. Such judgments, being self-regarding, are always accompanied by self-satisfaction, or self-dissatisfaction, according as the individual feels he has fulfilled, or fallen short of, the moral law; conscience punishes or approves, deters or suggests. It has an intellectual side and an emotional side; it may be enlightened or the reverse, sensitive or the reverse. Its enlightenment is to be estimated by the moral law through fear of punishment here or hereafter; through hope of reward here or hereafter; through hope of reward here or hereafter; through hope of reward here or hereafter; through conscience is that of the man who has the highest ideal, who wishes to realize the best life of which humanity is capable. The sensitiveness of conscience depends partly upon heredity, and partly upon habit and training. Some people naturally feel their shortcomings more acutely than others, while indulgence in vice always tends to lessen the shame felt at such indulgence.

2. Homer and early times.—Although there is embedded in the Greek language the notion, in later times developed by philosophers, that virtue and sin have an intellectual side (Homer's phrase for 'versed in wickedness' is αθεμίστια είδώς,

'knowing lawless deeds' [see, for example, Od. ix. 189, 428, xx. 287]), yet the most common moral terms used in early times refer to the emotional side of conscience. In Homer we have: (1) alδώs (alδέομαι), used of those who feel reverence towards the gods (II. xxiv. 503; Od. ix. 269, xxi. 28), towards suppliants or guests (II. i. 23, 377, xxi. 74, xxii. 419; Od. iii. 96, iv. 326), or of those who inhibit their passions in order to realize some higher end (II. v. 530, vi. 442, vii. 93, xiii. 122, xv. 561, 657, 661, xxiv. 44; Od. iii. 24, vi. 66, 221, viii. 172, 324, 480, xiv. 146, xx. 171). The substantive may be rendered 'shame at offending gods or men,' 'respect for the moral rebuke of others,' 'modesty,' 'sense of honour,' 'self-respect.' (2) If alδώs sometimes approximates to the 'lawgiving conscience' which precedes an act, alσχύνομαι (Od. vii. 305, xviii. 12, xxi. 323) generally represents the shame (or the fear of it) inflicted by the 'judging conscience,' although it is not always possible to distinguish between the terms. (3) The indignation felt by others at transgression is represented by νέμεσις (II. vi. 351; Od. ii. 136, xxii. 40), but occasionally νέμεσις is self-regarding (Od. ii. 64, 138, iv. 158; II. xvi. 544, xvii. 254), and on one occasion (Od. i. 263) θεούς νεμεσίζετο means 'he stood in awe of the gods.' (4) A feeling of reverence for the rights of humanity is expressed in II. xviii. 178 by σέβας, and in II. vi. 417 by the verb σεβάσσατο.

The moral sanctions of the Homeric Greek were thus (i.) fear of the gods, (ii.) respect for public opinion (\$\phi d\tau is \tau r\tilde{\rho} \rho \tilde{\rho} \rho\$. (ii.) self-respect (Helen calls herself 'a dog,' \( II.\) vi. 356), and a sense of honour which sometimes led to deeds of heroism. Achilles would rather die than fail to avenge his friend Patroclus (\( II.\) xviii. 95 ff.)—an instance of devotion to duty which Socrates, in the Platonic \( Apology \) (28 C D), quotes with strong approval. Conscience, in fact, was acting, although as yet no special word existed to represent it, while the intellectual side was less developed than the emotional.

3. Individual merged in the citizen.—The characteristically Greek respect for public opinion found freer scope as city life developed, and as State discipline became the chief educator of the Greek people. The citizen looked upon morality as submission to the will of a corporate body. "We lie here in obedience to our country's commands,' was the epitaph of the noblest heroes that Greece ever produced. The law, in fact, was invested with a peculiar sanctity of its own, and the individual found moral satisfaction in yielding implicit obedience to the powers that be; in modern language, he surrendered his conscience to the general conscience, and was content to be guided by the latter. Plato (Crito, 51 E) makes Socrates personify the Laws, who point out that every citizen has virtually agreed to abide by them, and not to prefer his own sense of right and wrong. That such was the belief of the historical Socrates is shown by Xenoph. Mem. IV. iy. 12, where τδ νόμιμον is equated with τὸ δίκαιον. It was generally felt that the vast majority of men needed some strong external constraint. Hesiod (Works, 182 ff.) dreads the departure of moral fear from the earth, and the Platonic Protagoras (Prot. 322 BC) calls alδώs and δίκη the bonds of political and social life. The language of Æschylus is stronger still. 'Who, asks Athene (Eum. 699), 'is righteous if he fear nothing? In a remarkable passage of the Ajax of Sophocles (1073 ff.) it is stated that φόβοs and alows are a necessary defence to both States and armies; that only δέσε and αίσχύνη can bring a man safety. Plato, in a yet more striking passage (Laws, 699 C), makes φόβος and αίδως responsible for the Athenian victories over Persia.

Athenians, he says, had a despotic mistress in

Athenians, he says, had a despotic mistress in aldás, through whom they were the willing slaves of the laws (698 B), and those who would be good must be similarly disciplined.

4. Unwritten laws.—But, in spite of the tendency to merge morality in legality, the Greek was aware that the individual ought to form moral judgments for himself when the laws were silent. The jurymen at Athens swore to decide suits according to the laws. but, when these were suits according to the laws, but, when these were rη dρίστη, Aristotle, Rhet. i. 15. 5; of. Æsch. Eum. 674). Again, the Greek acknowledged certain great 'unwritten laws,' of which Socrates (Xenoph. Mem. IV. iv. 19 f.) mentions four—to worship the gods, honour parents, avoid incest, and repay benefactors. Occasionally the unwritten laws might clash with those of the State; then the individual must decide between them. The tragedians are constantly depicting situations in which a character has to choose between the Philotetes is a good example, while Antigone readily faces death rather than obey the edict of Creon, and, by leaving her brother unburied, violate the unwritten laws.

5. Decay of State discipline.—It is remarkable that the notion of conscience was more clearly apprehended just at the time when the morality of the masses began to decline, that is, during the period subsequent to the outbreak of the Peloponnesian War. The reason is partly that, as the State discipline slackened, the vicious and weaker characters, no longer having so firm a check upon them, grew more immoral, while the stronger and nobler natures (not necessarily the philosophers) learned to obey an inner law of righteousness. But the latter were comparatively few, and Plato, in the second book of the Republic, repeats the story of Gyges' ring in such a way as to show his own belief that the many are incapable

of being virtuous for the sake of virtue.

6. Decay of State religion.—Not only the State discipline, but the belief in the State religion, had by this time lost much of the power it once possessed. Few thinking men continued to believe in the existence, let alone the providence, of Zeus, Apollo, and the other Olympians. The story told by Herodotus (vi. 86) of Glaucus and the Delphic oracle illustrates how the State religion had once been, in some respects at least, a good moral influence. When, however, the Divine sanction failed to exert effective control, the individual conscience more clearly manifested itself. In yet another way did the decay of belief in the Olympic pantheon further the development of the idea of conscience: the early Greek had thought, with a strange inconsistency, that the gods both tempted men to sin and punished sin; at first he blamed the gods for leading him astray; then, deprived of this excuse, he began to blame himself

this excuse, he began to blame himself.
7. Other components in Greek religion.—But there were other and more abiding components than Olympian worship in the religion of the Greeks. One should note the φαρμακός, or scapegoat, mentioned by Hipponax (frag. 4 ff., ed. Bergk) and Aristophanes (Frogs, 733). Fear of spirits (probably Pelasgian in origin, as it is not to be found in Homer), especially dread of a murdered man's ghost, gave rise to the ideas of an avenging deity (ἀλάστωρ), and of blood-guilt (παλαμναίος, προστρόπαιος, ἐναγής). The latter might infect a whole family, or even a State (Thuc. vii. 18). Doubtless at first the infection (μίσσμα, μύσος) was regarded as something material, to be cleansed by expiatory ceremonies, or it might even be perexplatory ceremonies, or it might even be personified (Furies, μητρός έγκοτοι κόνες [Æsch. Chocph. 1051]); but in time the doctrine was spiritualized. All the second

Xenophon (Cyrop. VIII. vii. 18) speaks of the fears that the souls of wronged persons bring upon murderers, and of the avenging spirits (παλαμναίου) which they cause to visit the unholy; while Euripides interprets the Furies of Æschylus as the stings of conscience (Orestes, 396).

Orphism introduced the doctrine that the soul was exiled from heaven because of sin, and that reunion could be achieved only by purification. In Homer the gods lead men to transgress, but Orphism taught that guilt arose from man himself. Abstinence and rites were the Orphic means of cleansing; but, however degrading this teaching might be in unscrupulous hands (Plato, Rep. ii. 364 E), it was possible to give it a spiritual interpretation. interpretation (νηστεῦσαι κακότητος [Empedocles, 406, ed. Karsten]), and it most certainly helped to foster a sense of sin. The doctrine of ὁμοίωσις (becoming like unto God) is Orphic in origin, and gave to the world an ideal which increased in moral value as the idea of the Divine nature was purified and ennobled. According to Orphism, man was good and bad, Divine and human. The realization of man's dual nature must have tended to develop the individual conscience. In the Pythagorean sect, which owed much to Orphism, examination of the conscience was enjoined (according to C. Martha, Etudes morales sur l'antiquité, 1883) from coult times and in the Handling. 1883) from early times, and in the *Hippolytus* of Euripides we have an Orphic who is horrified at the suggestion to commit a sexual offence. In the history of morals the idea of physical impurity generally precedes, and leads up to, the conception

of a guilty soul.

8. Morality and the human heart.—Whatever the origin may have been, the 5th cent. witnessed the development of the idea that the human soul ( $\psi \nu \chi \eta$ , φύσις, φρήν, νοῦς) is the supreme judge in the sphere of morality. The mere fact that philosophers like Xenophanes criticized the Homeric theology on moral grounds, shows that they regarded human nature as superior to religious tradition. This thought is specially prominent in the plays of Euripides. The *Ion* is an angry protest of the human soul against a conscienceless god who numan soul against a conscienceless god who ravishes maids and leaves them to their shame (Ion, 892; cf. 880). The heart of man is considered by Euripides to be the seat—possibly the source—of virtue and of vice. Chastity is said to reside in the human poors (Baccha, 314, 315, Hipp. 79, Tro. 987, 988); Theonoë (Hel. 1002, 1003) has a 'mighty when of right conserved. Shrine of righteousness' in her  $\phi i\sigma s$ ; the unhappy Phædra exclaims, 'My hands are pure; the stain is on my soul' (Hipp. 317). Conscience the law-giver and conscience the accuser are both manifest in these dramas. The countryman in the Electra giver and conscience the accuser are both manitest in these dramas. The countryman in the Electra is too honourable to consummate the marriage which has been forced upon Electra; Macaria goes voluntarily and readily to an awful death in order to save her kindred; Orostes is tormented by the consciousness of matricide. Like many other men of a sensitive moral nature, Euripides is painfully aware that the times are out of joint; oaths are no longer sacred, and alöds has vanished from the earth (Medea, 439). This dramatist, perhaps more than his great predecessors, admired the beauty of self-sacrifice; Alcestis and Macaria are worthy successors to Prometheus and Antigone.

The Greek of the 5th cent, was thus fully aware of the working of conscience, and he began to use special words to describe it. These laid stress, not upon the enotion which follows a judgment of conscience, but upon the intellectual character of that judgment. One word is absent intellectual character of that judgment. One word is absent in thellectual character of that judgment. One word is absent to have become popular in the moral sense. Another is obverts, "understanding," used by Euripides to describe the remorse of Orestes (Or. 396), by Menander (iv. incert. 86, Meineke), who says that 'conscience doth make cowards,' and by Polyblus (xviii. xxvi. 13). The last passage is to this effect: 'There is no more terrible witness, or more formidable accuser, than the conscience that dwells in each man's soul.' But the most

common term is the verb σύνοιδα, with its participial substantive τὸ συνειδός, meaning either (a) 'to be cognizant,' or (b) 'to share in the knowledge of another.' This verb expresses at once the intellectual character of a judgment of conscience and the dual nature of human personality. It is impossible to decide when the term first acquired its moral meaning, but it is used of a clear conscience by Sophocles (ap. Stob. Flor. xxiv. 6) and (with a negative) by Plato (Rep. 331 A, τῷ μηδὲν ἀνης ἄδικον ξυνειδότι ἡδεῖα ἐλπίς), and of a guilty conscience by Euripides (Or. 396) and by Aristophanes (Wasps, 999, Thesm. 477). Stobæus has collected a number of passages dealing with τὸ συνειδός in his Florilegium, ch. xxiv., and it is interesting to note that he attributes to Pythagoras an exhortation 'to feel shame most of all before oneself,' and the statement that conscience deals more cruel blows than the lash. We are reminded that the Pythagoreans laid stress upon self-examination, not as an exercise of memory, but as a moral discipline. One other word for conscience may be noted here. A scruple is sometimes called ἐνθύμον, 'something lying heavy on the heart' (Herod. viii. 54; Thuc. vii. 50; Antiplo, Tetral. ii. 1, 2, 4, 9; Soph. Œd. Tyr. 739; Eurip. Her. Fur. 722).

9. Shame before the self.—A clearer distinction now begins to be drawn between the shame which results from fear of punishment or disgrace, and the shame which accompanies loss of self-respect. the shame which accompanies loss of self-respect. Democritus, a profound moralist without an ethical system, looks for happiness in serenity of soul (fr. 9-11, ed. Natorp). Sin should be avoided, not through fear, but because it ought to be avoided (διά τὸ δέον, fr. 45). Even when alone, a man ought not to do or say anything base. He should be ashamed before himself rather than before others (fr. 42). He should no more do evil when pohody will learn about it than when everybody nobody will learn about it than when everybody will do so; it is best to reverence oneself (ἐαυτὸν μάλιστα αἰδεῖσθαι, fr. 43). The Attie orators not only emphasize the uneasiness of conscience resulting from the fear of discovery, but also extol the life that is free from self-reproach, although the two ideas are sometimes combined. Antipho (Tetral. i. 3, 3) mentions as moral checks both fear ( $\phi\delta\beta\sigma$ ) and dread of sin ( $d\delta\kappa ka$ ), and he thinks that a jury will be influenced by respect for 'the gods, piety ( $\tau\sigma\hat{v}$   $\epsilon\hat{v}\sigma\epsilon\beta\sigma\hat{v}s$ ), and themselves' (Or. vi. 3, cf. also vi. 1). Isocrates (Nic. 39 A) bids us envy not the rich, but those conscious of no sin. Fear of the rich, but those conscious of no sin. Fear of punishment or of disgrace may be implied here, but a clearer note is sounded in [Isocrates] 5 B: 'Never expect to hide a sin. Even if others learn nothing of it, you will be conscious of it yourself.' Lysias (Or. xix. 59) speaks of one who thought that a good man ought to help his friends, even though nobody should know about it. In the psendo-Demosthenic speech against Aristogiton, the writer says (780) that 'there are altars of justice, discipline, and honour (albobs) among all men: the fairest and holiest are in the soul and men; the fairest and holiest are in the soul and nature of the individual.' Socrates is made in the Xenophontic Apology (§ 5) to avow that in the past he has enjoyed the most pleasant possession a man can have, the consciousness that his life has always been holy and just (cf. also Xen. Apol. § 24, and Stob. Flor. xxiv. 13). Finally, a fragment of the comic poet Diphilus (ap. Stob. xxiv. 1) denies that a man who is not ashamed before himself when he has done wrong can be ashamed before others who are ignorant of it.

10. Philosophy and conscience.—It has been maintained, and as energetically denied, that this clearer realization of the shamefulness of sin is Both seem to have been due to the same cause, namely, the decay of old beliefs, but it is perhaps unreasonable to deny a real, though indefinite, influence to philosophic ethics. It should be noticed, however, that σύνοιδα and τὸ συνειδός are

popular, not philosophic, expressions.

There are plenty of examples throughout the course of Greek literature and Greek history of the individual deliberately following the dictates of his better self, but such acts are rarely associated with the words employed to designate 'con-

science.' The latter (τὸ συνειδός, etc.) generally refer, not to the law-making conscience, but to an adverse decision of the judging conscience, and to the self-dissatisfaction which accompanies it. Now, it was with the enlightenment of morality that Greek ethical philosophy chiefly concerned itself. As a rule it passed over the shame that accompanies wrong-doing, and never tried to make it the highest moral motive. Convinced that vice is ignorance, both Socrates and Plato devoted their lives to educating the moral sense; and Plato constantly insists that mere conscientiousness, like that, for example, of Euthyphro, is not suffi-cient. But if sin is nothing more than a mistaken notion of what is good, no place is left for shame and remorse. Carried to its logical conclusion, the doctrine denies either the existence or the reasonableness of moral praise and moral blame. Socrates trusted to reason to guide him aright in moral questions, and doubtless fathered any scruples he might occasionally feel on his δαιμόνιον probably a hallucination of the sense of hearing.

—probably a hallucination of the sense of hearing. (1) Plato.—Plato regarded as true morality only that which springs from knowledge of the idea of good. Morality founded on fear he continually disparages, especially if the fear be that of public opinion (cf. Crito, 47 C, Phædo, 82 A B, and Euthyphro, 12 C), though he admitted that the majority of men were incapable of 'philosophic' virtue, and should be compelled to obey, not the fluctuating general conscience, but the dictates of philosophic rulers (Rep. 519, 520). Consequently, alöss is for the many rather than for the few, and it and fear form the two warders of the ideal State (Rep. 465 B). Towards the end of his life, Plato empha-465 B). Towards the end of his life, Plato emphasized more the value of awe and reverence. Every legislator, he says in the Laws (647 A), will hold moral fear in high honour: fear, law, and true reason are the principles that keep the appetites in check (783 A); strong public opinion restrains a man from incest, the fear of committing which, were naturally really and the law are not appeared. even unknowingly, makes a man ready to kill himself (Œdipus, Macareus, 838 C). But what Plato valued was the fear that checks crime, not the shame that follows it, and he therefore set little store by the popular conception of ro ownersors; it is the old man Cephalus in the Republic, the representative of the old morality, who is made to sound the praises of a 'conscience void of offence,' and to enlarge on the terrors of the wicked.

Conscience the lawgiver, though working in the hearts of men, was as yet but feebly apprehended as an idea, and herein the work of Plato bore fruit. The keynote of his ethical philosophy is that the really virtuous man must know what the good is, i.e. must have an educated morality. And when a man knows what virtue is, he cannot help acting a man knows what virtue is, he cannot help acting virtuously; for no one is voluntarily wicked. Sin is a disease of the soul (Gorgias, 479 B), and he who sees this will submit to anything, even to death, to rid himself of the plague. Even though the gods and men are unaware who is righteous and who is not, righteousness accompanied by all the punishments of sin is better than unrighteousness accompanied by all the rewards of virtue (Rep. 366 DE). Plato felt that the enlightened soul, brought face to face with sin in all its nakedness, would turn from it in discust.

(2) Aristotle.—Aristolle, taking the end of man to be a full and virtuous life, the result of habituation and practical wisdom, never discusses conscience. The first principles of the science of human conduct, he thought, were perceived immediately, by a kind of intuition ( $ato\theta\eta\sigma\iota s$ , Ethics, 1142 a). He values highly self-respect, and the beauty and desirableness of virtuous actions; alows he regards sometimes as modesty, befitting only the young 1 1

(1128 b), sometimes as a shrinking from the ugliness of sin (1116 a, 1179 b). Emphasizing as much as Plato the necessity of an enlightened intelligence for truly virtuous conduct, Aristotle did good service by insisting (again with Plato, Laws, 653 B) upon the importance of training youth by habituation to love good and to hate evil (Ethics, 1104 b).

(3) Stoics.—It has been held that the Stoics, with the individualism their destricts of the self-

(3) Stoics.—It has been held that the Stoics, with their individualism, their doctrine of the self-sufficiency of man, their neglect of public opinion, their elaboration of the idea of duty (προσήκον, κατόρθωμα), and their exhortations to live a life according to the Divine reason implanted in the heart of man, did much to develop the notion of conscience. Some believe that they coined the word συνείδησις, but this is more than unlikely. By συνείδησις conscience is described in the (of course apocryphal) sayings of Bias and Periander recorded by Stobæus (Μος. xxiv. 11, 12), in Wis 171, in the NT, in Diodorus (iv. 65. 7: δια τὴν συνείδησιν τοῦ μόσους els μανίων περιέστη), in Lucian (Αποσες, 49), and in the proverbs assigned to Menander (Μοποσείλιλα, 654: conscience is a god to all mortals. Chrysippus (Diog. Laert. vii. 85) used the word, but he meant, not conscience, but consciousness. Even the later Stoic writers, Epictetus and Marcus Aurelius, though they constantly mention the action of conscience, seem purposely to avoid the word συνείδησις. The fact is that all the Greek of pal. for 'conscience' look, with scarcely an exwords and the conscience of look, with scarcely an exwords and the conscience of look, with scarcely an exwords and the conscience of look, with scarcely an exception, to the conscience of look, with scarcely an exception, to the conscience of look, with scarcely an exception, to the conscience of look, with scarcely an exception, to the conscience of look, with scarcely and exception, to the conscience of look, with scarcely and exception of conscience the legislator, had no special word to describe it, although its emotional side is hinted at in alödes. Now, the Stoics attributed 'absence of emotion' (ἀπάθεια) to their wise man; yet, though he would not entertain fear of disgrace (Diog. Laert. vii. 112, 116), he would feel alödes. It was the legislating conscience, δρθο λόγος, that the Stoics emphasized; but, while Roman Stoicism came to express this by conscientia, among the Greeks it ha

(4) Epicureans.—Perhaps it was the Epicureans who developed the idea of a guilty conscience, and this would account for the Stoics avoiding the term σωείδησις. At any rate, Epicurus held that sin is an evil only because of the fear of discovery (Diog. Laert. x. 151), and a graphic description of conscience the accuser is to be found in the poems of the Epicurean Lucretius (de Rer. Nat. iii. 1014-1023, cf. iv. 1135). Probably, however, philosophy, whether Stoic or Epicurean, had less influence than the facts of moral experience, which were more and more cossciously realized by the popular mind.

11. Summary.—From the earliest times the Greeks had terms referring to the emotional side of conscience in most of its espects.

II. Summary.—From the earliest times the Greeks had terms referring to the emotional side of conscience in most of its aspects. From the end of the 5th cent. σύνεσις and σύνοιδα were used to denote the intellectual aspect of conscience the judge. Orphism had emphasized the dual nature of human personality, while the gradual decay of the State religion and of State discipline, along with the intellectual movements of the 5th cent., forced men to realize that they had a judge in their own hearts. The idea, present from the first, that a man should feel shame before himself grew clearer; the hatefulness of sin was more acknowledged, and is urged with unsurpassed moral force in the writings of Plato. From the first it was felt that man owes allegiance to his better self; that he must obey, not only the traditional code, but the dictates of an inner law. Hinted at occasionally in albus, this feeling was not crystallized into a special term;

but the philosophers laid stress upon educating this better self, and thereby enlightening morality. Of the individualistic schools, the Stoics insisted on obedience to an inner law of reason, the Epicureans on the fears that follow wrong-doing. The growth of the idea of conscience was due to the development of the people; philosophy merely tried to inspire higher ideals by which conscience might judge. As the notion of conscience developed, morality appears to have declined. The relaxation of the bonds of external discipline, while it caused the few to acknowledge an inner judge and lawgiver, allowed the many to sink into superstition and moral degradation.

It should be noticed in conclusion that among the Greeks conscience was as yet scarcely connected with religion. The Christian's conscience accuses the sinner before God; the Greek's conscience accused him before himself. Cf. general art. CONSCIENCE.

II. ROMAN.—The Greeks, although they had many words denoting the emotions connected with moral self-criticism, failed to bring into common use any term summing up all their experience of the action of conscience; the Romans, richer in words denoting obligation, crystallized into conscients the different aspects of conscience soon effective teaching bogs at the Self-attice.

after Stoic teaching began to be effective.

1. Common moral terms.—Pietas, one of the commonest moral terms, signifies a sense of duty, not only towards the gods (Cicero, de Nat. Deor. i. 115, Top. 90). but also towards country, parents, and friends. It combines the notions of loyalty, respect, and (sometimes) affection. Fides (faithfulness, trustworthiness), the foundation of justice (Cic. de Off. i. 23), was thought to be a virtue peculiarly characteristic of the early Romans. It is combined with pudor and probitas in Cicero (de Rep. iii. 28), and moralists insisted that it meant loyalty to intention rather than to the spoken word (de Off. i. 40). The formula ex animi sententia was used of conscientious fulfilment of an oath, while pudor denoted the shame which prevents or follows a violation of the moral law. But in no term is the notion of conscience more clearly implied than in religio. Originally used of a feeling of awe towards an unknown object, it came to mean a scruple as to the proper means of propitiating a divinity. Cicero distinguishes it from superstitio; and though, when applied to the worship of the gods, it contains little moral meaning, when used metaphorically it often denotes or implies the action of conscience. Thus Cicero combines it with auctoritas, aquitas, fides, and timor in describing the character of certain witnesses, and it often denotes conscientious currying out of a duty (ad Fam. xi. 29, pro Font. xiv. [40], pro Roscio Com. xv. [45]; Livy, xxiii. 11). The remorse caused by conscience is not infrequently described by such phrases as morsus animi (Livy, vi. 34), tormenta pectoris (Tac. Ann. vi. 6), and flagella mentis (Quint. Declam. xii. 28; cf. Juv. xiii. 194, 195).

2. Obligation to external, and to internal, law.—In early times obligation was felt to an external moral law; it was only when the Republic was tottering to its fall, and the State religion ceased to hold the hearts and minds of men, that the inner voice of conscience was heard more clearly. We cannot trace the development of the idea so well as in the case of Greece, because, with the exception of Plantus and Terence (who adapted or translated Greek originals), there is very little Latin literature of earlier date than the 1st cent. B.C. But it cannot be doubted that much of the change was due to the teaching of the Stoics, especially of Posidonius and Panaetius, who exhorted men to follow the deity within them, i.e. the Divine reason, of which a portion has been given to each

individual. The conception of this deity ( $\delta a l \mu \omega \nu$ ), this fragment of the Divine mind, this guide and protector, must have helped to develop the notion of conscience; indeed, Epictetus (fr. 97) speaks of God handing men over to be guarded by 'their innate conscience.' Cicero, in speaking of the sanctity of an oath, warns us (de Off. iii. 44) that he who takes an oath summons as witness God, 'that is, his own mind'; and the same writer is the first to employ the noun conscientia (pro Roscio Am. 67).

The verb conscire occurs only once (Hor. Ep. 1. i. 61), and is there used (with a negative) of a clear conscience. Conscius is often used without any moral meaning, but once in Plautus (Most. 544) animus conscius has the sense of a guilty conscience; this phrase and mens conscia are occasionally found with the same meaning in later writers (Lucret. iii. 1018, iv. 1135; Ovid, Fasti, i. 485; Sallust, Cat. 14). Ovid (Fasti, iv. 311) uses conscia mens recti of a clear conscience that laughs at slander; but in Virgil (Aen. i. 604), mens sibi conscia recti probably refers to conscience the guide, which leads men to differentiate between

right and wrong.

In the sense of 'consciousness,' conscientia is rare, but it is exceedingly common in most writers after Cicero with the meaning 'conscience.' first time it occurs it is joined to animi (Cic. pro Roscio Am. 67, 'conscientiae animi terrent'—the writer's rationalistic interpretation of the Furies), and, as Mulder remarks (De conscientiæ notione, p. 97 f.), the expressions animi conscientia, mentis conscientia (the latter in Cic. pro Cluent. 159) are intermediate between the vague pectus, animus, mens, on the one hand, and plain conscientia with its full moral meaning on the other.

its full moral meaning on the other.

From Cicero onwards the idea of conscience grows more distinct and more full of meaning. It is regarded as Divine (Cic. Parad. iv. 29); it accuses and judges (Livy, xxxiii. 28; Tac. Hist. iv. 72; Sen. de Ben. vi. 42); it is a witness (Sen. Ep. 43; Quint. Inst. Or. v. xi. 41; Juv. xiii. 198). Bona conscientia, mala conscientia, 'clear conscience,' 'guilty conscience,' are terms which do not appear to be used by Cicero, but are common enough in Seneca and other later writers. But enough in Seneca and other later writers. But enough in Seneca and other latter writers. But conscientia (with a genitive case added) not infrequently occurs in Cicero with the meaning of 'a clear conscience,' which he calls 'fruit' (Phil. ii. 114), 'a reward' (de Rep. vi. 8), 'a joy' (ad Fam. v. 7), and 'a comfort' (ib. vi. 6, 12).

3. Conscience the lawgiver valued as a guide.—

The Stoic teaching, insisting as it did upon obedience to the Divine reason in the heart, led men not merely to fear conscience, but to value it highly as a director of life. Cicero recognizes conscience as a lawgiver (ad Att. xiii. 20), and so does the younger Pliny (Ep. i. 22), while the idea is especially common in Seneca. Conscience, from especially common in Seneca. Conscience, from Cicero onwards, is considered a better guide than public opinion (Cic. de Fin. ii. 71, ad Att. xii. 28; Livy, xxxiii. 28; Pliny, Ep. i. 8, iii. 20; Sen. de Ben. vi. 42), though it is difficult to decide whether these are cases of the judging conscience or of the legislating conscience; indeed, it is impossible to keep these quite distinct, as a judgment on a past act is, of course, a guide to future conduct. past act is, of course, a guide to future conduct.

4. Summary. — Conscience, then, was always acting, but at first it took the form of a strong feeling of obligation to an external moral law that was sanctioned by tradition, religion, and the State. As the influence of these grew weaker, men transferred their allegiance to their own hearts, and realized that they had within them an accuser, a judge, and a guide. The Stoic doctrine of a Divine reason immanent in each individual was a most powerful aid to a clearer conception of

conscience; the writings of Cicero and Seneca. who were both imbued with Stoicism, afford the best evidence of the way in which the notion of

conscience developed.

The ethical terms used by the early Greeks emphasized chiefly the emotional side of conscience; those used by the early Romans laid stress on moral obligation. Among both peoples the development of the idea of conscience was due to the decay of the State religion and of the State discipline, and the consequent turning of men's thoughts inwards; but, whereas the Greek philosophers made little use of the popular term τὸ συνειδός, and devoted their energies to improving the moral ideal according to which conscience judges, the Roman Stoics appear to have adopted the term conscientia, and to have made it express far more than its Greek equivalent. The Greek word nearly always stands for a guilty conscience; the Latin word, although very often associated with guilt, not infrequently denotes moral selfsatisfaction or the inner promptings of conscience the lawgiver. Neither word is associated with the State religion; but, while philosophic religion neglected rò oweios, conscientia was naturally used as an equivalent of the Stoic 'guardian,' the fragment of Divine reason implanted in the heart of each individual. Hence Christianity found in conscientia a term whose fuller meaning it could develop by its doctrine of the Holy Spirit accusing, exhorting, and 'leading into all truth.' But it should be noticed that the ancients made no attempt to analyze psychologically the conception of conscience, which remained to the last popular rather than philosophic, in spite of its adoption by Roman Stoicism.

Roman Stoicism.

W. H. S. JONES.

CONSCIENCE (Jewish).—Conscience is an essential element in the system of Jewish ethics. It is the motive power and the last arbiter for the moral rectitude of man; it is the judge, and at the same time the highest standard by which his actions in his relation to God and to his neighbours are measured. Conscientiousness in the fulfilment of duties is a moral heightening of the principle of duty, and is the necessary preparation for the virtues of mercy and love. The principle of righteousness which underlies conscience may be of a purely legal and ceremonial character, whereas conscience goes beyond simple legal forms, and springs from higher motives than those of obedience to the law and the performance of ceremonies. The motive force is a truer conception of the relation between man and God, and the acknowledgment of the principle that human perfection can be attained only by imitating, as far as human power allows, the ways of God. The 'hallowing of life' is the real object of all the laws, and still more so of the moral injunctions and acts of conscience which supplement them and assist in achieving the purpose of making the Jewish nation 'a kingdom of priests and an holy nation' (Ex 195). More than once is the sanctification of life enunciated in the Pentateuch, and the reason given is 'because I am holy.' The holiness of God is the ultimate reason and explanation of the laws which would cause man, who had been formed

'in the image of God,' to reach a higher standard, and place him almost on a par with the angels (Ps 88). As explained by the Rabbis, the various instances recorded in the Bible of God's direct communion with the Patriarchs were intended to teach their descendants how to act. 'Just as God clothes the naked (Adam and Eve), so should man clothe the naked; just as God visits the sick (Abraham), so should man make it his duty to visit the sick; just as God buries the dead (Moses), so must man bury the dead; just as God comforts the mourners, so must man comfort the mourner' (Gen. rabba, viii., Pirke R. Yehudah, § 25); in fact, all acts of charity and benevolence, all those duties which a man is bound to perform, not in virtue of a direct command or a legal prescription, but prompted by his 'heart,' are to conform to the Divine standard and promote the hallowing of life—the sanctification of God's name. And all the blessings that follow from it-peace, happiness, charity, goodwill, love—make man approach the Divine. The seat of this higher conception of moral duty—self-imposed duty, not duty imposed from without—was placed in the 'heart,' which stands in Hebrew for mind, sentiment, feeling, conscience. Hence 'a pure heart,' 'a clean heart,' as mentioned by the Psalmist, means a clean conscience, a pure mind, a noble conception of duty fulfilled without any other motive than the desire of self-sanctification.

In Jewish teaching, however, the legal and the purely ethical have never been really separated, but have been treated as concomitant principles. For, as remarked above, the justification and explanation of the former were sought in the latter, and both were to lead to the sanctification of life. Thus we read: 'And the heart of David smote him' (1 S 245). In Isaiah 58 these ethical principles are summed up in a masterly manner, and show us the workings of that spirit of holiness in the prac-tical walks of life. The other books of the Prophets teem with denunciations against 'hardness of heart,' harsh treatment of widows, orphans, and slaves, and dishonest dealings with one's neighbour. Moral perfection is thus defined by the prophet Micah (6<sup>8</sup>): 'He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' 'To do justly' was the particular realm of the mind, the work of conscience for God's sake, the work assigned to 'the heart' (cf. Concordance, s.v. 'Heart'; and the expressions 'with all thy heart,'

'Heart'; and the expressions 'with all thy heart,' with the whole heart,' etc.).

These ethical principles and guides of life, in addition to the legal prescriptions, found terse expression in proverbs and maxims, saws of wise men, and teachings left by venerated persons—a kind of moral compendia like the Books of Proverbs and Ecclesiastes. The authors of some of the apocryphal books followed these examples, and the Books of Sirach and the Wisdom of Solomon. the Books of Sirach and the Wisdom of Solomon, as well as Fourth Maccabees, are nothing other than such moral compendia. Direct reference to conscience we find in Sir 428 and Wis 17<sup>10</sup> (<sup>11</sup>), which are in the spirit of Jewish ethical teaching. A special class of ethical literature starts from the same period, i.e. before the destruction of the Temple, and it has continued to our day—the literature of 'Testaments,' or ethical wills of some great personage. These circulated afterwards far and wide, and became recognized moral guides independent of the codes of laws which regulated the strictly formal mode of life. It would be out of place here to discuss the whole range of ethical teaching; hence we must limit ourselves to those

passages that refer to 'conscience,' uprightness, moral responsibility, in the daily relations between man and man-references found scattered throughout these books. A brief survey of this branch of literature, however, is imperative for the historical sequence of such teachings, and in view of the fact that ethics had not been reduced to a system, or split up into sections differentiating the moral value of one principle as opposed to another. All stand on the same footing, and demand the same attention. There is no room for eclecticism in these collections. The oldest example is perhaps the *Testament of Tobias*, which emphasizes, as he had done in his lifetime, the moral duty of burying the dead—one of those pious duties and works of charity which the law does not prescribe, and neglect of which is not punishable by its letter, but whose fulfilment was a matter of conscience for every pious Jew. More important is the reference (To 1410) to the *History of Achiacharus* (Ahikār), since recovered and restored to its place at the end of the Book of Tobit. This is a collection of wise maxims and guides to proper deeds and moral actions, though in the versions preserved it is more in the nature of worldly practical wisdom of not too elevated a type. Its interest lies also in another direction; the form of address, 'O my son,' etc., is repeated in a large number of treatises to be mentioned later on. Richer is the harvest yielded by the Twelve Testaments, in which apparently the very word 'conscience' occurs for the first time in Palestinian texts: Reub. 43 'Even until now my conscience causeth me anguish on account of my impiety' (cf. Charles, ad loc. p. 9). In other testaments the same idea occurs: Jud. 205, where the corresponding word is 'heart,' and similarly Gad 53. To this category of testamentary teaching the present writer would assign also the famous collection of the 'Fathers of the Synagogue,' called 'The Chapters' (Pirke Aboth) after they had been grouped together in chapters. They can only be properly understood as such testamentary injunctions, the last wills of the leading men of the Great Synagogue and their successors men of the Great Synagogue and their successors in the high position of spiritual guides and leaders of the people during the period of the Second Temple. The authors have been grouped chronologically, and these chains of ethical maxims served the purpose of being a chain of tradition. In reality they are the principal ethical teachings representing the ethical wills of those sages, and as wills they fall naturally into their place, whilst hitherto they had been a riddle. A few examples may suffice:

may suffice:

"Rabban Gamaliel, the son of R. Judah the Prince, said:
"An excellent thing is the study of the Torah combined with
moral discipline (derekh eres), for the practice of both causes
sin to be out of remembrance" (ii. 2).1

"Hillel said: "Judge not thy neighbour until thou art come
into his place" (ii. 5). According to R. Eleazar, the good way
to which a man should cleave is 'the possession of a good
heart,' and the evil to be shunned, 'a wicked heart' (ii. 12, 13),
where 'heart,' no doubt, is to be taken in the Biblical sense.
'R. Eliezer said: "Let the honour of thy friend be dear unto
thee as thine own" (ii. 14). "R. Jose said: "Let the property
of thy friend be dear to thee as thine own" (ii. 16). Among
those who have no share in the world to come, R. Eleazar the
Muddaite places the man who puts his fellow-man to shame in
public. It is the moral and not the legal sin which is to be
shunned, and if committed it is to be explated by 'repentance
and good deeds,' as is often repeated here (iv. 15; cf. Taylor,
Sayings of the Jewish Fathia-8; Cambridge, 1307, ad loc.).
Round this collection of maxims grew up a
whole cycle of similar teachings, accretions, and

whole cycle of similar teachings, accretions, and additions from other sources, and examples drawn from the lives of other sages. It also was com-

mented upon by the most prominent writers of subsequent ages. One of the oldest is a small collection known as the 'Work (or Story) of R.

1 The phrase derekh ereg has hitherto been wrongly translated 'worldly business.' It can only mean, at least in this passage, 'moral discipline,' and one of the later compilations intended to serve as a 'moral guide' bears the title Derekh ereg.

<sup>1</sup> As will be seen, there is no Hebrew word which corresponds entirely with 'conscience.'

Judah the Prince' (Ma'aseh R. Yehudah ha-Nāsī), and later on developed into the 'Chapters of R. Judah the Prince' (Pirke di Rabbenu ha-Kaddosh). Another is 'The Will of Eliezer the Great,' or 'The Ways of the Pious' (Savaath R. Eliezer hagadol, or Orhoth Saddikim), agreeing in many points with the history of Achiacharus. It shows exactly the same development as other collections of maxims, apologues, and saws in universal literature, inasmuch as, to one portion, or to a small, old, and genuine section, other elements of a similar tendency are added. The names of the reputed authors vary, and a compilation ascribed originally to Talmudic authorities, i.e. Eliezer ben Hyrkanos, is then transferred to a much later Eliezer of the year 1050. The substance, however, is the same; and most of these collections merely repeat older materials, increased in later times by some similar maxims from other sources. The burden of the message of these collections is to seek the judge in one's own conscience, and to find the punishment for moral guilt in remorse of conscience, in the consciousness of a fall from a moral height, and in the desecration or profanation of the Sacred Name. In a much more elaborate manner the theme is enlarged upon in the 'Chapters or Maxims of R. Nathan' (Aboth di R. N.) of the rth-sth cent., into which much of the accumulated matter had flowed; and in the book called *Derekh ereş*, 'Moral Guide' (of which two recensions have been preserved—'Major' and 'Minor'), and in the *Tanna debe Eliahu*, in which the prophet Elijah is the teacher. The feeling of inner responsibility the teacher. The feeling of inner responsibility for moral faults and the glory in conscientious performance of ethical deeds have found in this book a powerful, and at the same time an elevating, poetical expression. The way to shun sin, to lead a pious, modest, exemplary life, full of humility and charity, and to accomplish the duties of the heart; is here expounded in simple and withal dignified language. This book belongs still to the Talmudic period, and is certainly anterior to the 9th century.

But the postulates of ethical teaching were not limited to mere maxims, highly appreciated and honouring to those who had formulated them, but still of a purely theoretical value. On the contrary, as far as possible, they were introduced into the fabric of consistent legislation, and, though many of the acts in question were not indictable before the regular tribunal, the conscience and religious principles of the individual remaining the ultimate forum before which they could be brought, some of them at least were brought within the four corners of the Law, and were made offences amenable to its rigours. Starting from the prohibition of oppression, fraud, and violence against widows, orphans, and strangers (Ex 22nd, Lv 1933), and, more especially, of fraud and overreaching in business transactions (Lv 25<sup>11, 17</sup> 'And if thou sell aught unto thy neighbour, or buy of thy neighbour's hand, ye shall not wrong one another'; 'And ye shall not wrong one another; but thou shalt fear thy God'), the Rabbis have extended the effects of these prohibitions very far, and have very clearly defined the principle of overreaching, and also established the rule that it applied to Jew and non-Jew alike. They have shown a high containing the statement of the containing the co ception of moral duty and obligation, and have applied a lofty standard of moral rectitude in the interpretation of these commands, which are called 'subjects left to the discretion of the heart' the 'heart,' of The law is called (Debārîm ha-mesurim la-leb; course, stands for 'conscience'). Ona'ah, from the hypothetical root of the Heb. word honah in the above Biblical passages. They word honah in the above Biblical passages. They have made this law very severe, and any deviation from its strict application makes the sale or pur-

chase void. To take advantage in any way of favourable legal circumstances, or of ignorance, or of quibbles, is sufficient to annul the transaction.

of quibbles, is sufficient to annul the transaction.

Oppression by means of word alone and not by deed is considered even worse than overreaching in the matter of money (Bab. mes. 58b): 'If a man repents, he must not be reminded of his sins'; 'If a man is a proselyte, he must not be told of his heathen ancestry, for money can be restored, but spiritual agony can never be made good.' 'Nor is a man to ask for the price of an object unless he has the intention of buying,' for he is thereby deceiving the vendor, who is unable to read the man's heart (Mishn. Bab. mes. ch. iv.; see also Lampronti, Pahad Yizhak, s.v. 'Ona'ah' [the whole of the Rabbinical literature on the question of overreaching, from the Mishna down to the 17th cent.]). 'If a man, under a filmsy pretext, withdraws from a bargain, they say: "May He who obtained redress (by punishment) from the men of the Flood and the men of the Bispersion (of Babel) be sure to obtain redress from (i.e. to punish) the man who does not keep his word"' (Mishn. Bab. mes. iv. 2). In addition to overreaching, the Sages also inveigh strongly against obtaining a good opinion under false pretences, which they call 'stealing a good opinion' (Genebath Da'ath): 'Of seven kinds of thieves, those who steal a good opinion create a false impression in their favour] are the worst, for, if they could, they would attempt to deceive the Almighty' (Tosefta, B. kamma, vii.). 'He who deceives man by such devices is like unto him who attempts to deceive God' (Rallah rab. fol. 18a). 'Do not invite a man to dine with thee when thou knowest that he is not then inclined to eat; 'one must not open a jar of oil or wine pretending to do it in honour of a guest, if it has to be opened as it] is already sold to a customer, and thereby create a good opinion by false appearance of consideration, he it a Jew or a Gentile' (Hullim, 94a; Shulhan Arukh Hoshen Mishpat, ch. 228; and Maimonides in his Principles of Ethics).

The reason for all these precepts is that they are inimical to the sanctification Oppression by means of word alone and not by deed is con-

The reason for all these precepts is that they are inimical to the sanctification of life, and cause the defamation of the Divine Name, which are in the keeping of man's conscience, and left to the

discretion of the heart.

'discretion of the heart.'
'A queen having lost her jewels, it was announced by royal proclamation that whoever should find and return them within thirty days would obtain a rich reward, but if after thirty days, he would be put to death. R. Samuel b. Sosarti, having found them, returned them after thirty days. When asked why he did so, as he was exposing himself to suffer capital punishment, he replied: "If I had returned the jewels within the thirty days, the people would have said that I had done so for the reward; I have therefore kept them till now, so as to show, even at the risk of severe punishment, that one is bound to return the property found even if it belonged to a Gentile "(Jerus Talm. Bab. mes. ch. il.). Again, 'R. Shimeon b. Shetah bought an ass from an Ishmaelite. When his pupils examined it more closely, they found a jewel hanging round its neck, and they said to him: "O master, it is a blessing from above, thou hast become rich!"; whereupon he replied: "I bought the ass and not the jewel," and he returned the jewel to the Ishmaelite owner' (ib.).

It would be easy to multiply examples and

It would be easy to multiply examples and maxims of an ethical character from the Talmudic

The Talmudic Sages coined a word for moral obligation which affords us a glimpse into the working of their mind. They use the verb hayyab, from the Bibl. root hob, which means 'material debt,' and employ it to designate man's moral 'indebtedness,' his moral 'obligation,' which he must fulfil, lest by neglect he become 'guilty.' The moral duty stands at least on a par with his The moral duty stands at least on a par with his legal obligations, and most of the ethical duties mentioned in the Talmud are regularly introduced by the formula hayyab adam, 'a man is bound' (of course by moral conscience) to do this or that. This formula has since become stereotyped, and is never used in connexion with legal commandments.

In this ethical Haggada the material is not arranged according to any system, starting, as it were, from the fundamental principle of the love of God or of His Unity, and then deducing from it those secondary principles which form the subject of a movel life. The tracking was of a propely ject of a moral life. The teaching was of a purely practical nature; the people did not care to follow it up to its theoretical beginnings. The Bible set the example. There also the laws and command-ments are not arranged in any systematic order, and some of the fundamental principles are placed next to matters of relatively minor importance. At the end of the 9th cent., however, a great change took place. Under the influence, indirectly

of Greek, and directly of Arabic, philosophic speculations, the Jews began to develop systems of religious philosophy in which special attention was often paid to the ethical side of the Jewish faith. Whilst, in the older period of Hellenism, Jewish thinkers were influenced by Plato and the Stoa, such as Philo and the author of the pseudo-Josephus 'On the Rule of the Intellect,' and were more or less guided by allegorical interpretations of the Bible, the philosophers of later times were mostly under the influence of Aristotle and his Arabic commentators, such as al-Fārābī (†950), Ibn Sīnā (Avicenna, †1038), Ghazālī (†1111), and Ibn Rushd (Averroës, †1198), while the purely theological speculation of the adherents of the Kalām (the Mutakallimun) also found followers among the Jews.

Before referring to the Jewish philosophers, it is of interest to mention a fact hitherto entirely ignored in connexion with the dissemination of their moral teachings. Such collections of maxims as are mentioned above were also put into verse, and formed terse epigrams or long didactic poems—a form better adapted to render them popular, for the masses do not care for historical or theoretical investigations, and still less for philosophical justifications of moral conduct. Fragments of the ancient saws of Ben Sira were then collected, and other collections of a similar nature were made. It is owing to this tendency that about that period (9th-10th cent.) the Book of Sirach was re-translated into Hebrew, as the language of the newly discovered version testifies. It is the period of 'Achiacharus' in its modern recension (Lukman, etc.). A century later no less a person than the last of the great Geonim of Babylon, Hai (940–1039), wrote his rhymed didactical poem Mūsar Hasket—also a kind of moral vade-mecum adapted to the understanding of the people, and probably taught in the schools and otherwise learnt by heart. It agrees also with the 'will' of Eleazar, Achiacharus, etc. A few examples must suffice.

Achiacharus, etc. A few examples must suffice.

'My son, my first word is: Fear the Lord; and with each of thy deeds give praise unto Him' (vr. 1.3). 'Forgive the sin and transgression of thy neighbour, and be ready to accept repentance and regret.' 'Be not treacherous or seek strife, and foster not rebellion' (vr. 75 ff.). 'When thou hearest the defamation of thy neighbour, cover it up and pretend not to have heard it' (vr. 88-89). 'Wisdom is to walk in the path of faithfulness and of the fear of God; and true understanding (character) is to avoid evil.' 'Be an (honest) judge among thy people' (vr. 114 ff.). 'In all thy transactions choose righteousness; have pity on the poor and miserable, and appoint an adviser and admonisher to thy soul' (vr. 185 ff.). 'Let thy heart (mind) beware of pride (proud insolence)' (168). 'Do not say to thy neighbour, Come to-morrow, when thou canst give to-day; give and do not tarry.' 'Judge thyself as thou wouldst judge others' (176).

His contemporary Samuel Ha-Nagid imitated Hai in Spain, in his Ben Koheleth ('Son of Ecclesiastes'). On other didactic poems we need not

To return to the Jewish philosophers, we note that, though they were all bent on finding in Judaism the highest expression of Divine truth, and aimed at leading to the highest good, yet they differed in their definition of the summum bonum and in the means of attaining it. To cultivate all the virtues was the road which led to the knowledge of God, and in this knowledge was to be found the ultimate goal of human perfection, i.e. nearness to God. Hence sometimes the intellect nearness to God. Hence sometimes the intellect and moral conscience were not clearly distinguished from one another. This is not the place to discuss the various systems of ethics evolved by these Jewish philosophers. It may suffice to point out that every system of thought among Arabs and mediæval Scholastics is to be found among the Jews. Of those thinkers some—like Saadya, Gabirol, Ibn Zaddik, and Maimonides—are more rationalistic, assigning to the knowledge of God

and to Wisdom the highest potentiality for good, and considering that the highest aim is to be attained by moderation, by the rule of the intellect over the actions and thoughts of man, while others incline more to the mystical side. To the latter category belongs Behay, the first philosopher to write a special work on the 'Duties of the Heart' (such is the title of the book, Hoboth ha-Lebaboth). He recognizes human conscience as the last arbiter and the true inward prompter and guide in all moral actions which lie outside the specifically legal injunctions. He lays special stress on the elevating and purifying influence of moral consciousness, and therefore leads up to a kind of religious asceticism or Quietism, by recommending retirement from life, abstinence, and prayer as means for attaining perfection. Without being means for attaining perfection. Without being morbid, he exhibits a high moral sensitiveness, and has had a lasting influence upon succeeding generations. One can trace his influence especially

in a whole series of subsequent writings.

These philosophical writings, being almost all composed in Arabic, had to be first translated into Hebrew, and only then could they gain a wider circulation. The writings of Saadya thus reached France and Central Europe, through the medium France and Central Europe, through the medium of the Hebrew anonymous translation which was used by Berechyah ha-Nakdan (second half of 12th cent.) in his two ethical compilations—the 'Compendium' and the 'Refiner' (Hibbur and Masref, ed. H. Gollancz, London, 1902). He eliminated the entire speculative part, and retained only the ethical, which he augmented with excepts from the writings of Ibn Gabirol, Behay, and Nissim

and Nissim.

and Nissim.

Of sin and repentance he says: 'From the passage Hos 1416.

'Return, for thou hast stumbled,' we learn that we should have an inward regret at our guilt, and that we should reflect that our sins have proved unto us a wretched stumbling-block (p. 71, ed. Gollancz). He speaks most emphatically of the 'duties of the heart.' All action rests upon the heart's intention and upon the secret thoughts; their study must necessarily precede the study of the physical, practical performance of the commandments. And he goes on to relate the following: 'A pious man once said to his disciples, 'if you had no sins whatever, I should be atraid lest you had something worse than sins.' And they asked, 'What can be worse than sins!' He answered: "Insolent pride, for it is written, Every one that is proud in heart is an abomination unto the Lord'' (Pr. 165) (ch. exxii. p. 113 [Heb.]). Very beautiful is the chapter devoted to 'the heart' (ch. iii. in the \*Marrel'), in which the author has skilfully collected verses of the Bible, teachings of the Sages, and philosophical speculations, to show that Reason, Law, and Tradition demand of a man the performance of those actions by which human perfection can be attained, and that man must be guided by an enlightened understanding and a pure heart, i.e. by pure conscience.

Of the same way of thinking as Behay was Abra-

Of the same way of thinking as Behay was Abraham b. Hiyah (middle of 12th cent.), although he was more emphatic about fasting and repentance to assuage the pangs of stricken conscience, and to to assuage the pangs of stricted conscience, and to serve as the means of avoiding sin. Like Behay, he shows points of contact with the teaching of Ghazālī and of the Ṣūfīs (the pure brethren). Of the Intellectuals, or, better, of those who derive all the moral virtues—charity, piety, energy, loving-kindness, love of God, moral rectitude, etc. -from the knowledge of God, and seek the road to that knowledge in the 'middle way,' the most prominent is Maimonides. He enunciates his views in his commentary on the 'Chapters of the Rathers,' in the chapters on the 'Knowledge of God' in his great Compendium of the Law, in his 'Guide of the Perplexed,' and in other writings.

ledge, and from it alone emanates the impulse to action or inaction (Introd. to Aboth, ch. viii.). It is his moral conscience which causes reward or punishment for deeds which are neither commanded by the Divine legislation nor forbidden by it (Guide, iii. 17, fifth theory). In ch. liii. Maimonides defines the meaning of the Heb. words hesed ('loving-kindness'), mishpāṭ ('judgment'), and ṣĕdāķāh

ing-kindness'), mishpāṭ ('judgment'), and ṣĕdākāh ('righteousness'), and says of the last:
'The term ṣċāākāh is derived from ṣċāek, "righteousness." It denotes the act of giving every one his due, and of showing kindness to every being according as it deserves. In Scripture, however, the expression ṣċāākāh is not used in the first sense, and does not apply to the payment of what we owe to others. When we, therefore, give the hirrd labourer his wages, or pay a debt, we do not perform an act of ṣċāākāh. But we do perform an act of ṣċāākāh when we full those duttes towards our fellow-men which our moral conscience imposes upon us, e.g. when we heal the wound of the sufferer.' And again: 'sċāākāh is a kindness prompted by moral conscience, and is a means for attaining perfection of the soul.'

He also insists on the harmony between good action and good thought: in the exercise of human

action and good thought: in the exercise of human free will the good must be sought for its own sake; and the evil must be shunned because of its inherent wickedness, not out of fear of punishment or in the expectation of reward (Com. to Aboth, i. 3, on the passage: 'Be like servants who minister to their master without the condition of receiving a reward'). He rebukes men who, though they do not possess a certain virtue, yet, appre-

they do not possess a certain virtue, yet, appreciating its perfection, 'sometimes desire to make others believe that they possess that virtue. Thus people, e.g., adorn themselves with the poems of others, and publish them as their own productions. Also in various branches of science, ambitious yet lazy men appropriate the opinions expressed by other persons, and boast of them that they have originated these notions' (Guide, ii. 40).

And he condemns men who seek honour at the expense of others and spread insinuations and slanderous statements (Hilch. Teshubah, iv. 4). He is no less emphatic in his condemnation of those who try to overreach Jew or Gentile, or create a false opinion in their favour. Such men are an abomination before the Lord, for the aim and object of a moral life is to approach the

Having acquired the true knowledge of God, the knowledge of His Providence, and of the manner in which it influences His Creatures in their productions and continued existence, he (i.e. man) will then be determined always to seek loving-kindness, righteousness, and judgment, and thus imitate the ways of God' (Gvitde, iii. 54, ad jn.; cf. Jer 9137). With this sentence Maimonides concludes his Guide.

The next period, which commences almost with the close of the philosophical era at the end of the 13th cent., shows the deep impress of those two streams of thought reaching down from the past. The ethical and the philosophical, the mystical and the rationalistic, the purely practical and the deeply spiritual, moral, and unselfish teaching were caught up in one current and gathered into one stream (cf. Berechyah, above). A new word is used to denote this new ethical literature—Mūsar, 'Moral Discipline,' foreshadowed in Hai's poem, and occurring already in the Proverbs as 'moral teaching' (12, cf. 418 512 etc.). Henceforward it denotes 'piety,' 'religious-moral life,' embracing the legal in a narrower and the ethical in the largest sense. The works belonging to this period inculeate the practice of virtue benefit where inculcate the practice of virtue, honesty, piety, resignation, charity, love of one's neighbour, and saintliness of life. There is a psychological reason for the abundance of such books from the 13th cent. onwards. It was the time of the direst persecution of the Jews in many lands, and, unless the Sagar and teachers of there corrections had the Sages and teachers of those generations had fortified the moral courage of the harassed and unfortunate people, every trace of consciousness of the moral duties of man would have been obli-terated. The sense of sin and chastisement, of Divine visitation justified by inward backsliding,

1 He refers, of course, to the Talmudic passages quoted above
(Hullin, 94a, and B. kamma, 113a).

was deepened by these books of Mūsar, in which the best teaching of the past was placed before the readers in as simple a language as could be commanded. Each author, following the bent of his own inclination, laid stress now on one side of the moral life, now on the other. Thus, some would exhort to fasting and ascetic practices; others to works of unselfish love of God and men; others would teach wisdom, moderation, patience, and freedom from passion; but all were united in the conviction that human life is worthily lived only when it is placed in the service of God, for the benefit of mankind, and for the glorification of His name. A man's conscience must be pure, and every one is equally responsible for thought as for deed, whether prescribed by the Law or left to the discretion of one's own heart, for God sees everything, and nothing is hidden from Him. We are, and ought to be, the judges of our actions, and to us is left free choice to decide which way to turn.
What lends special importance to this Mūsar

literature is the fact that most of these books of Musar were translated at an early date into the vernacular language for the benefit and instruction of the middle-class Jews, who were not sufficiently acquainted with the Hebrew to read them in the original language. These books became the literature par excellence of Jewish women; they were translated into the Jewish-German and the Jewish-Spanish languages, and parts also into Arabic and Persian, thus becoming real 'household treasures. Shabbethai Bass gives a list of no fewer than 120 such books in his bibliography (Sifthei Yeshenim, printed in the year 1680, fol. 15a), exclusive of the numerous commentaries on the 'Chapters of the Fathers' (ib. fol. 18a). A few of the more prominent may be mentioned, for, besides reminiscences of, and direct quotations from, the older literature, the authors have added some more instructions—personal expressions of their own conceptions of the duty and moral obligation incumbent on every Jew. Here, of course, the notions of the fear of God and the love of God prevail, for everything must be done out of that love and for the sake of hallowing His name by moral actions, and thereby sanctifying human life.

Nahmanides, in 1267, writes to his son from Acco a 'moral epistle,' in which he enjoins, among other things, that he be modest and humble: 'When thou speakest, bend thy head and lift up thine heart (sursum cordar), and speak quietly, and consider every man whom thou addressest as being greater than thou art. If he be poor and thou rich, or thou a greater scholar than he is, then think that thou art more full of guilt; or, if he be siming, that he is doing it out of ignorance, unintentionally, and not deliberately. In all thy deeds and thoughts remember Him of whom it is said that His glory filleth the world.'

Jonah of Gerona († 1263), known as the Havid and Maddark.

thoughts remember Him of whom it is said that His glory filleth the world.

Jonah of Gerona († 1263), known as the Hasid and Kaddosh, i.e. Martyr, wrote, in the strain of Behay, his famous Sha'arez T'eshubah, 'Gates of Repentance,' and Sefer ha-Yir'ah, 'Book of the Fear of God,' where the feeling of consolousness of the gravity of sin and the duty of repentance are expounded in a masterly manner. He says: 'There are people who believe that, if you do not transgress any of the written laws, you cannot commit sin, for it is connected with active work. And yet there is no greater loss for the soul than to imagine that purity consists only in not having gone the way of active sin, and not also in the neglect of the performance of deeds of charity and of good works. For the highest perfections can be achieved only by carrying out injunctions (which are not direct legal commandments, but ethical demands), such as the exercise of free will, love of God, contemplation of His loving-kindness, the recognition of God's ways in His visitation of man, and, above all, in the sanctification of His name by worship, fear, and by cleaving unto Him' (Sha was Teshubah ii. §§ 14, 17). 'Do not pretend that thou art not able to help by word or deed, for, if thou rotusest, thy strength will wane (tb. § 70). 'Thou shalt not take a bribe (Ex 233) means also, Thou shalt not allow thy judgment to be influenced by flattery, for the purity of conscience will thereby be clouded (ib. § 98). Almost contemporary with those were Yehudah the Pious in Germany (12th cenh.), and his pupil Eleazar of Worms († 1238), and Yehele b. Yekutiel in Rome (1278), as well as Moses of Coucy in France (1233-46), who wrote ethical treatises and guides for a moral life—the 'Book of the Pious,' Kefer Hasidim (Yehudah); the 'Perfection of Human Conscience,' Ma'alath

ha-Middoth (Yekutiel); and the great Code of Laws, Sefer Miswoth ha-Gadhol (Moses of Coucy). Each of these men represents a special school of thought. The first two are of a mystical disposition, Quietists; the writer in Rome follows, on the whole, the philosophical writers; while the codifier of the Law, like Maumondes, introduces chapters on ethical duties into the very Code: 'Be fair to every one, be he a Jew or a Gentile.' 'Money obtained by sweating the workman, or by buying stolen goods and idols as ornaments, brings no blessing.' 'Draw the attention of the Gentile to his mistake (in any business transaction); and better live on charity and begging than appropriate the money of others, which will be a disgrace to Judaism and to the Jewish name.' 'Be honest with every one, no matter to what faith he belongs.' 'Those who clip the coin, who sell short measure, who practise usury, are a curse; and there is no blessing in their money.' 'Do not say, 'I' will repay evil,' but trust in God, and He will help thee.' 'If any one has defrauded thee or brought false witness against thee, or has ruined thee, do not avenge the injustice by doing the same to him.' 'Do not listen to slander' (Yebudah Hasid). 'Act in such a manner that thou needs not be ashamed of thyself,' 'Keep thine imagination pure, so that thy deeds may be likewise.' 'Know that the reward from the Lord is in accordance with thy resistance to sin.' 'The highest aim and ambition of man should be to fulfil the commandments, to sanctify His name, and to sacrifice himself for God's sake' (Eleazar). 'A Sage said: "Whoever sows hatred reaps regret." 'Be true and honest, as our Sages say: "Let your yea be yea and your naynay,"' 'If a Gentile trusts you and relies upon your word, you must in all your transactions justify his confidence and be true and honest, so that the name of God be sanctified' (Yekutiel). 'Whosoever is a novice in the fear of God shall say every morning on rising: "To-day I will be a fatithful servant of the Lord; i will beware of wrath, l

The mystical philosophy of religion embodied in the Zohar, the chief exponent of the later Kabbälä, recognizes no less emphatically the call of conscience. The fulfilment of moral duties is not only a reward in itself, but it is the main cause of the harmony of the world and of the uninterrupted flow of Divine grace from the highest spheres down to the mundane sphere. 'Woe unto the sinners, for they keep the Divine glory in exile,' is a con-stantly recurring phrase. The mystical philosophy has in this case not contributed to weaken the

moral fibre, and a high tone of ethical loftiness pervades the pages of the Zohar.

In conclusion, a few wills may now be mentioned. That of Asher b. Yehiel is of special interest on account of the fact that his code of the Law, with slight modifications, is the direct source of the recognized standard religious Jewish Code. He died in 1327, and by his will continued the old tradition, which was carried on to the end of the 18th cent. and even later. Among the authors are men like his son, Yehudah b. Asher († 1349), Abraham, and his grandson Sheftel Hurwitz (17th Hasidim, Israel Ba'al Shem-Tob (end of 18th cent.). Differing somewhat in their views on Divine worship, they are at one in the conception of moral duty and human responsibility, as lying not in the fulfilment of legal commandments alone, but to a greater degree in the performance of moral obligations for which there is no incentive by the promise of reward, and no threat of punishment for neglect.

ment for neglect.

Last, not least, the 'Shining Lamp,' Menorath ha-Mā'ōr, of Israel ben Joseph Alnaqua († 1391), preserved partly in the Reshith Hokhmah, 'Beginning of Principles of Wisdom,' of Elijah de Vidas (16th cent.), and the compilation of Isaac Aboab under the same name, Menorath ha-Mā'ōr, contain the gist of the ethical and Haggadic teaching of the Rabbis. Though a rather large volume, this book has been the household book of Jewry from the time of its compilation (c. 1300) to the present day. It has been translated into many languages, and, together with the Book of Elijah de Vidas, it is the Golden Treasury. The love of one's neighbour, and the principles of moral rectitude, of moral duty, of the heinousness of

4.

clandestine sin and open hypocrisy, of the happiness wrought by repentance and a clean conscience, of loving-kindness and mercy as Divine attributes to be imitated by man, of moral perfection to be attained not only by outward ceremonial law or by fulfilment of prescribed legislation, but by following the inner voices of the soul and the unwritten commands of the Divine in man, of the hallowing of life and the sanctification of the name of God-of all this the book is full. Its aim is summed or all this the book is full. Its aim is summed up in exemplifying the words of the prophet, in the light of Maimonides' interpretation that the highest duty of man is to fulfil acts of hesed, 'loving-kindness,' mishpat, 'judgment,' and sedahah, 'righteousness': 'For I am the Lord which exercise loving-kindness judgment, and righteousness in loving kindness, judgment, and righteousness, in the earth: for in these things I delight, saith the Lord' (Jer 9<sup>24</sup>). This has remained the guiding

Lord' (Jer 924). This has remained the guiding principle for 'conscience' in Judaism.

Literature.—In addition to the authorities cited in the article, see L. Zunz, Gottesdienstl. Vortrage der Juden?, Frankfort, 1892, p. 103 ff., 'Ethische Hagada,' also Zur Geschichte und Literatur, i., Berlin, 1845, p. 122 ff. 'Sittenlehrer'; D. Rosin, Ethik des Maimonides, Breslau, 1876; M. Suwalski, Hayyei ha-Yehudi al pi ha-Talmud², Warsaw, 1893.

CONSCIENCE (Muslim) .- I. Names for the phenomenon.—The normal manifestations of the conscience, whether in individuals or in communities, are to be found in uneasiness about acts perpetrated in the past, and the desire to make amends for them, or in refraining from perpetration, on grounds of abstract right and wrong. These manifestations are to be found among moral agents with few or no exceptions, but they are not always labelled with a name. Probably the nearest equivalent in Arabic is the word al-zājiv, 'the restrainer,' defined as 'God's preacher in the heart of the believer, the light cast therein which summons him to the truth'; but it obviously refers to the second group of manifestations only, and its limitation to 'Believers' is due to the fact that in a sense, according to the Islamic system, the unbeliever can do no wrong, as being outside God's covenant. For the first group probably the word saviwa, 'the secret,' i.e. the secret self, would be the nearest synonym; this is the word used in the maxim 'God concerns Himself with your consciences, embodied by Omar I. in his Instruc-tions to a Judge. The modern Islāmic languages employ conventional translations of the European words; in Turkish vijdan (properly 'sensation') is employed, in Arabic damīr ('the hidden being'). But for the adjective 'conscientious' it is probable that a paraphrase would have to be used.

2. The conscience in law.—The maxim quoted above was of the highest importance for the development of Islām. Whereas St. Paul says, 'he is not a Jew who is one outwardly' (Ro 228), the Prophet's doctrine was, 'he is a Muslim who is one outwardly, i.e. who pronounces a certain formula and pays a certain rate. In virtue of this principle, and another to the effect that Islām cancelled all that was before it, the Propliet's most stubborn opponents and persecutors might be admitted to the privileges of Islām without any atonement for their former conduct being necessary, or any guarantee that their conversion was dictated by anything but fear. The phrase 'union of hearts' was applied to the winning over of opponents by bribes. The inquisition into people's private character and opinions, carried on by some Islamic sovereigns, was in open contradiction to the Prophet's principles, and confession of secret sin was so far from being encouraged by the Prophet, that, in a tradition of fair authority, he is represented as doing his utmost to dissuade a man from confessing. In the maxim quoted from Omar the reference is to the credibility of Muslim witnesses, into which no inquiry may be made. Provided they are not notorious evil-livers—a term which is clearly defined—all Muslims are credible. On the other hand, to religious performances the maxim acts are by their intentions' applies. And Omar held that the Divine power would intervene to expose cases of shameless hypocrisy which would seriously interfere with the course of justice.

3. Conscience as a guide to the individual.—So far as the conscience is identical with the moral sense, or instinctive notions of right and wrong, the Prophet's system took little account of it; indeed, its tendency was to make the Prophet's revelations and practice the sole source whence knowledge of right and wrong could be obtained. His followers constantly handed their consciences over to his keeping, being unwilling to set their opinion against his. The fact that he claimed obedience only in licitis et honestis shows that he did not really claim the infallibility which logic compelled his followers to ascribe to him. That logic was, however, irresistible; for, if the right of private judgment were once allowed, clearly people could not be compelled to accept Islam at all. Although, then, there are occasional attempts at basing a system of ethics on either reason or the natural sense of right, these are not really in accordance with the spirit of the religion. The reference is regularly to the Quran, the practice reference is regularly to the Qur'an, the practice of the Prophet, and the sayings of his followers: 'Whoso makes them his model goes right' is a common saying. The scope allowed to the conscience in private affairs by Muslim writers is similar to that indicated by the maxim noblesse oblige. So the formula, 'I appeal from you to yourself,' i.e. 'your better self,' is occasionally heard.' Hence the word abiyy, 'refusing,' is often applied by poets to a soul which declines of itself to enter humiliating courses. to enter humiliating courses.

4. The public conscience.—In Oriental despotisms the sovereign does not, as a rule, pay much regard to public opinion, and it might be hard to find any case in Muslim history in which the conduct of the sovereign had been of itself actively resented; neither parricide nor fratricide, de-bauchery, nor even heresy, appears to have of itself stirred up such indignation among the subjects as to cost a sovereign his throne. The assassination of the monster al-Ḥākim, the Fāṭimid Khalif (A.D. 1021), seems to have caused more indignation than his long catalogue of atrocities. Cases are therefore of interest in which concessions are made by the sovereign to the public conscience, to the extent of salving it; for such concessions imply that the sovereign thought it worth salving. A fiction with which we meet in Egyptian history more than once is the discovery of buried treasure, enabling the sovereign to build a mosque-there enabling the sovereign to build a mosque—there being a doubt whether the Muslims would attend worship in one which had been built out of illgotten gains. The murder of a brother was occasionally explained in an official document as an accidental death, etc.; but, on the other hand, elever usurpers not infrequently gathered followers by stirring up public indignation against those whom they wished to overthrow. The Umayyad and Abbāsid dynasties both won their first triumphs in this way. It was at times thought worth while in this way. It was at times thought worth while to murder a saintly man and make it appear that a sovereign had perpetrated the crime, with the view of getting him dethroned. Similarly, in our time there have been suspicions of atrocitics being 1 Yāqūt, Diet. of Learned Men, od. Margoliouth, 1910, vol. v.

Life of Ibn al-Athīr, ix. 161 (Cairo, 1808).

1 Ibn al-Athīr, ix. 161 (Cairo, 1808).

of rousing the conscience of Europe. The bestinformed political writers in the East insist on the maxim, 'the people follow the religion of their kings, and the maxim, 'even in your conscience curse not the king' (Ec 1020), represents the prevail-

ing practice. Noteworthy manifestations of the conscience. Although the lives of the Muslim sovereigns, as told by their chroniclers, frequently, if not ordinarily, display absolute ruthlessness, yet in their relations with those persons who played the part of the Hebrew prophets, conscientiousness seems to have been the rule rather than the exception. Cases in which the sovereign, however arbitrary, permitted himself to be rebuked by a saint, and even followed the saint's advice, are quite common.1 saint might even denounce the doings of a Khalif from the pulpit.<sup>2</sup> The following anecdote of the Ghaznavid Mahmūd b. Sabuktakin illustrates the conscientiousness of an Oriental despot. A traditionalist was summoned to repeat edifying matter before the Sultan. The man commenced his discourse before he had been asked, and a slave was told to box his ears. The blow rendered the preacher permanently deaf. The Sultan was deeply distressed at this result, and offered abundant gifts in compensation; the traditionalist declined them all, saying he would accept nothing but what had been taken from him, the power of hearing. Requests from the Sultan for pardon were met merely with a reference to the final judgment. To this stubborn reply the Sultan answered with an embrace.3

There is a considerable literature on the desirability of cleansing the 'inner man,' of which Ghazali's 'Scrutiny of the Hearts' may be mentioned as an example.

LITERATURE.—This is given in the article.
D. S. MARGOLIOUTH.
CONSCIENTIOUSNESS.—Conscientiousness (from 'conscience' [q.v.]) may be described as an attitude within the moral life, a source of virtue, rather than one of the virtues. Judgment, with

its intellectual reference, and integrity, with its emotional reference, are involved, imparting direction to conduct, and tending strongly to the adap-

tation of habit on the basis of new values. Developed morality presupposes two main groups of elements which interact with each other. These are the objective and the subjective, often termed the universal (or social) and the individual (or personal). The former consists of customs and usages, of conventions, observances, and legal or quasi-legal codes, of social and political institutions. All, in turn, are integral to a cultural organization such as a race, a people, or even an epoch. The latter, though inseparable from the former, consists of the peculiar contribution resultant upon the reaction of individuals to the norms of the social unity. So long as this response remains unconscious or unreflective, personal character misses complete distinctiveness, and tends to keep the level of the general, customary average. when, thanks to a subtle admixture of intellect and emotion, men place themselves in a reflective attitude towards the norms of the communal spirit, conscientiousness supervenes, and obligation acquires an enhanced, because positively recognized, influence upon character.

"Conscientiousness, then, is reflective intelligence grown into character. It involves a greater and wider recognition of obligation in general, and a larger and more stable emotional response to everything that presents itself as duty; as well as the habit of deliberate consideration of the moral situation and of the acts demanded by it' (J. Dewey, Outlines of a Critical Theory of Ethics, 1891, p. 200).

In a word, conscientiousness is marked by the 2 JRAS, 1907, p. 309.

1 e.g. Tabarī, iil. 668. 2 Yāqūl, Dict. of Learned Men, v. 4 Mukāshafat al-gulūb, Cairo, 1823.

presence of a reinforced requirement of conscience, and by the effort to meet it. Yet, even so, the condition of moral anxiety, accompanied by habitual introspection, can hardly be accepted as an equitable account of the matter. This view savours too much of temporary circumstances, associated, say, with such supposititious entities as the 'Non-conformist conscience,' the 'New England conscience,' or the like. Possibly the Puritan strain led Green to formulate his over-subjective analysis:

led Green to formulate his over-subjective analysis:

'There remain the cases (1) of reflexion on past actions of our
own, (2) of consideration whether an act should be presently
done, which it rests with ourselves to do or not to do. In both
these cases, the question of the character or state of will which
an action represents may be raised with a possibility of being
answered. Given an ideal of virtue... a man may ask himself, Was I, in doing so and so, acting as a good man should,
with a pure heart, with a will set on the objects on which it
should be set?—or again, Shall I, in doing so and so, be acting
as a good man should, goodness being understood in the same
sense?... The habit in a man of raising such questions about
himself as those just indicated, is what we have mainly in view
when we call him conscientious '(Prol. to Ethics, 1883, p. 3221.).
But conscientiousness is not to be identified with

But conscientiousness is not to be identified with conscience 'in its extreme form of self-reflectiveness,' which 'investigates with the searching power of an expert, in order to discover the slightest de-flection from what it holds to be good. It is because of its personal or individual character that it is she to put forward a claim to independence of the State or of any social order (S. Alexander, Moral Order and Progress, 1889, p. 157 f.). Accordingly, one may accentuate the subjective aspect of conscientiousness readily, and thus minimize the objective reference. If it be reduced to a mere analysis

scientiousness readily, and thus minimize the objective reference. If it be reduced to a mere analysis of internal moods, it may very well indicate weakness rather than strength of character.

'The simply ethical temper is related to spiritual productiveness as mere good taste is to creativeness in poetry and art. With so circumspect a step it makes no way; and, though it never wanders, neverfiles. For ever occupied in distinguishing, it acquires the habit of fear instead of love—nay, above all things, fears to love. Its maxims are maxims of avoidance, which shape themselves into negatives, and guard every acmue with the flaming sword of prohibition, "Thou shalt not." In apprehension of possible evil, it dares not surrender itself to any admiration and fling itself into unrestrained action for any haunting end: the admiration must first be scrutinized, till it has cooled and its force is gone; the end in view is traced through a thicket of comparisons, till it is lost in the wood. Nothing, accordingly, is more rare than a character at once balanced and powerful, judicial and enthusiastic; and faultless perception is apt to involve feeble inspiration (James Martineau, Types of Ethical Theory<sup>2</sup>, 1886, ii. 60).

Thus the division of opinion regarding conscientiousness has its roots in the two groups of elements inseparable from morality. If the objective factor be emphasized, knowledge of social demands, or

be emphasized, knowledge of social demands, or insight into their nature, is viewed as the dominant feature. If, on the other hand, emphasis be laid on the subjective factor, self-examination, with anxiety about personal moods and feelings, assumes primary importance.

In the Greek world, where our sense of conscientiousness had not developed, but where 'wisdom' (coopia, civeous, not yet civellinus) played a parallel role, the community-aggregate of predispositions and tendencies in the realm of values (cf. Grote, Plate and the Other Companions of Solrates, 1865, i. 249) furnished plentiful material which was regarded as neither good nor bad. The 'wise man' was likened to an artist, who shaped this raw stuff into the masternians of

was inkened to an artist, who shaped this raw stuff into the masterpiece of a model life. For example, 'Arisotle presents us with the general type of a subtle and shifting problem, the solution of which must be worked out afresh by each individual in each particular case. Conduct to him is a free and living creature, and not a machine controlled by fixed laws. Every life is a work of art shaped by the man who lives it' (G. L. Dickinson, The Greek View of Life 6, 1907, p. 137).

Accordingly, paradox though it may seem, virtue was knowledge, in the sense that the superior, and scious (reflective) attitude upon the traditional custom of the rolutela. In this way the 'higher law' of wisdom was made manifest. But, leaving

the imperfect Socratics out of account (cf. CYNICS, CASUISTRY), it bore rather upon group-norms than upon the independent 'conscientious' judgment of the individual. The internal thrust of the principle had to await Stoicism and the Christian con-

Nevertheless, the classical moralists of Greece did originate the idea of inward principle, of indidid originate the idea of inward principle, of individual reaction upon the cultural situation, with the result that, consequent upon profound civil vicissitudes, the Stoic conception of 'conscience,' based on the independence of the 'wise man,' grew up and acquired fixity. In this way, dynamic progress in morality, as contrasted with static custom, was enlivened-not, however, without pathological was enivened—not, nowever, without pathological accompaniments, because the restraints of the old society weakened. Despite this, two heritages had been prepared for the Christian consciousness: the conception of inner principle, mediated individually; and the doctrine that, in the sphere of morality at least, whatever might be said of religion this inward writering that the doctrine that it is invested with a province that the said of the the contract of the said of th gion, this inward principle must be adjudged by the mind. Thus the contrast between the two elethe objective or social and the subjective or individual—took definite shape. And successive conceptions of conscientiousness witnessed, if not a struggle, then a lack of balance, between them. At one time, as in the mediæval view of 'prudence,' the objective tended to assert itself; at another, as in the Puritan emphasis on 'righteousness,' the subjective exercised primacy. In a word, men constructed their description of the source of virtue on the basis of current relative evaluation of the virtues.

The very fact, then, that the Christian consciousness has substituted 'conscientionsness' for the 'wisdom' of the Greeks—and this finally—suffices to show that the internal and individual had won full recognition. The conscientious man must use discernment, according to the inward principle. with reference to the norms of social custom. Moral progress and initiative pivot upon this. On the other hand, this initiative is concerned about these same customs—to discover how they may be preserved lively. And yet, of necessity, this process means that, because they are subjects of concern and of consequent new estimate, they must alter.

Conscientiousness, then, may be described as genuine concern, mediated intelligently, for all such values. This cannot but result in approval and disapproval; and these attitudes are traceable and disapproval; and these attitudes are traceable in part to emotional convictions about an inward ideal. So far as the conscientious man has made this ideal his own, being able to say, 'This one thing I do,' it has become 'the way and the truth' for him. Accordingly, in the issue, conscientiousness turns out to be an energetic pursuit of an individual-social ideal—an ideal that appeals to emotion mainly through chiestive associations. individual-social ideal—an ideal that appeals to emotion mainly through objective associations, and to intellect mainly through intelligent personal reactions to those associations. The conscientious man is at once responsive to social achievements and ends, and considerate of the one principle whereby these ends are relegated to their due places in a harmonious whole. He feels that his own goodness is bound up with that of others, hence personal assortion of the norm as he equivages hence personal assertion of the norm as he envisages it; he knows that his own progress must depend ultimately upon the clearness of his apprehension of the inward principle. Thus reflective insight, on the basis of affective conviction, grasping and transforming group-norms, constitutes the moral reason, the latter is held to be the source and guardian of virtue. It serves itself the central factor to be reckoned with in an active moral consciousness.

But, further, this implies that conscientiousness

is characterized by disinterestedness. Otherwise, it would not include a concrete estimate of the entire import of an action. Self-assertion here becomes a species of self-forgetfulness. this quality the self-reference of conscientiousness is merged in a larger whole. So, if this quality be emphasized, conscientiousness may find a place in the list of virtues. It would then stand as the chief of the cardinal virtues, thus becoming more or less identical with what modern moralists have termed the 'good will.' This implies that it is the guarantee, not of mental acumen or of æsthetic taste, but of goodness realizing itself throughout the entire circle of a life which, in turn, draws sus-tenance from the norms of the community. In these norms the conscientious man discovers new stimuli to the inner principle. But the necessity for reflexion rules out supposititious automatic deliverances of an equally supposititious internal tribunal'—'conscience.' Briefly, vital interest in the good, as the principle reveals it, at once sets problems, and points the conditions of their solution. Fusion of sober judgment with earnest aspiration, and fusion of restraint, mediated socially, with fervent desire, both passing over into will, constitute the modern counterpart of the Greek 'wisdom.' And this species of ethical apperception which imports our experience into a moral order, and also perceives that it is originated from a moral order, is true conscientiousness. It is the pre-requisite and accompaniment of any end which moral beings can adopt for the completion of their well-being. Hence its inevitable relation to questions which pass over into the field of religion.

CONSCIOUSNESS.—What is consciousness? From the dawn of modern philosophy the question has been discussed, and psychology and philosophy have endeavoured to find a reply. The answers have been very various, but we may not summarize them in this article. To summarize those given from the time of Descartes onwards would be to write a history of modern philosophy. And at present the question is more widely and more incisively discussed than ever before. Some philosophers and psychologists almost insist on discarding the name altogether, while others make the results of the analysis of consciousness the whole of their philosophy. For example, A. E. Taylor

"This is perhaps the place to add the further remark that, if we would be rigidly accurate in psychological terminology, we ought to banish the very expression "consciousness" or "states of consciousness" from our language. What are really given in experience are attentive processes with a certain common character. We abstract this character and give it the name of "consciousness," and then fall into the blunder of calling

the concrete processes "states" or "modifications" of this abstraction, just as in dealing with physical things we make abstraction of their common properties under the name of "matter," and then talk as if the things themselves were "forms of matter." Properly speaking, there are physical things and there are minds, but there are no such things in the actual world as "matter" and "consciousness," and we do well to avoid using the words when we can help it 'Elements of Metaphysics, p. 79 n.). In the text, with all the emphasis of italics, Taylor says: 'We cannot too strongly insist that if by "self-consciousness" is meant a cognitive state which is its own object, there is no such thing, and it is a psychological impossibility that there should be any such thing as self-consciousness. No cognitive state ever has itself for its own object. Every cognitive state has for its object something other than itself' (ib. p. 79).

Taylor makes short work of consciousness; and if we took his view, the writing of an article on consciousness might be dispensed with. But, as we are hardly able to conceive what is meant by a cognitive state which has an object which is something other than itself, we may be permitted to go on. It is scarcely consistent with the ordinary use of language, and certainly quite inconsistent with the use of psychological language, to speak of a cognitive state in active relation with an object. For whom is the state, and who is aware of it? But this question may be better discussed at a later stage. Meanwhile it may be safely said that the word 'consciousness' denotes some phase or aspect of our mental life, and that it is not identical with any of the other aspects which we apply to particular mental processes or states. It is not feeling, nor is it willing, nor is it thinking; but these states or processes have this at least in common, that they are conscious states. The contrast does not lie between feeling and consciousness, or between willing and consciousness, or between thinking and consciousness. The contrast lies between consciousness and unconsciousness. For the characteristic of every mental state, or of every mental process, seems just to consist in the fact that they are states of a conscious subject, and that

they are for that subject.

While this is so, many questions of interest and importance arise as to the relations of the subject to its states, as to the distinction, if there is a distinction, between the phrases 'states of consciousness' and 'consciousness of states.' Is consciousness to be identified with the sum of its states? Can we neglect the reference to a subject, and proceed to analyze, compare, classify, and arrange these states according to the laws of their growth, their interrelations, and so on, leaving out of sight, as common to them all, their relation to a common subject? This has been done, and, in fact, it is the ordinary psychological procedure. But there is always a sort of uneasiness about proceeding in this way; for many inconvenient questions arise as to the subject for whom the experiences are, and the unity to which they are referred. Ideas, processes, and states come and go; they cluster together, they occupy our attention, and they seem to pass into the unconscious. It is natural that the scene of their appearance should be likened to a theatre, and that, while they have passed from the scene, they should have a sort of existence behind the scenes. It may be well to quote the classic

illustration of Hume:

illustration of Hume:

'For my part, when I enter most intimately into what I call myself, I always stumble on some particular perception or other, of heat or cold, light or shade, love or hatred, pain or pleasure. I never can catch myself at any time without a perception, and never can observe anything but the perception. When my perceptions are removed for any time, as by sound sleep, so long am I insensible of myself, and may truly be said not to exist. And were all my perceptions removed by death, and could I neither think, nor feel, nor see, nor love, nor hate, after the dissolution of my body, I should be entirely annibilated, nor do I conceive what is further requisite to make me a perfect non-entity. If any one, upon serious and unprejudiced reflexion, thinks he has a different notion of himself, I must confess I can reason no longer with him. All I can allow him is, that he may be in the right as well as I, and that we are essentially different in this particular. He may, perhaps, per-

ceive something simple and continued, which he calls himself; though I am certain there is no such principle in me.

But, setting aside some metaphysicians of this kind, I may venture to affirm of the rest of mankind, that they are nothing but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and mayarrent. Our pure carnet turn ut holy recleas with but a bundle or collection of different perceptions, which succeed each other with an inconceivable rapidity, and are in a perpetual flux and movement. Our eyes cannot turn in their sockets without varying our perceptions. Our thought is still more variable than our sight; and all our other senses and faculties contribute to this change; nor is there any single power of the soul which remains unalterably the same, perhaps for one moment. The mind is a kind of theatre, where several perceptions successively make their appearance; pass, re-pass, glide away, and mingle in an infinite variety of postures and situations. There is properly no sumplicity in it at one time, nor identity in different; whatever natural propension we may have to imagine that simplicity and identity. The comparison of the theatre must not mislead us They are the successive perceptions only that constitute the mind; nor have we the most distant notion of the place where these scenes are represented, or of the materials of which it is composed' (Hume's Works, ed. Green and Grose, Lond. 1909, i.534 i.). Or, again, a little further on: 'What we call mind is nothing but a heap or bundle of different perceptions united together by certain relations, and supposed, though falsely, to be endowed with a certain simplicity and identity.'

It is a curious passage, and the more we study it the more curious it appears. There is the suggestion of a theatre, so often made since by other psychologists, and no sooner is it made than it is withdrawn. Yet it has fulfilled its aim. It has directed our attention to the stage, and has so far served its purpose. But a theatre suggests a stage, and players, and spectators. These suggestions, however, are somewhat inconvenient, and raise awkward questions. So we are told that 'the comparison of the theatre must not mislead us.' For it is 'the successive perceptions only that constitute the mind.' One is compelled to ask, What is a perception, and what is a succession? Above we were told that 'several perceptions successively make their appearance—pass, re-pass, glide away, and mingle in an infinite variety of postures and situations.' The perceptions make their appearance—to whom? Hume had formerly spoken of 'what I call myself.' So it is to what he calls himself that the perceptions appear, and all the passing, re-passing, and other movements are perceived by himself. And yet the mind that perceives, that looks on at the gliding show, is nothing but the bundle or collection of different perceptions. Is the mind aware that it is a bundle? Or that it is a collection? Whence came the bundle or collection? And how does it recognize itself to be a unity? In the passage before us, Hume is unable to state his argument without the implication, in every sentence, of what he formally denies. He is in the presence of a unique factthe fact of a succession of perceptions which recognizes itself as a bundle or collection. How is it so? We are careful to state it in his own language, for that language implies the unity of the conscious subject to which all the gliding appearances are referred. It would appear that we are face to face with a unique kind of thing—a thing which seems at the same time to be knower and known, actor and spectator, a show and the spectator for whom the show is. For all these passing, re-passing, and gliding appearances, so felicitously described by Hume, had an existence only for himself; and, while other people may have similar experiences, these particular experiences were for him alone. And he was something more than the bundle of perceptions, he was the self for whom the perceptions were. We do not require here to discuss the relation of body and mind (see BODY AND MIND, BRAIN AND MIND, MIND), or of physiology and psychology. Nor can we dwell on the attempts to deduce the unity of consciousness from the unity of the nervous system. There is a parallelism be-tween the growth of mind and the growth of an organized nervous system. Physiology has often given useful hints to psychology. There are parallels between the evolution of the organism and the

evolution of consciousness. But, while that is so, the fact of consciousness remains without parallel, and its nature must only be described and not explained. It is interesting, for example, to follow Herbert Spencer through his works setting forth the Synthetic Philosophy, from the First Principles, through Biology and Psychology to Sociology and Ethics. It is of special interest to mark the description of the origin and growth of these, and then to notice how psychology enters in. After he has described the evolution of the nervous system, he seeks to correlate the stages of evolution with a corresponding mental growth. How about consciousness? Whence did it come?

consciousness? Whence did it come?

'In its higher forms, instinct is probably accompanied by a rudimentary consciousness. There cannot be co-ordination of many stimuli without some ganglion through which they are all brought into relation. In the process of bringing them into relation, this ganglion must be subject to the influence of each—must undergo many changes. And the quick succession of changes in a ganglion, implying, as it does, perpetual experiences of differences and likenesses, constitutes the raw material of consciousness. The implication is that, as fast as instinct is developed, some kind of consciousness becomes nascent' (Psychology, Lond, 1885, sect. 195).

So far we obtain only a raw material of consciousness and some kind of nascent consciousness. Another passage from the Psychology seems to show

Another passage from the *Psychology* seems to show

how a consciousness must arise:

how a consciousness must arise:

'Separate impressions are received by the senses—by different parts of the body. If they go no further than the places at which they are received, they are useless. Or, if only some of them are brought into relation with one another, they are useless. That an effectual adjustment may be made, they must be all brought into relation with one another. But this implies some centre of communication common to them all, through which they severally pass; and as they cannot pass through it simultaneously, they must pass through it in succession. So that, as the external phenomena responded to become greater in number and more complicated in kind, the variety and rapidity of the changes to which this common centre of communication is subject must increase—there must result an unbroken series is subject must increase—there must result an unbroken series of these changes, there must arise a consciousness. Hence the progress of the correspondence between the organism and its environment necessitates a gradual reduction of the sensorial changes to a succession; and by so doing evolves a distinct consciousness—a consciousness that becomes higher as the succession. cession becomes more rapid and the correspondence more complete' (sect. 179).

It is interesting to note how, in the description of the process, Spencer is constrained to assume, as in existence, the consciousness whose genesis he is seeking to describe. He speaks of 'perpetual experiences of differences and likenesses' in the ganglion through which the numerous stimuli are co-ordinated. If these exist, then we submit that the work supposed to be effected by consciousness is already being done. If these stimuli can be co-ordinated by a ganglion, what is the need of a consciousness to do a work already sufficiently provided for? As we read on, the wonder increases. The impressions received by the senses must be adjusted, and the adjustment is made through a centre of communication through which they pass in succession. But this centre, through which the impressions pass in succession, does a business which is ever on the increase, and, in order that its work may be done, a consciousness must arise. Why? As a matter of fact, a consciousness has arisen—something which is aware of the various changes within itself, which also has a certain power of intervention. But in the description of the whole process no place is left at which a con-sciousness can enter in. Either one must hold that consciousness has been implicitly present from the beginning, or it can never appear on the terms assigned to its entrance by Spencer.

That there is a relation between consciousness and the nervous states of the organism is unquestionable. But the origin and character of that relationship are not sufficiently described by Spencer. From the above account of the origin of consciousness, it appears as altogether a superfluous addition to a nervous system. The work of co-ordination has been already accomplished, and has, indeed.

automatically proceeded until the stimuli have learned how to pass through a centre, and to pass in orderly procession. Yet, on the whole, consciousness is greatly needed in the system of Spencer. For 'all mental action whatever,' we are told a little further on, 'is definable as the continuous differentiation and integration of states of consciousness' (op. cit. ii. 301). Are the states of the organism? Are they part of the integration and differentiation of matter and motion? Or is there only a parallelism between the two? Is psychophysical parallelism the ultimate word on the relationship between the two? Or is the consciousness simply an epiphenomenon, a mere accompaniment, or, in the metaphor of Huxley, is it simply the ticking of the clock which is mistaken for its function?

Leaving on one side the questions of the origin of consciousness as unanswerable, and the further questions of the relations of mind and body as too large for our proper theme, let us ask, What is really meant by conscious life, or, in other words, by consciousness? As we reflect on what happens when we attend to the processes of our inner life, we note three main characteristics: (1) There is the fact of change; without change, or without the entrance of a new fact into consciousness, there is no consciousness. Continued sameness would mean unconsciousness. (2) There is the preservation or reproduction of previously given elements, with some connexion between elements formerly given and those that are new. (3) There is the inward unity of recognition. In the stream of the inner life there are always present those three factors. Thus synthesis is the fundamental fact of all consciousness. But the synthetic activity of consciousness has always a certain end in view. This will become abundantly clear as we look at the mental attitude towards an object. This attitude is three-fold, corresponding to the three aspects of mental activity. Consciousness is always occupied with some object. It is not needful to define the object for our present purpose. But, be it what it may, (1) it is an object of knowledge; we seem to know it, or to know something about it. (2) It brings to us some pleasure or pain; it affects us in some way. (3) We tend to alter it, transform it, take possession of it, and master it. We desire to have a clearer view of its character, or to make it serve our purpose. An object is thus related to us in three ways; and these three are the fundamental aspects of conscious activity-knowing, feeling, and striving, which are three aspects of the same mental state, not to be separated from each other, not to be thought of as successive in time, but elements of one concrete experience. From any of these points of view we arrive at the conclusion of the unity of the subject, which recognizes all these attitudes as its own. Cognition, recognition, or any other name descriptive of the cognitive atti-tude, presupposes the unity of the subject. The feeling of pleasure in activity, or of pain in the interruption of the activity, presupposes a central point into relation with which the changing elements of consciousness are brought. Similarly, it may be shown that all conative activity presupposes the unity of the subject, for it is the attempt to bring the object into harmonious relations with the other objects formerly or presently held together in our experience.

Thus from many points of view, as we look at the living, moving, thinking, willing; concrete being, we are presented with the fact of a unitary consciousness, of a real self, capable of a real experience. Yet it has been possible for systems to be constructed, theories of knowledge to be promulgated, psychological theories to be set forth, and

views to be argued, from which personalism has been excluded, and all reference to self and the unity of the self avoided. It is worth while to see how this has been possible. The possibility of it has not been without advantage in the interests of science. What does science desire to accomplish? A man of science does not know anything, does not desire to know anything, save the objects in their causal relation to one another. He seeks to look at things as parts of Nature, strives to construct and to model them until he has arranged them in their sequence as causes and effects. He strives to find the linkages, and, when he has linked all things together in a scheme which seems to include the whole, he is satisfied with his work. But, in order to fulfil this purpose, he has to make himself a martyr to science. He is no longer a man with his will and his purpose. with his will and his purpose, a living, breathing man with a life of his own; he has become what we may call an abstract spectator, a consciousness which simply becomes aware of the ongoings and the linkages of the energies of the universe. Such a personality is not a real man. The standpoint of the spectator involves certain abstractions. He has put aside all interests, all living attitudes, and all the varied manifoldness of his concrete life, and has converted himself into a mere onlooker, whose whole aim is to understand the ways in which things are linked together. It is so far an arti-ficial attitude, but in this abstraction from all that relates to personal will and purpose lies the enormous strength of the scientific attitude. It enables the onlooker to regard the processes of the world as the outcome of laws, to bring them into relations, to master them, and harness them to the fulfilment of his purposes. In fact, the scientific spectator who desires simply to know and to master the system of the world, abstracts altogether from his own life-interests, even from his own individuality, becomes merely a spectator of processes which are not for this individual or for that, but the same for every one. Further, not only does he abstract from all personal interests and from all individual proclivities, he finally comes to abstract from the activity of the knowing subject itself, and to look at the world as a system complete in itself, and independent of any subject. This mere abstract knower, who has detached himself from every personal characteristic, attitude, and interest, who simply watches the processes of Nature and registers them, is a useful creature for many purposes, but he can scarcely be taken as a complete and adequate representative of what consciousness, or self-consciousness in the fullness of its concrete being, means.

Science must proceed after the fashion described, if it is to do its work. But we ought to remind ourselves of the limitations prescribed by this attitude. In particular, we are not to put this abstract spectator, who has reduced himself to the stature of a mere spectator, in the place of the living man. The synthetic unity of apperception, to use Kant's phrase, may be all that is required for the purposes of explaining and describing the world, but this abstract attitude of the subject is not sufficient when we seek to speak of consciousness or of self-consciousness as it is in living experience. In the science of psychology we have also to assume this abstract attitude. Before the psychologist are the perceptions and thoughts, the feelings and emotions, the judgments and volitions, which he is to study and describe. He is well aware that the only key to the understanding of them lies within himself. No one save himself is aware of these conscious states, so far as they are his own. They are for him part of his own individual experience, and no one clse has these particular experiences.

which has the experience becomes an abstract detached subject, a spectator who stands outside of the skull of everybody, and is supposed to have the the skuli of everylody, and is supposed to have the manifold life of every conscious subject open to his gaze. It is necessary to make these abstractions; to make them is indispensable for the solution of particular problems, and helps us to attain to that mastery of the world which is essential for the fulfilment of the tasks of life. It is not needful to quarrel with the abstract attitude of every science, or to accuse it of wilful neglect of many elements in conscious life; our quarrel arises only when these special scientific aspects are set forth as complete and exhaustive accounts of the world.

To deal rightly with the question of consciousness which we have in hand, we must not be content to regard it as it appears in abstract science—merely as that which is aware of the processes of the world's ongoing, or merely as the abstract subject which meets us in psychological treatises. To neglect the subject and all its individual experiences, hopes, fears, and wishes, is quite right on the part of the physicist, the chemist, and the naturalist; and so to exclude the individual, and to declare that biography forms no part of psychology, is quite legitimate when the psychologist is seeking to understand the process of consciousness in general. But if the aim is to rogist is seeking to understand the process of consciousness in general. But if the aim is to understand the fullness, the manifoldness, the complexity, as well as the unity, of mental life, the method is inadequate. The psychologist looks at the inner life as mere contents of consciousness. This consciousness only becomes aware of what is going on, and from this point of view it is nothing more. All contents are of equal value, or, rather, they are of value simply because they have a place in the stream of consciousness. But this view of consciousness is of value only to the psychologist, whose business is to describe and explain the contents of consciousness, and to organize them into a system. When we look away from the peculiar business of psychology, and speak of men in their habit as they live, we are aware of a great deal of which psychology takes no notice. There is the life which the poet sees, expresses, and interprets; there is the life of which the historian writes, which he seeks to interpret and to understand; there is the world of political, social, moral, and religious interests; and all of us are in that world—each a separate personality, characterized for selves and others as personalities, with the power of looking before and after, of foresceing ends, and adopting means to realize them, of forming ideals, and of living up to them. Again, in every act of ours, in every feeling, every volition, and every thought, we are conscious of a self which expresses itself in aims and meanings. We see ourselves girt about with duties, laden with responsibilities, and we feel that we have a meaning in ourselves, and a place in the world. he seeks to interpret and to understand; there is in the world.

We are not called on to explain here the different meanings which the self has for the psychologist, and for all others, such as the poet, the historian, the jurist, the artist. In the works of all these we are in a field of personal will and personal interest; in the company of the psychologist we are merely in the presence of a consciousness which is reduced to the aspect of being only aware of its contents, and has no special interest in, or preference for, any of these contents. Such a potentiality we may leave on one side as we proceed to deal with consciousness. What is it? Well, it is not to be identified with the sum of all its states, or with the sum of all its real or consistent presentations. It is not the stream of changes which goes on within it, or merely the awareness of the contents of that stream. It is not knowing, or willing, or feeling, for outside of it there is no feeling, no willing, no knowing. Consciousness is the condition of an mental life; without consciousness there is no mental life. A psychical fact is simply a fact in consciousness, and it is nothing else. Unconscious knowing is a phrase to which we can attach no meaning. Just as little can we interpret a willing

of which we have no consciousness.

Consciousness, therefore, is undefinable. Like all ultimates, we must simply accept it as the condition of the explanation of all else, itself remaining unexplained. It may not be identified with the sum of its states, any more than we can identify a real whole with the sum of its parts. For, after we have summed up the parts, there remains uneccounted for the whole as of the whole. accounted for the wholeness of the whole. machine is not the sum of its parts, and an organism is something more than the sum of its structures and functions. This statement, true of every whole, is uniquely true of the whole of consciousness. It is not a faculty in addition to other faculties, as memory is different, say, from imagination; it is implied in all the faculties of the mind. It is an essential property of every process that goes on within the mind. The simplest view is that which regards consciousness as the sphere in which immediate experience goes on. We are baffled by the very simplicity of the immediate operation of consciousness. We are baffled also by the fact that out of this simplicity are evolved all the results of the activity of consciousness in relation to the world and to self. Sciences, poems, histories, all the outcome of human endeavour, are due to the activity of consciousness. But what we are conscious of at any given moment is simply the mental states, activities, and passivities, and the presentations with which they work. What we insist on here is that consciousness cannot be deduced from anything else.

Certainly it cannot be deduced from the play of unconscious forces, or from the elaboration of correspondences between the growth of consciousness and the evolution of a nervous system. It may be well to dwell for a little on the attempts made to deduce consciousness from the play of unconscious forces. 'Latent mental modifications,' 'unconscious cerebrations,' are among the phrases used in this connexion. W. James, in discussing the 'mind-stuff' theory, thus deals with the distinction between the unconscious and the conscious being

of the mental state:

'It is the sovereign means for believing what one likes in psychology, and of turning what might become a science into a tumbling-ground for whimsies. It has numerous champions, and elaborate reasons to give for itself. We must therefore accord it due consideration' (Principles of Psychology, i. 1631.).

In answer to the question, Do unconscious mental states exist?, James enumerates no fewer than ten proofs,—an almost exhaustive list,—submits them to a drastic criticism, and returns the verdict, 'Not

proven.' Of one proof he says:

proven. Of one proof he says:

'None of these facts, then, appealed to so confidently in proof of the existence of ideas in an unconscious state, prove anything of the sort. They prove either that conscious ideas were present which the next instant were forgotten; or they prove that certain results, similar to results of reasoning, may be wrought out by rapid brain-processes to which no ideation seems attached '(tb. 170). The tenth proof may be quoted more fully: 'There is a great class of experiences in our mental life which may be described as discoveries that a subjective condition which we have been having is really something different from what we had supposed. We suddenly find ourselves bored by a thing which we thought we were enjoying well enough; or in love with a person whom we imagined we only liked. Or else we deliberately analyze our motives, and find that at bottom they contain jeulousies and cupidlities which we little suspected to be there. Our feelings towards people are perfect wells of motivation, unconscious of itself, which introspection brings to light. And our sensations likewise: we constantly discover new elements in sonsations which we have been in the habit of receiving all our days, elements, too, which have been there from the first, since otherwise we should have been unable to distinguish the sensations containing them from others nearly allied. The elements must exist, for we use them to discriminate by; but they must exist in an unconscious state, since we so

completely fail to single them out. The books of the analytic completely fail to single them out. The books of the analytic school of psychology abound in examples of the kind. Who knows the countless associations that ningle with his cach and every thought? Who can pick apart all the nameless feelings that stream in at every moment from his various internal organs, muscles, heart, glands, lungs, etc., and compose in their totality his sense of bodily lite? Who is aware of the part played by feelings of innervation and suggestions of possible muscular exertion in all his judgments of distance, shape, and size? Consider, too, the difference between a sensation which we simply have and one which we attend to. Attention gives results that seem like fresh creations; and yet the feelings and elements of feeling which it reveals must have been already there—in an unconscious state (th. 1761).

Thus far the testatement of the proof of uncon-

Thus far the statement of the proof of unconscious mental states is real and existent. Of this argument, or proof, so fully stated, James says:

argument, or proof, so fully stated, James says:

'These reasonings are one tissue of confusion. Two states of mind which refer to the same external realty... are described as the same state of mind or "idea," published, as it were, in two editions; and then, whatever qualities of the second edition are found openly lacking in the first are explained as having really been there, only in an "unconscious" way. It would be difficult to believe that intelligent men could be guilty of so patent a fallacy, were not the history of psychology there to give the proof. The psychological stock-in-trade of some authors is the belief that two thoughts about one thing are virtually the same thought, and that this same thought may in subsequent reflexions become more and more conscious of what it really was all along from the first. But, once make the distinction between simply having an idea at the moment of its presence, and subsequently knowing all sorts of things about it; make, moreover, that between a state of mind itself, taken as a subjective fact, on the one hand, and the objective thing it knows, on the other, and one has no difficulty in escaping from the labyrinth' (p. 172).

He deals with the latter distinction first, and thus concludes:

thus concludes:
'There is only one "phase" in which an idea can be, and that is a fully conscious condition. If it is not in that condition, then it is not at all' (p. 173).

His language in dealing with the distinction between simply having an idea and knowing all sorts of things about it we quote fully, as it is of the highest importance in view of what we must discuss presently:

discuss presently:

the highest importance in view of what we must discuss presently:

'The truth is here even simpler to unravel. When I decide that I have, without knowing it, been for several weeks in love, I am simply giving a name to a state which previously I have not named, but which was fully conscious; which had no residual mode of being, except the manner in which it was conscious; and which, though it was a feeling towards the same person for whom I now have a much more inflaned feeling, and though it continuously led into the latter, and is similar enough to be called by the same name, is yet in no sense identical with the latter, and least of all in an 'unconscious' way. Again, the feelings from our viscera and other dimly-feltorgans, the feelings of innervation (if such there be), and those of muscular exertion which, in our spatial judgments, are supposed unconsciously to determine what we shall perceive, are just exactly what we feel them, perfectly determinate conscious states, not vague editions of other conscious states. They may be faint and weak; they may be very vague cognizers of the same realities which other conscious of much in the reality which the other states are conscious. They are eternally as they feel when they are the number of the same neither actually nor potentially, be identified with anything else than their own faint selves. A faint feeling may be looked back upon and classified and understood in its relations to what went before or after it in the stream of thought. But it, on the one hand, and the later state of mind which knows all these things about it, on the other, are surely not two conditions, one conscious and the other "unconscious," of the same identical psychic fact' (p. 174).

Apart from the somewhat curious phraseology, which would seem to imply that a state is conscious of its are an advanced and the later state of mind which knows all these things about it, on the other, are surely not two conditions, one conscious and the other "unconscious," of the same identical psychic fa

which would seem to imply that a state is conscious of its own object—which is rather startling—the argument seems conclusive. Yet it may be well to note that a reference to the conscious subject, when we speak of a conscious state, is always in order. But it is misleading to speak of conscious states cognizing faintly or fully, when we mean that the subject cognizes through these states more or less fully. But, as we follow James through the subsequent evolution of his thought, we feel that he seems to have departed from the conclusion reached in the passages we have quoted. At all

events, he writes as follows:

'I cannot but think that the most important step forward that has occurred in psychology since I have been a student of that science is the discovery, first made in 1886, that, in certain subjects at least, there is not only the consciousness of the ordinary field, with its usual centre and margin, but an addition thereto in the shape of a set of memories, thoughts, and feelings,

which are extra-marginal and outside of the primary consciousness altogether, but yet must be classed as conscious facts of some sort, able to reveal their presence by unmistakable signs. I call this the most important step forward, because, unlike the other advances which psychology has made, this discovery has revealed to us an entirely unsuspected peculiarity in the constitution of human nature' (Varieties of Religious Experience, p. 233). Again: 'The sub-conscious self is nowadays a well-accidited psychological entity; and I believe that in it we have exactly the mediating term required. Apart from all religious considerations, there is actually and literally more life in our total soul than we are at any time aware of. The exploration of the trans-marginal field has hardly yet been seriously undertaken; but what Mr. Myers said in 1802 in his essay on the Subliminal Consciousness is as true as when it was first written; "Each of us is in reality an abiding psychical entity far more extensive than he knows—an individuality which can never express itself completely through any corporeal manifestation. The Self manifests through the organism; but there is always some part of the Self unmanifested, and always, as it seems, some power of organic expression in abeyance or reserve." Much of the content of this larger background against which our conscious being stands out in relief is insignificant. Imperfect memories, silly jingles, inhibitive timidities, "dissolutive" phenomena of various sorts, as Myers calls them, enter into it for a large part. But in it many of the performances of genius seem also to have their origin' (p. 511f.).

The sub-conscious self can, according to Sanday,

The sub-conscious self can, according to Sanday, do even more wonderful things than these:

The sub-conscious self can, according to Sanday, do even more wonderful things than these:

'Besides the upper region of consciousness, there is a lower region into which the conscious mind cannot enter. It cannot enter, and yet it possesses a strange magnetic power by which the contents of the lower region are, as it were, drawn upwards and brought within the range of its cognition. This lower region is a storehouse of experiences of the most varied kinds; in fact, all the experiences, the author goes on: 'All these things are latent. The door of that treasure-house, which is also a workshop, is locked, so far as the conscious personality is concerned. For it there is no 'harrowing of hell,' no triumphant descent into the nether world, followed by a release and return of captives on any large scale. The door is locked against any such violent irruption. And yet, in some strange way, there seem to be open chinks and crevices through which there is a constant coming and going, denizens or manufactured products of the lower world returning to the upper air of consciouses, and once more entering into the train and sequence of what we call active life, though, indeed, the invisible processes of this life are just as active as the visible. It appears to be the function of the sub-conscious and unconscious states to feed the conscious. There is that continual movement from below upwards of which I have been speaking. A never-ending train of images, memories, and ideas keeps emerging into the light. But only in part do they come at call. And only in part do they come in fully organized form. . . The wonderful thing is that, while the unconscious and sub-conscious processes are (generally speaking) similar in kind to the conscious, they surpuss them in degree. They are subtler, intenser, further-reaching, more penetrating. It is something more than a mere metaphor when we describe the sub- and unconscious states as more "profound" (Christotogies, Ancient and Modern, Oxf. 1910, pp. 142-146).

The wonderful passage just

The wonderful passage just quoted prompts one to ask a number of questions. We are told that the door of the treasure-house is locked; yet Sanday seems to have obtained the key, for he describes the treasures which are there, and the work which is done there, and is able to compare it with the work done in the upper air. He is able also to declare that the processes down below are subtler, intenser, further-reaching, more penetrating. How has he come to know all this? If it be so, what is the use of a consciousness if the sub-conscious and the unconscious can do so much better work, and at so much less cost? As for ourselves, we are inclined to say of these fancies that they are 'whimsies' the word Professor James himself employed when dealing with the question of the existence of uncon-scious mental states. James has seemingly changed his view on the matter, and we submit that he was bound to answer his own arguments as these are set forth in his Principles of Psychology. These seem to us as cogent as they were before what he calls the discovery in 1886. When he declares that 'the sub-conscious self is nowadays a well-accredited psychological entity,' we are surely en-titled to ask what meaning he attaches to the word 'self' in this connexion. In the interesting chapter on the consciousness of self in the Principles of Psychology, he speaks of the constituents of the self as the material self, the social self, the spiritual self, and the pure ego. In the course of the discussion he says that the substantialist view of the soul 'is at all events needless for expressing the actual subjective phenomena of consciousness as they appear. We have formulated them all without its aid, by the supposition of a stream of thoughts, each substantially different from the rest, but cognitive of the rest and "appropriative" of each other's content. At least, if I have not already succeeded in making this plausible to the reader, I am hopeless of convincing him by anything I could add now. The unity, the identity, the individuality, and the immateriality that appear in the psychic life are thus accounted for as phenomenal and temporal facts exclusively, and with no need of reference to any more simple or substantial agent than the present Thought or "section" of the stream' (op. cit. i. 344).

It is true that this passage relates only to the

It is true that this passage relates only to the active subjective phenomena of consciousness as they appear. Are we to have one method and one form of process as applied to the phenomena of consciousness, and another when we apply them to the sub-conscious and the unconscious? Under what heading are we to place the entity called 'the sub-conscious self'? Is it material, social, spiritual? Or is it the pure ego? Yet the sub-conscious self is 'a well-accredited psychological entity.' Are we to lay stress on the adjective 'psychological,' or on the substantive 'entity'? We should like to know a little more regarding the sub-conscious self, but it seems that it is really outside the scope of psychological investigation. The door is locked, and no one can find the key. The effects of this doctrine of the sub-conscious self on psychology, ethics, and theology are so far-reaching, and to us so disastrous, that a thorough investigation of it and its claims is urgent. That investigation cannot be made here and now; we are concerned with it only so far as it bears on our present theme.

What are we to make of this wonderful subconscious self, which does such marvellous things?
Are we to take it as a positive conception, and with
Hartmann use it as an explanatory principle, when
all other sources of explanation fail? Then we say
with Höffding: 'Psychology is on secure ground
only when it confines itself to the clear and certain
phenomena and laws of consciousness' (Psychology,
Eng. tr. p. 73). True, Höffding immediately adds:
'But, starting from this point, it discovers the
unconscious, and sees, to its astonishment, that
psychological laws prevail beyond the province of
conscious life. In what follows we shall adduce
some examples to make this clear.' Reference
is made to memory, to the physiology of the
senses, to instinct, and to tact, to the fact that
an unconscious activity can be carried on simultaneously with a conscious, as 'when a spinner
turns the wheel, and draws out the thread, while
her thoughts are far away.' But, as the outcome
of the whole discussion, Höffding cautiously says:
'Notwither directions and description and

of the whole discussion, Höffding cautiously says:

'Notwithstanding the intimate connection and close interaction between the conscious and the unconscious, the latter remains for us a negative conception. The unconscious processes are cerebral processes just as much as the conscious, but whether, like these, they are of several kinds, we do not know. Instead of speaking of unconscious thought or unconscious feeling, it would be safer—if we wish to avoid all hypotheses—to speak with Carpenter and John Stantz Mill of unconscious cerebration, were not this expression unsuitable, as suggesting, in the first place, the mistaken notion that there may be consciousness of cerebration, properly so called, and because, in the second place, it might appear to affirm that there is nothing at all in unconscious activity related to what we know in ourselves as conscious states' (p. 81).

While mental activity may extend beyond con-

While mental activity may extend beyond consciousness, and while self may have a larger range than the consciousness is aware of at any one time, it is not possible for psychology, or for clear science, to seek for the principles of rational explanation anywhere save in the conscious life itself. The unconscious must remain a negative conception. It is simply metaphor, and bad metaphor at that, to speak of 'invasions,' of 'rushes' and 'uprushes,' from the lower world, and it is vain to seek for explanations of the on-

going of our mental life from what is supposed to have gone on in the sub-conscious self. We must exhaust the possibilities of consciousness, as the source of explanation, ere we seek to bring in the sub-conscious and the unconscious as a positive principle of explanation, as, from the very nature of the case, it is impossible to bring these into clear consciousness, or into consciousness at all. Instead of saying, with Sanday, that the function of the unconscious is to feed the conscious, it would be more consistent with the facts to say that the unconscious and the sub-conscious are storehouses of products manufactured by consciousness, and kept in retentis until they are needed. Habit has been described as lapsed intelligence, and is the outcome of repeated conscious processes, so often repeated that they have become automatic. Similarly it may be possible to deal with all the evidence of sub-conscious and unconscious activity of the self so as to show that all or most of these activities had conscious beginnings, and, in any case, that they are not unrelated to conscious activity it is in the past or in the present.

At all events, it is not from these unconscious or sub-conscious experiences that our evidence is derived, out of which are built up those conclusions which make up the science, the poetry, the history, and the philosophy of the world. For the principles which underlie these achievements of the human mind, the linkages which bind them together, and the certainty which they attain to are derived from the conscious and not from the unconscious activity of the mind. The basis of certainty lies in consciousness. Its affirmations, its intuitions, are the foundations on which we build. Not on invasions from the sub-conscious, nor on uprushes from the unconscious come those convictions of truth, reality, and necessity, which turn the raw material of our experience into the organized knowledge of the race.

'The necessity of thought which is manifested in the certainty of particular acts of judgment owes its distinctive character in the last instance to the unity of self-consciousness. Every particular judgment may be repeated, with the consciousness of the identity of subject and predicate as well as of the act of indement; starting from the same data, it is always the same synthesis which takes place, and our self-consciousness cannot exist apart from this invariability. Thus our judgment exist apart from this invariability. Thus our judging ego, with its unvarying activity, is opposed to particular acts of judgment as a universal, as the same and the permanent which binds together the different and temporarily separated acts of thought. With the confidence of the movement in each particular case is connected the consciousness of unvarying repetition, of return to the same point. In this constancy, which presents a general law in contrast with the particular act, we are conscious of judgment as something withdrawn from the sphere in which we have a subjective choice and are free to bring about alterations; we are conscious of it in the same way as when it maintains itself in some particular act against contradiction. Becausa this identity and constancy of our action is the condition of our consciousness as one and undivided, it is also the final and fundamental basis upon which we can fall back (Sigwart, Logic, Eng. tr. i. 187).

It is one of the merits of Sigwart's great treatise on Logic that he brings all the logical judgments into close relation to the unity and identity of selfconsciousness. We know no work in which this has been done so thoroughly and so convincingly. Take another passage, dealing with certainty:

Take another passage, dealing with certainty:

'The certainty that a judgment is permanent, that the synthesis is irrevocable, that I shall always say the same—this certainty can be forthcoming only when it is known to depend, not upon momentary psychological motives, which vary as time goes on, but upon something which is immutably the same every time I think, and is unaffected by any change. This something is, on the one hand, ny self-consciousness itself, the certainty that I am I, the same person who now thinks and who thought before, who thinks both one thing and another. On the other hand, it is that about which I judge, my thought itself as far as regards its invariable content, which I recognize as identical each time, and which is quite independent of the state of mind of the individual thinker. The certainty that I am and think is final and fundamental, the condition of all thought and all certainty whatever. Here can be none but immediate and self-evident cortainty; we cannot even say that it is necessary, for it is prior to all necessity. In the

same way, the certainty of my consciousness that I think this or that is immediate and self-evident; it is inextricably interwoven with my self-consciousness; the one involves the other (p. 240).

The form under which consciousness exists is that of the distinction of subject and object. As factors in the synthesis of consciousness there are to be distinguished the object of which we are conscious, and the subject which is conscious of the object. The object is for the subject, and is either a state of the subject, or an activity of it, or a quality of external things. When this distinction is clearly made, there is a clear consciousness; when vaguely made, there is a vague consciousness; when it is not made at all, there is no conscious When we are conscious, we are conscious of something, and we are conscious of that something only as we distinguish it from self, and place it over against self as its object. We are not to enter into the age-long controversy as to whether there can be a merely sensitive consciousness which is neither subject nor object, but consists only of particular feelings. It has been widely contended that a purely sensitive consciousness is possible, and that the reference to subject and object, which all admit as characteristic of full-grown consciousness, arises out of associated experiences. These are classified as vivid and faint, the vivid coming from the object, and the faint from the subject. Out of these particular feelings association builds up the conception of both subject and object. But Hume does not allow any validity to this conception; it is only a fiction of the mind. Herbert Spencer, while he strives to account for the distinction of subject and object by the associationalist theory eked out by the theory of evolution, does admit, or rather lays stress on, the distinction between subject and object, as a cardinal principle of his synthetic philosophy. But the mere addition of units of conscious feeling could never reach a unitary consciousness. For these units of feeling are each different from all the rest, and, as they begin in time, they perish as soon as they appear, unless they are held together by reference to the self whose they are. States of consciousness can never be without a consciousness of states. If there is to be a consciousness of states, there must be a subject which discriminates itself from the states, can hold them together for discrimination or comparison, and can distinguish all of them as states of itself.

Consciousness may range from the simplest awareness to the closest discrimination. It may be vague and narrow, or it may be clear and comprehensive. The lowest range of consciousness may be dim and indefinite, as when we are dropping off to sleep, or when our attention is directed to something else. In fact, many impressions may be made on our senses which rise only to the threshold of consciousness, and perhaps may not rise even to the threshold.

the threshold.

'In these cases, consciousness approaches a vanishing point, and often reaches and passes it. The object exists for us only as a vague objectivity without definite significance. They emerge from this state only by a voluntary or involuntary direction of our attention towards them. If, now, we choose to call this state unconscious, and reserve the name of consciousness only for clear or distinct consciousness, we should say that very many mental states exist below consciousness. This has often been done, and the theory maintained that we may have manifold sensations and feelings without being conscious of them. But this is simply the extravagance of confounding vague and imperfect consciousness with none, the truth being that we may have vague and unobtrusive sensitions without directing our attention to them; the lower limit of consciousness does not admit of being definitely fixed' (Bowne, Introd. to Psychological Theory, p. 239 1.).

The truth is, that we are unable to express con-

The truth is, that we are unable to express consciousness save in the form 'I am thinking this or that, I am feeling pain, I am doing this act, or I am intending to take such a course of action.' It is quite true, as Hume says, that we always

find ourselves in some particular state, but in every state, whatsoever it may be, we find ourselves. is not possible to interview a blank self, or to abstract the ego, so as to have an idea of it as we have of external objects, or of events of a particular kind in consciousness, nor can we make our self completely an object, for, even if that were possible, there is always that subjective activity of the subject which goes on while we seek to make the ego completely objective. While this is so, yet the further step which is so often taken, namely, to abstract altogether from the subject, and to make conscious activity only a stream of thought, or a mere aggregate, seems altogether illegitimate. Can we have a stream of thought, without a single permanent subject of our psychic activities? Even a stream has its identity, and anything which we can call a unity is something more, as already observed, than the sum of its parts. But can we really think of a feeling in abstraction from something that feels, or of a willing without a subject that wills, or of a thought without a thinker? that wills, or of a thought without a thinker? Can we really think of our psychical life in an impersonal way? It is possible to describe, as in fact we do, the outward happenings of the world, and in an impersonal way to say 'it rains,' 'it thunders,' 'it halls,' 'it storms,' 'it is dark,' or 'it is a stormy night.' Try this in describing the psychic life, and immediately we feel how incongruous it is. 'It thinks,' 'it wills,' 'it feels,' 'it is in pain,' 'it is full of joy'—we can write so, as we can write paragraph. nonsense, but the incongruity is too obvious, when plainly put, to allow us for one moment to regard it as an adequate account of the facts.

Even when a psychologist reduces the phenomena of consciousness to a stream of thought, he is constrained in unguarded moments to speak of our will, our psychical states, thus adding to the stream that factor without which it could not have been even

a stream. In the mere statement of the case-a statement which seems at first to eliminate the statement which seems at first to eliminate the necessity of a subject—one is forced to imply the subject in every statement. One is compelled to imply a subject. For ideas, feeling, or will are not there in a vacuum; they are, after all, only modes of consciousness. We may neglect a pain which nobody feels, a pleasure which is pleasant to nobody, or a will and a purpose which is the activity of no one. Is it possible to imagine or conceive a perception of these inner experiences where there is no necessary a perception which is where there is no perceiver, a perception which is only the bare object perceived, a mere subjectless feeling? How are we to account for the connexion of all the events of seeing, hearing, feeling, and for the recognition we have that we have had these experiences before, and that we have a memory of them, without the supposition of a subject whose experiences they were? Is it possible for any one really to think of an impersonal stream of thought, which binds into unity all the particular psychical events of our experience, and to suppose, further, an additional impersonal event, by which all the other impersonal events are gathered into one, while yet this additional event is only a phantom, an illusion, although it has the strange power of seeming to itself identical through all the successive moments of its experience? Can we really think so? Is it not easier, more consistent with the facts, to assume the subject as real, as present to all its states, and as able somehow to hold them together, and to group them according to their real resemblances. Can any one think of himself as the sum of the events of his experience, only with the inexplicable addition that it is he who thinks them so? Hume boldly calls this a fiction, and Stuart Mill calls it a 'final inexplicability,' and neglects it as a source of explanation.

Is it not the easiest solution simply to acknowledge

that the ideas of persistence and duration find their simplest explanation from the supposition that we are, and know ourselves to be, identical in

time?

While we have thus to postulate continuity of the conscious subject—for on any other supposition we should be unable to account for the ideas of change, continuity, or permanence—there are many questions which remain for discussion and for settlement. It is almost a matter of course to say that psychical events as such exist only in so far as they are present in consciousness; their distinctive character lies in the fact that they are conscious. A seeing, of which we know nothing, a pain of which we are not aware, an act of volition which takes place without our being able to notice it, are not possible, for the seeing, etc., is only by means of consciousness. While this is true, it is also true that there are different degrees and modes of becoming conscious. When a consciousness has attained to some fullness of self-possession, and is in possession of the results of experience, there is for such a consciousness a fund of experience organized into masses, and any new experience can take up a new feeling or idea into such an ideal mass already formed. The process is so fully described in many psychological textbooks that we need not dwell on it here. Thus, we refer any new experience of colour to the class of colours we already know, and, being in possession of these names, we name the new experience of colour accordingly. But there was a time in the growth of the subject when names were not in our possession. These names of general ideas are formed gradually from particular perceptions, which at the beginning had no name. But even for the particular perception, or for the particular experience, there is this indispensable condition, that there should be a discrimination of the particular elements which co-exist at every moment, and some notice taken of them. These two conditions must be present before we can properly speak of consciousness at

At this earliest stage of conscious life, ere the subject is in possession of the wealth of organized experience, the subject is, as it were, lost in the

object.
Our immediate consciousness of objects seems at first to be a mere presentment of them to the passive subject, to a self that is not in any way occupied with itself, or even conscious of itself at all. The outwardly directed gaze seems simply to admit the object, and not to react, still less to be aware of itself as reacting, upon it. But, in the first place, we have learned to recognise that, whether we are conscious of it or not, there is always a reaction, an analytic and synthetic activity of thought, even in our simplest perceptive consciousness; for, without this reaction, no idea of any object as distinct from, and related to, other objects could ever arise to trouble the self-involved sleep of sense. Apart from such reaction, we might say that the sensitive subject would remain for ever confined to itself, were it not that in that case there would properly be no self to be confined to; for where there is no outward, there is, of course, no inward life. It is thus the mental activity of the subject that creates for him a world of objects, or, to put it more simply, that enables him to become conscious of the world of objects in which he exists. In the second place, not only is the subject active in perception, but he necessarily and inevitably has an incheate consciousness of himself as a subject, in distinction from the subjects which that activity enables him to apprehend. For to apprehend an effect, as such, is to distinguish it from, and relate it to the self that is conscious of it. It is to refer an idea or feeling to that which is other than the self, to reject it from the self and to objectify it; and such a rejection or repulsion necessarily involves, on the other side, a witchwawal of the self from the object. The simplest outward-looking gaze, which seems to lose itself in the object to which it is directed, yet recognises that object as other than itself or its own state; and, indeed, all its absorption in the object to whe system of the self form the object in a function in the objec object.
Our immediate consciousness of objects seems at first to be 

tion which the individual would give of his own consciousness, they would generally be omitted. But they are always there. For it is not possible, in the nature of things, that there should be an object, except for a subject, or without that subject distinguishing the object from itself, and itself from the object. In this sense there can be no consciousness of objects without self-consciousness. Even, therefore, if the word "I" be delayed for a little, the inchoate thought of it cannot be wanting to one who is conscious of objects as such' (Edward Caird, The Evolution of Relayion, i. 183-155).

As we know consciousness in ourselves, it has a beginning, a growth, and a history. Thrust into the midst of conditions not realized, slowly learning to find itself at home in the world, and gradually coming to the knowledge that there is an external order to which it is related, the self-conscious being, in intercourse with things, comes, so far, to the knowledge of the world and of itself. The story need not be told here, but there is a story, for the finite personality does come to the know-ledge of itself. It learns to distinguish between itself and the world. But consciousness becomes clear and definite when it recognizes that there clear and definite when it recognizes that there are distinctions among its objects, and relations into which these can be gathered up. These relations become ever more clear and definite, and, as knowledge progresses, consciousness finds itself in an ordered world, and, just in proportion to its recognition and mastery over the order of the world, is its recognition of itself as the counterpart of the order of the universe. Its own rational principles are realized there, and it becomes more rational as it recognizes the objective value of its rational as it recognizes the objective value of its own rational nature, as embodied in a rational world. But we may not regard the distinction of self and not self as if it were identical with the distinction of subject and object. The first may be called an ontological distinction, for it relates to the distinction between two things which make up the whole sphere of being, whereas the distinction between subject and object describes a mental function. The contents of the two are constantly At one moment the object may be this changing. table, with its shape, colour, material; and the next moment it may be the mental process which passed through the mind when the table was the object. The object may be things in the outward world, or it may be the state of consciousness by means of which we deal with the outer world. may be the thing I see, or it may be the vision through which I see it. The distinction between subject and object is the form under which consciousness always takes place; subject and object are a relation within one experience, and they are essential to the reality of that experience.

It may be observed that the conception of self,

like all other conceptions, is one of gradual growth, and the time of its full realization is, for us, not We are not to look for the self as if it were laid on a shelf, a thing among other things. the subject of all experience, and usually it is the last conception which is reached by the conscious subject itself. This late recognition of the conception of itself may be paralleled by the late emergence, in the history of thought, of the problem of thought itself. Nothing is nearer to us than thought, and yet the problem of thought is one of the very hardest to grasp. Spontaneous thought deals with objects rather than with itself, and reflexion is hard. Thought hides behind itself; it reflexion is hard. Thought hides behind itself; it is so occupied with its processes and problems that it does not reflect on them, and, having reached conclusions unreflectingly, often takes these as original data given from without. Knowledge is taken for granted, and the knowing process was for a long time utterly neglected. Nor had knowledge any suspicion of the complexity of the knowing process, nor did knowledge find it necessary to submit itself to an analysis of the process of knowing or to inquire into its own validity. It was

inevitable that in the long run the question of the possibility of knowledge should arise, but it could not arise until knowledge had been at work for a long time, and had attained to some mastery over itself and its work. So is it with the problem of the self. As shown by Caird in the quotation above, the consciousness of the self in the consciousness of objects is at first latent; it may be delayed, but it is always implicitly there. As a matter of fact, it may always be latent and never come into clear consciousness at all. Self-experience may be the only form which self-consciousness may assume. The self may be so lost in the process of experience, so absorbed in its feelings, desires, and thoughts, that it may never reflect on itself, and never ask consciously what it is. It may remain on this level all through life. Absorbed in its object, living out its experience of pleasure, engrossed in its own pursuits, and interested in the success of its plans, it may never seek to reflect on its own nature or on the order implied in the most simple experience. One may be active, energetic, far-sighted, wise, and yet may have never given a single hour to the thought of that self which has all these characteristics, for in the history of human thought and its evolution the simplest and most fundamental of all problems are the latest to emerge into the light.

The two factors—subject and object—which always represent the form which experience has, are not, at the outset, explicitly distinguished, and experience may go on all through life without any clear consciousness of the distinction. Yet the two inseparable factors are always there. is always possible, however, to focus our attention on the one factor or on the other. The mind may direct attention on the object or on the subject. The consciousness of self may remain at the level of mere self-experience; it may be so absorbed in the object as never to ask itself about itself. It may, indeed, neglect itself altogether, and may so seek to formulate its experience as to make the subjective factor disappear. Thus it may seek to become a philosophy, and find a sufficient explanation of the subjective factor disappear. tion of experience in a something which does not require a subject of knowledge at all. But such a philosophy, though it constantly reappears, is after all inadequate to answer the questions which constantly recur and which we need not here restate. For immediately the question arises as to the subject for whom all experience is possible, and, when we ask this question, the answer must be that a self which is conscious at all has implicitly within itself the possibility of a complete selfconsciousness. Focusing our attention, then, on this factor of experience, we can regard it as the subject of experience which takes up all particular experiences, rules them, binds them into a system, and makes them elements in one consistent experience. In this event self-consciousness would have attained its ideal, for it would have reached the goal of self-knowledge and self-control. The conception of a perfect self-consciousness consists in the fact that it is in possession of itself, and can set the bounds of its own experience. Selfknowledge, self-reverence, self-control—in these, and not in finitude or infinitude, lies the conception of a perfect selfhood. But for finite beings, for us men, this ideal is a goal, and cannot be an actual attainment. For we do not set the limits of our own experience; we are subject to inrushes from without, we have experiences which are inherently irrational, and we have feelings which are sometimes uncontrollable, and generally there is so much of our experience which is simply given that we cannot be said to be masters of ourselves. Yet the growth of a rational personality is measured by the progress of the mastery which it has over

the elements of its own experience, and the power of placing every impulsive and merely emotional element under the guidance of reasonable selfconsciousness.

Thus, then, we may regard the self as conscious of itself in all its manifold experiences. Knowledge is possible, because all the objects of knowledge can be brought into relation to the self. Objects out of all relation to the conscious self are for that self non-existent. Whether we look at the self-conscious being from the point of view of knowledge, or from the ethical, or the æsthetic, or the religious point of view, the result is to raise our estimate of the self-conscious being to the highest. For each of these affirms that the self-conscious being is the postulate without which truth, beauty, goodness are without meaning or worth. The conscious subject is the subject for whom all objects are; it is also the subject in which goodness is realized, and ethics affirms that the self is that in which goodness is to be realized through a continual process of self-realization and self-determination. The world of beauty has no meaning without the seeing eye and the ideals which the self in intercourse with the world builds

up for itself.
We do not require to follow out the results of the analysis of self-consciousness into its further issues, or to enter into the discussion regarding an absolute, all-inclusive self-consciousness. ever seeks to follow out that argument into all its consequences may find it fully unfolded in the works of Hegel and his followers, as well as in the works of Green, of the two Cairds, of Royce, and of many others. It may, however, be said that it is scarcely possible to describe the totality of things according to the analogy of one self. The Hegelian philosophy is a perfect description of the way in which an inchaate self arrives, or may arrive, at self-consciousness. It is of the highest value from that point of view. But to make it absolute seems too great a demand. For this is a universe of many selves, and the unity of the universe cannot be construed after the fashion of the growth and evolution of one self. therefore, the world is indebted to the Hegelian idealists for the analysis of self-consciousness, and for the far-reaching results of that analysis, the attempt to construe the life of the universe after that analogy cannot be regarded as final.

Ere we close, it may be well to notice the argument of Bradley, because it would make all the contendings of this article invalid. We quote

the contendings of this article invalid. We quote his summary:

'We had found that our ideas as to the nature of things—as to substance and adjective, relation and quality, space and time, motion and activity—were in their essence indefensible. But we had heard somewhere a rumour that the self was to bring order into chaos. And we were curious first to know what this term might stand for. The present chapter has supplied us with an answer too plentiful. Self has turned out to mean so many things, to mean them so ambiguously, and to be so wavering in its applications, that we do not feel encouraged. We found, first, that a man's self might be his total present contents, discoverable on making an imaginary cross section. Or it might be the average contents we should presume curselves likely to find, together with something else which we call dispositions. From this we drifted into a search for the self as the essential point or area within the self; and we discovered that we really did not know what this was. Then we went on to perceive that, under personal identity, we entertained a confused bundle of conflicting ideas. Again the self, as merely that which for the time being interests, proved not satisfactory; and from this we passed to the distinction and the division of self as against the not-self. Here, in both the theoretical and again in the practical relation, we found that the self had no contents that were fixed; or it had, at least, none sufficient to make it a self! (Appearance and Realty?, p. 101 f.). p. 101 f.).

In his own ironical way Bradley had said elsewhere:

'There remains still left a third moral, which, as I am informed, has been drawn by others, that if we are not able to rest with the yulgar, nor to shout in the battle of our great schools, it might be worth our while to remember that we live on an island, and that our national mind, if we do not enlarge it, may also grow insular; that not far from us there lies (they say so) a world of thought, which, with all variety, is neither one nor the other of our two philosophies, but whose lattle is the hattle of philosophy itself against two undying and opposite one-sidednesses; a philosophy which thinks what the vulgar believe; a philosophy, lastly, which we have all refuted, and, having so cleared our consumences, which some or us at least might take steps to understand (Etheat Studies, p. 38).

Parkens demanagement Reality is the order way.

Perhaps Appearance and Reality is the endeavour to think what the vulgar believe. But there is left in it no shred of belief of what the vulgar believe. Of the whole work set forth with such amazing ability in the last named treatise this much may be said, that it amounts to a demonstration of the usclessness of the attempt to interpret experience from a mere abstract point of view. Bradley finds that all the categories and relations of thought abound in contradiction. herence, predication, quality, identity, causality, unity, space, and time are full of contradictions. When we arrive at the question of the self and its reality, contradictions swarm more and more. What is the way out of this network of contradictions? They are somehow removed in the Absolute. These contradictions are Appearance, and Reality has somehow absorbed them into itself. But it would be quite possible to show that the same method used by Bradley to discredit Appearance would work havoc also with the Absolute. That is on the supposition that his logical procedure could be carried out in the Absolute. The greatest con-tradiction we know is the contradiction between the rigour of his logic as applied to Appearance, and the slackness of it as applied to the Absolute. Apart from this, is not the method of Bradley simply an illustration of a wrong conception of the categories, and of their application?

Apart from this, is not the method of Bradley simply an illustration of a wrong conception of the categories, and of their application?

'The epistemological interest makes us unwilling to admit anything that cannot be conceptually grasped. Accordingly it seeks to make ideas all-embracing. At the same time it is clear that this view is a tissue of abstractions. The impersonal idea is a pure fiction. All actual ideas are owned by, or belong to, some one, and mean nothing as floating free. We have already seen that the various categories of thought, apart from their formal character as modes of intellectual procedure, get any real significance only in the concrete self-conscious life of the living mind. Apart from this, when considered as real, they become self-destructive or contradictory. The idealism of the type we are now considering assumes that these categories admit of being conceived in themselves, and that they are in a measure the pre-conditions of concrete existence, and in such a way that we might almost suppose that a personal being is compounded of being, plus unity, plus identity, plus causality, etc. Thus personal existence appears as the outcome and product of something more ultimate and fundamental. The floatitious nature of this view has already appeared. When we ask what we mean by any of these categories, it turns out, as we have seen, that we mean the significance we find them to have in our self-conscious life. In the concrete the terms have no meaning except as it is abstracted from our own personal experience. The only unity we know anything about is no abstract continuity of existence through an abstract time; it is simply the self-equality of intelligence throughout its experience. And the change which we find is not an abstract continuity of existence through an abstract time; it is simply the self-equality of intelligence throughout its experience. And the change which we find is not an abstract change running off in an abstract time, but is simply the successive form under which the

The unity of consciousness, the identity of the

self-conscious life, the progressive realization of the self in intercourse and in interaction with the world and with its fellows, are thus among the most sure of our beliefs, and among the most indispensable of our postulates. Many further questions arise which cannot be discussed here, for the adequate solution of any one problem involves the solution of every other. But no problem can be solved on a merely impersonal plane, and no category is of value except as a function of the concrete personal life.

plane, and no category is of value except as a function of the concrete personal life.

Literature.—The following is a selection from the vast literature dealing with the question: Adamson, The Development of Modern Philosophy, 1903; Bowne, Introd. to Psychological Theory, 1836, also Personalism, 1908; Bradley, Appearance and Reality, 1893 (2nd ed. 1897), also Ethical Studies, 1876; Edward Caird, The Evolution of Religion, 2 vols. 1893; Höffding, Outlines of Psychology, Eng. tr. 1892; James, The Principles of Psychology, 2 vols. 1891, also Varieties of Religious Experience, 1902; Green, Works, ed. Nettleship, vol. i. (1883); Kilipe, Outlines of Psychology, Eng. tr. 1895, also Introd. to Philosophy, Eng. tr. 1807; Lotze, Metaphysic, Eng. tr. 1885; Ladd, Philosophy of Knowledge, 1897; Minsterberg, Psychology and Life, 1899; Shadworth Hodgson, The Metaphysic of Experience, 4 vols. 1898; Stout, Manual of Psychology, 2 vols. 1898-9; Sigwart, Logic, 2 vols., Eng. tr. 1895; Ward, art. 'Psychology,' in Elr's, also Naturalism and Agnosticism, 2 vols. 1899; Taylor, Elements of Metaphysics, 1903; Wundt, Human and Animal Psychology, Eng. tr. 1894; Villa, Contemporary Psychology, 1903; Royce, The Spirit of Modern Philosophy, 1897, also The World and the Individual, 2 vols. 1900-1; see also the Histories of Philosophy, such as Ueberweg, Höffding, Erdmann.

JAMES IVERACH.

CONSECRATION.—'Consecration,' or 'dedication,' may be defined as the solemn setting apart of persons or things for some particular religious work or use. The essence of any such rite or ceremony is to be found in the performance, whenever possible, of some act which is typical, or symbolical, of that for which the setting apart or consecration takes place. This act, either from the first or in process of time, is naturally accompanied by some announcement to the congregation of what is being done or intended, and by forms of prayer asking for the Divine approval and blessing; but no such accompaniments are really essential to the consecration itself, though they increase the dignity of the occasion and tend to general edification. This is, indeed, true of all symbolical rites and ceremonies in their ultimate simplicity, and the Biblical narrative well illustrates the truth in its account of the marriage of Adam and Eve (Gn 2<sup>22</sup>), where the essence of the marriage rite is described in the simple statement that 'the Lord God brought unto the man' the woman whom He had made of the rib taken from his side

With regard, however, to the consecration of persons or things in the stricter sense with which we are now dealing, we see traces of the original idea in various instances. The ordination of a idea in various instances. The ordination of a lector (reader) consists in permitting him for the first time to read the Gospel in the course of the service. A priest is made by permitting him (as in the modern Roman Pontilical) to celebrate the Holy Mysteries simultaneously with the consecration history, and in the same way an altar, and ing bishop; and in the same way an altar, and even a church itself, are consecrated by being first used for Holy Communion, and so on. Again. there are cases where the act is more conveniently and suitably symbolical rather than typical: e.g.

and suitably symbolical rather than typical: e.g. 102. Cyprian, Ep. xxxiii. 2, where he speaks of a young lector Aurelius thus: 'Dominico legit interim nobis, id est, suspicatus est pacem, dum dedicat lectionem' (while he acts in his new capacity as lector).

2 See Procter and Frere, New Hist. of Book of Com. Pr., Lond. 1901, p. 669 note.

2 Off. the letter of Pope Vigilius to Profuturus of Braga (A.D. 538): 'consocrationem cuiuslibet ecclesiae in qua sanctuaria non ponuntur celebritatem tantum scimus esse missarum.' See J. Wordsworth (On the Rite of Consecration, p. 6 f.), who points out the significance of the fact that the words xupuako and Dominicum are used both for the Lord's House or Temple and for the Lord's Supper or Sacrifice; see also Duchesne, Origines du culte chrét. p. 404 (Eng. tr.).

the doorkeeper of the church receives the keys of the church doors, the sub-deacon receives the chalice and paten (the vessels of his office), the virgin is veiled to signify her marriage with Christ (or His Church), the lector himself actually receives a copy of those Gospels which he is henceforth privileged to read, and so on. The Greek word commonly used to denote dedication of buildings (εγκαίνια; ef. καινίζειν and καινοῦν¹) itself suggests that the idea here emphasized lies at the

root of the ceremonies employed.

It is hardly necessary to say that the Christians were not the first to introduce the practice of thus consecrating, or dedicating, persons or things to religious purposes. Apart from the well-known custom of the Jews (e.g. in dedicating houses, Dt 20<sup>5</sup>, Ps 30 [title]; or city-walls, Neh 12<sup>27</sup>; or the Temple, 2 Ch. 5. 6; Jos. Ant. XI. iv. 7 f., XV. xi. 6), both the Greeks and the Romans (and other nations as well) observed such ceremonies for their priests and sacred buildings. But for Christians, during a considerable period after the foundation of their faith, anything but the simplest and least imposing ceremonies in connexion with consecration would have been both out of place and practically impossible. This article does not deal (except incidentally thus far) with the ordination of the clergy (see Ordination). We proceed, therefore, to consider the cases (chiefly those of buildings) to which the word 'consecration' is more usually applied in the present day.

During the first three centuries of the Christian era we have little evidence, if any, of regular rites or ceremonies being in use when places or buildings were set apart for Divine service. Of course, such places or buildings gradually became more and more numerous, and more and more carefully restricted to religious purposes, as persecution decreased and the affairs of the Church became more settled. But we can easily imagine that, almost from the first, forms and ceremonies grew up in connexion with their dedication; for instance, as J. Wordsworth has reminded us,2 the two primary conditions were probably 'a transference of previous ownership on the part of the Founder, and an acceptance of the trust by the Bishop of the Diocese'; and the only essential ceremony was the solenn celebration of the Holy Eucharist.<sup>3</sup>

the solenin celebration of the Holy Eucharist.

'The part played by the Founder or Builder would, in accordance with Jewish and heathen precedent, be a considerable one; and Christian custom, acting in accordance with the principles of Roman law, would prescribe the dedication by solemn and ceremonial use. The usurpatio juris of the Christian Society in its new home could hardly be otherwise exemplified than by the Sacrament in which believers, gathered under the presidency of their chief pastor, came together to meet their Lord in His new house, to plead His sacrifice, and to feast upon it.'

We have to dismiss on wides.

We have to dismiss as evidence the quotation from Philo Judæus, de Vita Contempl., given by Eusebius (HE ii. 17. 9) and adduced by Bona (de Reb. Liturg., Rome, 1671, I. xix.): &ν έκαστη δὲ ολέφ. [of the Therapeutae in Egypt] ἔστιν οίκημα leρδν δ καλείται σεμνείον καὶ μοναστήριον κ.τ.λ., because Eusebius's identification of the Therapeutae with the Christian ascetics of S. Mark in Alexandria is baseless and next to impossible. And the statement in the Calendar from the Library of the Queen of Sweden, quoted by Baronius (Annal. A.D.

57, no. 100), 'Kal. Aug. Romae dedicatio primae ecclesiae a beato Petro constructae et consecratae, is unhistorical; and so, no doubt, is the assertion attributed to Euodius (Niceph. ii. 3), who was the first bishop of Antioch, that James was consecrated first bishop of Jerusalem, and that the seven deacons were ordained in that house in which Christ instituted the Lord's Supper, and where the Holy Ghost descended on the Apostles.

It is not till the cessation of the persecution of Diocletian that we are on safe ground with regard to any actually recorded service of dedication. Eusebius (HE x. 3) speaks of the restoration of peace at that time being marked by the founding of new churches, and, among other signs, mentions έγκαινίων έορται κατά πόλεις και των άρτι νεοπαγών προσευκτηρίων ἀφιερώσεις, a notable instance being the dedication of the Church at Tyre (in the name of Paulinus), which took place A.D. 314, and at which the historian himself preached the inaugural sermon.2 There was a large concourse of bishops, clergy, and people on the occasion, and the Holy Mysteries were apparently celebrated, but no other distinctively initiatory ceremony is mentioned. This occasion is historically important, because it seems to be the first recorded instance, both (1) of a kind of consecration service, and (2) of a church with what is now commonly called a 'dedication,' i.e. consecrated under the title of a patron saint. Subsequently, instances of both

As Duchesne (loc. cit.) has pointed out, the church of S. Paulinus at Tyre is a representative of one out of two types of church in the first ages, viz. what we should now call the parochial church of a town or district. Of this type there would sometimes be more than one needed and provided in any single town or district, the principal one of which would, of course, be the 'cathedral,' as we now call it, where the bishop's throne was set up. Churches of this type seem often to have been known by the names of their founders or other great persons connected with the place (e.g. at Tyre above, S. Denys and others at Alexandria [Epiph. Hær. lxix. 2; PG xlii. 205], and S. Ambrose at Milan);3 or by some great Christian doctrine or event (e.g. 'Ayla Zoola at Constantinople [A.D. 360], or the 'Ardoraos at Jerusalem). A church called Dominicum aureum was dedicated at Antioch by Constantius in 341 (Socr. ii. 8; Sozom. iii. 5).

The other type of church was that which was connected with the tombs of martyrs and other saints. In the catacombs (q, v) at Rome, and in the burying-places (cameteria, polyandria) generally, the custom gradually grew up (1) of keeping the anniversary of such persons' death (natalis) or burial (depositio) by a service at their grave, their very tombstone often forming the altar for the consecration of the Sacred Elements; and then (2) of holding services there more frequently than once a year.<sup>5</sup>. After a time a church was built over the spot, and called after the name of the martyr or confessor who lay buried under its altar (hence the term martyrium, and the like, applied to churches). As churches had to be

1 Ci. Mart. Hier.; D'Achéry, Spiciley. (Paris, 1655-67) tom. iv. The Church of S. Peter ad Vincula on the Esquiline was dedicated in the name of both S. Peter and S. Paul on Aug. 1, in the episcopate of Felix IV. (432-440). There may, however, have been some church-building there before that date.
2 Quoted by him at length (loc. cit. 4).
3 The Gel. Sucramentary (ed. Wilson, Oxford, 1894, p. 140 t.) contains 'orationes et preces in dedicatione. basilicae quam conditor on dedicatam reliquit,' and also '[missa] in ejusdem conditors avendix.'

conditor non dedicatam reliquit, and also '[missa] in ejusdem condition's agendis.'

4 The medieval cathedral at Aix in Provence is said to be dedicated to the Transfigured Saviour; and in later times we have dedications like the Ascension, Corpus Christi, etc., or even Holy Cross, House of Prayer, and the like.

5 Hence what are called the 'stations,' and the 'station days' of early Roman service-books and calendars.

<sup>1</sup> apicpoor; is another noun, and arabeirae another verb.
2 Op. ett. p. 6.
3 Cf. the two corresponding regulations from the letter of Pope Vigilius, quoted above: 'omnes basilicae cum missa debent semper consecrari, et nullus presbyter missas celebrare praesumat nisi in sacratis ab episcopo locis.' These, though not so early as they claim to be, probably embody ancient tradition (Wordsworth, La.). The Liber Diurnus, which gives us very early Roman usage, speaks of dedications without missee publice or rubhea processio, but these are (according to Duchesno, op. cit. p. 404) 'cases of monastic oratories not open to the public,' so that the maugural missæ would be of a quasi-private nature. nature. 4 Wordsworth, loc. cit.

more numerous than martyrs' tombs, it also became sufficient to have some portion of a saint or some small personal relic of him (nignoru, sunctuaria), perhaps only a piece of linen dipped in his blood, or even portions of the Gospel or of consecrated bread, to represent or symbolize the 'patron' in each case; and eventually this second type of church was adopted, though very gradually, and not so universally as is sometimes imagined, at all events throughout Western Christendom. See, further, art. COMMEMORATION OF THE DEAD.

Perhaps we may at this point distinguish yet a third type of church of which we sometimes hear in ancient history, viz. buildings which were adapted from secular or heathen purposes to Christian. It used to be held that this was the origin of the basilica form of church, the Roman law-court or business-exchange being turned into a Christian building; but this theory has been, we think, successfully disproved of late years. We do, however, hear of heathen temples being so converted, though it is probable that in many cases the old building was pulled down and a new one erected with the old material; e.g. the Pantheon at Rome was conscrated by Boniface IV. (608-614) under the title of S. Mary ad Marting and Marting at Martin 12. Martyres on May 13; and Martene (de Ant. Ritt., Antwerp, 1700, II. xiv. 4-5) gives other instances in both East and West.<sup>3</sup> Jewish synagogues were

also subjected to the same treatment.

As to the ceremonies connected with the dedication of churches, considerable diversity must have prevailed from the first, if we are to judge by such scanty evidence as we possess; and this diversity lasted in the West well into the Middle Ages. At Tyre in 314, as we have seen, the ceremonial is of the simplest; a large assembly of bishops, clergy, and laity from the town and neighbourhood assisted at the first celebration of the Holy Mysteries, and a dedicatory sermon was preached. More than 200 years later the essence of dedication was still distinctly recognized as consisting in the public celebration of the Holy Communion and nothing else. In 538, Vigilius, Bp. of Rome, writes to Profuturus of Braga (in Spain) to the effect that, in the case of ordinary churches, it is not even necessary to sprinkle holy water by way of consecration, since this is sufficiently effected by the celebration of Mass; in the case of churches of the second type above described, the relies of martyrs (sanctuaria) must be previously deposited in the church, or, if they have been removed, they must be replaced. The 'Leonine' Sacramentary contains a 'missa in dedicatione [ecclesiae]'; but this is, of course, for use either after the dedicatory rite itself or on the anniversary day.6

It is noticeable that, while the earliest form of

1 See on this point a valuable paper by Wickham Legg, in no lxxiii. of Ch. Hist. Soc.'s Tracts, p. 53 ff., and another by J. Wordsworth in no. li. of the same series, p. 19 ff. (already quoted). Cf. also P. Lejay's article on the Ambrosian Rite in DACL, pp. 1487-9. 'I would venture to suggest that the reason of the absence of the rite from this [English] form of consecration was that the early British and Irish Churches only dedicated their churches to living saints. In this case no relies could be had, and therefore the rite was of necessity omitted 'Gr. Olden on the Laabhar Breae, 1900, vol. iv. pt. ii., S. Paul's Eccl. Soc. p. 99).

the Laubhar Breae, 1900, vol. iv. pt. ii., S. Paul's Eccl. Soc. p. 99;
2 E.g. by G. Baldwin Brown, From Schola to Cathedral, App. i. p. 217 ft.

2 C. Bede, IIE. i. 30.

4 Ct. Get. Sacram. p. 141 f. (ed. Wilson), which gives 'orationes et preces in dedicatione loci illius ubi prius fuit synagoga.'

5 This, which is now such an important part of the Roman rite, seems originally to have been practised by Christians to purity thoir private houses rather than their churches (see Duchesne, op. cit. p. 407 (quoting Lib. Pontif. i. 127).

6 P. 15, ed. Feltoc, Camb. 1896; the collect here speaks of 'hostias quas maiestati tuae in honore heali apostoli Petri cui haec est basilica sacrata deferimus,' and each of the other formulæ also mentions S. Peter.

the 'Gregorian' Sacramentary does not provide for the dedication of churches, the 'Gelasian' does; and this, combined with other evidence or indications given and discussed by Duchesne (op. cit.), suggests that, in this as in other cases, the local Roman church was originally inclined to a severe simplicity in matters of ritual, and that the fuller ceremonies and forms of prayer which afterwards obtained and are still in use in the Roman Communion are traceable to foreign or 'Gallican' influences.' It seems not unlikely also that those ceremonies in the Western rite which are distinctive of consecration proper are ultimately derived from the East (e.g. from the Byzantine ritual), and that only the part relating to the deposition of relics in the new building is originally Roman. The student cannot fail to be struck, as Duchesne and others have pointed out, with the fact that this deposition of the relies, as given in its fullest form in the two most ancient Ordines Romani,<sup>3</sup> partakes distinctly of a funeral character, while the 'Gallican' ceremonies all point to the idea of adapting the Christian baptism of persons to the dedication of buildings. The modern Roman ser-vice is a combination of the two types of ceremony, but in it the deposition of the relics is to some extent outbalanced and overshadowed by the consecration rites proper.

A concise description in detail of the regulations and order of service as now provided in the Roman Pontifical is subjoined, and will be found useful, both because it exhibits most of the rites that have gradually gathered round the occasion in Western Christendom, and because it is the basis on which, since the Reformation, the Bishops of the Anglican Communion have, with varying degrees of exact-

Communion have, with varying degrees of exactness, drawn up their Consecration Offices.

With regard to the first point, it will be well to bear carefully in mind what J. Wordsworth has remarked in the valuable treatise (On the Rite of Consecration, p. 13) to which reference has already been made: 'I conjecture that (here), as usual, in process of time, diverse ceremonies were heaped together without much regard to their congruity.' Wordsworth makes this remark with special reference to the ceremony of the abeedarium (see below), but one feels its applicability to a good deal of the present overloaded service. As to post-Reformation forms of consecration, the student will find a list of those 'in use in the 17th century' on p. 27 f. of the same treatise, and the present sarum Form on p. 30 ff. (with the music). This is much the most satisfactory adaptation of ancient forms and uses, Eastern as well as Western, that the present writer is acquainted with. The S.P.C.K. also publish the forms authorized for the dicesses of London, Truro, Worcester, Wakefield, and Winchester; and of these the first three more or less follow the old lines, whilst the last two are based on Bp. Andrewes' Form (1620). It may be added that no Form would seem to be really adequate which does not provide that the consecrating bishop shall conclude the consecration with a solemn Eucharist, either at the time itself, or, if the service take place in the evening, at a reasonably early hour the next morning. This provision is made in the Form of the modern Irish Church, and in that of the Church of the United States of America.

The similar describition of the modern Eastern the Church of the United States of America.

The similar description of the modern Eastern rite, with which this article concludes, will be likewise interesting both in itself and as illustrating much that has been said during the course of our

i. MODERN ROMAN USE .- I. Preparatory regulations.—(1) Consecration may take place any but by preference on Sunday or a Saint's day.
(2) The archdeacon is to give notice of the day fixed beforehand. (3) The consecrator, the clergy, and the people should fast before the service. (4)
On the evening before, the consecrating bishop prepares the relies which are to be deposited in the church, placing them under seal in a suitable casket, with three grains of frankincense and a written record of the consecration, and laying the

printed by Duchesne (op. cit. p. 456 ff.); the other, that of
Verona, edited by F. Banachini (Amast. Buktoth. iii. 48).
4 See Wordsworth's remarks (op. cit. p. 9 f.).

casket on a bier with lighted candles under a tent before the principal door.1 Vigil is kept, and Nocturns and Lauds are sung before the relics that night.<sup>2</sup> (5) Inside the church a large number of articles have to be prepared for various purposes during the service, and care has to be taken that the church has a free passage round it outside. (6) On the morning of the day itself the bishop enters the church in ordinary dress, and sees that everything is in order, and that the 12 candles over the 12 consecration crosses on the inner walls are lighted.3 He then leaves the church empty, save for one deacon vested in anice, all, girdle, and white stole, who stands behind the principal door, when it is closed upon him.

2. The ceremony.—(1) The service proper is now begun. The bishop, having fully vested himself, and being attended by another deacon, a subdeacon, acolytes, and other ministers, goes to the place where the relics are reposing, and the seven Penitential Psalms are recited. He then proceeds to a faldstool before the church door, and, kneeling there, after an antiphon and collect ('Actiones nostras, quaesumus, Domine, etc.), says with the

choir the first portion of the Litany.

(2) The next ceremony is the exorcizing and blessing of salt and water, which, being afterwards mixed and again blessed, are made use of in the following manner: First the bishop sprinkles himself and his assistants, whilst the choir sing the usual antiphon, 'Asperges me,' etc.; he then marches three times, preceded by two candle-bearers, round the outside of the church, sprinkling the walls as he goes, the choir singing an appropriate responsory; each time he reaches the principal door, he first kneels and says a collect, and then performs this very ancient and dramatic ceremony:6 he stands on the threshold and strikes the door with the butt end of his staff, saying, Attollite portas, principes, vestras, etc. (Ps 23 Vulg.); the deacon from within (see above) inquires, in the words of ver. 8, 'Quis est iste rex-gloriae',' and the bishop answers, 'Dominus fortis et potens,' etc.; at the third time those who stand by call out 'Aperite,' the bishop makes the sign of the cross on the threshold, the door is opened, and the cross of the binsond, the tool is opened, and the procession passes in, the bishop proclaiming, 'Pax huic donui,' and the deacon from within replying, 'In introitu vestro.'

(3) Whilst the bishop goes to the centre of the

building, two antiphons are sung, the use of the second of which is very ancient, 'Zacchæe, festinans descende' (see above). Then, during the singing of the 'Veni, Creator Spiritus,' one of the ministers sprinkles ashes8 in the form of a

1 This is most conveniently the west door, if the structure

has one.

2 All this is in accordance with very ancient use, probably Callican (see Sacramentary of Drogon, Bishop of Metz [826-855], quoted by Duchesne, op. cit. p. 487 ff., and described by Delisle, Mem. sur d'anciens sacramentaires, Paris, 1886, Delisle, Mér p. 100 ff.). gallican.

p. 100 ft.).

3 Gallican. These crosses are still often to be found in our English churches. 'It is said that the English use differed from the foreign in having crosses both within and without. The Irish use shows its primitive character in ordering the crosses to be cut with a knife, no doubt on wooden posts,' etc. (J. Wordsworth, op. cit. p. 16; cf. Wickham Legg, op. cit. p. 54).

4 Pontifical of Egbert, 1853 (Surtees Soc.), Eenedictional of Archip. Robert (H. Bradshaw Soc.); cf. Get. Sacr. (p. 827, ed. Wilson, 1894). The antiphon now is 'Adeste, Deus unus omnipotens,' etc.; in the above-named Pontificals it is 'Zacchee, festinans descende,' etc., which now comes later in the service.

vice.

<sup>5</sup> This is the first of two sprinklings that occur; see note 1

on next col. for comments on the origin of the practice.

<sup>6</sup> Gallican. Egb. Pont., Bened. of Archby. Robt., etc.

<sup>7</sup> The earliest word for 'staff' here is cambuta (or cambuta),

'shepherd's crook,' perhaps derived from κάμπτεν.

<sup>8</sup> The introduction of ashes on which to write looks very like a later artifice to enable the 'bishop to do something which at first he would have been able to do without difficulty' (J. Wordworth) Wordsworth).

S. Andrew's cross (decussis) on the floor of the nave.1

The second part of the Litany is next said to the end, but with special petitions by the bishop, standing, for the church and its altar now in act of being consecrated. After this the bishop says two collects, the second an ancient one ('Magnificare, Domine,' etc.),<sup>2</sup> and then, whilst the choir sings the song of Zacharias (Lk 1<sup>685</sup>.), with antiphon 'O quam metuendus,' etc., between every two verses, he occupies himself in writing with the end of his staff the letters of the Greek alphabet on the cross aforesaid, from the left Western corner to the opposite Eastern corner, and of the Latin alphabet from right to left.3

(4) This done, the bishop approaches within a fair distance (spatio congruenti) of the high altar, and says three times: 'Deus, in adiutorium meum intende, Ry Domine, ad adiuvandum me festina, with the 'Gloria Patri.' Hereupon salt and water are for a second time exorcized and blessed (with new formulæ); ashes also are blessed and mixed with the salt and water; then wine is blessed and added to the mixture.<sup>4</sup> Finally, two prayers are uttered: (i.) that the Holy Spirit may be sent down upon the mixture; <sup>5</sup> and (ii.) that all kinds of

down upon the mixture; 5 and (ii.) that all kinds of 1 The origin of this rite, which is probably Gallican, has puzzled the learned. It has been connected with the cross drawn by the Roman augus in laying out a templum, and by the surveyors (agrimensores) in measuring out land for a colony (e.g., de Rossi, Bullet, di archeol. christ., 1881, p. 140 ff.). The application of the second usage is approved by Duchesne (op. cit. p. 417), and by H. le Clercq and P. Lejay (DACL, p. 58, 1438). On the other hand, Wordsworth (op. cit. p. 11 ff.) criticizes the applicability of either usage to the rite in question. The surveyor's cross was, he says, 'one of 4 right angles,' 'like the St. George's cross on our flars, cutting the four sides into equal portions,' and the letters they used were in no way attached to these lines, but 'scattered all about the plans.' It is therefore, of the two, more likely that the peculiar Christian rite came from 'a vague memory' of the old laying out of a heathen temple than from the other; and he prefers de Rossi's suggestion that the figure is really a Greek x and the initial of our Lord's name in that language. 'To write His name' symbolically upon the new church floor 'would be a very fitting mark of His ownership.' He further conjectures that the ceremony originally belonged to the laying out of the first sketch or foundation of the building rather than to the actual consecration (see note5 above): cf. the Gr. oravporityon and the modern laying of the foundation-stone. The antiphon, 'Fundamentum aliud nemo potest,' etc., and the Psalm 86, 'Fundamenta eius,' etc., which are found at this point in Bened. of Arabb. Robs., tend to corroborate the view suggested. It may be added that the ceremony, as at present practised, is rather ineffective, and does not appear to fit at all well into the rest of the service.

2 Duches thinks that this and two other prayers which occur

service.

<sup>3</sup> Duchesne thinks that this and two other prayers which occur later on (Deus gut loca, etc., and Deus sunctificationum, etc.) may have been borrowed by the Gallican Rite from some Roman Missa Dedicationis. This first one occurs in the Gelasian Sacrama. (p. 140, ed. Wilson) in such a Missa, but in the Missal of Gellone, Epb. Pont., Greg. (472 Mur.), etc., in the same place as now. The other two are both found in Pont. of Egbert and Bened. of Arothy. Robt.

3 In some early Sacramentaries it seems as if the Latin alphabet was written on both the intersecting lines, and we hear also of the Hebrew alphabet being likewise sometimes used. To Wordsworth (op. cit. p. 12) 'the alphabet seems to be another symbol of Christ as the word of God, not only Alpha and Omega, but all that lies between,—every element, in fact, of human

but all that lies between,-every element, in fact, of human

but all that hes between,—every element, in rate, of number speech.'

4 This holy water is technically called in later times 'Gregorian,' as though instituted by Gregory the Great; its use seems to have been common to both the Roman and the 'Gallican' Rites, though in the letter of Bp. Vigilius to Profuturus (A.D. 583) it is mentioned only to be disapproved of ('nihil indicannus officers is per can [ecclesian] minime aqua exorcizata inctetur'). The ordo of Verona (see note 3 on p. 605) mentions the use at the end of the service, but this may be a later addition.

5 Gell., Egb. Pont., Bened. of Archbp. Robt., etc.

benefits typified by it may accrue to the newly consecrated building. The bishop then signs the inside of the church door with two crosses, using his staff, and uttering another prayer suitable to the action. Returning to his former position, he invites the congregation to pray for a blessing upon the building, 'per aspersionem huius aquae cum vino, sale et cinere mixtae.'

(5) Consecration of the altar.—The choir begins by singing Psalm 92 ('Judica me,' etc.), with the antiphon ('Introibo,' etc.), while the bishop, standing before the altar, dips his thumb into the 'Gregorian' water and makes a cross first in the middle of the mensa and then at each of its four corners, saying, 'Sanctificetur hoc altare,' etc., each time. At the conclusion of the introit, the bishop, having said the prayer 'Singulare illud,' etc., goes seven times round the altar, sprinkling the holy water with a branch of hyssop, whilst the antiphon ('Asperges,' etc.) and Psalm 50 ('Miserere mei,' etc.) are said.<sup>3</sup>

(6) All the walls and pavements of the church inside are sprinkled in the same manner three times designed by the single of Psalm 191. 67 and

times, during the singing of Psalms 121, 67, and 90, with various antiphons. Two prayers 4 (both ancient) and a preface follow, the bishop standing

with his face towards the door.

(7) The bishop now goes up once more to the altar, mixes some cement with holy water, which he duly blesses, and throws what remains of the water away at the base of the altar.

(8) His next duty is to go and bring the relics solemnly to their new resting-place in, or under, the altar that has been prepared for them. This he does with much caremony while the choir sings Psalm 94 ('Venite, exultenus,' etc.), with several antiphons. But, before entering the church with his sacred burden, he carries it once round the building outside, and delivers a set oration at the principal door, on the duty of treating churches with reverence and on the importance of endowments, after which the archdeacon reads two decrees of the Council of Trent. The bishop next addresses the founder of the church as to his intentions in maintaining it and the clergy attached to it, and, on being satisfied with regard to them, asks for the people's prayers on his behalf, whereupon the responsory ('Erit mihi Dominus in Deum,' etc., Gn 28<sup>21.22</sup>) is sung. The bishop also signs the outside of the door with chrism, which he has brought down with him from the scarthary. the sanctuary. At last the procession enters the church itself bearing the relics, while Psalms 149 and 150 are sung, with various antiphons. After a collect ('Deus, qui in omni loco,' etc.), the bishop

1 This ceremony seems to be somewhat delayed by the intrusion of the consecration of the High Altar and others if required, though, no doubt, that ceremony consists in part of sprinkling with the water.

though, no doubt, that ceremony consists in part of sprinkling with the water.

2 The usual introit at Mass.

3 The rite may be derived from the Christian practice of sprinkling holy water in their dwellings (see Duchesne, op. cit. p. 407, and cf. Gel. Saor. p. 225 ff. [ed. Wilson], which provides two forms of 'Benedictio aquae spargendae in domo'). See note 5 on p. 602 above.

4 These are the prayers mentioned in note 2 on p. 612 above. The preface is in Pont. Eyb. and Bened. of Archbn. Robt.

5 It seems probable that this might at one time take place on another day or even, as has already been mentioned, not at all in certain cases. In the Ambr. Pontifical (ed. Magistretti, Milan, 1897), Pont. Eyb., and Bened. of Archbn. Robt., the deposition of relics is placed later in the service, fafter the blessing of the linen and other apparatus; in the Pontifical of Dunstan there is a separate heading here: 'Incipit ordo quomodo in sanota Romana ecclesia reliquiae conduntur'; and similar evidence is supplied by other Pontificals; see Dewick's remarks in a footnote to Wordsworth, op. cit. p. 22.

6 For an early instance of reverence for churches in a hitherto neglected portion of Christendom, cf. canons 33 and 53 of Rahbola, Bp. of Edessa, Ab. 411-435, quoted by F. C. Burkitt, Early Eastern Christianity, London, 1904, p. 148 f.

7 All these (exhortation, decrees, and address) or any of them may be omitted pow.

8 Bened. of Archbp. Robt., Greg. (481 Mur.), etc.

first signs with chrism the receptacle 1 in which the relics are to be laid, and then places the vessel containing them therein.<sup>2</sup> While the antiphon 'Sub altare Dei,' etc., is sung, he censes the relics, and fixes with the cement he has previously pre-pared (see above) the slab upon the confessio. Further antiphons are sung, and other collects

ruther antiphons are sung, and other collects ('Deus qui ex omni cohabitatione [or coaptione],' atc., and 'Dirigatur oratio nostra,' etc.) are said while this work is carefully completed.

(9) The mensa altaris (i.e. the upper slab) is then censed, anointed, and blessed with a number of antiphons, collects, and Psalms (83, 91, 44, 45, and 86). In this part of the ceremony oleum catechumenorum as well as sanctum charsma is used chumenorum as well as sanctum chrisma is used for anointing, to typify the right of confirmation as the completion of the initiatory rite.

(10) After this the 12 consecration crosses on the inner walls of the building (see above) are each separately visited to be anointed, censed, and blessed, after the singing of Ps 147, an antiphon,

and two responsories.

(11) Incense is now specially blessed, and has then by the bishop's own hands to be formed into 5 crosses, placed with holy water, oil, chrism, and wax on the 5 crosses of the mensa, and lighted with wax on the 5 crosses of the mensa, and figured with antiphons and prayer ('Domine sancte,' etc.). The ashes are carefully removed, the bishop says another prayer and preface, and Ps 67 is sung, with an antiphon. The altar is yet again anointed in silence, and, after two more prayers ('Majestate tuam,' etc., and 'Supplices te deprecamur,' at he bishop goes to his throng near the altar etc.), the bishop goes to his throne near the altar and cleanses his hands with bread, while the subdeacons wipe the mensa with coarse towels.

(12) The other vessels and ornaments of the church and altar are then similarly dedicated with antiphons, responsories, Ps 62, and collects, and at last, when the altar has been properly vested and prepared, the Missa dedicationis is solemnly

celebrated.

At the end of the service the ashes on which the alphabet was traced are removed, and the whole

church is cleansed.

ii. MODERN EASTERN RITE.—For this we must take the Orthodox Greek Church as the norm. Here there is a general resemblance to the Western rite; but, though there has been a certain amount of elaboration introduced into the service during the last 200 years,8—partly, perhaps, in the direction of assimilation to Western usago,9—yet it is, on the whole, a simpler ceremony, and there are important divergencies.

To begin with, there is a short and simple form

I This is now called 'confessio, id est, sepulchrum altaris.' The term confessio is found also in many early books; it is equivalent to martyrium, and means the hollow place beneath the altar which is still to be seen in some of the oldest Roman churches, and which is the origin of the later and larger crypts, marking the place of burial of the martyrs over whom the church was they raised.

marking the place of burial of the martyrs over whom the church was first raised.

2 The only direction now is that this should be done 'veneranter,' but in the Ambr. Pontif. and Pont. of Eigh., as also in Grey. (481 Mur.), the rubric requires that a veil should be stretched in front of the altar at this point ('extenso velo inter eos [sc. clericos] et populum'). Both the Bened. of Arabhp. Robt. and the Pont. Eigh. characterize a prayer at this part of the service as 'oratio post velatum attare,' but it is not quite clear whether the word does not here mean 'vested' rather than 'veiled.' What this veil was which Duchesne considers 'Gallican' is uncertain; perhaps it was only the ordinary altar curtain, which there is reason to believe used to be drawn before the altar at the consecration in the Mass (see Wickham Legg, op. cit. p. 9). 3 Gel. (p. 130, ed. Wilson) and Grey. (482 Mur.), Hened. of Arabhp Robt., etc.

4 Sections (6), (10), and (11) seem each to be of 'Gallican' origin.

4 Sections (1), (10), (10), origin.
origin.
5 Greg. (485 Mur.),
6 Both of these are found in Greg. (484-5 Mur.) and Bened. of Archbp. Robt.

p. 1043, etc.

9 But see what is said on p. 60b above.

provided for laying a foundation-stone. This consists of first censing the site, the choir going in procession with the bishop round the foundations, singing the ἀπολυτίκια of the saint in whose name the church is to be dedicated. Then, after a prayer on the site of the future altar, the bishop takes a stone, makes the sign of the cross with it, and lays it somewhere on the foundation, saying, 'God is in

the midst of thee, 'etc.

In due time, when the church is built and ready for use, the dedication (éykalvia) itself takes place. The following articles have to be prepared beforehand: 4 drams of pure wax, 20 drams each of mastic, myrrh, aloes, incense, resin, and ladanum, 2 vessels, some paper and twine, a litre of finely powdered marble, relics of martyrs with a little silver receptacle, holy chrism, 10 cubits of linen cloth, 2 napkins, 4 pieces of white soap, a new sponge, a vessel of wine, 4 pieces of cloth embroidered with the figures or names of the Evangelists, the κατασμακιον and as many αντιμίνσια the bishop intends to consecrate (see below, p. 63b).

Then, on the evening before the day fixed for the consecration, the bishop and clergy meet in the new church. The relics are placed upon the  $\delta l \sigma \kappa o s$ (paten) in three parts on the altar, and covered with the ἀστερίσκος and the ἀήρ. A short service is conducted, consisting of the Blessing, the Trisagion, the Lord's Prayer, certain τροπάρια, and the

Dismissal (ἀπόλυσις).

Next, if the church is to be fully dedicated (i.e. not as a mere oratory or for temporary use),3 the relics are taken out into some neighbouring consecrated church, and laid upon the altar there; otherwise, this adjournment does not take place, and whatever service there is, is performed in the new building. Vigil is kept that night in presence (1) There is a special ἐσπέρινος of the relics. (Vespers), with proper  $l\delta\iota\delta\rho\mu c\lambda$  and three proper lessons (viz. 1 K 8<sup>22-5</sup>), Ezk 43<sup>27</sup>-44<sup>4</sup>, and Pr 3<sup>13-35</sup>). (2) Later on, again, there is a special δρθρός (Lauds), in which the Gospel is that of the saint of the dedication; the proper canon, with its nine odes, is attributed to John of Damascus. This service is

concluded with the great Doxology.

Next day, after a short rest, the bishop and clergy assemble once more in the new church. In one vessel the wax, mastic, etc., are all melted together in a fire. In the other water is heated, The mensa is taken off its supporting pillars, and paper is wrapped round the latter, projecting an inch above the top, so as to hold the powdered marble when it is poured in. Thereupon the priest begins the office of the Prothesis, while the bishop proceeds to the old church, where he dons his episcopal robes, and orders the Liturgy proper to be begun. A procession is formed, in which the people carry lighted tapers, the dergy the Gospels, and the bishop the relics on his head. They start for the new church, singing various τροπάρια, and marching round the precincts, till they reach the doors, outside which the relics are deposited on the τετραπόδιον.<sup>4</sup> After the προκείμενον, the Epistle (ἀπόστολος; He 2<sup>11-end</sup>) and the Gospel (Mt 16<sup>18-20</sup>) are read.

After this, another procession takes place round

the outside of the church, whilst they sing the 3rd ode of the canon mentioned at δρθρός above. This is followed by a second Epistle (He 91-8) and Gospel (Lk 1038-end).

For a third time they march round the walls, while the 6th ode of the canon is sung. Then the relics are laid upon the τετραπόδιον as before, the bishop prays, and a τροπάριον is sung. Standing before the closed church doors, the clergy sing Ps 24<sup>7π</sup>, some from within demanding 'Who is the King of Glory?' and those without answering.1 Thereupon the doors are thrown open, and the procession enters the church; the bishop, passing up the nave, solemnly places the relics in their receptacle, pours chrism on them, and prays. The powdered marble and the hot mixture of wax and other ingredients are then poured round the base and at the top of the pillars of the altar, and the mensa is securely replaced and fixed thereon. While the cement cools and dries, Pss 145 and 23 are sung.

They then swathe the bishop in the 10 cubits of linen which have been provided, and fasten the 2 napkins over his arms, so that his vestments are entirely protected from being soiled in the ceremonies which ensue.<sup>2</sup> After this he kneels down (this being an unusually solemn attitude for prayer in the East) and recites a long prayer of dedication, and the deacon says the litany (exrevî). Then the bishop washes the mensa, first with the soap and warm water during the singing of Ps 84, next with the wine while Ps 51<sup>76</sup> is sung, using the artificial to wipe it off; lastly, he makes three crosses with the chrism (or oil) on the mensa, spreading the oil from them all over the top, and also on the pillars, while Ps 133 is being sung.

The vesting of the altar next takes place. At the corners of the mensa the 4 cloths with the Evangelists' names or figures on them are fixed with the cement; over them the κατασάρκιον, with its four tassels at the corners, is spread, during the singing of Ps 132; then, after washing his hands, the bishop takes the outer covering (called ἐπενδύτης) and unfolds it over the mensa while they sing Ps 93. Lastly, he takes all the new drtiplious which are to be consecrated, and spreads them out, one on top of the other, on the altar; and on the top of all he puts an articlevator which has already been conse-

crated; meanwhile Ps 26 is sung.
After this, first the altar, then the whole church, is censed. Next the arriphrous are anointed, where they lie, with chrism into which the relics or something which has been in contact with them have been pounded, so as to communicate their virtues to the artification. Each pillar in the body of the church is likewise anointed with the sign of the cross. The deacon says a συναπτή, and the bishop recites another long prayer. Finally, the Liturgy proceeds to the end as usual, the Epistle now being He 31-4, and the Gospel Jn 10<sup>22t</sup>.

The Liturgy must be repeated for 7 successive

days on the new altar, and the new artificous remain there as before. After that they are all regarded as fully consecrated, and may be distributed as occasion requires.4

It will thus be seen that at a consecration chief stress is laid on (a) the erection of the altar in the new church, and (b) the hallowing of the arrulrous, which can never be a separate service, and is

1 Neale (op. cit. p. 1044, note) thinks this dramatic way of singing these verses is a modern interpolation from the Roman rite, and that it was not known to Goar or his editors in the 17th or early 18th century. But this is somewhat doubtful.

2 S. Simon of Thessalonica interprets this as symbolizing the grave-cloths of our Lord (see Neale, in loc.).

3 It has been suggested as probable that a blooming vine-spray or rose-branch was originally used at this point, and that the idea of the wine was borrowed from the West.

4 Their proper position in future is below the regardorous next.

4 Their proper position in future is below the κατασάρκων, next to the surface of the mensa itself.

CONSENT.—The usual meaning of the noun 'consent' is voluntary agreement to, or acquiescence in, another's proposal. The verb is used similarly: 'to consent' is voluntarily to accede to, to agree, comply, yield. The original meaning of the word (from Lat. consentire to feel, think, judge, etc., together') is almost obsolete. It is rarely used to denote agreement in sentiment, opinion, or judgment, though this meaning is preserved in the phrases 'common consent,' universal served in the phrases 'common consent,' 'universal consent' (consensus gentium). Thus we find it in Sidgwick's Methods of Ethics<sup>6</sup> (1901), bk. i. ch. viii. § 3. We are led, he says, to endeavour to set at rest doubts as to the validity of the particular moral judgments of men 'by appealing to general rules, more firmly established on a basis of common consent.' And in Matthew Arnold's Mixed Essuys, 1879 ('Equality'), we find the sentence: 'As to the duty of pursuing equality, there is no such consent among us' (p. 49). Most of the primary, and some secondary, meanings of the word have, however, been taken by other words, so that we now speak, been taken by other words, so that we now speak e.g., of assenting to statements, doctrines, and creeds, and of consenting to proposals. Examples of this use of the word are to be found as early as the 12th cent. (see OED, s.v.).

A stage logically intermediate between the primitive and modern uses is the employment of consent' to denote agreement in a course of action. 'When the wills of many concur,' says Hobbes, 'to one and the same action and effect, the concurrence of wills is called consent' (*Works*, IV. xii.), and in Lk 14<sup>18</sup> we read that 'all with one consent began to make excuse.' There is no reference to the sentiment, opinion, or judgment of the persons

concurring to act.

But in its modern prevalent use 'consent' denotes a type of volition which implies acquiescence notes a type of volition which implies acquiescence in what is proposed by another, an acquiescence, not in the proposer's sentiment or judgment, but merely in his proposal. The state of mind preceding consent seems to include some reluctance to the action proposed. The reluctance may be of any degree, from mere indifference, through definite disinclination (which may be due simply to lack of light), to decided aversion. In the typical case of consenting, the reluctance is overcome without ceasing to exist. When reluctance ceases, the end takes on a more or less desirable character. An end desired is our own, whatever be the psychological origin of the idea of the end. It may have been suggested by another because he approved of it or desired its realization; but, while the end is his

1 See art. 'Antimensium,' in DCA i. 91 f.
2 'There is a distinct difference in consciousness between the consent of belief and the consent of will. The consent of belief is, in a measure, a forced consent,—it attaches to what stands in the order of things whether I consent or no. The consent of will is a forceful consent—a consent to what shall be through me' (Baldwin, Handbook of Psychology, 1891, 'Will and Feeling,' n. 171). p. 171).

only, and not attractive to us, there may be an indifference, at least, if not a more positive reluctance, to adopt it. When it touches us and creates desire or wins approval, it becomes to that extent our own end, and ceases to be what we acquiesce in. We consent to, that is, voluntarily acquiesce in, an end which is not our own in the sense explained. Consent so defined raises difficult moral problems.

The fact that a deed is done reluctantly does not do away with the fact that it is willed, nor, according to John Stuart Mill (Utilitarianism, 1901, ch. ii.), does it affect the morality of the action. It may affect our judgment of the character of the person doing it, but the morality of the volition depends upon the nature of the whole result which was foreseen to depend upon the The apothecary in selling poison to volition. Notition. The allothecary in setting poison to Romeo said, 'My poverty, not my will consents,' but he could not disclaim responsibility for the poisoning proposed by Romeo. He did not wish the poisoning, yet 'the consent, though said not to be of the will, might have been enough to hang for' (T. H. Green, Prolegomena to Ethics, 1890, bk. ii) A purpose opening to a very saction ii. ch. ii.). A man who consents to a wrong action may plead poverty, compulsion, etc., as extenuating circumstances, but would these affect our judgment of his culpability, except in the same way as similar considerations would affect our judgment of the same way as similar considerations. ment of an action which he conceived and carried

out entirely on his own initiative?

It is difficult to fix the nature and the degree of responsibility attaching to consent, since acquiescence in any particular case may signify nuch or very little. It may mean, e.g., anything between non-interference and full co-operation. Would we give as much credit to one who permits a good deed to be done as to another who actively helps to perform it? Would we blame equally persons who allow an evil to be done, assist in doing it, or do it entirely themselves? Salome consented to the proposal of Herodias that John the Baptist handled by the wheeled and downwide his head of the should be beheaded, and demanded his head of the king. Herod consented and ordered the execution (Mt 148th). Herodias, Salome, and Herod willed the death. Were they equally responsible and reprohensible? Again, acquiescence in the same deed may have a different moral significance in the case of different persons. Pilate consented to the demand of the people to crucify Jesus Christ. Jesus consented to die. The consent of the one showed him to be a weak and unjust ruler; the consent of the other revealed Him as a Saviour of It is clear, therefore, that, in order to determine the moral significance of an act of consent, the whole complex result willed must be analyzed into its elements and considered in their relation to one another, and also in relation to the concrete conditions in which the person willing finds himself. The situation is often very complicated. The acquiescence of Jesus in His own death, c.g., was an act of obedience to His Father's will, yet consenting to that will involved the committing of a crime by the Jews and Pilate. Matheson (Studies of the Portrait of Christ, 1899-1900, bk. ii. ch. iii.) thinks that the agony of Gethsemane was largely due to His aversion to allow such a crime, and to doubt whether it could be in accordance with the will of God. 'Taking up the cross' for a Christian frequently means consenting to a course of action which he does not desire, and cannot see the reason for, or the reasonableness of; nevertheless he acquiesces, in the belief that he is doing the will of God, and that the will of God is good.
Submission of the will to authority of any kind

amounts, directly or indirectly, to acquiescence in what is proposed by others. Obedience is consent, so is compromise; co-operation involves it. We cannot live in social relations with others without

having, now and again, to do things for them which we do not ourselves desire, and on which we may not be able to pass judgment. For it is not easy to know whether the ends which our fellow-men set themselves to realize with our help are, on the whole, good. The goodness of particular ends is, within limits, relative to the individual. An end which is good for one to aim at may be bad for another. This is true irrespective of our conception of the ultimate ideal of life. Even if the ultimate good be one and the same for all, it is individualized in a different form for every life, and each claims the right to realize it in his own way. This seems a legitimate claim, and consequently the good man may feel called upon to regard consent to special ends which he does not desire, and is not in a position to approve or disapprove, as a normal duty. By recognizing the claims of his neighbours to his love and help, he admits also their right to expect him sometimes to acquiesce in their purposes and to trust their judgments. He must act, not on his own insight, but in dependence on that of His will must consent to theirs. appeal of many proposals may depend not so much on their intrinsic reasonableness, as on the persons making them. Therefore the wise man is only partially able to realize the ideal of a life according to reason. He can scarcely hope that the ends which his fellow-men seek are always good. Moreover, good men often come into apparent conflict with one another, and co-operation is limited by competition.

A more difficult problem is raised by a consideration of the fact that man's life is lived in a world over whose course he has very little control. If the world is the result of blind forces utterly indifferent to human ends, the wise man has no ground for hoping that life will ever be satisfactory. He can-not acquiesce in such a world. His mind and heart must protest against it, however useless the protest may be. If these forces form a mechanical system, whose operations can be traced and related, man's intelligence may bow to the inevitable order, and seek to understand it, but his conscience does not consent to such a scheme. The moral will would be inevitably opposed to a merely mechanical cosmical process. It cannot acquiesce in a world which is not based on moral principles, and which is not ultimately amenable to human ends.

And even on this assumption a completely rational life is an ideal which is scarcely realizable by any one in the present state of existence. And, therefore, Kant (cf. Critique of Practical Reason) maintained that immortality is a necessary moral postulate. He maintained, moreover, that the existence of the supremely Good Will must be postulated as creator and governor in order to secure complete harmony between the perfect moral will of man and the conditions of his happiness. There appeared to be no other way of guaranteeing the realization of the bonum con-

summatum.

Many of the higher religions teach submission to this sovereign will, whose ways are often in-scrutable, as the highest duty. The Christian position is that we should will that God's will be done, and consent, therefore, to all that is involved in the operations of that will, whether we like and approve them or not; knowing, in the words of St. Paul, that 'all things work together for good to them that love God' (Ro 828). In a sense such a view effects a partial synthesis between the two attitudes of acting from rational insight and consenting to the order of the world. For, if its fundamental assumptions are true, a man acts autonomously and rationally in willing continuously open to the test of consistency; and in so far as the realization of the supremely good and reasonable will; and also by consenting, in detail, to

particular events, and to particulars of conduct, even when unable to desire and approve them. The practical problem then reduces itself to knowing what that will intends us to do.

A synthesis of a different kind is attempted in some metaphysical systems, such as that of Spinoza (cf. his Ethics and Treatise on the Improvement of the Understanding). Everything that exists, Spinoza thought, follows eternally and necessarily from the being of the One Substance. The end of life is to obtain rational insight of an interior in the limit of the control of intuitive kind into this being, to see self as one of its modes, and to acquiesce in the order of things. When the order of the Universe—Substance, Nature, God, Truth, are Spinoza's terms—is understood, we more than acquiesce in it; we find satisfaction in the knowledge. Supreme and enduring happiness consists in the intellectual love of God (amor intellectualis Dei).

For consent in marriage, see MARRIAGE.

LITERATURE.—This is sufficiently indicated in the article. DAVID PHILLIPS.

CONSEQUENCE.—If a proposition p implies a proposition q, but q does not in turn imply p, then p is called the antecedent and q the consequent; whereas, if each implies the other, they are preferably called equivalents. Logical consequence is thus the relation obtaining between a conclusion and its premisses, such that if the premisses are true the conclusion is true. The reverse of this relation—the relation holding between the consequent and an antecedent-is logical presupposition. That is, the consequent is logically presupposed by the antecedent; for only if it be true can the latter be true, whereas the antecedent might be false and the consequent still true.

By causal consequence, on the other hand, is meant the relation between an antecedent event and its effect; and the philosophically important question at once arises, Are the two types of con-sequence the same? For a century it has been believed that Hume and Kant proved successfully that the relation between cause and effect is not that of logical consequence, by showing that we discover causal relations not by deduction, but by observation and experiment, or inductively. But this does not follow; for, though it is true that our discovery of causal relations is usually made inductively, the relations discovered are logical. Moreover, many causal relations have been deduced, to wit, those inferred in mechanics and mathematical physics. Indeed, all causal laws can be explicitly formulated as propositions of the type p implies q. Perhaps what confuses us is that the temporal relation between an antecedent cause and its effect is foreign to logical consequence, and that the antecedent event seems to us, for practical reasons, necessary for the effect, and not the effect for it. But the effect is quite as necessary for the cause as the cause for the effect; and, though in a temporal system, such as the world is, events must be related in time, still this relation is logically accidental to the generic relation whereby from the nature of one part of the world-system we are enabled to infer the nature of another part. This generic relation is that of logical implication, and is either the causal relation or a class of which the causal relation is a member. See CAUSE, CAUSALITY.

WALTER T. MARVIN.

CONSISTENCY (Ethical).—In so far as ethics

VOL. IV.-5

regard to its theoretical aspect, the question arises whether ethics is simply knowledge of moral facts, or whether it must fashion an ideal to serve as a or whether it must assist at the second of the rule for conduct; whether, that is to say, it merely describes or also enjoins and commands. If it be describes, or also enjoins and commands. merely descriptive, its sole aim will be to discover the characteristic and essential features of morality. The latter view has very largely come into favour

in modern times.

1. Consistency in naturansus comes.

tarianism, Eudæmonism, or the Ethics of Feeling, proposes to explain the origin of morality. starts from phenomena; it examines the native capacities of mankind, and even tries to trace the development of these. It occupies itself with the psychological analysis of impulses, feelings, and emotions, with man's relations to his environment, and his dependence upon, or relative independence of, this environment; with his relations to Nature, to his fellows, and to the communities in which he finds himself; with suffering and his reaction against it; with his estimate of things by means of a 'value-judgment,' which may itself be variously construed, and with the origin of these valuejudgments. In so far as ethics bears this empirical character, its business is to subject the conduct of men to historical and psychological investigation, to analyze it, to discover, if possible, the laws which actually regulate human life and which furnish a standard of value for conduct, and to determine the class of actions most conformable to this standard. For this school, in fact, the only important matter is to draw from the boundless mass of material such general truths as will be

valid within this particular sphere.

It is impossible on these lines ever to get beyond probability or merely relative points of view. An ethical theory of this sort is inevitably tied down to the relative. Consistency can find no footing here. All that is required is to bring the manifold data under general categories by induction. Em-pirical thinkers, and more especially sceptics, who place their mark of interrogation upon everything, will even tell us that the endeavour to introduce consistency into ethics is a mere futility, and really prevents us from doing justice to the facts. A moralist like Bentham, for instance, will have nothing to do with consistency. For, though he admits the validity of the general proposition that morality is concerned with the good of the whole, he yet holds that experience alone shows what makes for this good. Laws derived from the facts are only of relative value. A change in the facts will necessarily involve a change in the laws. Those who favour the historical method give Those who favour the historical method give special prominence to the fact that ethical ideas undergo extensive modifications, and that every age has its own particular assortment of such ideas, won from the most heterogeneous points of view, and therefore quite incapable of being reduced to unity. Effete conceptions—vestiges of earlier modes of thought—still continue to operate in certain civales or in the general conscients. in certain circles, or in the general consciousness, at a time when other usages and ideas, by no means reconcilable with the old, have come to the front. Hence, it is said, the collision of duties and the existence of contradictory views of moral life are just what we might anticipate, and accordingly the demand for consistency is sheer folly. Moral judgments are thus the result of a psychical and historical process—the mere temporary compromise between the competing interests of the day. To look for consistency under such conditions is to shut one's eyes to the facts. A like judgment must be passed upon the theory which finds morality in the spontaneity of our nature, which builds upon instinct and unconscious tendency, and which, as wholly averse to rational principles, would trace

moral action to the impulse of an inherent goodness in mankind, or of partly conscious, partly unconscious, propensity; or, again, would even bring in the operation of a natural creative potency. this theory, also, the entire function of ethics is to describe the impulses as they appear in experience.

describe the impulses as they appear in experience. The explanation of this antipathy on the part of empirical ethics to the idea of consistency is that the system merely registers and describes the various types of ethical thought and action, classifying them under general headings, and refraining from any attempt to harmonize these, on the ground that the moral ideas and phenomena emerge in the most diverse departments of human life, in the most disparate phases of culture, and in ages most remote from one another, and that accordingly they cannot well be brought into organic unity. Indeed, many even maintain that the sphere of practice is the proper arena for the irrational, for a power quite impervious to reason. Here, it is said, we encounter the fact of personality; here the concrete, the merely particular, comes into play—that which in the last resort eludes the grasp of thought. All general principles are therefore but bare abstractions, drawn from a limited field of experience, and as divergent as the data they refer to.

2. Consistency in religious ethics.—Frequently.

2. Consistency in religious ethics.—Frequently, too, even religious ethics gives no more consideration to the idea of consistency than does empirical tion to the idea of consistency than does empirical ethics. The ethics of religion has usually been content to give sacred sanction to a traditional morality, which has grown up amongst a people under the most heterogeneous influences; or it has, at most, added sundry directions regarding ceremonial observances, ecclesiastical duties, and especi-ally works of piety. We need not expect to find a harmonious consistency under such conditions.

ally works of piety. We need not expect to find a harmonious consistency under such conditions.

We have an instance of this in Jewish ethics, with its multifarious precepts regarding individual conduct, and regarding social, ceremonial, and political affairs. The ethics of the Persian religion embraces a vast array of ceremonial and moral ordinances, together with injunctions regarding social duties, such as planting trees, killing noxious animals, and the like. Jewish and Persian ethics, however, so far agree in resolving all the various regulations into a formal unity, namely, the will of God, as the source of all; and it is the same will which fixes the penalty of transgression and the reward of obedience.

A second type of religious ethics is that which admits a dualistic morality. In Dudahism, for instance, there is one morality for the monks and another for the laity. The universalism of this religion was not carried to its final issues; thus, woman was placed in a lower rank than man, and the system of caste was left undisturbed; and, while the leading principle of Buddhistic ethics was the complete surrender of desire in a life of patience and contemplative wisdom, this was subsequently. The monks were required not only to eschew adultery, but to abstain entirely from sexual intercourse, to avoid luxury, and to give themselves to meditation. A distinction was also made between venial and mortal sins. Rules of propriety were added to moral obligations. A consistently developed ethical theory is thus clearly out of the question.

The same is true of the ethics of Brāhmanism. The Law Book of Manu contains an exposition of duties, as also injunctions regarding the retention of the caste system and regarding submission to the Brāhmans. On the other hand, there is, as early as the Upanisads, the formula Tat tuan ass, 'That (the Cosmos) art thou,' which bids each find himself in his fellowman; and, while asceticism, solitary meditation, and withdrawal into the forest count for more than family or business lif

forest life shall be adopted only after a man has lived in a family and brought up a son.

Consistency is likewise alien to the ethics of Roman Catholicism. For one thing, morality is here made to rest upon the isolated fiat of an external authority; for another, a distinction is drawn between obligations and counsels. Moreover, the sacrament of penance prescribes a series of external works; while, finally, the monastic ethics of the religion is severed from the ethics of the laity.

Nevertheless, it would be wrong to imagine that religious ethics must necessarily assume this double form, or that it can be no more than a mere aggregation of contingent and isolated commands, and must in consequence lack consistency.

As a matter of fact, the ethics of Confucius, who put a check upon belief in spirits, soothsaying, and exorcism, and who read a Divine revelation in the natural and social order, exhibits a more homogeneous and self-consistent character than any of the above. 'The wise man obeys the law and awaits his destiny; that is the sum-total of duty.' This law sets forth the right hierarchy of social relationship in the subjection of the wife to the husband, of children to parents; in family affection, which is to be nurtured by ancestor-worship; in the separation of the sexes, as providing a 'barrier for the people'; in the subordination of the younger to the older, and of the subject to the ruler.

The law also decrees that this social order shall be represented The law also decrees that this social order shall be represented in the ritual. Kindness to the poor, the friendless, the widow, and the orphan, is commended, and great stress is laid upon faithfulness in friendship. The governmental system should aim at nurturing a peaceful, industrious, and contented people. It quite accords with all this that Confucius sets great store by ancient tradition and history, as exhibiting the decrees of heaven in punishment and reward. Observance of this moral order is at the same time a religious duty. It is obvious that, notwithstanding the aphoristic form which this moral teaching tends to assume, nearly everything is dominated by a single thought. Finally, the ethics of Christianity exhibits certain features which not only imply that the entire moral life is brought under one point of view, but also set forth a consistent moral ideal.

3. Consistency in rational ethics.—(a) As the application of an abstract law.-While religious ethics, therefore, either as giving formal sanction to incongruous usages, or as massing together arbitrary laws, or as separating the moral interests of religion from those of the secular life, tends in the main to dispense with consistency, the case is quite different with rational ethics. The fundamental tenet of the latter school is that the moral is grounded in the rational; and, even if a distinction be made, as by Kant, between practical and theoretical reason, the test of consistency holds good in either. When Kant wishes to prove that a breach of the universal moral law is indefensible, he points to the contradictions which such a breach involves. If we would test the validity of a maxim, we have but to ask how it would work as a universal law. Thus, for instance, the refusal to implement a promise, were it made a universal rule, would result in a state of things where no promise was accepted, i.e. the maxim would defeat its own purpose. The criterion applied here is therefore that of logical consistency. Similarly, in his *Critique of Practical Reason*, Kant resorts to the logical categories as furnishing a more precise definition of freedom. In one form or another, rational ethics makes out a case for an unconditional factor in morality, and it must vindicate the claim of this unconditional and universal principle to be supreme, i.e. to determine everything that comes within its province; in a word, it demands consistency.

Consistency in rational ethics is, primarily, the requirement that the practical side of life in its entirety shall be brought to the test of the universal

moral law, and made subject to it.

moral law, and made subject to it.

Thus the Stoics maintained that all morality lay in the one supreme virtue, namely, harmony with the law of nature or of reason. From the same standpoint Kant treated morality in a purely formal way, taking reverence for the law as the sole motive. This law, however, being as yet wholly abstract, is incapable of positively determining the concrete materials of conduct. Given conditions are brought within the scope of the law; they are not, however, derived from the law, but only tested by it. For example, the institution of marriage is not deduced from the law, nor is its place in the ethical economy assigned by the law; the sole question is whether, marriage being assumed, the universally valid law can take effect in the relationship. Strictly speaking, in such a case we can say only that the law must not be infringed; we cannot determine the actual duties of marriage. It is, in fact, precisely on this account that Kant distinguishes between duties of perfect and those of imperfect obligation. Thus, for instance, the obligation of developing one's natural powers is an imperfect one, because, while the maxim of such effort is undoubtedly a law, the mode and degree of the effort are in no way defined by it, but are left to personal choice. Even on Kant's view, therefore, there is a certain permissive sphere in morals, to which the consistency of the moral law cannot be extended—a sphere for casuistry, in which particular cases cannot be decided by the law.

Kant's mode of applying the test of consistency in the field of rational ethics stands in contrast with that of Herburt. On the one hand, the unitying principle from which Herburt starts is an esthetic a priori judgment regarding relations of will, and from this judgment proceed the ethical ideas. On the other hand, he enumerates five such relations of will (recalling the five axioms of Whewell), which he simply places side by side. To look for consistency here is apparently out of the question, as these five ideas are neit

of Herbart presents us with a much more concrete ideal than Kant's universal abstract law, and so exhibits a higher degree of consistency.

(b) Consistency in the structure of the concrete moral ideal.—The criterion of consistency is applied even more cogently by those who seek by speculative methods to give the ideal a con-crete form. It was on these lines that *Pluto* fashioned his ideal Republic, which he regarded as the highest image of the Good upon earth, though his dualism stood in the way of a perfectly consistent theory. In the main, however, he sought to delineate a harmonious antitype of the Idea of the Good; and it was his conviction of the universal supremacy of this Idea that moved him to incorporate in his scheme the concrete conditions of human life and the special faculties of the soul. In the Laws, it is true, he somewhat lowers the Ideal in favour of the existent civic situation, yet this does not so much imply a surrender of consistency as a desire to actualize his ideal State amid given conditions. The Idea of the Good which manifests itself in the individual (as virtue) and in the State—the macrocosm of man—is set forth by Plato with the strictest consistency as the unifying principle of morals. This is even more true of Aristotle. With him, the one vous is supreme in man, laying down just proportions for all emotions and all goods; and, although he gives an empirical tabulation of the particular virtues rather than a classification dominated by a universal principle, yet his guiding thought is that the dianoetic virtues are concerned with the development of the practical intelligence, while the ethical virtues have to do with reason's mastery of the passions by exercise. In effect, therefore, according to Aristotle, virtue is one, viz. the supremacy of reason, which, however, can be adequately realized only in the State—the State itself, again, being founded upon the home. Aristotle also agrees with Plato in linking his doctrine of virtue to the Idea of the Supreme Good, but he concedes a much wider scope to the operation of reason in practical life, and thus carries out his ethical doctrine in a more consistent way.

In modern times, J. G. Fichte and Schleiermacher have urged the importance of unity in ethical theory, and have given complete consistency to the moral ideal. True, Schleiermacher discarded imperative ethics and advocated the descriptive method. In his opinion, however, ethics is not an empirical or inductive, but rather a speculative, science. The moral ideal is not an ideal of obligation, but it is described as the ideal by which men act—duty; or in terms of the faculty which manifests itself as lawful—yirtue; or in terms of the result of action—the highest good. In all this Schleiermacher applies the ideal with such rigorous consistency as to demand that every man, with due allowance for his individual nature, shall construct and realize his ideal concretely and in full detail. He gives no place to the distinction between perfect and imperfect obligations, or to the collision of duties; since at every moment only one mode of action is ethically possible—that, namely, which in the circumstances best furthers the entire moral process. Morality being an integral whole, every action is in its degree a reflexion of this whole. The distinction he draws between symbolizing and organizing action he admits to be relative only, since each includes the other in smaller compass; the same is true of the universal and the individual factor. Each ethical province therefore in a measure embraces the other, and, when combined, they constitute the highest good—a unity absolutely complete in itself. The ideal has no gaps, and, consequently, nothing

The ideal embraces the is merely permissive. entire range of human conduct; in fact, even the mode of action in any given situation is deter-

mined by fixed rules.

According to Schleiermacher, reason is a power which moulds nature to new issues; and among modern thinkers it is he who has most consistently developed the thought that the whole spiritual life of man is ethically determined, no phase whatever being left out. His *Theological Ethics* bears the same character. It simply describes how the same character. It simply describes now the religious impulse—the Divine spirit operating as the intensified power of reason—works as the constraining motive in the determination of moral action in its details, and how it strengthens this rational action (as it is called in his *Philosophical* Ethics) without running counter to it or altering its content. The man who is in harmony with the Spirit of God is, in thought and feeling, an integral concentrated force, which manifests itself in the moral ideal, and effects the highest good. This concrete form of the ideal exhibits a far more strict consistency and uniformity than does the

abstract idea of universally valid law.
(c) Consistency in the historical development. (c) Consistency in the historical development.—
We can scarcely look for a more exigent standard of consistency in ethics than that of Schleiermacher, but we may give more consideration to the fact of development. Schleiermacher's ideal is really timeless. No doubt he holds that the speculative view of ethics may be brought into relation with historical science and practical life by means of critical and technical studies, and he desiderates that full account be taken of the individual's special place in the Kingdom of God; he even grafts upon the ideal the laws by which the whole course of conduct must be directed; but, nevertheless, he practically overlooks the factor of development in the moral consciousness. In his Kritik der bisherigen Sittenlehre he submits In his Kritik der bisherigen Sittenlehre he submits the history of ethics to a searching investigation, but from a purely critical point of view. This defect was made good by J. G. Fichte, and notably by Hegel; subsequently also by Chalybäus, Harms, and von Hartmann. These thinkers took account and con Harmann. These trinkers took account of the successive stages through which morality had passed, and contended for consistency in the ethical idea. As an example we may take Hegel's Rechtsphilosophie, which also comprises his ethics.

Hegel's Rechtsphilosophie, which also comprises his ethics.

In the history of moral experience Hegel sees a logically necessary process of development. He argues that the component factors of the moral idea are exhibited in the several stadia of the developing moral consciousness; that they are all conserved in the highest stadium, and incorporated in the all-embracing unity of the moral organism. From the premoral condition of the natural life, with its impulses, out of which, in process of time, grows a system of wants, Hegel differentiates the stage of abstract law, in which man is subject to an external arbitrary norm, expressed primarily in the regulation of property and contract. Next, consciousness passes, by an inner necessity, from this purely outward phase of freedom to the stage of morality, which lays stress upon inner feeling in an abstract and one-sided way. Advance is then made to the stage of Stitlichkeit, or established observance, in which moral thought allies itself with an objective content embodied in the moral community. This content manifests itself first of all in the family, which forms an expression of natural feeling, and in which individual property becomes family property; it then appears as civil society, with its system of wants, police regulations, and corporate institutions; finally comes the State, which assimilates the results of the whole development. The State conserves the family and civil society, in which the individual finds his satisfaction; it conserves the inner disposition, which now acquires a concrete ethical content; it conserves the sphere of abstract law, and even the life of natural impulse together with its system of wants.

Now we may possibly take exception to some of the details of this sequence, but we cannot well ignore its leading idea, viz. that man advances from a state of nature to a state of average 1 System der spekulations Ethik (Leipz. 1850).

See his admirable work Die Formen der Ethik (Berlin, 1878), afterwards incorporated in his Ethik, ed. Wi

The second second

morality characterized by statutory law; that, passing from the stage of positive enactment, he formulates the law abstractly as good disposition; and that, finally, he transforms this abstract morality into concrete established observance, thus arriving at a Supreme Good which recapitulates in itself all the preceding stages. The idea of consistency in ethical knowledge is thus extended to the process of development and at the or consistency in ethical knowledge is thus ex-tended to the process of development, and at the final stage we are brought to a provisional har-mony in which the consistency of the ethical idea

mony in which the consistency of the ethical ideal is revealed as the economy of the moral organism.

(d) Consistency in the relation of Ethics to the ultimate principle of Philosophy.—Speculative moralists, however, carry consistency to still further lengths. Not only do they assign to ethics, as a special science, its proper place in the system as a whole—as even Kant does, in his distinction of the orbital and practical reason, but they either theoretical and practical reason—but they either trace it to, or deduce it from, an ultimate unity, a supreme integral principle, thus fitting it organically into a complete philosophical rationale of the universe. Such is the procedure of Plato, who holds that true knowledge involves morality, and that morality carries with it insight into truth, and who therefore regards the science of knowing, or dialectics, as the cardinal science, embracing not only knowledge but also the supreme content of knowledge, i.e. true being or the Ideas, of which the highest is that of the Good and Beautiful. These Ideas Plato deems to be realities, so that the True and the Good and the Beautiful are one. The subject-matter of metaphysics or dialectics, which embraces the knowledge of being, is identical with the Good and Beautiful; and, as this highest Idea is Deity metaphysics religion and highest Idea is Deity, metaphysics, religion, and morality are in the last resort one—just as truth, goodness, and beauty cannot be dissevered. Plato's differentiation of physics and ethics from dialectics is due to the fact that the good and beautiful of the actual world is only a copy of the real—a mere representation in material form, since the world is the sphere of becoming.

Although Aristotle and the Stoics likewise aspired to place ethics in its right connexion with philosophy as a whole, yet their endeavours after unity, their ideas of consistency, were not carried out so fully as Plato's, the reason being that unity, their ideas of consistency, were not carried out so fully as Plato's, the reason being that their interest in experience and the special sciences was greater than his, and so far deranged their philosophical views. On the other hand, we have a striking instance of consistency in the work of Spinoza. Even his mathematical method, which in reality is logical rather than mathematical, supplies an illustration of this. He regards metaphysics, ethics, and religion as constituting an integral whole; and, further, his theory of the parallelism of thought and extension enables him to incorporate physics into this unity. Here, therefore, we have an attempt on a grand scale to connect ethics organically with the entire system, and to enforce the principle of consistency to its extreme limit. A similar course is followed by the Absolute Philosophy of Germany, as exemplified by Fichte, Schelling, and Hegel, and, as they take the historical process into account, their system is even more comprehensive than that of Spinoza. Hegel looks upon man's whole moral experience in its several gradations as a phase of development in the self-manifestation of whole moral experience in its several gradations as a phase of development in the self-manifestation of the Absolute, or the Idea, which actualizes itself in moral life in order to attain, in esthetic intuition, in religious conception, and, finally, in philosophic thought, a survey of the whole process. Moral life is thus an aspect of the Idea, a stadium in its development. Here consistency reaches the acme of rigour. Schleiermacher, too, endeavoured to bring ethics into organic convexion endeavoured to bring ethics into organic connexion

with his whole philosophy. For him, as for Schelling, the highest principle was indifference, i.e. the absolute unity of opposites. This principle is confronted by the world, where, in virtue of the underlying unity, the several opposites of thought and being, real and ideal, manifest themselves as diverse, indeed, yet not inconsistent. This interfusion of real and ideal, if the former preponderates, is nature; if the latter preponderates, it is reason. Reason and nature, however, tend towards a state of mutual adjustment, reason becoming nature by its activity, and nature likewise labouring to become reason. Thus ethics becomes physics, and physics ethics. Still another opposition confronts true scientific knowledge. Our thought is at once speculative and conditioned by experience. Hence the science of reason and the science of nature have each a speculative and an empirical side. The speculative science of reason is ethics; the empirical is history. The speculative science of nature is Natur-philosophie, while the empirical embraces the special natural sciences. Ethics and history are interlinked by technical and critical studies. Such is Schleiermacher's way of making ethics an organic part of universal science.

4. General investigation.—It appears from the foregoing synopsis that moralists differ very greatly in regard to consistency as applied to ethical theory, the main cleavage corresponding to that between the empirical and the rational interpretation of morality. If morality be regarded as merely a means to the greatest possible good, then reason itself must be similarly interpreted, and, on this view, consistency comes into consideration only in so far as it is conducive to the same end. This general good, it is alleged, is best served by obedience to rules which have been inferred from experience. But absolute laws, laws permitting of no exception, are scarcely within the scope of such a hypothesis. General rules are deduced from limited empirical data, and, if such data be augmented, the rules will be correspondingly modified. They are, by their very structure, incompatible with absolute validity. Should it be asserted, for instance, that a man must, with a view to his own happiness, subordinate his personal interests to those of others, this law will be recognized by him only so long as he finds it to his own advantage. Thus ethics, if it be but a means to a relative end, cannot itself get beyond relativity, and must renounce consistency.

The same result follows when a purely empirical

The same result follows when a purely empirical theory of development is applied to morality. Altered conditions or the progress of civilization will necessitate a change in moral laws. Since, on this theory, ethics merely summarizes the best directions for human well-being under given circumstances, and since the variability of such directions and maxims is held to prove the relative character of the science, strict consistency is put out of court. As corroborative of this view, it is alleged, in particular, that ethics must needs keep within the limits of the attainable, and that it is impossible to apply the idea of consistency at all hazards. If we bear in mind the way in which men really act, the way in which impulses, feelings, and passions are adjusted by the psychical mechanism, and in which we become conscious of this adjusting process, we can formulate rules which, so far from remaining mere ideals, take account of men's actual capacities and circumstances, and are therefore capable of being put into practice.

But even the most extreme empiricism must allow that morality emerges only when certain demands are made in reference to the data of experience—demands which this school finds so

little self-explanatory that it has recourse to all manner of 'sanctions' to establish their authority. Without the antithesis of an ideal confronting the data of experience as a regulative law, morality is impossible. It may, indeed, be said that this ideal is simply the resultant of our empirical valuejudgments, a product derived from experience by abstraction. Thus, for instance, the law of altruism, as against egoism, may be traced to the experience that other-regarding conduct brings an increase of satisfaction. But the question them experience that other regarding conduct brings an increase of satisfaction. But the question them arises whether this generalization is universally valid; and, again, whence comes the faculty by which such generalizations are made. The truth is, this faculty of abstraction is that by which we is, this faculty of abstraction is that by which we colligate the manifold in a unity, on the assumption that it is amenable to law. The ideal set up by the moral reason is something more than an aggregate of rules, derived by abstraction from value-judgments; it is in reality reason's own craving for unity, which it seeks to realize in the ethical judgment it applies to the facts of volition. The unity which is not overfly given in our various unity which is not overtly given in our various impulses, feelings, and passions is demanded by reason, and the demand cannot be met by anything relative. It is a fact that a number of moralists take their stand upon the unconditional character of morality; and this fact can neither be explained nor explained away by the empirical school. Reason cannot rest till it has moulded the mani-fold into a unity, and in the ethical field this means not only that reason constructs ideals, but that its ideals are consistent. It is, of course, true that different epochs have different ideals, but this by no means implies that the ideals of any period were defective in the matter of consistency. Reason has built up its ideals in ever-enlarging form; it has in ever-increasing measure incorform; it has in ever-increasing measure incorporated therein the various spheres of conduct; and, by defining the mutual relations of these spheres, it has attained perfect symmetry in its ideal. Indeed, reason has at length reached a point where it can survey the whole historical sequence of ideals in a single view, and where it can be to receive the process of development by which seeks to grasp the process of development by which the approved elements of the earlier ideals are taken up into the ampler range of the later. In short, if by an inherent necessity the moral reason is to carry out its task of ideal-making, and if its demand for unity is put forward unconditionally, then the entire field of voluntary action must be subjected to its authority, and its ideal must seek to effect the complete organization of moral life. In ethics, therefore, consistency is an unconditional requirement. Since the whole spiritual life of man is touched by the will, it must of necessity fall under the moral ideal.

It has been said, indeed, that the concept can never reach the concrete, the particular. But, while this is the case, we can nevertheless form the concept of the particular, and can accordingly assign the particular to its proper place in the ethical system, subordinating it to the whole in such a way as to make it an organic part thereof—a component which, so far from causing any dislocation, really works with all the rest as mutually complementary, and is thus wrought into the harmony of the whole. If it be deemed pedantic thus to bestrew the whole way of life 'with mantraps of duty,' it must be frankly conceded that there are sections of life where movement must be free, as, for example, the sphere of recreation, of sociality, of imagination, or the asthetic sphere. But the moral ideal encompasses these tracts in such a manner as to permit a certain freedom therein, provided that there be no over-stepping of the limits laid down by the moral system as a whole. Here, therefore, we have no exception to

the moral law, but simply an application of the ethical principle that each sphere shall be dealt with in its own way, while ever remaining a constituent part of the moral organism, and keeping within its own bounds. Here too, therefore, the unifying formative reason may manifest itself in constructing ideals.

Further, consistency, to be effective, must be complete. No doubt, it is at present a prevalent view that a narrow and one-sided policy achieves the best results. An oppressed class, for instance, demands its rights: these are not to be won, it is said, by deliberations as to how that particular section of society is to be fitted into the social organism; nothing but the ruthless enforcement of its claims can secure for it improved conditions of life, though eventually, of course, such amelioration may benefit the whole. Again, it is asserted that a State attains prosperity not by enthusiasm for the ideal of humanity, but by a self-centred struggle for a recognized place in the council of the nations. Or, again, the individual who has formed new religious views must, it is held, not walk softly or make compromises, but must carry his views into effect ruthlessly, i.e. consistently. Mankind, in short, makes progress only by the one-sided pursuit of narrow aims. Society is so constituted that, while one man is carrying out his ideals with inexorable consistency, his action is being circumscribed by the interests of others. The whole process culminates in the mutual adjustment of interests. Thus the striving of reason for unity at length attains its end unconsciously, although the several parts seemed to be inharmoniously distributed. Progress is secured by mutual conflict. It is wrong, therefore, to lay the burden of this final adjustment upon the individual; all that we can expect from him is consistency in his own particular sphere, and in the advocacy of his special interests.

Plausible as such a theory may seem, and numerous as are its champions, it is nevertheless untenable. Were it consciously put into practice,

untenable. Were it consciously put into practice, it would forthwith plunge nations, classes, muni-cipalities, and individuals—in fact, human society at large—into embittered strife, without a single reconciling element. Passions would become ramreconciling element. Passions would become rampant, and animosities more virulent. We must preferably hold to the other view, viz. that the individual shall recognize the rights of others; that each class, each group, shall feel itself to be an organic part of the larger whole, the State; and each nation a section of the human race; and that in the conflict of opinion every man shall take pains to apprehend what is good in the view of others. As a matter of fact, it is not laid upon men to prosecute their individual aims with relentless consistency, but rather to realize those aims less consistency, but rather to realize those aims in a manner compatible with the ideal, so that personal interests may be advanced without detri-ment to the larger whole. Such a mode of apprehending the moral task demands, without doubt, a higher degree of intelligence. But a consistency which is merely sectional is no consistency at all, and is incapable of securing true progress, for it carries within itself the seed of reaction, which will sooner or later germinate. Moral development proceeds from the more simple conditions to the proceeds from the more simple conditions to the more complex; but, for that very reason, the prime necessity is to gain control of these complicated conditions by taking into account the various relevant elements which they contain, and by subordinating them to the unifying and moulding prover of reason. Our children replies to power of reason. Our abiding problem is to systematize the whole ethical data in harmony with the ideal, for only such an issue can adequately neet the unconditional demand for unity which reason makes. A The state of the

5. Consistency between the moral ideal and practice. — The more perfectly consistency is attained in the formation of ideals, the less possible is it to ignore the discrepancy between the ideal and the actual moral situation. When the reality is compared with the ideal, it appears incongruous, contradictory, one-sided, narrow, circumscribed, rent by antitheses—in a word, bad; while the ideal itself seems but a futile and impracticable demand. In particular, it is rational ethics, with its special insistence upon a logically constructed ideal, which is mainly affected by the discrepancy, so that its boasted consistency would here seem to become abortive. Plato traces the defects of the empirical world—as compared with the Idea—to matter, and thus ends in dualism. Spinoza deduces not only the inadequate ideas and affections, but also the adequate ideas-not only human servitude, but also human freedom-from the same mathematical necessity, and can therefore make his ideal avail at most only for the favoured few. Nor could Hegel dislodge this discrepancy; for, though he held the antithesis to discrepancy; for, though he held the antitlesis to be the very mainspring of progress, and as such to be subject to logical sequence, the contradiction was not thereby removed. Above all, Kant felt the opposition between the practical reason and the natural propensities so intensely that he went to the very verge of dualism. Even Schleiermacher was forced to recognize a difference between the speculative moral ideal and actual moral practice, and accordingly he introduced—in his *Christian Ethics*—a 'purifying activity,' which was in reality a confession of the discrepancy. Now this contradiction seems to turn the consistency of the moral ideal into a mere abstraction. Consequently many ideal into a mere abstraction. Consequently many thinkers of to-day would have us recognize a certain irrational factor in the world, a factor certain irrational factor in the world, a factor which necessarily precludes a consistent application of the moral ideal to the facts of life. According to von Hartmann, the will is non-logical, and the sole task of ethics is to evince this fact, moral action being in the end simply an anodyne to the will, which finds no satisfaction in any moral result. Here the antagonism is carried to such a point that moral action is made a means to its own ultimate abrogation. From all this it would appear that the consistent formation of ideals, as essaved more especially by the rational school of between the ideal and the actual.

Now this would undoubtedly be true, were the

Now this would undoubtedly be true, were the construction of ideals the final task of ethics. Such, however, is not the case. Nature, and especially human nature, is so constituted that it must have recourse to reason as a means to its own harmony and perfection. The first stage, therefore, is the idealizing activity of reason, the outcome of which is the rationally harmonized image of nature. But this is only the first stage; and, when once consistency has been realized here, a further advance is made, for now practice is to be moulded into conformity with the ideal. Thus the contradiction above noted is simply a necessary point of transition—necessary, that is, if we are to have ethical life or action at all. In other words, if moral results are to be achieved by the rational activity of the soul, then the end, the task set before us, must first of all be known; and only when it is known can we proceed to the task of realizing it. The antithesis between the rational ideal and human nature, as it is, is not an absolute one. The truth is rather, that life, as we know it, awaits the rational action of the soul as the medium by which it is to be harmonized and transfigured. The initial, or idealizing, stage of the moral process of reason is therefore responsible for no more than the harmonious, consistent for-

mation of the ideal. Once this has been attained, consistency makes the further demand that the ideal shall not remain a bare ideal, but shall be realized. It is impossible to rest satisfied with the mere self-consistency of the ideal: consistency must also govern its practical application to life.

Now, as regards this practical accomplishment

Now, as regards this practical accomplishment of the ideal, we must bear in mind that there are two factors in the process. There is, first of all, the application of the ideal to the concrete facts of life; and, secondly, its realization on the part of the will. In either aspect we must take account of consistency, i.e. of the requirement that the unifying impulse of reason shall operate throughout

with absolute authority.

The application of the ideal to the concrete case The application of the ideal to the concrete case implies the faculty of taste or judgment,—Kant's Urtheilskraft,—the instinctive form of which is conscience. In accordance with what has already been said, this immediate judgment of conscience cannot be self-sustaining, but, in so far as it is valid, it pre-supposes knowledge of the moral ideal, as well as the right use of the congrete ideas of the as well as the right use of the concrete ideas of the end which have been grafted upon the ideal by education. Now, since practical life sets particular tasks before us, and since a particular task requires a particular time for its performance, the question arises, what action ought to ensue at a given moment—for, of course, the ideal, as something concrete, has various sides. But it is impossible to act consistently with reference to more than one side at a time, and, if we take the one nearest to us as the most important, our act will be consistent in a partial sense only. The ecclesiastic, for example, may fix his mind so intently upon the interests of his church as to be oblivious of other duties. Such a one-sided consistency is the result of limitation, and leads to fanaticism: fiat justitia, percat mundus! We may, in fact, find a consistency which is so rigid as to verge upon puer-Sabbath-observance, is over-emphasized in the manner of the Pharisees. The vital matter is rather to keep the ideal before the mind in every act. Every act must be of such a kind as will, in its degree and place, further the entire moral process; only so can the ideal be realized in each particular case. This may seem too great a burden to lay upon the generality of mankind. How many, it may be asked, are so far advanced in ethical knowledge, or so proficient in the exercise of their judgment, as to be capable of subjecting every case to such thorough-going reflexion? The majority trust to their conscience, which may be said to express the average ethical culture of the day, and at best they plead for some modification of the universal law in view of their personal circumstances. For instance, in regard to the obligation of philanthropy, they point to the state of their resources, or to their responsibility to those that have the first claim upon them; and, on the whole, they fare wonderfully well with this instinctive judgment, for they are in this way making a genuinely consistent application of the ideal. The explanation is, of course, that every man finds himself in a certain situation, in certain definite relationships; and a whole array of actions —provision for one's family, assiduity in one's calling, etc.—have become matters of use and wont. With respect to such things there grows up a certain moral conviction, which requires no special preliminary consideration, since, so to speak, it has become transformed into flesh and blood. Thus the immediate judgment of conscience is, in general, the consistent application of the ideal to the particular case.

It is different when one takes an active part in public life. Exact knowledge will then be required, so that one's decisions may be of the right kind; and a mature reflexion upon one's own faculty of judgment will be no more than proper. The same thing applies when we are confronted with important issues. Here also a man must carefully weigh all the salient facts of the situation, so that his action may in its own measure meet the entire moral demands of the occasion. The realization of the ideal will in such instances call for a developed tact and foresight, while these qualities will also be needed in order to understand the faculties by which, and the conditions in which, we must act, as well as the laws of the objects we wish to work upon. Self-knowledge and knowledge of facts are the pre-requisites of framing right ends and applying appropriate means. No relaxation of consistency is discernible here, for it is precisely the world as given which is to be transformed by the moral ideal. On the contrary, consistency demands that everything necessary to the accomplishment of that great end shall be done.

When, however, the intelligence has been thus

When, however, the intelligence has been thus brought to bear consistently upon particular cases, it is then required, first, that the will shall harmonize with the intelligence, and, secondly, that the appropriate mental and bodily organs shall be at the disposal of the will. The former desideratum is in this instance the fundamental union of the will with the moral ideal, i.e. the good will combined with love or enthusiasm for the ideal. This good will is also of crucial importance for particular volitions. But, in the second place, the volition can be carried into effect only by the exercise of the relative organs, and here the significance of psychology and psychophysics for ethics comes into view. We need not, however, speak of this aspect in detail. Enough has been said to show that in ethics the idea of consistency, alike in the formation and in the practical realization of the moral ideal is of decisive invortance.

tion and in the practical realization of the moral ideal, is of decisive importance.

CONSOLATION, COMFORT (Christian).— Consolation is an act or process of giving comfort; the state of being comforted; or the condition and consciousness of relief from anxiety and distress, or of support in sorrow and affliction. Comfort is a complex emotion induced by means of consola-tion, or the act or process of comforting; but, although it is to be classed among the emotional states, it has certain well-defined presentational aspects. In its fullest, and especially in its re-ligious, sense, there is the consciousness of a person whose presence, words, or acts are the source of the feeling of comfort, and constitute the consoling element. Although there are several weakened uses of the term 'comfort,' and it is often employed in an abstract and derived sense, the personal (or quasi-personal) source is always implied. The immediate effect upon the will is that of solace or soothing, restraint from agonizing or neurotic effort, and the inhibition of excited acts. The subconscious effect is that of a tonic, and the will is braced thereby for healthful exercise. Whilst the consciousness of a personal presence and influence is the dominant feature in religious consolation, is the dominant feature in rengious consonation, there is always, in the background at least, the presentation of something that produces pain, 1 See W. James, Varieties of Religious Experience, p. 505. distress, or anxiety. Probably in most cases the cause of the painful feeling is at first the focus of attention, but the process of consolation forces it into the background as the comfort is being experienced. The consciousness of personal help and support is the positive element in the case, whilst the negative is the sense of relief and mitigation.

As consolation and comfort play an exceedingly important part in the Christian consciousness and in the offices of religion, the connotation of these terms in devotional literature is in general identical with Scripture usage, from which it is derived. The Heb. word non (Ps 119°, Job 6°) has its rootmeaning in the act of breathing pantingly or sighing, probably as the expression of deep, sympathetic feeling on the part of the consoler. It especially refers to God as the Comforter of His people in their affliction calentify or representing especially reters to God as the Comforter of His people in their affliction, calamity, or persecution, or even in their repentance. In most cases, as in Ps 119<sup>56,76</sup>, confort is given to the righteous, as such, in their tribulation, but in some other instances, as in Is 40<sup>1</sup>, the comfort follows upon repentance, and Jahweh is represented as having changed from His state of anger to that of pity and compassion for His people. The richest form and compassion for His people. The richest form of comfort in the OT is probably what is often designated 'the motherhood of God' (Is 66<sup>13</sup>). The NT conception of consolation and comfort

The NT conception of consolation and comfort in general has no reference to sin, but refers rather to the persecution, distress, and tribulation to which the faithful are exposed. The word most frequently employed is παράκλησα, whose primary significance is that of the ministrations of one called to assist, counsel, or relieve. παραμυθία (1 Co 14³ only) refers to comfort given by word or speech, whilst παρηγορία (Col 4¹¹ only) brings out the aspect of soothing. The presence of God is the dominant feature in Christian consolation, together with the promises, assurances, and pledges of supwith the promises, assurances, and pledges of support and ultimate victory through Christ. God as manifested in Christ is the Comforter of His children; but more specifically the presence and power of God realized in the Spirit, through whom Christ returned to His disciples at Pentecost, indicate the significance of the Hely Spirit being dicate the significance of the Holy Spirit being designated the Comforter (παράκλητος, Jn 14<sup>16, 26</sup> 15<sup>26</sup> 16<sup>2</sup>).

There are two instances in the NT where com-There are two instances in the NT where comfort may be considered to have reference to repentance and forgiveness. The first instance is that of the second Beatitude (Mt 54), but it is by no means certain that the 'mourning' (of \(\pi\epi\epi\text{00vres}\)) refers to one's own sin. The other case is in 2 Co 710, where it appears that St. Paul experiences the comfort on account of the code references the comfort on account of the code references. ences the comfort on account of the godly sorrow which is felt by the Corinthian converts. The most familiar instance in devotional literature of the function of comfort in remission of sin is in the Book of Common Prayer immediately after the Absolution, in the Office of Holy Communion: 'Hear what comfortable words our Saviour Christ saith,' etc. The personal ministrations of sympathy, love, and support in the midst of sorrow. and pain are far more prominent in the NT and in Christian literature than deliverance from the evils themselves. It is as though the inevitable-ness of suffering were recognized, especially the forms of it that Christians are called upon to bear for their Master's sake and as incidental to their for their Masters sake and as incidental to their work of extending the Redeemer's kingdom. 'All that would live godly in Christ Jesus shall suffer persecution' (2 Ti 3<sup>12</sup>). In the sense, therefore, in which tribulation is regarded as partaking of Christ's sufferings, and as the result of well-doing

I The Arab a signifies the act of 'being kind to,' or 'patient with' (a person), and consequently 'comfort.'

the strike

or endured for righteousness' sake, consolation is not given in the form of the removal of such grievances, but in the consciousness of the Divine

presence and approval, and the grace of God to support and sustain throughout all these experiences.

Whilst the Divine Being is the ultimate source of comfort, the 'Father of mercies and God of all comfort' (2 Co 1<sup>3t</sup>), it is explicitly taught by St. Paul that Christian believers should in their turn become comforters of those who need sympathy and strength. In harmony with this injunction, the consolations of religion may be administered by the officers of the Church and by all who have had to pass through such experiences themselves. They are to be the instruments whereby the Divine comfort is mediated and brought to bear upon other souls and lives. Barnabas, who was exceptionally gifted in this respect, was fitly surnamed 'son of consolation' (viòs παρακλήσεως, Åc 436).

The circumstances under which the administration of consolation is needed by the Christian and generally commented upon in devotional and in homiletical literature will now be summarized.

(1) Physical or mental limitations, pain, or istress.—The comfort consists in the knowledge distress. of the disciplinary value of suffering, the con-sciousness of the transcendent power of the spiritual in the realized infirmity of the flesh, and the acquisition and development of the gifts and the acquisition and development of the fiesh, and the acquisition and development of the gifts and graces of sympathy, tenderness, and gentleness with other sufferers, together with patience and fortitude. 'Tune non est melius remedium quam patientia, et abnegatio mei in voluntate Dei' (à Kompis, de Imit. Christi, lib. ii. c. ix. 6). The classic example of this form of consolation is that of St. Paul's 'thorn in the flesh,' and his comment thereupon, 'Most gladly therefore will I rather glory in my weaknesses, that the strength of Christ may rest upon me . . . for when I am weak, then am I strong' (2 Co 1296.).

(2) Anxiety, perplexity, and care.—Here the Christian needs the assurance that he is in the hands of an All-wise and All-loving Heavenly Father, and that, so long as he makes God's cause and kingdom his chief interest and aim, all that is necessary for the effective discharge of his duty and the accomplishment of his work will be secured to him (Mt 633). As God is in the whole environment of our life, so shall those who trust in Him be under His direction, as they are beneath His protecting hand.

be under His direction, as they are beneath His

protecting hand.

protecting hand.
(3) Depression and spiritual desolution.—The best consolution under these conditions is the exhortation to continue in the prayerful and persistent discharge of duty and Christian work, and to wait patiently for the revealing of God's face and favour, and especially not to rely too exclusively upon one's feelings. Von Hügel points out the need for the 'sober and stable, consistent and persistent, laborious upbuilding of moral and religious character, work, and evidence,' instead of yielding to 'fierce and fitful,' 'wayward and fleeting feelings,' in the hours of darkness and isolation of soul (The Mystical Element of Religion, i. 5 f.). The exercise of faith strengthens the Christian in the consciousness that prayer for light and joy the consciousness that prayer for light and joy will sooner or later be heard, and that the inner witness will be given.

(4) Difficulty in Christian work, opposition and persecution.—Here the conflict of wills comes into play and the determination of the heart had been seen to be seen

play, and the determination of the heart against God and in defiance of the gracious influences that are brought into operation. This is particularly distressing when, as in the time of persecution, the opposition assumes an aggressive form. Christians are exhorted in the NT not to grow fainthearted or weary in bearing their testimony even though they may have to seal it with their blood

They are encouraged to take comfort in the pro-They are encouraged to take comfort in the prospect and promise of the ultimate triumph of the truth and the all-conquering power of love which refuses not to suffer and to die. Moreover, they are to regard their sufferings borne in love on behalf of others as the means whereby the hearts of their opponents and persecutors are to be reached, and they are truckt to prove and home that the and they are taught to pray and hope that the opposition will be ultimately broken down. The line of consolation adopted by the Fathers in en-couraging the Churches to endure persecution was in general to remind them of the predictions of our Lord and the Apostles (Irenæus, adv. Hær. lib. iv. c. xxiii.); to point to the notable examples of martyrdom, from the death of Abel to the passion of our Lord (Cyprian, Ep. lv.); and also to seek to win the hearts of men by 'Christ's new way of patience' (Tert. adv. Marcion. lib. iv. c. 16).

(5) Bereavement.—Those who are bereaved are comforted by the blessed memories of the past,

which ever remain as a sacred treasure, and by the promises that they shall meet again those who die in the Lord, for their life is assured in the Resurrection life of the Conqueror of death and the grave. St. Ambrose stated the ground of the Christian's hope thus: 'Habent gentiles solatia sua, quia requiem malorum omnium mortem existimant. . . . Nos vero ut erectiores praemio, ita etiam patientiores solatio esse debemus; non enim amitti, sed praemitti videntur, quos non assumptura mors, sed aeternitas receptura est' (de Excessus Fratris sui Satyri, lib. i. c. 71). St. Paul refers to the state of the sainted dead, and their final triumph through their Lord, and admonishes the Thessalonians to 'comfort one another with these words' (1 Th 4<sup>18</sup>).

(6) Death and the fear of death.—Beyond all other consolations the consciousness of the presence and power of Christ-the Resurrection and the Life, who has triumphed over the last enemy-is assured to the believer. So closely related is the dying saint to his Lord, that St. Paul speaks of dying saint to ins Lord, that St. Faul speaks of him as being amongst those who are asleep in (or through) Jesus (διὰ τοῦ Ἰησοῦ, 1 Th 4¹⁴), and as dying unto the Lord (Ro 14²). This thought is also carried out by St. John in the Apocalypse: 'Blessed are the dead which die in the Lord' (ἐν Κυρίφ, Rev 14¹³). This relationship ensures to Christian believers the hope of heaven, eternal

Christian believers the hope of heaven, eternal life, and a glorious resurrection.

Whilst the experiences here summarized call for consolation, and that consolation is found in the promises of Scripture and in waiting upon God, there is always an implicit reference to the Divine Being Himself as the primary source of comfort. Thomas à Kempis clearly expresses this when he says: 'Unde non poteris, anima mea, plene consolari nec perfecte recreari, nisi in Deo, consolatore pauperum ac susceptore humilium' (de Imit. Christi, lib. iii. c. xvi.). In a secondary or derived sense, the words of God, His attributes, and His gifts are often referred to as being in themselves comforts, just as, in ordinary affairs, material things are designated 'comforts' if they minister to our wellbeing, not being luxuries on the one hand, or necessaries on the other. Also it is one of the duties and privileges of Christian believers to be the means of communicating the comfort they have received of God to other souls, by sympathy and tenderness, and by the support of collective faith and intercessory prayer. In the exercise of this function of consolation, the reflex action is experienced, which, in no slight degree, brings a sense of satisfaction, and even of joy, in being of service to suffering humanity.

Further, comfort is realized by Christians in the

consciousness of community with their Lord in His sufferings, in being partakers with Him in the

work of redemption, in drinking of the cup from which He drank, and in being baptized with His baptism. In tribulation incurred in the service of humanity, and incidental to the accomplishment of His work, there is, as St. Paul expressed it, the filling up what is lacking of the afflictions of Christ (Col 1<sup>24</sup>). The Mystics of all schools have always been accustomed to direct the attention of the persecuted to the cross of Christ as the chief source of consolation, especially where sufferings have resulted from devotion to His cause. In contemplating thus the marks of His pain and anguish and the sense of desolation that He endured upon the cross, they have realized that they were one with Him in bearing reproach and ignominy, even though they could not suffer as He did in expiation of human guilt. Moreover, the thought of the transcendence of Christ's sufferings inspired a feeling of gratitude and an inspiration to the believing soul to endure 'the contradiction of sinners' without soul to endure 'the contradiction of sinners' without complaint or impatience. John Newton, in his well-known hymn, 'Begone, unbelief,' etc., dwells upon this thought—'Did Jesus thus suffer, and shall I repine?' These considerations inspired the hymn of John Keble, in The Christian Year, for Good Friday, that to the cross the mourner's eye should turn 'with softer power for comfort' in earth's darkest hour than on any bright day.

The full meaning of Christian consolation is not exhausted apart from the conception of the mystic union of Christ with the believer. There is a sense in which the Church has ever been conscious that,

in which the Church has ever been conscious that, as Christ is the head of the body of believers, He suffers not only for their sins, but in all the sorrows and tribulation that God's people have to endure. God's consolation is, in this mystical sense, the realization of Christ's presence with us in all life's painful experiences, in His humanity and His eternal priesthood. The realization of God's presence in Christ bears the promise of ultimate triumph, and, although Christ's disciples shall have tribulation in the world, their final conquest is secured and guaranteed in His victory over all.

LITERATURE.—There is no subject more frequently referred to in the whole of devotional literature than consolation, but the specific treatment of it is somewhat slight. For psychological treatment, see W. James, Varieties of Religious Experience, London, 1902 (chapters on 'Saintliness' and 'Mysticism,' and the Conclusions); Fr. von Higel, The Mystical Element of Religion, 2 vols., London, 1908-9 (esp. the Introduction and pt. iii.). Devotional works: Thomas a Kempis, de Imitations Christi (in various editions and Eng. translations); St. Francis de Sales (frequent references scattered throughout his writings); J. H. Burn, Manual of Consolation, London, 1902; Pére Huguet, The Consoling Thoughts of St. Francis de Sales, Dublin, n. d.; Frassinetti, Consolation of a Devout Soul, London, 1876; Cowper, Newton, Doddridge, etc., Comfort for the Mourner, London, 1822; R. Buchanan, Comfort in Affiction, Edin. 1871; C. H. Spurgeon, Twelve Servinos for the Troubled and Tried, London, 1896; J. H. Jowett, The Silver Lining, London, 1907-8; E. Romanes, The Hallowing of Sorrow, London, 1896; H. Black, Comfort, London, 1910. Ci. also Chrysostom as Stagirtum (PG xivil.); Honoratus, Ep. consolatoria (PL); J. Hinton, The Mystery of Pain, London, 1866, 41870; C. Kingsley, Out of the Deep, London, 1886; S. A. Brooke, Sunskine and Shadow, London, 1886; J. E. Hopkins, Consolator the Consoler?, London, 1879, 41834.

CONSOLATION (Greek and Roman). —In
Greece the germs of a literature of consolation can be traced to ancient times. The dead were commemorated in threnodies, which were designed also to console the bereaved, and a great vogue was enjoyed by a threnos of Pindan, in which the idea of the Ombits exchallers, were drawn upon was enjoyed by a threnos of Pindar, in which the ideas of the Orphic eschatology were drawn upon for consolation, and which is made use of in the pseudo-Platonic dialogue Accords. In Athens it was customary, probably after the Persian wars, to engage a rhetor to deliver a funeral oration—like that, e.g., which Thucydides puts into the mouth of Pericles—regarding those who had fallen in battle; and it was usual at the close to address in battle; and it was usual at the close to address the relatives in consoling terms. Several of these

orations are still extant; one, the epitaphios of Hyperides, is known to have been delivered in 322 B.C. The grounds of consolation are set forth in ch. 20 of the Menezenos of Plato, which is a parody upon the sophistic epitaphios of the type seen in that composed by Gorgias. Philosophy likewise had at an early stage wrought out activities. likewise had at an early stage wrought out certain consolatory lines of thought, and it is possible that the writings of Antisthenes the Cynic may have suggested what Xenophon makes Socrates say in the Apology. Aristotle's dialogue 'Eudemus on the Soul,' and the 'Callisthenes on Mourning' of Theophrastus, were also well stored with consoling sentiments. But the standard work of the kind was that of Crantor the Academic (c. 270 B.C.) 'On Mourning,' which was sent by the author to a friend whose children had died, and which Cicero calls 'aureolus et ad verbum ediscendus libellus' (Acad. ii. 135). As it treated of sorrow not as a reprein 150). As it treated of sorrow not as a reprehensible emotion—in the manner of the Stoics—but rather as a natural impulse, requiring only to be kept within bounds, the book found many readers; and, when Cicero, in 45 B.C., essayed the composition of his Consolatio for his own comfort after the demise of his daughter Tullia, he made Creater's work the besis of his own while he Crantor's work the basis of his own, while he reproduced its ideas a little later in the Disp. Tusc. reproduced its ideas a little later in the Disp. Tusc. (esp. i. 19-72). Plutarch does the same thing in the piece addressed to Apollonia. Epicurus also had elaborated many comforting sentiments, as he was specially concerned to deliver men from the fear of death; he sought to convince them of the painlessness of dying, and of the absolute cessation of perception thereafter, thus grappling with the popular superstitions about the terrors of the under world (Lucret. de Bar. Nat. iii. with Heinze's world (Lucret. de Rer. Nat. iii., with Heinze's

Nor had the rhetoricians neglected the consolatory oration, and in the Hellenistic periodperhaps even from the time of Isocrates—they had framed for this species of composition certain rules, which in their later form are found in the μέθοδος ἐπιταφίων of pseudo-Dionysius and the περί παραμυθητικοῦ of Menander (4th cent. A.D.). These rules are followed not merely by heathen, but even by Christian, funeral discourses (cf. F. Bauer, Die Trostreden des Gregor v. Nyssa, Marburg, 1892). It is specially worthy of note that the plan of composition elaborated by the rhetoricians was taken over by poetry, the most outstanding instance of this being the *Consolutio ad Liviam* which bears the name of Ovid, and which is neither a fabrication of the Renaissance period nor, as was long believed, a product emanating, under Seneca's influence, from the later school of the respective but a poem actually presented to Livia rhetoric, but a poem actually presented to Livia upon the death of Drusus in 9 B.C. The rhetorical scheme had also an influence upon the work of Statius (esp. Silvæ, ii. 6: 'Consolatio ad Flavium

Among the elements of a consolatory oration a Althony the elements of a constantly orange as special place is given to the praise of the deceased. According to the detailed rules for the eyecour, this permitted of great amplification. The discourse likewise described the way in which the departed would be received by his ancestors and the heroes of antiquity. The bereaved were also shown that their experience was common to man-kind, that not only individuals but whole king-doms had perished, that life is simply a trust from the Deity, and that excessive grief can profit neither the mourner nor the dead. Instances were also given of men who, like Priam, would have been happier had they died earlier.

A distinct species of this literature appears in the 'consolations' addressed to those who had been banished, as, e.g., Seneca's letter to his mother Helvia, and Plutarch's περί ψυγῆς. In

these, as in works of consolation generally, special use is made of the ideas expressed in the popular diatribe of the Cynics, emphasis being laid upon the thought that the home of the wise man is not a particular city but the whole world. Here, too, the writers drew extensively upon the examples of celebrated exiles, such as Antenor, Evander, and Diomedes.

**CONSTANCY.**—This quality is most clearly manifested by instinct (q.v.)—the innate tendency to respond similarly to similar influences. Reasoning introduces variations. As a large part of the experience of savages is due to instinct, their conduct can be predicted till they are moved by thought, and then they are erratic; for guiding principles are lacking, with the result that way-wardness and fickleness are conspicuous. Attention is irksome to them (as to children), and tasks that are readily begun are swiftly abandoned. The civilized man criticizes and often resists instincts, while he compels the various choices that are open to him to move in directions favourable to his designs. Constancy may belong to a single thread of a life, or it may be characteristic of the entire collection of activities. An affection of love or hate may abide for years without having occasion to display itself and without affecting the ordinary conduct; at length the opportunity comes, and the fires that had been hidden blaze out. In other cases there are purposes which day by day mould all the circumstances and call into their service

every power of body and mind.
(1) Social influences and the necessity of obtaining a livelihood account for many sorts of constancy. Personal tendencies to variation are subject to limitations imposed by the opinious and plans of others. To a large extent we must all comply with demands made upon us, and it is so hazardous to foreake the career to which one has been bred, that forsake the career to which one has been bred, that the trade or profession chosen secures the service of the entire life. Success requires patience and perseverance. Hand and mind gain facility by continuous endeavours, the spur to which is often the necessity of providing for domestic needs. Nevertheless, in the most mechanical calling there may live affections and aspirations due to an ever fresh willingness; in the moss-covered well there is spring water. The soul can steadily rise, though outwardly the man appears to be treading a millround. Fidelity to persons and to causes frequently makes music in what appear to be

monotonous histories.

(2) Tendencies to constancy are not equally strong in all natures. There are weather-cock, and there are stubborn, souls; for flexibility and firmness are partly to be ascribed to constitution. Undisciplined no one can be satisfactory, but the discipline required differs in each case. Some vessels drift to and fro and are in danger of foundering, while others stick fast on the rocks and look as if they would be battered to pieces by the waves; the Christian religion would guide the one class and release the other. To change the constitution is a miracle of which Christianity believes itself to have the secret. Shallow soil can be deepened and rock can be dissolved; hence there may appear corn-producing fields, and gardens lovely and fragrant with flowers.

(3) When is constancy admirable? Only when it is a quality of aims that enrich human experience, when it belongs to a purpose to convert moral ideals to the actual, to acquire and spread truth, to respond gladly to whatsoever is pure and lovely,

to love men and to labour for their good, to make one's life valuable to humanity. Such purposes admit minor changes, whereas evil motives. poses admit minor changes, whereas evil motives, such as pride, may lie behind some forms of constancy. In order to maintain a vitally important consistency, superficial inconsistency is often imperative. There cannot be a righteous adhesion to opinions the falsity of which has been demonstrated, for 'constancy in mistake is constant folly.' Would not a resolution never to vote differently, never to espouse another faith, imply that in youth infallibility had been faith, imply that in youth infallibility had been acquired? An abiding loyalty to truth necessiacquired? An abiding loyalty to truth necessitates changes in beliefs, habits, and allies. But serious men cannot alter easily or without pain. The lower consistency is abandoned for a higher, and the abandonment is often accompanied by loss of what is dear, without any apparent com-

pensating gain.

(4) The conditions of constancy.—Failing the predominance of one idea or affection, the ideas and affections must be of a kind to work together with a good measure of harmony. 'A double-minded man is unstable in all his ways' (Ja 18). Serious and deep contradictions are ruinous. A commanding purpose (or purposes that harmonize with one another) will consolidate and organize the impulses and desires, so that, from being a mob. impuses and desires, so that, from being a mob, they are converted into an army. Noble aims will gather about themselves the strength and warmth of the lower impulses: and after a time the habit of beating down sensual and unsocial impulses will cause the soul to move more and more easily on the higher than on the lower paths. Courage will be required, and sacrifices also. Devotion to the interests of persons can survive the discovery of unworthiness in those whom one loves; and the cause espoused can still be served, though it fails to gain popular approbation; 'many waters cannot quench love' (Ca 8'). Generally there is the sympathy of some companions whose support helps sympathy or some companions whose support herps to keep the fires of zeal burning. Especially is constancy promoted if the general plan of life or some particular design or way is believed to have the favour of heaven; for then there is the assurance of supernatural assistance, and all the rills and streams of one's purposes seem to be drawn into the river of God's will. The human will is never so firm as when it thinks itself to be merged in God's, and great confidence possesses

the aspirant to sanctity who reads, 'This is the will of God, even your sanctification' (1 Th 43).

(5) The effects of constancy.—In Oliver Cromwell's Bible was the inscription, 'O. C. 1644, Qui cessat esse melior cessat esse bonus.' Mere visits to realms of thought, or occasional excursions into any sphere of activity, are insufficient to make deep marks on character, or to give skill in any handicraft or profession. A few warm days in winter can produce no harvest. Who can be an accomplished musician, scientist, linguist, without persistent toil? Great are the differences between the results of κατοικέω and παροικέω. A favourite word in the Fourth Gospel is μένω: the branch that 'abides' in the vine bears much fruit (Jn 15<sup>5</sup>). No wonder that Bunyan had an aversion to the lives of Mr. Pliable and Mr. Temporary, seeing that such men not only fail to reach the Celestial City, but even discourage other pilgrims. By constancy power is accumulated and capitalized, skill is acquired, and the soul makes for itself a tradition which it is ashamed not to honour. While the man becomes a law to himself, observers can rely upon him and infer his future from his past conduct, for there is logical connexion between the past and the present. Constancy makes the good better and the bad worse. See also PERSE-VERANCE.

W. J. HENDERSON.

CONSTANTINE.-I. Life.-Flavius Valerius Aurelius Constantinus was born on 27th Feb. of Aurelus Constantinus was born on 27th Feb. of a year uncertain, generally given as 274, but probably a little later. The place was Naissus (Nisch) in Dardania (Servia) (Anon. Valesii, 2; Constant. Porphyrogenitus, de Thematibus, ii. 9 [in Migne, PG exiii.]). The fiction of his birth at York, current in all medieval English historians York, current in an mediaval Engine misograms (the silence of Bede, HE i. 8, should be noted), arose from a misunderstanding of the phrase 'illic oriendo' (Panegyr. vi. 4), which refers to his accession, not his birth. Constantine's father, M. Flavius Valerius Constantius (the surname Chlorus is not found until late Greek writers), was a noble Dardanian soldier, whose mother was the niece of the emperor Claudius. His mother, Flavia Helena (b. about 250; Euseb. Vita Constantini, 2 iii. 46), (b. about 250; Euseo. Vita Constanting. In. 40), was the daughter or servant (Ambrose, de Obitu Theodosii, 42) of an innkeeper of Drepanum in Bithynia, a city rebuilt by Constantine in 327 in her honour and re-named Helenopolis. Her marriage to Constantius was probably irregular (Anon. Vales. 1; Zosimus, Res Gestæ, ii. 8; these pasvates. 1; Zosimus, has Greene, n. 6; these passages should not be pressed as more than morganatic [see Digest. xxv. 7]) until after the birth of her son (cf. Constantine's legislation, infra, V. i. d (2)). When Constantine was about 14, his father was promoted by Diocletian to the rank of 'Cæsar' (1st March 293), with the government of Gaul (1st March 293), with the government of Gaul and Britain, on condition that he divorced Helena and married Theodora, daughter of the emperor Maximian. Constantine did not accompany his father, but was left at Diocletian's court at Nicomedia, possibly as a hostage, until the growing jealousy of Galerius, after the abdication of Diocletian and Maximian (1st May 305), compelled him to a memorable ride agress Europe to his him to a memorable ride across Europe to his father's camp at Boulogne (Lactant. de Mortibus Persceut. 24; Anon. Vales. 3, 8), where he arrived in time to share his father's victories over the Picts (Eumenius, Panegyr. vii. 7).
The death of Constantius at York (25th July

The death of Constantius at York (25th July 306) was followed by the proclamation by the army of Constantine as 'Cæsar' (Zos. ii. 9; 'Augustus' in Euseb. HE viii. 13, VC i. 22, though this higher honour was not ratified by Galerius until the following year [Panegyr. vi. 5; coins in Eckhel, Doct. Num. Vet. viii. 72; Lact. MP 25]). His seat of government was Trèves, which he embellished with many buildings. In 307 he strengthened his position by his marriage. 307 he strengthened his position by his marriage at Arles to Fausta, the daughter of Maximian. The Empire was thus divided between six rulers: The Empire was thus divided between six rulers; in the East, Galerius, Licinian (Valerius Licinianus Licinius), and Maximin Daza; in the West, Constantine (Gaul and Britain), Maximian, who had reassumed the purple, and his son Maxentius. But Maximian, after a crafty intrigue against Constantine, was captured and forced to strangle himself in Feb. 310 (Lact. MP 29, 30; Eumen. Panegyr. vii. 20), while the death of Galerius at Sardica (Anon-Vales. 3, 8) in May 311 led to the division of the Empire between Constantine, Licinian, and Maximin Daza. The three refused to recognize Maxentius, whose tyranny in his province of Maxentius, whose tyranny in his province of Italy, Africa, and Spain, gave Constantine an excuse for the invasion of Italy (Euseb. HE ix. 9. 2, VC i. 26; Nazarius, Panegyr. x. 19, 31; Zos. ii. 14 says Maxentius was the aggressor). He

1 Secok, Gesch. d. Untergangs d. antik. Welt, i. 435 n., gives 280 as the date, but his reference, CLL i. 2 p. 802, seems in accurate.

2 Hereafter cited as VC.

2 Hereafter cited as MP.

crossed the Alps (Sept. 312) either by Mt Cenis or erossed the Alps (Sept. 312) either by Mt Cents or by Mt. Génèvre (see the contemporary [A.D. 333] Itin. Anon. Burdigalense, ed. Geyer in USEL xxxix. 5), captured Susa and Verona (Oct.), and within 58 days of declaring war defeated the sluggish Maxentius at Saxa Rubra, about 9 miles N.W. of Rome. The drowning of Maxentius in attempting to escape over the Milvian Bridge (Ponte Molle) completed his triumph, 28th Oct. 312 (Anon. Vales. 4, 12; Lact. MP 44; Euseb. HE 1x. 9; there is a full account in Seeck, op. cit. 1, 109-137).

4, 12; Lact. MP 44; Euseb. HE 1x. 9; there is a full account in Seeck, op. cit. i. 109-137).

Constantine's victory was followed, early in 313, by a conference at Milan with Licinian, and by the marriage of Licinian to his sister Constantia. The defeat of Daza by Licinian near Adrianople (30th Apr. 313) and his death in August at Taisus left Constantine and Licinian in sole possession—the ex-emperor Diocletian dying probably that same summer (Seeck, op. cit. i. 459 f., following as his source Idalius, Consulares Fasti, dates 3rd Dec. 316) at Salona. But the concord of the two was ended by the triumphs of Constantine at Cibalis hollow. The first civil was between them was ended by the triumphs of Constantine at Cibalis (Vinkovei in Hungary), 8th Oct. 314, and Maidia in Thrace (Anon. Vales. 5; Zos. ii. 18-20), after which a truce was patched up, Constantine leaving Licinian in possession of Thrace, Asia Minor, Syria, and Egypt. Constantine now devoted himself to internal reforms, from which he was called away by the war with the Goths and Sarmatians in Illyricum and Dacia (322) and the final struggle with Licinian. The victories in suite of Licinian's with Licinian. The victories, in spite of Licinian's superior forces, of Adrianople (3rd July 323) and Chrysopolis (Scutari, 8th Sept. 323) were followed by the humiliation and enforced death of Licinian in 324 (Soc. HE i. 4; Euseb. VC ii. 18; Zos. ii. 28; Eutrop. Brev. x. 6) and the re-union of the Empire under one head.

The foundation by Constantine of a new capital The foundation by Constantine of a new capital (4th Nov. 326 [Anon. de Antiq. Constant. i. 3, in A. Banduri, Imperium Orientalle, Paus, 1711]; see Burckhardt, Die Zeit, etc. 415; but de Broglie, L'église, etc. i. 440 f., dates in 328) at Byzantum is one of the great events of history. In reality it continued Dioeletian's policy of ruling from Nicomedia. It was dedicated on 11th May 330 (Gibbon, ed. Bury, ii. 157 n.), under the title of New Rome. The removal of the seat of government was completed by an entire re-organization of the Empure. pleted by an entire re-organization of the Empire, the new absolute monarchy of Diocletian which had taken the place of the old principate being consolidated and systematized (see Seeck, op. cit. ii.). Constantine's last years, though years of peace, were unfortunate. His character degenerated (Eutrop. Brev. x. 7), his expensive building operations drained the Empire of its resources (Zos. ii. 32, 35, 38; Schiller, Rom. Kaiserbuilding operations drained the Empire of its resources (Zos. ii. 32, 35, 38; Schiller, Rom. Raiserzeit, ii. 230), his habits became effeminate, and his jealousy of a rival made his family life miserable. His eldest son Crispus, the offspring of an early irregular marriage with Minervina, had shown great ability in forcing the straits of Hellespont against the superior fleet of Licinian (323), yet he was executed (July 326) at his father's command (Anm. Marcell. xiv. 11), though the reason for this act is obscure. This was followed, possibly a year or two later, by the execution of his wife Fausta on the charge of adultery. In 331 Constantine was forced to attack the Sarmatians, who had encamped near the Danube. His victory—for his supposed defeat is a curious error of Gibbon for his supposed defeat is a curious error of Gibbon (ii. 217)—was the last of his successes. He died near Nicomedia on Whitsunday, 22nd May 337, though he nominally reigned for four months (until 9th Sept.) after his death.

1 For detailed investigation of this domestic tragedy see Gorres and Seeds. Die Verwandtenmorde Constantine des Grossen, in ZWT xxx, 118871, 843 ff., xxxiii, [1890] 63 ff.

In spite of the claims of Rome, he was buried at Constantinople in the great church of the Trinity (later called 'Holy Apostles'), which he had completed for the purpose the previous Easter. At Rome the heathen senate enrolled him among the gods (V. Schultze, Untergang d. gr.-rom. Heidentums, 1887-92, i. 66), though the medal struck to commeniorate this was made of a Christian type (King, Christian Numismatics, 1873, p. 53). In 1204, his tomb was destroyed by the Latin crusaders on their capture of Constantinople.

Constantine's hie, like that of Charles the Great, has become legendary, and was one of the favourite romances of the mediaval Church On these see the critical studies of E Heydeneich, esp 'Constantin der Grosse in den Sagen des Mittelalters' in Zischr. f. Geschichtswissenschaft, ix. [1893] 9. 1ff. In spite of the claims of Rome, he was buried

II. Extent of the Church at the time of Constantine's 'conversion.'—At the outset of an in-Constantine, it is of importance to understand the extent and influence of the Church and its attraction for any statesman.

attraction for any statesman.

(a) Numbers.—Matorials for forming an estimate of the strength of Christianity under Diocletian will be found in Hainack's claborate survey (Expansion of Christianity, Eng. tr. ii. [1904] 240-456). From a careful study it would appear that in the East the Christians, except in a few towns, were still only a small minority, at the most—one-ninth or so of the whole (H. Richter, Westrom. Reich [1865], p. 85)—and in the West they would be considerably less. Unfortunately we do not know the population of the Emwest they would be considerably less. Omortunately we do not know the population of the Empire. The liguie of Gibbon (i. 42), 120 millions, is absurdly large; J. Beloch (Bevolkerung d. gr.-rom. Welt, 1886) gives it under Augustus at 54 millions, but this seems too small. If we take it at 60 millions under Neio, the great famines, etc., in the middle of the 3rd cent, would have reduced it to slightly less under Constantine. At the outside, therefore, the Christians would scarcely number five millions (Gibbon's proportion, 2,6,11,65), thus comes to the same result), or less than the Jews, who numbered over six millions, of whom one million were in Egypt. In Rome in 250 we calculate from Eusebrus, HE vi. 43. 11, that the Christians numbered between 40,000 and 50,000 in a city of nearly a million, i.e.  $\frac{1}{10}$ , though this proportion would be higher in the time of Constantine. In the country districts the Christians were far less numerous than in the country

(b) Influence. - But what the Christians lacked in numbers they more than made up by their organization, unity, wealth, and driving power. In these matters only the Jews could equal them, but Judaism was hindered by its Law from ever becoming an international religion. The Christians, shut off from the pleasures of the world, had grown immensely rich, while their morality, solviety and enthusiagen would extract any glater. sobriety, and enthusiasm would attract any statesman who looked deeper than popular rumour. For any statesman anxious to infuse new life into a dying world Christianity had no rival except, possibly, Mithraism, for Neo-Platonism, etc., had no value for the vulgar; nor must we overlook tho value to the statesman of the Christian doctrine

of immortality (Burckhardt, op. cit. p. 140).

III. Personal relation to Christianity.—The personal relation of Constantine to Christianity personal relation of Constantine to Christianity is a subject of much importance, as upon its decision many questions, both theological and ecclesiastical, depend. As to the date of his conversion the earliest authorities are contradictory. Lactant, Instit. Div. vii. 27, a work finished before 311, would be conclusive, but the passage has been shown by its editor, Brandt (CSEL xix, 668), to be an interpolation. Equally

a profes

conclusive would be sentences in the letter of Constantine to the bishops at Arles in 314 or 316 (Optatus Miley. Mon. Vet. [USEL xxvi. 208]), but Hosius (see *mfra*, IV. (b)). Zos. 11. 29 (cf. Soz. *HF* i. 3) dates the conversion after the execution of Crispus, to the remorse for which he attributes it. For our part we first detect a warmer note as to Christianity about 314, in Constantine's letter to Chrestus (Euseb. HE x. 5). As legards his whole relation to Christianity, the data are involved and have been variously interpreted, while the difficulty has been increased by the delay of his baptism until his death. The whole problem has been rendered additionally obscure by the complex imperfect character of Constantine himself—calculating, shrewd, superstitious, often cruel, cynical—whose one great instance of consummate foresight alone entitles him to be called 'Great.' Brieger (Ztschr. f. Kurchengesch. iv. [1881] 163 ff.) and Gibbon make it altogether a question of politics; but, as Bury has pointed out (Gibbon, ii. 566), this is to ascribe to Constantine a freedom from superstition which, though natural in an English deist of the 18th cent., was altogether unknown in the 4th. Schiller (op. cit. ii. 213) believes that his ideal was a syncretistic fusion of the best elements of Christianity and paganism. But Constantine's powers of observation must have shown him the impossibility of any such syncretism; the refusal of precisely such syncretism lay at the root of the whole persecu-tion of Diocletian. As a summary of the follow-ing survey we incline to think that Constantine at first leaned to toleration for political reasons, as a system of balance or equal opportunity for heathenism and Christianity; and that the suc-cess of his arms and the identification of his vanquished foes with heathenism (cf. Constantine's Oratio ad Sanet. Coetum, 23-26, of which this is the concluding thought) led to a policy of self-interest passing into an intellectual, possibly even a moral, conviction; with the consequent effort, but without unstatesmanlike haste, to supplant heathenism by Christianity, and in certain disec-tions (see infra, V. i.) to alter the laws accord-ingly. The relapse of his last years was rather moral degeneration than any reaction (Burckhardt) towards paganism, while at its best his religion was probably a 'strange jumble' (Niebuhr, Rom. Hist., Eng. tr. [1828 ff.] v. 449) of creed and superstition.

(a) In early life.—That Constantine's mother Helena was a Christian before her divorce has been asserted (Theodoret, HE 1. 17); but Eusebius (VO iii. 47) ascribes her conversion to her son. While there is no reason to identify his falher Constantins leaning towards Monotheism (Euseb. VO i. 17, ir. 49) with a belief in Christianity, it is of importance to note his tolerant disposition. During the great persecution of Diocletian it was only in Constantius' provinces of Gaul and Britain that there was any safety for Christians (Optat, Milev. i. 22), though even Constantius thought it well to conform to the edict of Diocletian to the extent of destroying the churches (Lact. MP 15, as against Euseb. HE viii, 13. 13). Here and there also there were one or two marty1s—not necessarily, of course, by Constantius' orders. To the tolerant practice and disposition of his father we must add the influence of Nicomedia, at the palace of which Constantine was brought up. The

1 Spain, where persoutions abounded, was not, as is often stated, in his government, but was under the charge of Datian, an officer of Maximian.

2 For the martyrs in Britain—St. Alban (very doubtful), Aaron, and Julius (more doubtful still)—see Bede, HE, ed. Plummer, ii. 17-20; Haddan-Stubbs, Councils, Oxford, 1869-78, i. 6; Harnack, Expansion, ii. 410, n. 4.

9.4

power of the Christians, whose great basilica towered up against the palace, the fact that, in the court itself, Prisca the wife and Valena the daughter of Diocletian, the influential eunuchs Dolotheus and Gorgonius, and Lucian the chamberlain, were Christians (Lact. MP 15), the 1esistance of the Christians to Diocletian's edicts, and the chaos produced by attempts to carry out the edicts—all must have impressed him with the folly and impossibility of a policy of persecution (cf. Constantine's Orat. ad Sanet. Cost. 25), Yet, while in Gaul, his personal cult appears to have been that of Apollo or the sun-god (Eumen. Panegyr. vii. 21), and even late in his reign he was still under its influence, so that, e.g., his statue at Constantinople was a mutilated sun-god from Athens (cf. infra, V. ii. (c) 'Sunday')

(b) In his struggle with Maxentius.—Rumours of the persecution in the East under Galerius and Maximin Daza would confirm Constantine in his conception of its folly and in his policy of tolera-tion (Lact. MP 24. 9). He was therefore a willing party in signing, with Licinian, Galerius' edict of toleration (30th Apr. 311). In his struggle with Maxentius, the plea of Constantine's invasion was the deliverance of Rome from his tyranny and vices (Euseb. *HE* 1x. 9. 2, *VC* 1, 33; *Panegyr*. ix. 4; Julian, *Cas.*, ed. Hertlein, pp. 405, 422), and the Christians as such were tolerably treated (Optat. Milev. i. 18). As regards the famous vision at the Milvian Bridge opinion will always be divided. In our earliest authority (Lact. MP 44, written in 314, probably by the tutor of Crispus), Constantine was warned in a dream on the night before the battle to draw the monogram of Christ upon the shields of his soldiers.

For the form of the monogram and labarum, see Smith-Cheetham, DOA i. 494. We may note that the labarum (derivation unknown), or standard with this monogram, appears on Glesco-Bactuan coins of the 2nd and 1st cent. n.o., and also on Tarantine coins of the Brd cent. n.o. (ef Soc. HE v. 17, and Soz. HE vn. 15, for symbols of the cross as a sign of immortality on temples of Isis; see also Schiller, pp. 2st. ii. 205 n.; Madden, Num. Chron, 1877, p. 17 ft.). According to E. Rapp (Das Luha um und d Somencultus, Bonn, 1865), there is no well-attested use of the labarum as a Christian symbol before 823 (see below, p. 789, top).

The familiar story is not found in Euseb. HE ix. 9, which is silent on the subject, but occurs in the later VC i. 28 (cf. also ib. ii. 55; Soz. HE i. 4), where Eusebius states that Constantine told it him 'long afterwards and confirmed it with an oath,' but gives no date. The value of this personal statement is discounted by the silence of Constantine in his Orat. ad Sanct. Coet., where surely of all places he would have dilated upon it. Oaths with Constantine were also very common. Allowing for exaggerations in the intervening years, we may take it that something external happened, possibly a solar halo, which not unfrequently assumes the form of a cross, and that this was sumes the form of a cross, and that this was interpreted by Constantine as an augury of Divine intervention. There is proof of the dream in the inscription by the Senate on the arch of Constantine, dedicated in 315. The 'instinctu divinitatis' (CIL vi. 1139) there alleged as the cause of victory (of. Constantine, Orat. ad Sanct. Coet. 26) has been shown to be original and no later addition (of Lancieri Pagun and Charletian Reme addition (cf. Lanciani, Pagan and Christian Rome, 1892, p. 20f.; Garrucci, in King, op. cit. p. 20). Additional proof is found also in the pagan Panegyr. ix. (written in 313) ch. 4 'te divina pracepta,' ch. 11 'tu divino monitus instinctu.' Whether this 'coeleste signum,' as Lactantius,

1 This explanation was first given by Fabricius (Bib. Greeo, vi. 8-29. Stanley (Eastern Church, p. 181) refers to the Aurora Borealis of 1848 and its curious popular interpretations; of Nazarius, Panegy; (writien in \$21), ch. 14, of the hosts in the sky in \$12-313 that were 'the talk of all Gaul.' The state of the state of 141

loc. cit., calls it, was a miracle 1 brings in con-

siderations beyond our scope.<sup>2</sup>
We are told (Euseb. *HE* 1x. 9. 10, 11, *VC* 1. 40) that, after the victory of the Milvian Bridge, Constantine erected at Rome a statue of himself, with the spear he usually carried in his right hand shaped like a cross. As evidence the VO is almost valueless, and Brieger thought that the passage in IIE was an interpolation. But Eusebius mentioned this statue in a speech at Tyre in 314  $(HE \times 4.16)$ , and this seems to decide its existence and the general belief in the East in 314 as to Constantine's position, though the popular Christian rumour might not be a correct interpretation of the artist's work.<sup>3</sup> The spear-cross was probably designedly ambiguous. A more important evidence of Constantine's favour for the Christians is his or constanting a layour for the Christians is has handing over to the Roman bishop (before Oct. 313; see infra, p. 79<sup>b</sup>) of the 'domus Faustæ,' a palace possibly of his wife, formerly belonging to the Lateran family (thegonovius, Rome in Middle Ages [Eng. tr. 1894 ff.], 1. 88), which became the residence of the Bishops of Rome (Lib. Pontif., ed. Duchesne, i. 191). The erection of the churches commonly attributed to him (Lateran, St. Peter's) is probably a little later, if we may indue from the is probably a little later, if we may judge from the fact that they were built with pagen spoils (Greg. op. cit. i. 92), though the small St. Paul's (fuori le muri), the foundation of which was wrongly attributed to Constantine, would come under the head of the oratories restored after the edict of Milan (Duchesne, op. cit. i. 178, 195; Lanciani, op. cit. p. 150 ff.; Greg. op. cit. i. 100). On the whole the evidence of Constantine's churches in Rome (the list of which in the Lib. Pontif. is very exaggenated) is inconclusive as to the date of his conversion.

(c) Between 312 and 323.—After the victory of the Milvian Bridge, Constantine and Licinian promulgated at Milan, in the spring of 313, a second edict of toleration—'free liberty to choose that form of worship which they consider most suitable'—and restoration of forfeited churches

and property.

For this edict see Euseb. HE x. 5, and for its original Latin form, Lact. MP 18. Note the non-committal religious references—'Quidquid est divuntatis in sede caelesti.' This edict was second to that of Galerius, to which the 'hard conditions' (airperes) of § 4 refers. Mason (Persecution of Dicoletican, 1876, p. 227 ff.) has exploded the older idea (still held in DOB i. 633) that Constantine issued a second edict of toleration at Milan, before the Milvan Bridge, and that this was the third.

But, until 323, Constantine kept a balance between Christianity and heathenism, though inclining more and more to the former (see infra, inclining more and more to the former (see infra, IV. (a)). About 317, he selected the Christian Lactantius to be the tutor of his son Crispus (b. 306[7]; Jerome, de Vir. III. 80). From 315 onwards, pagan emblems (Mars, 'Genius Pop. Rom.,' Sol) disappeared from his coins, and indifferent legends ('Beata tranquillitas,' etc.) took their place. This period of neutrality was ended by his conflict with Licinian. In 319, Licinian had begun to oppress the Christians, especially in his army (Workman, Persecution in Eurly Church, 1906, p. 187 n.), though without much bloodshed (Euseb. HE x. 8; VCI, 49-56, ii. 1, 2; Sozomen, HE i. 7; for a clear VOi. 49-56, ii. 1, 2; Sozomen, HE i. 7; for a clear examination see F. Görres, Die Liein. Christenverfolgung, Leipzig, 1875, esp. p. 29 ff. To this persecution belong the Forty Martyrs of Sebaste [see O. v. Gebhardt, Acta Mart. Selecta, 1902,

1 J. H. Newman (Essays on Eccles. Miracles, 1813, p. 103 ff.) and de Broglie (op. cit. i. 216 ff.) give the best defence of this

and de Broglie (op. cit. i. 216 ft.) give the cost would probably yiew.

It may be of interest to note that the signs would probably be read in Latin—in hoc signs vinces—and not Greek—rourd vice—as Costantine spoke Latin. The annalists are divided on the subject.

5 Cf. Ensething mistake (HE vil. 18) of a statue of Assulapius at Patiens for one of Jesus.

pp. 166-181]). This foolish move gave Constantine the opportunity of appearing as the advocate of the Christians (323), who were really far more numerous in Lieman's domains than in the West. The struggle thus became a cusade, and the labarum was stamped on most coins (Euseb. HE

Num. Chron., 1877, p. 53 ff.).

(d) From 323 to his death.—After his conflict with Licinian, Constantine, according to Eusebius, at his head converted to the wick. put his hand seriously to the work, forbidding put his hand seriously to the work, tobleaning pagan sacrifices in general (see infra, p. 81a), and building churches (VC 11. 44-46). But, on the whole, his attitude to paganism was cautious, though his aversion to the old faith would be increased by his unfortunate reception in heather Rome in 326, which led to his abandoning it for Constantinople. After this he seems to have increased the privileges of the clergy (Soz. HE i. 8, 9), and he rewarded towns that turned temples into churches (Soc. HE i. 18; Soz. HE ii. 5), in several cases because of immoral rites (cf. Euseb. Laud. Constant. 8). Many temples were also despoiled for the founding of Constantinople, and despoiled for the founding of Constantinople, and by his expressed wish the new city was free from organized heathenism (Euseb. VC ii. 48). At the same time the existing temples of Byzantium—Cybele, Castor and Pollux, etc.—were not destroyed, and the city itself was dedicated to Tyche (Fortuna), though without temple services (Zos. ii. 21; Schultze, op. cit. ii. 281; for this Tyche, Bury refers to a study of J. Strzygowski, 'Die Tyche v. Konstant' in Analecta Graeciensia, Graz, 1893), By this time Constantine's 'conversion,' hitherto chiefly political, had become an intellectual belief chiefly political, had become an intellectual belief in Christianity as an historical religion capable of proof (see Constantine's remarkable sermon, Orat. ad Sanct. Coet., esp chs. 4, 11, 18, 19, where the Sibyl and Virgil's 4th Ectoque are appealed to). The return of his aged mother Helena from her pilgrimage to Palestine (undertaken in 326, possibly because of her son's execution of Crispus), with two nails from the Cross, one of which he turned into the bit of his war-horse, led to his foundation at Jerusalem of the Church of the Holy Sepulchre on the site of a temple of Venus (Soc. HE i. 17; Euseb. VC iii. 30), and he also prepared a form of common daily prayer for the army (Euseb. VC

iv. 20).
Though not even a catechumen, Constantine delighted in preaching sermons, in Latin, to the delighted in preaching sermons, in Latin, to the applicating crowds; one of these has been preserved to us by Eusebius (VC iv. 29). But at the same time his alienation from Catholicism towards Arianism was increasing (see 21/22, p. 80), helped probably by the death of his mother Helena (c. 330 [Euseb. VC iii. 47]; buried at Constantinople [Soc. HE i. 17]). The fact that he did not take any steps either to become a catechumen or to be haptized until he felt recent a duelth may be availabled. until he felt near to death, may be explained as due either to political balancing, or to lack of decision, or, more probably, to the belief that baptism, like the heathen lustrations, ensured the remission of sins, and to the growing dread of post-baptismal sin. He was finally haptized by the Arian bishop Eusebius of Nicomedia (Euseb, VC iv. 62-63; Jenome, Chron., ann. 2353 [in PL xxvii. 680]). In the Greek Church he has practically been cannot be the Arcatlon. to the Apostles.'

Into the large question of the advantage or otherwise to the Church of Constantine's adoption of

1 Soc. HE i. 17; Soz. HE il. 1; ion characteristic to be an invention. But the rest of the chapter—the Invention of the Cross—must be discredited owing to the complete silence of Euseb. VO iii. 20, 30, and of the Itim. Burdfuldense (written \$88 in OSEL xxxix.)). The story is first found in Cyrli of Jerusalem (b. 316). Ep. all Const. 3, the genuineness of which is, however, doubtful.

Ŋ

Christianity as the State religion, we cannot enter. The familiar lines of Dante (Inferno, xix 115),

An! Constantine; to how much ill gave birth, Not thy conversion, but those iich domains That the first wealthy Pope received of thee,

have really a wider significance than the false donation; and the judgment of Mill (Essay on Liberty, ch. 2) deserves to be pondered 'It is a bitter thought how different the Christianity of the world might have been, had it been adopted the Thomas and the state of the St as the religion of the Empire under the auspices of Marcus Aurelius, instead of those of Constantine 1 For a contrary judgment cf. Newman, Arians,

1871, p. 248.

IV. Constantine and the Church.—(a) Relations of Church and State.—Nothing was further from the intention of Constantine than to abandon to the Church any portion of his Imperial prerogative, and this determination would be increased by the sycophancy of the Court clergy. Into his adoption of the new religion he carried all the old Roman ideas, for his 'conversion' was not a revolution in the political genius of the Empire. Whatever crudity there may have been about his religious opinions, his views as an official were clear. To the Roman governor religion was a department of the civil service. The consequences of this are apparent in the after history of the Church. The Emperor, it is true, could not be the Pontifex Maximus of the new religion—this title, retained by Constantine, was dropped by Gratian (Zos. 1v. 36), and in time lapsed to the Bishop of Rome but the new autoracy founded by Diocletian and himself (on this see Gibbon, ch. xvii., with Bury's appendix) made this of less moment than for the early Cæsars. For that matter, the official title of the new monarchy was the higher 'deus' (Schiller, op. cit. ii. 33, 34). In consequence, in the Eastern Church the Emperor was always the supreme head, as his modern representative, the Czar, is to-day; but in the West the ahandonment by Constantine of Rome for his new capital gave the bishops of Rome their great opportunity.

Thus Constantine and his successors, while giving the Church Councils full liberty of discussion, insisted that their own consent was necessary to confer validity on the canons; and they regulated the business by Imperial commissioners, often laymen. So, at the Council of Arles, Constantine deputed Bishop Marinus to preside (Euseb. HE x. 5. 19; Mansi, ii. 469); at the Council of Nice, Bishop Hosius of Cordova (on this complicated question Hostas of Contova (on this complete question see DCB i. 168, and, for the Rom. Cath. view, Hefele, Councils, Eng. tr. 1871, i. 37 ft.); while at the Council of Tyre (335) he sent the consular Dionysus as commissioner (Euseb. VC.iv. 42; PL viii. 562). The doctrine asserted by Constanting was never wholly lost even in the Roman Catholic Church, and was of great influence as late as the Council of Constance (cf. also Articles of the Anglican Church, no. 21).

(b) Constantine and heresy.—To the Roman magistrate religious recusancy was tantamount to political disaffection. Constantine and his successors were therefore driven, almost before the ink on the decree of toleration was dry, to deal with heresies and schisms within the Church itself. To allow the Church to be sent into diverse parties would be to destroy the very solidarity and universality ('catholic') which had marked it out to the politician from all other religions as destined to become supreme. Hence the anxiety of Constantine to secure the peace of the 'legitimate Catholic Church' (Euseb. HE x., 5: 20).

(1.) Constantine's first intervention was in regard to the Donatists (u. a.)

to the Donatists (q.v.).

For Constantine and the Donalists we have Optatus Milev. de Santanate Donalist. (written about 275) i. 22 i.; but Optatus is neither complete nor altogether trustworthy. We also,

possess a valuable collection of anonymous documents, Decem Monumenta Vet. ad Donatist. hist. pertinentia, usually bound aunumenta vet. au Donattst. aist, perturentia, usually bound up with Optatus (best ed of both by C Ziwaa in CSEL xxv. [1893], also by Dupin [1702] and Migne, PL viii 674 ff.). Certain letters of Augustine (Epp. 88, 43) add to our knowledge. For a critical examination see O. Seeck, Quellen u Urkunden uber die Anfange des Donatismus' in Ztschr. f. Kirchengesch x [1889] b05-568, and L. Duchesne, Le Dossier du donatisme, Paris, 1889.

In answer to the appeal of the Donatists (18th Apr. 313) forwarded by Anulinus, proconsul of Africa, Constantine summoned Cæcilian, bishop of Carthage, and the ten accusing bishops to appear at Rome before a synod over which he instructed Pope Miltiades to preside (Euseb. HE x. 5. 18; August. Ep. 88, c. Crescon. iii. 81). At the same time, prompted by Hosius, bishop of Coidova, he gave Cacellian certain marks of lns esteem (Euseb. HE x. 6). The synod met (2-4 Oct. 313) in 'the casa of Fausta on the Lateran,' and the decision was given against the Donatists (Optat. op. cit. i. 23-24; Aug. contra Ep. Parmen. i. 10; Ep. 43, 5 [14]) On the further appeal of the Donatists, Cæcilian was detained at Brescia (b. i. 26), and two bishops were dispatched by Constantine to Africa to make inquiries 'ubi esset Catholica.' As they reported in favour of Cacilian, the Donatists pressed the appeal, and Constantine ordered the case to be re-tired at Arles (Euseb. HE x. 5. 21; Optat. op. cit. i. 26; Decem Mon. Vet. iii. iv. v.). About the same time (Feb. 15, 315) a commission was appointed by Constantine to inquire into the guilt of bp Felix of Autumni.<sup>2</sup> Of the decisions of Arles we have only fragmentary evidence (F. of Arles we have only fragmentary evidence (F. Maassen, Quellen des canon. Rechts, Graz, 1870, p. 188 ff.), and its date, 1st Aug. 314 or 316, is uncertain, though probably the latter. As the Donatists were still not satisfied, Constantine heard their appeal at Milan (10th Nov. 316; Augustine, c. Crescon. iii. 16, 67, 82, iv. 9, ad Don. 19, 33, 56), and confirmed the decisions of the Councils (August. Brev. coll. Carth. d. iii. c. 12 ff., contra Ep. Parm. i. 11; cf. PL viii. 750). Constantine thereupon issued edicts confiscating the churches of the Donatists (August. Ep. 105, 2, 9; 88, 3), though within a few years (5th May 321) he 88, 3), though within a few years (5th May 321) he

88, 3), though within a few years (5th May 321) he adopted a policy of toleration or indifference (Optatus, Dec. Mon Vet. vuit., Brev. iii. 40, 42; cf. Aug. ad Don. 56, Ep. 141, 9).

(ii.) As regards other heretics, Eusebius (VC iii. 63-65) tells us of his zeal against 'Novatians, Valentinians, Marcionites, Paulians' (i.e. followers of Paul of Samosata), those 'who are called Cataphrygians' (i.e. Montanists) and the confiscation of their meeting-places to 'the Catholic Church.' Thus, as Eusebius puts it, 'the savage beasts were driven to flight.' Constantine's refusal to 'heretics' of the privileges granted to the Church became part of the law of the Empire (Cod. Th. xvi. 5. 1; Cod. Just. i. 5. 1; in 326).

(iii.) To the greater Arian difficulty which

(iii.) To the greater Arian difficulty which distracted the Eastern Church [see art. ARIANISM, vol. i. p. 777] the attention of Constantine seems to have been drawn about the year 319. As a majority of the bishops of Asia appeared to support Arrus' cause, Constantine, in the hope of ending the dispute, first sent his confidential adviser Hosius, bishop of Cordova, to Bishop Alexander of Alexandria and the presbyter Arius, with a characteristic letter begging them to lay aside 'this insignificant subject of controversy 'and co-operate

insignificant subject of controversy and co-operate 1 If no. v. is genuine, it was either dictated by Hosius or shows interpolations. It does not seem to the present writer that it can be safely used with reference to Oonstantine's character and Christianity at this period.

2 Thus is the correct form, not aptimpt. For the text of this trial see Des Mon. Vet. ii., in OSEL xxvi, 197, and for its date L. Duchesne, op. cit., p. 642.

8 So Seeck, op. cit.; but Duchesne, op. cit., p. 640, argues for 814; time for the events seems to the present writer to demand the later date. For the decisions see Deo. Mon. Vet. iv. (OSEL xxvi, 200), also in PL viii. 818; August. Ep 48. For the councils, see PL viii, 815; Hefele, Councils, Eug. tr. i, 180 fi.

with him in restoring unity (Euseb. VC ii. 64-72). As this failed, Constantine, on the advice of Hosius (Sulpic. Severus, Chron. ii. 40, 5 ed. Halm in CSEL 1.), summoned a Council which met at Nicas (19th June-25th Aug. 325). The 'council which met at Nicas (19th June-25th Aug. 325). The 'council menical' (olsovyérn, i.e. 'of the Empire,' cf. Lk 2¹ and CIL, passim) character of the Council—about 10 bishops from the West, and 308 from the East (Athanasius, ad Afros, 2; cf. Soc. HE 1, 9)—and its importance alike mark the beginning of a new term for Christianity. era for Christianity. Its controversies do not concern us; but for our present purpose it should be noted that the influence of Constantine for peace was considerable (Theod. HE i. 11), that the Council was summoned in his name (Euseb. VC iii. 6), that Constantine presided at the opening (ib iii. 10 ff.) and addressed it at its close (ib. iii. 21), and that he communicated its decision to the Church of Alexandria (Soc. HE i. 9). But in 328 there was a change of policy. Whether owing to the influence of his sister Constantia, the widow of Licinian, who had herself been influenced by Eusebius of Nicomedia, or because Constantine was now more in touch with the speculative East than in his earlier years, he sought a less stringent enforcement of Nicene doctrine. The Arianizing Eusebius of Nicomedia, who had been banished at the close of the Council, now reappeared and gained the Emperor's ear. The result was seen in the deposition of Athanasius (cf. vol. ii. p. 169, or W. Bright in *DCB* i. 186) by the Council of Tyre (335), his banishment by Constantine (336) to Trèves, the rehabilitation of Arius by Constantine (Soc. HE i. 26), and the order that he should be received back into fellowship at Constantinople (336). The death of Constantine left the Arian trouble to his successors, under whom Alianism became still more identified with Court circles,

We may point out that Constantine's whole policy as regards heresy and unity fastened upon the Church for sixteen hundred years a policy of intolerance. The result was soon seen in the case

of Priscillian (see Priscillianism).

(c) Endowments.—The supposed 'Donation of Constantine,' all-important historically as this falsehood proved, need not detain us. It carried with it the dear of Constantine. with it the story of Constantine's leprosy, and baptism by Sylvester at Rome.

The story will be found in PL viii. 507-578. Its date was probably the 5th century. In 1229 two men who ventured to doubt its genuineness were buint at Strassburg, and as late as 1523 it was deemed heresy to dispute it (Lea, Inquisition in Middle Ages, 1888, iii. 568 n.). Its overthiow by L. Valla (in Donat. Const. Declam. in Brown, Fassio, Rerum Expetend. [1690] i. 182) was one of the first results of the Renaissance.

The benefactions of Constantine were, however, considerable. For instance, he sent Cæcilian, bishop of Carthage, 3000 folles (φολλεῖς), or purses, i.e. nearly £18,000 (Euseb. HΕ x. 6; cf. VC iv. 28). Great sums were also spent on the building of churches (Euseb, HΕ x. 2. 3. 4), especially at Jerusalem (Holy Sepulchre [Euseb. VC iii. 34-40]), Bethlehem (ib. 43), Nicomedia (ib. 50), and Rome. Of his benefactions to the great basilicas at Rome we nossess a list that seems authentic (PL viii. we possess a list that seems authentic (PL viii, ye possess a list that seems authentic (FL viii, 803 ff.), though many of the gifts mentioned are later accumulations (Duchesne, Lib. Pont. i. Introd. p. 152). Of great importance from another standpoint is his order of fifty copies of the Scriptures 'legibly described and of a portable size' (Euseb. VC iv. 36).

V. Influence of Constantine's establishment of Christianity upon legislation.—The following are

Christianity upon legislation,—The following are the most important evidences of the growth, during the reign of Constantine, of specifically Christian laws or of the influence of Christian sentiment.

t. Mote List and Slaves.—There was no abolition of slavery; this was not a burning question in the Early Church. But slaves condemned to

games or to the mines must not be branded in the panies of the blanks must have a sure of the Divine beauty' (Cod Th. ix. 40 2, March 315; PL viii. 119). In dividing estates, families of slaves must not be separated (Cod. Th. i 25, in March 271: 273) March must not kill or \$134; \$PL\$ viii 376). Masters must not kill or wantonly torture their slaves (Cod. Th. ix. 12, chs. I, 2 in 319 and 326; Cod. Just. ix. 14; \$PL\$ viii. 161). But the wording of this last law left wantonly of exerce while fruitive clarge. many loopholes of escape, while fugitive slaves must not only be given up (Cod. Just. vi. 1. 4, in 317; PL vni. 150), but could be examined by torture (Cod. Just. vi. 1. 4 6, in 317 and 333) or deprived of a foot (1b. vi. 1. 3, undated). The abolition of crucifixion (Soz. HE i. 8) and the breaking of legs (Aur. Victor, Cas. 41) would chiefly apply to slaves. But the illegality of Cluistians being held as slaves by Jews (Eursch Christians being held as slaves by Jews (Euseb. VC iv. 27; Cod. Th. xvi. 9. 1, 2, 4, xvi. 8. 6; of.

VC iv. 27; Cod. Th. xvi. 9. 1, 2, 4, xvi. 8. 0; ct. Cod. Just. i. 10) witnessed rather to the growing hatred of the Jews (cf. Cod. Th. xvi. 8. 1; Cod. Just. i. 9. 3; PL viii. 130, in Oct. 315).

(b) Gladiators.—Gladiatorial shows were prohibited in 325 (Cod. Th. xv. 12. 1; PL viii. 293; Cod. Just. xi. 44; cf. Euseb. VC iv. 25; Sor HE i. 18), though the law was certainly not enforced in Italy. That at Constantinous there were never in Italy. That at Constantinople there were never any gladiatorial shows may be ascribed to the influence of Christianity, when we remember Constantine's bloody slaughters at Trèves in his early life (Eunen. Paneg. 12).

(c) Adultery, etc.—(1) Concubinage was disallowed for married men (Cod. Just. v. 26 in 326; cf. Digest. i. 25. 7). (2) Rape, etc., was to be severely punished, the woman, even if not a consenting party, by disinheritance; abettors, if slaves, by burning, if ficemen, by banishment (Cod. Th. ix. 23. 1; PL viii. 195-198, in April 320).

(d) Children, debtors, etc.—(1) Poor parents were forbidden to kill their infant children, the care of whom was henceforth to be an Imperial charge (Cod. Th. xi, 27, 1, 2; for Italy first in 315 [PL viii. 121], then for Africa and other provinces in 322 [PL viii. 236]). The Christian sentiment of this law (cf. Lactant. Instite. vi. 20) is more obvious law (cf. Lactant. Instit. vi. 20) is more obvious than its correct political economy. Exposure of children was not forbidden until 374 (Cod. Just. vii. 51. 2, ix. 16. 7). The growing poverty of the Empire alone was responsible for Constantine's allowing the sale of infant children by poor people (Cod. Th. v. 8. 1; v. 7. 1, in 329 and 331; cf. Cod. Just. iv. 43)—a practice forbidden in 294 by Diocletian (Cod. Just. lc.). (2) Illegitimate children were legitimized by after-wedlock in the case of free-born women (Cod. Just. v. 27. 1, 5, in 336; cf. PL viii. 387-389). (3) Debtors must not be scourged, or, except in special cases, imprisoned (Cod. Th. xi. 7. 3, in Feb. 320; PL viii. 189). Prisoners were not to be confined without air and light, or with 'chains that cleave to their bones,' or to be imprisoned before trial (Cod. Th. ix. 3. 1, 2; Cod. Just. 1x. 4. 1, 2, in 320 and 326; PL viii.

2; Cod. Just. 1x. 4. 1, 2, in 320 and 326; PL viii. 199, 299). ii. CLERGY AND CHRISTIAN WORSHIP.—(a) The 'Catholic' clergy were freed from the discharge of civil duties (Cod. Th. xvi. 1, 2, in Nov. 313, Oct. 319; PL viii. 102, 180), but in July 320 the abuse of this led to its restriction (PL viii. 200), as was also the case in June 326 (Cod. Th. xvi. 2, 6; PL viii. 314). (b) Exception was made to the law Pagaia Pagaia and Science and Sc to the lew Papia Poppea against celibacy in favour of the clergy, thus allowing them to inlerit (Cod. Th. xvi. 2, 4), (c) Public works and the sitting of the courts were forbidden on Sundays, dies celibacies (Cod. Th. is 8, 1, Cod. Tod. iii. 10).

'dies solis' (Cod. Th. ii. 8, 1; Cod. Just. iii. 12, 2, in July 321; PL viii. 224; noto the balanced 'dies solis,' which would suit Mithraism also), (d) Manumissions were permitted to be solemnly made in churches as well as in temples (Cod. Th. xvi. 2. 4, iv. 7. 1; Cod. Just. i. 13. 1, 2, in 316 and Ap. 321; PL viii. 214f.). As these manumissions were made on Sundays, and especially at Easter, Christianity became associated in the public mind with the release of slaves.

iti. PAGAN WORSHIP AND RITES .- (a) Prohibi-

iii. PAGAN WORSHIP AND RITES.—(a) Prohibition of pagan sacrifices in general (Euseb. VC 1i. 44, 45, iv. 23, 25).

That there was such a law may be inferred from Cod. Th. xvi. 10.2, 'law of our divine Father,' but it was certainly not carried out in the West, where the progress of Christianity was but slow (8. Dill, Roman Society in the Last Century of the W. Empire, 1898, vol. 1. ch 1; cf. A. Beugnot, Hist. do la destruction du paganisme [Paris, 1835], 106 ff.). Moreover, Constantine more than once proclaimed liberty to the pagans canot canoty their temples (Euseb VC 1 56, 60; Constant. Orat ad Sanct. Coet. 11; cf. Libanius [a. 884], Orat. pro Temples [ed. Foerster], III. xxx; Symmachus, Ep. x 4). The question is well discussed in de Broghe (op. ad. 1. 446-451). Beugnot (op. at 1. 100) takes the prohibition to refer to nocturnal and private sacrifices only. sacrifices only.

(b) The re-enactment, Feb. and May 319, of the law of Tiberius against divination (Cod. Th. ix. 16. 1, 2; PL viii. 155, 162). In Dec. 319 the consultation of haruspices was allowed when public buildings were struck by lightning (Cod. Th. xvi. 10. 1; PL viii. 202).

sultation of harnespices was allowed when public buildings were struck by lightning (Cod. Th. xvi. 10. 1; PL viii. 202).

Literantura.—(a) Sources,—The estimate we form of Constantine depends chiefly upon the value we attach to the conflicting authorities Some of the Latin sources may conveniently be read in Migne, PL viii., 'Opera Constantini', but, as this is both incomplete and uncritical, and contains much that is false, it should be used with care, especially as regards Constantane's correspondence. For the Life of Constantine we gain most from the following: The Panegyrists, inflated Gallic orations delivered on state occasions, but with a valuable residuum of fact. Two, delivered in 807 and 813, are of unknown authorship, three are probably by Eumenius (267, 810, 811), and one by Nazarius (821); in Migne, PL viii. 581 fl., or, better, A. Bähren's XII Panegyrica Lat. (1874), to which edition references have been made by number and chapter. Another work of special pleading, though from a different standpoint, is the de Mortibus Persecutorum (best ed. by S. Brandt, in CSEL xxvii. (1897)). This work, ascribed in the MS to an unknown L. Cecilius, was attributed before the close of the 4th cent., a.g. by Jerome in 593 (de Fir. Illust. 50), to L. Cecilius Firmianus Lactantus. The genulinences of this ascription has been assailed by his editor, S. Brandt (SWA wxv. 1892), and justified by Bury (Gubbon, il. 531–532). The date is probably about 315. Of the works of Eusebius of Cossarea, the HLE, published early in 325, is of great value, but the Vita Constantine (VC) in four books, written between 337 and 330, is pious sulvey (see Socretexy Editorpius, Breviarium ab urbe conduct (ed. F. Rueh), 1887, or H. Droysen in MGH ii. (1878). A most valuable source is the anonymous fragment first printed by H. Valois, hence called Anonymus Valesi (test ed. by Mommsen in Ohronica Minora, MIGH (1892); 1-71). As the clerical passages in it have been shown by Mommsen (op. cit., pref. p. 0) to be interpolations from Orosius, it wa

Constantiniana (Rome, 1856) does not seem to be in the Brit. Mus. (1910), but is partly translated in C. W King, Early Christian Numismatus (Lond. 1878). M Madden's 'Chinstian Numismatus (Lond. 1878). M Madden's 'Chinstian Emblems on the Coins of Constantine the Great' (In the Numismatus Ohronicle, London, 1877-78) is of great value.

(b) RECENT WHITERS.—Constantine has been treated with great fullness in all Church Histories and Dictionaries (the art. by J. Wordsworth in Smith's DCB is of special value), and in numerous monographs. (For a good list of these up to 1800 see Richardson's Introd. in Schaff, Ante-Nicare Library, 'Eusebius,' pp. 455-465) The following works are essential for the general history; E. Gibbon, ed. J. B. Bury (1896); new edition, 1910 ff), with valuable notes and appendixes; and H. Schiller, Gesch. d. rom Kauserzeit, 2 vols. (Gotha, 1837). Of special monographs mentioned in this study the following may be singled out: J. Burckhaidt, Die Zeit Constantin's des Grossen (Basel, 1853; 2nd ed., Leipzig, 1880); O. Secck, Gesch. des Untergangs der antiken Well, 2 vols. (Berlin, 1895-1901), V. Schnitze, Gesch. d. Untergangs d. gr.-rom. Heudentums, 2 vols. (Jena, 1887-92). Of older works, the conservative J. V. A. de Bioglie, D. Eghtes et Tempure rom. au ive siècle, 3 vols. (Paris, 1856), A. P. Stanley, Eastern Church's (1876, brilliant portrut of Constantine), and G. Boissier's La Fin du paganisme, 2 vols. (Paris, 1891), should not be overlooked.

H. B. WORKMAN.

CONSUMPTION (Economic). - Since Wealth of Nations gave the consumer rather than the producer or the merchant the first right to consideration, questions relating to consumption have always been prominent in Economics, though, especially in English books, they have not been formed into a separate branch of doctrine. It was thought that general questions about desire and utility were matter for Ethics, and should have a place in the preface, but not in the body, of Economics. This is still a common view, even when it omics. This is still a common view, even when it is held that 'a true theory of consumption is the keystone of political economy' (Keynes, Scope and Method of Polit. Econ., Lond. 1891, p. 107). And the special or more practical questions of consumption are then taken up under the familiar heads of production (q.v.), distribution (q.v.), and public finance or policy. The place which the general doctrine of consumption is now likely to hold is due to a better systematizing of the matter of Economics—as a science rather than into a series of co-ordinate divisions. The theory of value is made the centre, and from it come two questions, viz. the conditions of demand and the conditions of supply. The question of demand is that of consumption.

Its topic is utility, and its cardinal notion the Law of Diminishing Utility. An object or service has utility so far as it satisfies a desire. When bought it is bought for its utility; when consumed it is only the utility that is destroyed; when pro-

duced it is utility that is given to it.

The Law of Diminishing Utility is: other things being equal, there is always a point beyond which the utility of a commodity diminishes for every additional quantity of it that one possesses. It might be called the Law of Diminishing Desire, Its basis is the familiar fact that as a desire becomes satisfied it becomes exhausted for the time being. This is true not merely of appetites, but of higher desires whose satisfaction begets others. And it is true for indirect consumption when commodities are used as means of production) as well as for direct consumption (when they directly satisfy a desire). Simple though the law is, it has (1) an important theoretical use, and (2) still more important practical applications.

1. Theoretically it accounts for the price which

a buyer is willing to pay—(a) for different quantities of the same goods, and (b) for different goods, and so it accounts (a) for the prices that have to be

paid in any market.

(a) The first case is directly contemplated in the law, and is best illustrated in the price that one is willing to pay for any necessary commodity. Necessaries have the greatest utility because they are necessary, and in the pinch of famine they command the highest prices. But beyond a certain quantity they are not necessary, and then their

VOL. IV .-- 6

utility is limited by the simple desire of consuming them. As this desire becomes satisfied, the pleasure in consuming dimmishes, and with it the utility of the commodity, till it vanishes altogether, because the desire is satisfied.

(b) Similar considerations are apparent when we ask what we are willing to pay for different commodities. It depends, of course, on our desires. But the interest of the question is that these are in competition, since we cannot satisfy them all even if we had the means; and the special economic interest of the question is that our means are limited. It is the question how a given income are limited. It is the question how a given income is spent. And in terms of the general law we have these two answers: (1) every one seeks to secure the greatest Total Utility from his income, and (2) he does this by looking to the Marginal Utility of his various purchases in order to make it equal in them all. The first statement is obvious, but the second needs explaining. By marginal utility is meant the utility of any commodity, or quantity of it, that a buyer is just willing to take at a certain price. His debate with himself is at a certain price. His debate with himself is at a certain price. His debate with himself is always whether he could do better with his shilling now or in the future; and, if he buys and regrets, it is always because he might have had a greater utility for his shilling if he had bought something else with it, or if he had kept it. To spend well is not to buy the same degree of utility with every shilling, for infinite or necessary utilities are usually cheap. The difference between the price for which one gets them, and the price that one would be willing to pay for them, is called the Consumer's Surplus.

These notions of surplus utility, total utility.

These notions of surplus utility, total utility, and marginal utility are most clearly presented in diagram. For every commodity there can be drawn a curve representing all three. The shape of the curve is different for different commodities and for different consumers; but in accordance with

the general law of diminishing utility it shows in all cases a more or less regular fall in utility with every addition to the quantity hought. Annexed is the general curve for any necessary commodity. On O X are marked the units of quantity bought, and so of the price paid; and the diminishing areas drawn on them represent the diminishing areas. drawn on the line paid; and the diminishing areas drawn on them represent the diminishing utilities, the first being infinite, representing the infinite utility of that unit. The areas having equal bases, their difference may be represented by their height, and a curve drawn as in the figure. If a consumer buys 7 units, the marginal utility is that of the 

last portion, and he makes this his marginal purchase, because for the same unit of money he expects a greater utility of spending it on something else than on an eighth unit of this commodity. The total utility is represented by the total area of the figure, and the surplus utility by the area A Y y a. Taking all his purchases into account, it is clear that he will have nothing to regret (except, of course, the nature of his desires) if his marginal purchases have all an equal degree of utility. For he will thus have the greatest total utility from his income his income.

(c) A commodity has a different marginal utility for different consumers, the difference being due to the difference in their incomes and their desires. Hence with every price at which a commodity is offered there corresponds a certain demand; and, in general, the greater the piece the less the demand, and the less the piece the greater the demand. It is in expectation of a sufficient demand at a profitable price that commodities are produced, and it is on the correctness of his expectations, and not on the cost of production, that a producer relies for his price and profit. This is the essential consideration in the familiar law of supply and demand which accounts for all values

that are fixed by competition (q.v.).

2. As the ultimate aim of economic effort is to consume what is produced, the practical questions regarding consumption may run into great detail; and their answers easily run to one-sidedness if the questions are not systematic. This is seen the questions are not systematic. This is seen in the conflict of popular opinions about the spending of the rich. It would be hard to say whether people approve more of the rich man who spends much, and so spreads his wealth, or of the rich man who spends little, and appears, therefore, not to give work to others. And whatever may be thought of the spendtlinift, the miser, and the philanthropist as individuals, there is great diversity of opinion about the first two, and some diversity of opinion about the first two, and some about the philanthropist, as members of the body economic. And not all professional economists appear to have reconciled the truth in the two opposite statements that 'demand for commodities is not demand for labour,' and that 'want of work is due to under-consumption.'

The aim of economic organization and effort is, under conditions, to produce the greatest total utility; and, if we ask how economic progress is to be estimated, we ask the conditions on which this total utility depends. First it depends on the quantity and quality of wealth produced, and so on the trill and the most efficient use of the labour on the full and the most efficient use of the labour and the natural and acquired resources of a country.

And in looking at the economic progress of a country we are apt to look no further than at the amount and quality of wealth that is thus produced, and at its distribution with a view to further production. But the amount of utility in wealth thousand on the interview of wealth the area. wealth depends on the intensity and variety of the desires for whose satisfaction the wealth is consumed. This is the head under which all practical questions of consumption find their place. It is conveniently divided into two by considering, first, the satisfaction of desires that all sock to satisfy, and then the satisfaction of other desires. Regarding the former, it is anyarent that the total million ing the former, it is apparent that the total utility from a country's produce is greater when the margin at which the very poor cease to purchase is extended, and the margin of others is contracted so as to exclude waste and gluttony. A country of great houses and vile hovels is so far not making so much of its wealth as one where the houses are less great and the hovels less vile.

But it is when we turn from more or less necessary desires that we see the complexity of the question that may be organized from the point of view

of consumption. It is here that there is the nearest connexion between Economics and Ethics. The moral ideal is that of complete living, and requires a character having variety and depth of interests or desnes, quite as much as one having these in unity or system, and so in harmony. In economic progress there must be this variety and depth if the utility of wealth is to grow with its increase; and an obvious point is that many desires—most of the higher desired and an included in the control of the higher desired and are included in the control of the higher desired and are included in the control of the higher desired and are included in the control of the higher desired and are included in the control of the higher desired and are included in the control of higher desires, intellectual, sesthetic, and socialare very little destructive of utility. The cost of creating them, e.g. by education, is greater than the cost of gratifying them, and is therefore much the more important consideration. The most destructive desires need no learning.

It is also obvious from the nature of consumption that no comment on an economic system can be more severe than that it makes, or even lets, the noor grow poorer while the rich grow richer. The comment is often made, but it is made mainly on the erroneous ground that the gain of one must always be the loss of another It has not been true in fact of our present economic system (see DISTRIBUTION); still the comment might with advantage be more about on the face of it. From the same point of view it would be a very adverse comment on the progress of invention if it could still be said that the labourer has not been spared any of the severity and exhaustion of muscular work that he had before the revolution in industry. For nothing tells more against a wealth of life. But, on the contrary, the saving in mere hardness of toil has been one of the best

fruits of invention (see Production).

While there is ground for charging defects in consumption not to thriftlessness merely, but to the bad distribution of wealth and the struggle to have rather than to enjoy, there is a source that is at least as serious. So long as individual wealth is devoted to the service of a few desires, its increase must be consumed with diminishing utility. Luxury is for the most part such a spending, both when it is for self-indulgence and when it is for ostentation (see Luxury). But the evil is not so much in the presence of luxury as in the absence of the desire for better things. The pursuit of wealth has been far more cager than the pursuit of desires wherewith to give it the fullest utility. There is not yet any general belief that they can become so absorbing as those that need no learning. The common view of education is much more concerned with giving power to acquire than power to enjoy; and we are all children enough to enjoy no property of a thing so much as that it is our own. Such reflexions do not point to a want of progress but to the long way to go, and to the fundamental way in which economic

depends on moral progress.

The statistics of consumption that have most practical interest are concerned with the expenditure of small incomes. There are two methods of collecting them. One, the 'intensive' method, makes a minute study of individual families and their mode of life. It is most completely represented in the work of Le Play (1806-1882) and his school. Examples of it—though not so minute—are to be found in Booth, Life and Labour of the People in London (1889-97); Rowntree, Poverty (1901); and in Family Budgets (1896), collected by members of the Economic Club. The other, the 'extensive' method, looks rather to the quantity of its facts. Its chief expositor was Ernst Engel (1821-1896), who formulated a law, usually called Engel's Law, of which the main part is that as practical interest are concerned with the expendi-Engel's Law, of which the main part is that as income rises the proportion of it spent on food diminishes. And later statistics from various countries give a general support to his view that

measure of well-being, viz. the higher the proportion of earnings spent on food, the poorer a community, and any class in a community. An excellent example of the method is to be found m the U.S. Bulletin for 1903 of the Bureau of Labour. 'The figures of income and expenditure furnished in detail by 2567 families in 33 States, representing the leading industrial centres of the country, comprise the material for the detailed study of the cost of living. Certain data which do not enter so much into detail were collected in regard to the cost of living in 25,440 families.' For the United Kingdom the Board of Trade carried out an inquiry, and published an interesting memorandum on it in its Second Series of Memoranda with reference to British and Foreign Trade (1904), and within the last few years it has published extensive Reports on the Cost of Living of the Working Classes in the principal towns of the United Kingdom (1908), of Germany (1908), of France (1909), and of Belgium (1910). The German Imperial Statistical Office published in 1909 a report on the cost of living of 802 families with a small income. A full account of it will be found in the U.S. Bulletin of the Bureau of Labour, May 1910.

LITERATURE.—A general treatment of the statistics of consumption is given in R. Mayo-Smith, Statistics and Economics (=pt ii. of Science of Statistics), Lond. 1899, with a bibliographical note on p. 19; and a fuller treatment and note are to be found in att. 'Konsumtionsbudget' in J. Conrad's Handworterbuck der Statisticsenschaften', Jena, 1000. There is a 'Bibliography of Studies on the Cost of Living' in the Bulletin of the Bureau of Labour, May 1910.

W. MITCHELL. W. MITCHELL.

CONTEMPT.—This word is used either (a) in the subjective sense of the act of despising, or (b) objectively of the condition of being despised. In illustration of (a), Murray (OED, s.v.) quotes from Marbeck's Book of Notes (1581) the following passage: 'Contempt consisteth chiefelie in three things: for either wee contemne onelie in minde . . or lastlie when we adde words or doedes, which have ignominie or contunelie ioined with them.' One of the most familiar usages of the word is in the technical expression 'contempt of court,' as referring to any failure to recognize or obey the ruler of a court of justice or other legal

obey the ruler of a court of justice or other legal authority. In the passive sense (b), the expression thing into contempt' may be adduced; more rate is the use of 'a contempt' as equivalent to 'an object of contempt' (Gn 38<sup>23</sup> AVm).

1. Terminology.—In the primitive ages the superiority of the physically strong over the physically weak was accompanied by a feeling of scorn, which readily reflected itself in speech. The defeat of a foe, or the successful outwitting of inferior skill or cleverness by force of arms or cunning, tended to create a vocabulary of concunning, tended to create a vocabulary of contempt (see art. Boasting for similar phenomena). The word δειλός ('coward') in Homer came to mean 'worthless' and 'insignificant' (cf. the apostrophe à δειλέ, 'poor creature'). All languages exhibit the interjectional forms of contempt. Sometimes the same monosyllabic exclamation is used to express other emotions, so chandled is used to express other emotions, so that its exact force can be determined only by the context (cf. 'tush!' 'pish!' 'pshaw!' or Lat. phy or phu). There are also dissyllable words such as atat (or attat) in Latin, out (Mk 15<sup>29</sup>, of derisive joy or horror), 'avaunt!' and the like. Then we have phrases like is kopakas of Greek comedy, and I in malam crucem of Plantus and Terence. These extragate abriage application. suggest obvious analogies in English and other languages. Argumentative scorn expresses itself in the Latin use of scilicet, ironical or contemptudiminishes. And later statistics from various our assertion of what is obviously false (cf. nest countries give a general support to his view that very). More obvious still, as exhibiting the feeling this proportion may be used as a comparative of scorn or disgust, is the opprobrious apostrophe

common to all languages (cf. carcer, crux, patibulum, ρακά [Mt 5<sup>22</sup>], μωρέ [ib.], 'dog,' 'cun,' 'cullion' [Shakespeare, Taming of Shrew, IV. II. 20], 'geck and gull' [Twelfth Night, V. i. 351], 'John-a-dreams' [Hamlet, II. II. 595], 'zed' [Lear, II. II. 69, a term of contempt, because last letter in the alphabet], et hoc genus omne). 'The Philistine said to David, Am I a dog, that thou comest to me with staves?' (18 17<sup>43</sup>); cf. 'After whom dost thou pursue? after a dead dog, after a flea?' (18 24<sup>14</sup>) 'The Eastern street dog is a type of all that is cowardly, lazy, filthy, treacherous, and contemptible' (HDB, s.v. 'Dog').

Both in the Heb. of the OT and in the Greek of the NT the verbal forms expressing various degrees of scorn, derision, or disparagement are remarkably rich. In the OT we find he and hip foriginal meaning dub.]; they with the root idea of rejection; pix where the idea of scorn is connected with the mimicry of a foreigner's speech; and poy, 'smile.' In the NT we have dτιμάζω, άθετέω, εξουθενέω, καταφρονέω, περιφρονέω, δυγωρέω, and the expressive εκμυκτηρίζω (Lk 16<sup>14</sup> 23<sup>35</sup> = 'turn up the nose at'). The minetic or descriptive verb is as conspicuous in exhibiting the feeling of disgust as in other cases (cf. 'strut.' 'swagger'); and the expressive εκμυκτηρίζω (Lk 1611 233 = turn up the nose at'). The munetic or descriptive verb is as conspieuous in exhibiting the feeling of disgust as in other cases (cf. 'strut,' 'swagger'); and the word εκμυκτηρίζω recalls Shakespeare's 'I will bute my thumb at them' (Romeo and Juliet, I. i. 48 f., a contemptuous action for beginning a quarrel); 'to give her the avaunt,' i.e. to send her away contemptuously (Henry VIII. II. iii 10); or Pistol's expression (2 Hen. IV. V. iii. 124), 'Fig me, like the bragging Spaniard' (thumb thrust between first and second fingers as a mark of contempt and insult). The word εμπαίκτης (2 P 33, Jude 13; in 2 P 35 εμπαίγωση is also found) suggests tather more obviously external act or gesture than καταφρονητής (Ac 134). It may be noted in passing that contempt takes in literature the form of satire, in art that of caricature (see art. 'Satire' in EBr<sup>3</sup> and 'Caricature' in EBr<sup>30</sup>).

From Lucilius down to the present day scorn is an ingredient of satire. 'Facit indignatio versum,' said Juvenal (Sat. 1. 79); and it was a wholesome loathing of decadent morals that inspired such a satire as the Sixth, his 'Legend of Bad Women' (Mackail). The contempt of satire is fierce and litter; but it can also be genial, as in Don Quixote, where the follies of mediaval chivalry are held up to derision. There is a similar distinction in the

where the follies of mediavel chivalry are held up to derision. There is a similar distinction in the art of the caricaturist.

2. Psychology.—The psychological analysis of contempt has not often been attempted. It obvicontempt has not often been attempted. It obviously belongs to the category of what Wundt calls the objective emotions (Outlines of Psychology, ed. 1908, p. 197), and is generally to be classified as a species of anger, finding a place in what the same writer distinguishes as the 'excitement-depression' series of emotions, or in what Royce prefers to call 'the restlessness and quiescence' series (Outlines of Psychology, 1903, p. 178). Macdongall, in his Introduction to Social Psychology, draws a distinction between scorn as a binary compound of anger and disgust, or a tertiary compound, if positive solf-feeling is added to these, and contempt, which he regards as 'a to these, and contempt, which he regards as 'a binary compound of disgust and positive self-feeling, differing from scorn in the absence of the element of anger.' In ordinary usage, however, element of anger. In ordinary usage, however, scorn (g.v.) and contempt are used interchangeably; and, while some kinds of contempt are notably free from anger and suggest serene self-esteem, e.g. the attitude of the educated towards the illuterate, there are other forms in which one may deject the element of indignation, e.g. the loathing which a noble mind feels towards a cruel or ignoble deed. In Shakespeare's Twelfth Night, II. 1. 157 f., Olivia remarks: The state of the s

O, what a deal of scorn looks beautiful In the contempt and anger of his lip!

where obviously contempt is regarded as of close

kinship with anger.

Disgust, aversion, and shrinking from an object are undoubtedly marked features of contempt; sometimes this is accompanied by facial and other physical reaction, sometimes it is merely intellectual, as when Horace remarks: 'Odi profamum vulgus et arceo' (Od. III. i. 1) While, then, we can distinguish the main elements which make up

distinguish the main elements which make up the emotion of contempt, its quality is capable of multitudinous subtle gradations and internal shadings, corresponding with the objects and situations which call it forth.

3. Ethics.—(1) In the OT.—Contempt, as an emotion which, like anger, finds expression in word and deed, or as part of a mental condition, naturally passes into the sphere of ethical judgment. It is an element in the character of the Psalmist's God, as when he says, 'The Lord shall have them in decision' (Ps 2', referring to the rebellion of His disaffected subjects; so of the heathen, Ps 59's. In both passages the conception of contempt is associated with laughter. Such graphic anthropomorphism is not obsolete: e.g. graphic anthropomorphism is not obsolete: e.g. R. Browning's lines,

Happy that I can
Be crossed and thwarted as a man,
Not left in God's contempt apart .

(Easter-Day, axxiii.),

where a failure of ideal is associated with the sense of Divine rejection and wrath. The monotheistic contempt for idol-making and idolatry (of. Is 40<sup>194</sup>) in prophetic literature is an expression of the belief in God's unique and unapproachable right-coursess. In the OT, especially in the Wisdom literature, the 'scorner,' or contemptations man, (p') is a familiar figure. He not only does evil, but scoffs at the good (Ps 1), seeks wisdom and finds it not (Pr 149), dislikes reproof (15<sup>12</sup>), is an abomination (24°), and is punished (21°, Is 29<sup>20</sup>). The 'scorner,' in fact, belongs to the class 'fool,' which is so conspicuous in the teaching of Proverbs: the fool despises wisdom (Pr 17), his neighbour (14<sup>21</sup>), and the duty of obedience to parents (30<sup>17</sup>). Essu's despising of his birthright (Gn 25<sup>24</sup>) bour (1421), and the duty of obedience to parents (3017). Esan's despising of his birthnight (Gn 2524) was the indication of 'profanity' (He 1218) or spiritual apathy, in the same way that Israel's contempt for Jahweh's statutes and judgments (Lv 2616.48, Ezk 2013.16.21, Am 24) or for 'the word of the Holy One' (Is 522) was the sign of an evil heart. Objectively, national failure brings a nemosis of derision (Jor 4826139), or such derision may be an element of persecution (207, La 314).

(2) In the NT.—We have already cited the passage (Mt 522) where Jesus deals with the contemptuous terms 'Raca' and 'Thou fool,' and condemns them on the ground that they indicate

condemns them on the ground that they indicate a defective disposition of the heart and are there-fore to be judged under the new law before the as were offences, like homicide, under the old dispensation. Thus, our Lord's treatment of contempt is in harmony with the principles of His general 'ethical teaching. Moreover, so far as contempt was an anti-social sentiment and opposed to the recognition of the claims of a converse. posed to the recognition of the claims of a common posed to the recognition of the claims of a common humanity, the law of compassion, and the sense of the infinite dignity of the individual soul, it was to be sternly repressed. 'Take heed that ye despise not one of these little ones' (18°), i.e. the lumble and helpless of humanity. The idea of scornful rejection of the truth is contained in the warning, 'Ho that rejecteth (åberår) you rejecteth me' (Lk 10¹6). Jesus thought of the Pharisees as those that 'trusted in themselves that they were righteons, and despised (åberðar) others' (18°). righteons, and despised (exouverovers) others' (189).

He did not hesitate to use the language of contempt respecting the unreality of Pharisaic morals on the ground 'that then whole life was an acted play, and that their words hie was an acter play, and that their zeal for righteousness was unwarmed by love for their brothers, for men as such; nor did He scruple to use the term 'that fox' (13<sup>22</sup>) of Herod Antipas as summing up his moral cowardice and cunning. But contempt of man for man, of class for class, the disparagement of lowly conditions, even of sinners (as opposed to their sins), is juled out by the example and teaching of Christ. Christ's view of man was 'a transvaluation of all values' The first promise of the changed view of humanity is given in the Mugnification of the change of the ch ficat, 'He hath exalted them of low degree' (162).

The Greek contempt for humility, the arrogance (ὑπερηφανία) which Theophrastus (ὑharacters, § iv ) defined as 'a certain scorn for all the world beside oneself,' was excluded for ever from the higher ethics of Christianity. Evolutionary ethics, of which the extreme is reached in the thought of Nietzsche, still glorifies brute strength and satirizes the 'slave-morality' of the crowd, but the 'super-man' who alone will be tolerated by the world is not the embodiment of strength, physical and intellectual, but the embodiment of perfect love. Aristotle's 'lofty-minded man' looks down upon others 'justly (for he judges truly); but most people do so at random' (Ethics, iv. 3). Even the limitation of the parenthesis, however, fails to convince up. for in the same context we are told convince us; for in the same context we are told that 'he is not lavish of praise: for this reason he speaks no evil, not even of his enomies, unless it be to show his scorn.' Contrast this with Christ's to be to state his scorn. Contrast and with Christ's teaching, which enjoins the love of one's enemies and exalts meekness. The noblest character of ancient teaching 'walks, like contempt, alone' (Timon of Athens, IV. 11. 15), and views his fellows (to quote Shakespeare again) through the 'scornful perspective' which contempt lends him (AU's Well, v. iii. 48). He is quite oblivious of the claims of human brotherhood. In fact, his snobclaims of human brotherhood. In fact, his snob-bery is hardly distinguishable from that satirized by Thackeray, and is equally out of harmony with the Christian spirit. Pride of birth, intellect, and dominion is by Dante (Purg. x. xi. xii.) consigned to the first terrace of purgatory, from which the poet is escorted by the angel of Humility to the sound of celestial voices, singing, 'Blessed are the

poor in spirit' (xii. 3 ff.).

The haughtiness which despises its inferiors, The haughtness which despises its interiors, whether it take the form of reserve  $(elp\omega\nu ela)$  or active scoin  $(b\beta\rho_{DS})$ , is as incompatible with the humanitarian ideal of Christianity as the institution of slavery. The treatment of any human being as a chattel or instrument is no longer tolerable. Base things of the world and things that are despised did God choose' (I Co 128). The scorn of the man of the world for piety is an index of an oblique moral vision (cf. the Master of Ballantrae's contempt for his steward's strict and puritanical notions ['my evangelist,' he calls him ironically] in Stevenson's Master of Ballantrae). St. Paul warns the Thessalonians (1 Th 520) against contempt of 'prophesyings,' implying that manifestations of the Spirit have to be judged with careful discrimination, and that they are not to be distrusted because fanaticism or unreality accompanies them in particular instances. Contempt is often a form of bigotry, and the symptom of defective charity or telegrape. of defective charity or tolerance; and not soldom it is implicit in a cold rationalism or in the materialism which rejects immortality and religion. On the other hand, to be despised by the general

life, and not in youth alone, is the fine flower of a Christian personality. If, on the one hand, contempt is opposed to humility, reverence, compas sion, and love, it is, on the other hand, a legitimate element of the moral indignation of which the Founder of Christianity is the noblest exemplar.

Founder of Christianity is the noblest exemplar.

R. Martin Pope.

CONTENTMENT.—Contentment—the condition of being satisfied—is a state of mind which dilion or being satisfied—is a state or mind which may be regarded as a purely ethical product, or as a phase of religious experience. In the philosophy of life we are able to differentiate three types of contentment: Oriental, Græco-Roman, and Christian; and we propose to treat the subject under these heads. Royce, in his Outlines of Psychology (1903), has classified emotions under two dimensions namely, iestlessness and guiescence. If this sions, namely, restlessness and quiescence. If this classification be accepted, it is obvious that the

virtue of contentment gathers up into one experience the emotions of the quiescent order.

1. Oriental.—The essential element in the Oriental scheme of life is the suppression of desire. This is common to Brāhmanism and Buddhism. Barth (Religions of India, Eng. tr. 1882, p. 84) has remarked that the Hindu mind recognizes 'no medium between montal excitement and torpid indifference.' Pantheism, fatalism, the denial of personality and of any real immortality but that of the act—these impress upon all that the Oriental produces 'a certain monotonous character compounded of satiety and ungratified zeal.' So far as we can arrive at any conception of nuvāna, we may think of it as the screnity of the monk, exempt from all desire, contemplating without passion all that the average man holds dear—love and hate, power and oppression, tiches and poverty, fame and contempt—and awating with complete ataraxia the advent of death. The nirvāna-onearth reached by the arhat is a pledge of the nirvāna-after-death, his 'refreshment from the fire of passion' being the earnest of his 'refreshment from the fire of existence' (cf. Poussin, Bouddhisme, p. 103 [Buddhism, p. 14]). Some exponents of Buddhism point out that, while nirvāna is negatively the destruction of selfish desire and ignorance, it is positively universal sympathy or love for all beings. Cf. 'A. Vow of the Bodhisattva' (Suzuki, Outlines of Mahāyāna Buddhism, p. 398): and hate, power and oppression, liches and poverty,

'For the sake of all sentient beings on earth, I aspire for the abode of enlightenment which is most high; In all-embracing love awakened, and with a heart steadily

Even my life I will sacrifice, dear as it is.

In enlightenment no sorrows are found, no burning desires; Tis enjoyed by all men who are wise. All sentient creatures from the turbulent waters of the triple

I'll release, and to eternal peace them I'll lead.'

When it is objected that contentment can find no place in a scheme of life in which karna, or the law of moral causation, prevails, the reply is made that the selfishness of the rich will bear inevitable retribution in a future existence, while the sufferings of the poor, if the poor do not despair of them and yield to temptation, will bring them a future fortune. On the other hand, it is argued that human inequalities are not to be ascribed to the On the other hand, to be despised by the general conscience is no mean punishment. Let no man despise thy youth (1 Ti 412), or Let no man despise thee (Tit 215), is a summons to the cultivation of moral dignity, which at all stages of our The economic sphere is not that in which the law of karma operates. If a man lives in obscurity and misery, he is not concerned to find the explanation of these things in the past, nor is he anxious about the future. Social injustices and economic inequalities are inevitable in the present order.

"A virtious man is contented with his cleanliness of conscience and purity of heart... In point of fact, what proceeds from meltorious deeds is spuritual bliss only,—contentinent, tranquillity of mind, meckness of heart, and immovability of faith (tb. p. 1994).

Again, the true conception of karma is not merely individualistic; that is, it is not true that our deeds affect only our own fate. These deeds 'leave permanent effects on the general system of sentient beings, of which the actor is merely a component part; and it is not the actor himself only, but everybody constituting a grand psychic community called "Dharmadhātu" (sphittual nuverse), that suffers or enjoys the outcome of a moral deed (4b, p. 1921.).

In this way the inherent contradictions of the Buddhist view of life are modernized by an enthusiastic exponent; nevertheless, the denial of a Supreme Being and of personal immortality leaves us with a scheme of life so mechanical and cold that contentment becomes merely a fatalistic joyless acceptance of things as they are. Granting the admirable and even noble idealism of the Oriental, we miss the cheerfulness of the Christian saint who rests in the belief that a Universal Love dwells at the heart of creation and 'sweetly orders all that is.' Moreover, the ideal of contentment proclaimed by Buddhism is remote from life: it is too abstract and academic; it is the offspring of the cloister, and consequently eclectic and esoteric. Even when it glorifies compassion and charity, it loses itself in vagueness, and, except in some rare passages of the teaching of Sakyamuni, proclaims a universal benevolence rather than specific acts of sympathy. If love be 'the fulfilling of the law' and the condition of true contentment, it has no real place in a philosophy which denies the reality of the ego, or in a religion in which saintliness is

synonymous with impassibility.

At the same time, it is but just to remember that, whatever its stress on extreme renunciation of all the joys of life may have been, Brahmanism was far more human in its concept of contentment than was Buddhism. Thus the Mahabharata (iii. 92, xii. 12502) can say that 'no end is there of greed [lit. "of thirst"], (but) contentment is the highest good '(santoşah paramanı sukhanı), or we may read in the collection of quatrains attributed to Bhartrhari: 'Poor be he whose greed is great; if the mind be content, who is rich (or) who is

2. Greeco-Roman.—While in Eastern thought the extinction of desire is the summum bonum of the ethical or religious life, a quite different idea of personality was held by the thinkers of Greece. They were frankly humanistic in their outlook. The glory and power, the gifts and virtues, of the individual life, the supremacy of reason and wisdom, and the harmony and perfectibility of the soul were cardinal points in their system. We begin with the Socratic identification of virtue and knowledge. For a man to know what he is doing and why—in a word, wisdom—this is his supreme possession. Without claiming to have discovered an abstract theory of the Good or the Wise, and while on the whole scentical as to the possibility of such a discovery, Socrates provisionally con-ceived of the Good or the Wise as the faithful performance of the customary duties of life, and proclaimed that therein lay the secret of happiness. But what impressed his contemporaries was his independence of judgment and fearless criticism of conventional notions, rather than his love of knowledge. The result was the appearance of two opposing schools of thought—the Cynics, of whom Antisthenes and Diogenes were the notable figures,

and the Cyrenaics, of whom Aristippus was the The watchword of the list was selfhead. mastery-the practice of endurance and asceticism; that of the second, pleasure—the sercue and un-troubled pursuit of the pleasure of the moment, regardless of consequences. Neither to Plato nor regardless of consequences. Neither to Frate nor to Aristotle was the practical conduct of life of such moment as the pursuit of truth and the ideal interpretation of the universe. With the advent of the Hellenistic period, about 300 s.c., the interest of the State or community became subordinated to that of the individual. The realism or Cynic and Cyrenaic was succeeded by the systems of Zeno and Epicurus, in which once more 'ethics is the end and goal; and an ethic, moreover, which looks only to the interest of the individual.' To Stoics and Epicureans the supreme interest is the possession of individual independence, the saving of one's own soul, and the ordering of life nobly and happily. The Epicurean doctrine (see EPICUREANS) was far from being a mere glori-The picture given by Scheen of the Epicurean garden leaves on us the impression of a life of frugality and leisure—'plain living and high thinking.' The pleasure which Epicureanism regarded as the end of existence was not mere sensuality; it rather consisted, in its finer forms, of freedom from pain or disturbing elements (drapagla). The pleasures of mind were nobler than those of body. It is not material enjoyments that are the givers of pleasure; 'it is sober reasoning,' says Epicurus in his letter to Menœceus, 'searching out the reasons for every choice and avoidance, and banishing those beliefs through which the greatest tumults take possession of the soul. Another word that sums up the contented life is abrapheea ('self-sufficiency'), which was afterwards to be used in Christian ethics. 'We consider selfsufficiency a great good in order that, if we do not possess much, we may be satisfied with little' (Diog. Laert. x. 130 on Epic.). Nowhere do we find the spirit of Epicurean contentment so charmingly expressed as in the odes of Horace, the poet who, enamoured of his Sabine farm ('satis beatus print Sabine farm ('sa who, emanoured of his Sadine farm ('satis beaths unicis Sabinis,' Odes, II. Xviii. 14) far from the haunts and din of city life, urges his friends to 'sweet content' ('desiderantem quod satis est,' Odes, III. i. 25), to calmness of outlook ('quid sit futuum orns fuge quaerere,' Odes, I. ix. 12) or to patient endurance. patient endurance:

'Aequam memento rebus in ardus servare mentem' (Odes, n. iii, 11.).

In such phrases we discover the fascination of the Epicurean ideal 'of withdrawing from political and dialectical conflict to simple living and serene leisure, in imitation of the oternal leisure of the gods apart from the fortuitous concourse of atoms that we call a world' (H. Sidgwick, 'Ethics,'  $EBr^9$ ).

The Stoic conception of contentment may be summed up in the word ἀπάθεια ('impassivity'). The Stoic sage did not, like an Oriental yogi, regard all phenomena as illusions; nor did his essentially Pantheistic view of the universe destroy his sense of personal freedom and volition. Man can enter, by virtue of his gift of reason, into can enter, by virtue of his gift of reason, into relationship with the Eternal reason. His one aim, indeed, is to live a life of reason, or, as the Stoic phrased it, a life 'in conformity with Nature.' Such a life is the true virtue, and is its own reward, quite apart from external goods or advantages. The average man conceives of pain, sickness, and death as evils; to the sage living the life of reason they are merely 'indifferent.' Human passions are only diseases of the reason. The sage 'will strive to keep the mastery over such faulty fancies, and be true to the consummate virtue. fancies, and be true to the consummate virtue,

1 40

which is passionless and calm.' Such is the Stoic

'It postulated,' says Capes (Storessm, p 19), 'not only the absolute supremacy of reason, but its rightful claims to be the only motive force within the soul, for it would make a solitude of all besides and call it peace, but it implied no topper of ecstatic reverses and mystic contemplation, such as those which Eastern ascetics have enjoyed, in their attempts to close every pore and inlet of emotion, and to end almost in pure nothingness of individual being.'

This type of contentment is illustrated passim in the writings of the Roman Stoics-Seneca, Epictetus (see esp. the latter's chapter on 'Contentment,'

of Marcus Aurelius (cf. esp. bk. viii.).

3. Christian.—Before considering the Christian ideal of contentment, with which the Stoic found itself confronted in the early ages of Christianity, we may glance for a moment at the OT. The pure monotheism of the Hebrew saint and his unswerving belief in a Divine Providence shaped for him an experience widely different from those which we have considered above. The possession of God is his true wealth. 'The Lord is my shepherd; I shall not want' (Ps 231). Sadness, pain, exile, loss of wealth and property, drought and disease, were nought compared with his unshaken sense of God's presence and reality. Cf. the magnificent psalm of cheerful submission in Hab 3<sup>17-19</sup>, which Cowper has reproduced in the well-known hymn, Sometimes a light surprises, or the memorable cry of resignation, 'The Lord gave and the Lord hath taken away; blessed be the name of the Lord' (Job 121). In the Wisdom books we find happiness associated closely with a common-sense view of life's limitations; e.g. Pr 15<sup>17</sup> 17<sup>1</sup> 19<sup>1</sup> etc., or, more nobly, with the possession of wisdom (Pr 318-19). So far as the Prophetic writings are concerned, a clear apprehension of evils, social and political, a remorseless unveiling of injustice and oppression, and fierce invectives against idolatry, meaningless ritual, and false materialism, are combined with unswerving faith in the Divine guidance and in the ultimate victory of the Divine righteousness. The panic stricken despair of the materialist is nobly contrasted with the calm of the monotheist in Is 30<sup>1567</sup>. (cf. art. 'Contentment' in *HDB*). Generally speaking, in the writers of the OT contentment is the fruit of faith.

In the NT the same association of contentment with belief in God is evidenced in the teaching of our Lord. The new feature is the sublime conception of God's Fatherhood. It is the Fatherhood of God which points Christ's warning against anxiety and adds an immortal beauty to the words in Mt. 6<sup>24-84</sup>. Christ does not proclaim insensibility to the ills of life. He recognizes them, but calls upon us to live as children, to believe that God cares for us, and perfectly to trust the love, the wisdom, and the power of our Heavenly Father. This conception dominates the whole of His teaching. He uttered warnings against the love of wealth (Mt 6<sup>10</sup>), against self-seeking (Mk 10<sup>40</sup>), against social discontent (Lk 12<sup>18-18</sup>), <sup>1</sup> and against selfish slothfulness (Mt 25<sup>21-22</sup>). The last passage shows that Christ condemned inertia, while He praised activity when its end was not selfish but the Kingdom of heaven. It was no part of His plan to encourage agitation against social and political evils, or against public institutions which were inimical to the highest interests of humanity; but He proclaimed the positive conception of the Kingdom of heaven, as an ideal of human life wherein the interest of the individual became one with the interest of the community; in other words, a corporate righteousness, the foundation of which was love binding individuals and classes together. The Christian conception of contentment never 1.1 Cf. Paulson, System of Ethics, p. 491, for relation of contentment to covetousness. mere passive attitude of the soul; submission to God's will in life and death is an energy or act of a sanctified will. Such it was in our Lord's acceptance of the cross as the will of His Father. Dante's words (Par. in. 85), e la sua volontate è nostra pace (see the wonderful exposition of these words in Morley's Life of Gladstone, i. 215), give the secret of Christian calm.

makes resignation to life's limitations and ills a

It is also to be noted that contentment in the NT is closely associated with the truth of immortality. St Paul can cheerfully bear 'the sufferings of this present time' as 'not worthy to be compared with the glory which shall be revealed in us' (Ro S<sup>18</sup>). And it is this belief that differentiates his αὐτάρκεια ('self-sufficiency') from that of the Epicurean. 'His steadfast equanimity does not spring from contemplation of the great negative that life must soon end, but from the great positive that true life has no end' (Medley, Interpretations of Horace, 1910, p. 58, and cf. Lucretius, v. 1117f.,

\* Quod si quis vera vitam ratione gubernet, divitiae grandes hommi sunt, vivere parce aequo animo ').

Moreover, if, as Lightfoot suggested, there was a reference in St. Paul's epistles to the Stoic ideal of the sage and citizen of the world as alone possessing absolute wealth and freedom, that ideal is transfigured in the Christian experience. 'Alleady are ye filled, already ye are become rich, ye have reigned without us. We are fools for Christ's reigned without us. We are fools for Christ's sake, but ye are wise in Christ; we are weak, but ye are strong; ye have glory, but we have dishonour' (1 Co 4s. 10). Of also the passage in 2 Co 610 'as sorrowful, yet alway rejoicing; as poor, yet making many rich; as having nothing, and yet possessing all things.' St. Paul's sublime inner resources, as being one with Christ and the sharer of His ciuciliad and risen life, render him sharer of His ciucified and risen life, render him independent of outward conditions-'in everything at every time having every self-sufficiency . . in everything enriched' (2 Co 98.11); and finally, 'I have learnt in whatsoever circumstances I am to be self-sufficing . . . I have all strength in Him that self-sufficing . . . I have all strength in Him that giveth me power . . . I have all things to the full and to overflowing' (Ph 4<sup>11, 13, 18</sup>). The Stoic attains his universal kingship 'by self-isolation; the other by incorporation' (Lightfoot, *Philippians*, p. 305). 'Godliness with contentment (abtaphelas) is great gain' (I Ti 6<sup>3</sup>)—thus does the Apostle sum up the wealth of the Christian saint. Heroism, patience, courage andurance, whether we look for them in courage, endurance, whether we look for them in the annals of persecution and martyrdom, or in the daily round of common life with its constant cares and trials, may be regarded as the finits of contentment, the αυτάρκεια which inhabits what Wordsworth calls the

'central calm subsisting at the heart Of endless agitation.'

LITERATURE.—For the Oriental aspects of the subject two recent volumes, written from quite opposite points of view, may be consulted: L. de la Valide Poussin, Bouadahisme: Opinions sur l'histoire de la dogmatique (Paris, 1900), and D. T. Suzuki, Outlines of Mahayana Buddhism (London, 1997). Of the former there is a concise summary in English: Buddhism, a tr. published by the O.T.S. in the series Lectures on the History of Religions. Besides works quoted there are also to be named: W. W. Capes, Stotesm (Lond. 1880); W. L. Davidson, The Stote Oreal (Edm. 1907); W. Wallace, Britureamism (Lond. 1880); R. W. Dale, Laws of Ohrst for Omb. Life (Lond. 1880), p. 1571; F. Paulsen, Syst. of Ethics (Eng. L., Lond. 1890), pp. 491 and 503, H. Sidgwick, art. 'Ethics,' in Ehre and Outlines of Histo, The History and Sentence and enlarged); J. B. Lightfoot, Philippians', Lond. 1878 (Essay on St. Paul and Sentea).

CONTINGENCY.—The term contingentia, as LITERATURE.-For the Oriental aspects of the subject two

CONTINGENCY.—The term contingentia, as applied to that which is actual and accidental in applied to that which is logically necessary and in accordance with law, originated with the Schoolmen. The idea involved goes back, however, to the problems of Greek philosophy. The thinkers 

of Greece, once they had discovered the significance of general conceptions, and of the order of things typified thereby, came to distinguish between the world which moves in accordance with these conceptions and that which is not wholly determined by them. The former, at this stage of thought, was identified with the sphere of the heavenly bodies, the latter with the sublunary world, where the rigid sway of law—the authority of form and conception—was circumscribed by accident and anomaly. It was only upon a basis of materialism that Democritus was able to trace a rational order throughout the entire universe, while Heraelitus, the Eleatics, and the Stoics did the same only in virtue of their pantheistic principles. The philosophy of the Church, on its metaphysical side, attached itself, not to the two last-named schools, but to Aristotle and the Neo-Platonists. In this way it also took over the idea of 'contingency'; and accordingly we find it urging, now, with Aristotle, the imperfection of the lower sphere, and now, with Neo-Platonism, the disorganization of the pure Idea by matter and sense. In the ecclesion astical philosophy, moreover, the term 'contingency' acquired a new meaning from its connexion with Judgeo-Christian Theism. It was now used to express the volitional nature of the Creator, who is not limited by universal laws, but actually reveals the most profound elements of His being in the contingency of what cludes these laws. Thus, as Conceptual Realism (universalia ante res) evoked counter-movements of an empirical character, and interest in maintaining the freedom of the Divine will tended to strengthen them, there arose in Scholasticism various attempts to reconcile the validity of the pure Idea with a recognition of the actual—compromises which ranged from the spe-cifically Aristotelian systems to Mysticism and Nominalism.

Not until the dawn of modern philosophy was there a revival of the pantheism of Heraclitus and the Stoics, as represented in the philosophies of Nature that sprang up with the Renaissance; and, as it came to be recognized, in consequence of the newer investigation of Nature, that the laws of the sidereal world are identical with those of the lower sphere, there arose a fresh wave of pure Rationalism which excluded contingency. Then the mathematico-physical interpretation of the world, with the system of Spinoza in the forefront, made this revived Rationalism supreme. All the more vigorous, however, was the reaction of that Empiricism which, with its insistence upon the fact of contingency, took shape in the hands of Locke and Hume, of Leibniz and Kant; for, in spite of the fundamental Rationalism of the latter two thinkers, the one distinguished between the verites de raison and the verites de fait, the other between the rationality of the categories and the contingency of the matter of experience. The problem having thus been placed upon the new basis of a universal cosmic order, the Aristotelian view of contingency as confined to the sublunary world was, of course, discarded, as was also the Neo-Platonic identification of contingency with the irrationality of matter and sense. But contingency emerged once more in connexion with a general cosmical movement in epistemology and metaphysics, as the term was now used to signify the irrational factor beside and within the rational, and as the idea came into immediate touch with the questions regarding the conception of Deity; the thought of a creative will which acts without motive was pitted against that of a logical necessity by which the world proceeds from the Idea.
It was in these controversies that the full significance of the conception of contingency was at length realized.

The various aspects of the problem must be considered in detail, as follows:

r. The difference between the universal and necessary categories of thought and the facts embraced, unified, and controlled by these categories.—The facts, as such, are irrational and contingent. We cannot comprehend why this or that should exist; and, even if any particular thing be rationalized in virtue of its derivation from another, yet that other itself remains contingent. Should it be affirmed, however, that the whole manifold of phenomena can logically be deduced from the fact of the world as a whole,—a consummation which as yet is not even remotely possible, and remains at best a logical postulate,—nevertheless, the existence of the world itself would still remain irrational and contingent. The truly incomprehensible thing, as D'Alembert puts it, is that anything should exist at all. Here, in fact, we have the reason why metaphysics must, in the ultimate resort, refer the existence of the actual to the arbitrary fiat of Deity, precisely as was done by Augustine and the Nominalists, and, in another form, by the modern theories of Schelling and von Hartmann. Yet even so decided a rationalist as Descartes fell back upon the same explanation of the world as a whole.

2. The contingent elements in rational and logical necessity itself.—The so-called 'cosmic law,' 'cosmic idea,' and 'cosmic unity' are never more than phantasms of the mind, or postulates, and are incapable of actual realization. The objective fact is in reality a number of laws operating together, by the simultaneous application of which to the particular the latter becomes intelligible. But this very plurality of laws makes the laws themselves contingent, alike in relation to one another and to the ideal of the one supreme cosmic law. Then there is the further difficulty of depicting the manner in which the real is controlled by the laws. If we are not prepared to fall back upon the myth of Plato's lifest world, or of Scholastic Realism,—as is instinctively done novadays by most of those who make much of the idea of law,—we must interpret the laws of Nature as primarily of subjective import, i.e. as lending order, form, and perspicuity to the facts—an import which is undoubtedly involved in the orderly nature of the world, though we cannot see how. This procedure, however, introduces an excessive degree of arbitrariness and contingency into the idea of law. And if we seek, with the modern idealism of Kant and Fichte, to explain the agreement of law with reality on the theory that the world is generated by consciousness, yet the fact remains that the application of the laws which regulate the world, and are to be regarded as forming an organized unity, is in all cases guided by some particular interest of the mind engaged, and consequently furnishes a rationale, not of the entire reality, but only of that special aspect favoured by the interest in question. Such a selective and isolating procedure, however,—and no other is possible,—also involves an element of contingency.

involves an element of contingency.

3. The idea of individuality.—Even if we assume the existence of a universal rational order, yet we must admit that every single concrete phenomenon found in this network of rationality has a certain individual content, i.e. it cannot be fully explained by universal laws, but always exhibits some special and distinct element not derivable therefrom. This holds good alike of the simplest natural event and of the most delicate complex of psychical life. As a matter of fact, the universe itself and its development do not form a particular case of a general conception, but are absolutely unique. The problem of individuation is therefore identical with the problem of contingency in its general sense. The fact of individuality plays havor with every

system of thoroughgoing rationalism, which accordingly usually endeavours to deny or ignore the existence of the particular, or to interpret it as something else. This is what Leibniz means when he says that Spinoza would be right if there

were no monads.

4. The problem of the new .- On the principles of a purely rational system, nothing new could ever emerge in the world of the real. Everything would be involved in the existence of the whole, and therefore eternally present therein; or the apparently new would be only a phase and form of forces always present in unvarying quantity. It is clear, however, that on either alternative the new is got rid of by a mere evasion. In the first case, it still persists as something that has emerged in the process of development, as that which distinguishes the actual from the potential; in the second, as appearance and manifestation. A thoroughgoing rationalism must, like the Eleatic school, repudiate movement and becoming altogether, for, if it does not, then the admission that something has come into existence which was not contained in the antecedent situation implies an element of contingency. Hegel, in importing into the rationality of the Idea the principles of negation and transition to the antithesis, and in basing metaphysics on the principle of becoming, really, though surreptitiously, provides a place in his system for the contingent and irrational. Metaphysically expressed, this contingent element is the idea of creation and 'positing,' which is here applied to the particular in the same way as to the universe in § r above. in the same way as to the universe in § I above. Epistemologically expressed, it is the idea of a causality of non-equivalence, as opposed to the causal equivalence with which alone a consistent rationalism can be satisfied. In the causality of equivalence the nexus signifies identity of essence, with a mere change of form. In causal non-equivalence the nexus provides a place for the new. The endeavour to reduce all our knowledge of causes to the former category is hopeless, and accordingly an element of contingency clings to the conception of causality itself.

5. The connexion between contingency and freedom.—Freedom, in the sense of self-determination by universal laws, and our concurrence therewith, as contrasted with the haphazard of a purely psychical motivation, involves per se no contingency whatever. On the contrary, as determination by universal moral and social law, it forms the true germ of the conception of law in general, which is first of all realized in the personal sphere, and then transferred to the uniformities of the world-process. In reality, however, the causal 'must' of the process of things, when judged by the absolute standard of ideal values, manifests itself as something contingent. For, if these values represent the true significance of the existent, it is impossible to see why they should demand for their realization this particular sphere of causality. Moreover, freedom, in the sense indicated, implies the exclusion of absolute rational necessity from that sphere of objectivity which is at once the base and the theatre of its activity, since it demands, in the order of things, a certain elasticity, in virtue of which it may intervene in the manifold and mould it to its own ends. From this side also, therefore, an element of contingency insinuates itself into the conception of universal laws-a conception which is thus once more shown to include an element of the merely actual, and to be no longer a conviction of the absolutely valid. In relation to the ideal of universal necessity, interrupted or variable laws are contingent. Here, in fact, we

things, and never reaches the level of a truth scientifically proved.

6. Contingency in the ideas of freedom themselves .- While the ultimate cognizable source of the idea of law, and, therefore, of unconditional necessity also, lies in the ideas of freedom, absolute value, and validity, yet the particular ele-ments of that ideal order cannot be regarded as in themselves necessary Our observation does not carry us beyond an actual control of the soul by ideas bearing this or that interpretation, but we can never derive these from the conception of absolute necessity. As regards their form, moral ideas may be unconditionally necessary, but their content is dependent upon the actual conditions of bunnan life. Here we come upon the root of the old Scholastic controversy whether the moral laws are good because God wills them, or whether God wills them because they are good. We thus see that the idea of contingency pierces even to the deepest sources of all ideas of necessity.

The problem of contingency, then, in its various aspects, contains in nuce all the problems of philosophy, just as from the opposite side they are all contained in the problem of Rationalism. question of contingency is in leality the question as to the relation of the irrational to the rational, of the actual to the logical, of creation to the eter-nity and necessity of the world. The reconciliation of these opposites is impossible. The actual thinking activity of man consists in a continuous combination of the antitheses. Absolute Rationalism, with Pantheism as its logical conclusion, and absolute Irrationalism, with its logical consequence of the irrelation and incoherence of things, or Polytheism, are alike impossible. The final synthesis does not lie within the scope of human thought, and all attempts to reach it lead to contradiction.

In its religious aspect, the idea of contingency implies the vitality, multiplicity, and freedom of the world in God, and, indeed, the creative freedom of God Himself; while Rationalism, on the other hand, signifies the unity of the world, the supremacy of the super-sensuous, the comprehension of all things in a universal Divine law. Here, again, the logical solution less beyond us. In actual practice, it is true, Judæo-Christian Theism takes cognizance of both sides at once, and is therefore, speculatively, the most fertile religious principle. Even that interpretation, however, has its incoherences and its contradictions. But, in the last resort, it remains to be said, such antinomies are ineradicably present in every anti-theistic system as well-in Pantheism

and Nominalistic Emphicism alike.

E. TROULISCH.

CONTINUITY (Gr. συνέχεια, τὸ συνεχές; Lat. continuatio, continuum).—We may perhaps distinguish three stages in the history of the notion of continuity: (1) a pre-scientific stage, in which the notion is no more than a simple description of certain obvious facts of sense-experience; (2) a second stage, in which scientific philosophy first arrives at an apparently clear and distinct conception of the continuous as a peculiar kind of magnitude which cannot be divided into units. This stage of reflexion makes its appearance for the first time in the Eleatic enticism of the assumptions of Pythagorean Geometry, and cultouch the grounds, as well as the limits, of determinism, which is never more than a deduction the conception of a funform continuous motion from the axiom of the absolute rationality of is central for the whole doctrine of Nature.

Mathematically, it leads to the sharp contrast between Arithmetic as the science of non-continuous, and Geometry as the study of continuous, magnitude, which we find carried out in the elements of Euclid. (3) The third stage, represented by the labours of the 19th cent. mathematicians, and embodied in such theories of the continuous as those of Dedekind and Georg Cantor, consists essentially in the attempt to develop, by means of an extension of the notion of number, a purely arithmetical conception of the continuum, and so to restore the correspondence, broken down by Eleatic criticism, between Geometry and Arithmetic. That the new mathematical conceptions must, as they become more widely known, exercise an important influence on the development of philosophical thought in general is clear, though it is perhaps yet too early to predict the precise form which that influence will take.

1. The primary notion of continuity.—Here, as

in all study of the technical concepts of science, we have to begin by going back to the history of Greek thought in its expression in language. As Greek thought in its expression in language. As abundant evidence proves, the primary notion implied by συνεχές is 'having nothing between,' resenting no sensible gap,' 'hanging together.' Thus, with reference to space, we find Thucydides speaking of the siege-works at Platea as ξυνεχῆ οἰκήματα, 'buildings without a gap,' which, as he goes on to say, looked like an unbroken wall (iii. 21). So, with reference to time, in the medical writers of the 5th cent. συνεχές πυρετοί. 'nonwriters of the 5th cent. συνεχεῖς πυρετοί, 'non-remitting fevers,' are distinguished from διαλείποντες πυρετοί, 'periodical fevers,' and in Thucydides (v. 85) a ξυνεχὴς ρῆσις, or 'uninterrupted address,' is contracted with a free conference, in which each point made by one party is immediately answered by the spokesman of the other. In all these cases we are dealing with a simple experience not yet coloured by scientific reflexion. Every one knows the difference between an unbroken line and a series of dots with sensible intervals between them, between a steady pensisting pain and one which comes and goes, between the flight of a missile and that of a bird. The former seem to hang together, the latter do not; and it is this sensible hanging together, which the plain man has in mind when he speaks of the former as 'continuous.' So far no distinction has been made between a 'continuous' and a 'discrete' kind of magnitude, one which cannot, and a 'discrete' kind of magnitude, one which cannot, and one which can, be broken up into ultimate units, themselves indivisible. The plain man, for instance, would not object to talking of a 'continuous' series of integers (e.g. those from 1 to 10), though he commonly looks on an integer as a 'collection of ones' (exactly as Aristotle did). He would call the series 'broken' only if one of the members were left out.

only if one of the members were left out.
2. The Pythagorean Mathematics Eleatic criticism; views of Plato and Aristotle. -Serious reflexion on the presuppositions involved in the notion of the 'unbroken' first meets us in the criticism of the Eleatic philosophers of the 5th cent. on the mathematical and cosmological views of their Pythagorean neighbours. Amid all the uncertainty which surrounds the reconstruction of early Pythagoreanism, one thing seems cer-tain. The Pythagoreans were primarily interested in Arithmetic because they saw in it the key to the interpretation of Nature. In particular, they looked on Geometry, the foundation of all genuine physical science, as an application of Arithmetic. Things are made up of numbers' because they are endowed with geometrical form and magnitude,

it 'has position.' Hence, since a whole number (άριθμός) is simply a 'collection of units,' and since a geometrical figure is a collection of 'units having position,' there is an absolute correspondence between Anthmetic, the science of number, and Geometry. This is why, in the Pythagorean Geometry. This is why, in the Pythagorean scheme of the sciences, retained by Plato in the Republic and Epinomis, Arithmetre is made to take precedence of Geometry. The later arrangement, followed by Euclid—in which Geometry, so far as it can be pursued without the study of incommensuables, comes first (liks, i.-iv. vi.), Alithmetic next (liks, vii.-ix.), and then the theory of surds (bk. x.)-is due to the effects of the criticism of which we have now to speak.

The Pythagorean doctrine itself led very directly to consequences which were fatal to its own assump-If lines are simply made up of an integral number of 'units,' it ought to be possible in theory to answer the question how many points there are in any given terminated line. In other words, all lines ought to be commensurable, since the 'unit' measures them all without remainder, just as any two integers, even if prime to each other, yet have 1 as their G C M. But an immediate consequence of the 'Pythagorean theorem' (Eucl. i. 47) itself is that there is no assignable whole number of 'units' in the base of the equilateral right-angled triangle. In other words,  $\sqrt{2}$  is incommensurable with any integer. If the Pythagoreans employed a strictly scientific mothod for their crowning achievementthe inscription of the dedecahedron in the spherethey must likewise have known the construction of the 'golden section' (Eucl. ii. 11), which introduces us to another 'irrational' magnitude,  $\sqrt{5}$ . The legends which assert that Hippasus of Rhegium was drowned by the brotherhood for revealing one or other of these facts show how acutely the Pythagoreans felt the contradiction between their assumption and their conclusion. Hence, it is not wonderful that their critics should have pressed it wonderful that their critics should have pressed it to the utmost. Farmenides (il. c. 475 B.C., according to Plato) had already attacked their fundamental position by asserting in his poem that, since  $\mu \dot{\eta} \dot{\epsilon} \dot{\varrho} \nu$  ('what is not,' 'empty space') is a pure unreality,  $\tau \dot{\varrho} \dot{\varrho} \nu$  ('what is,' 'body') cannot be divided at all, because it is  $\xi \nu \nu e \chi \dot{\varrho} s \pi \partial \nu$  ('all hanging together'), and  $\dot{e} \dot{\varrho} \nu \dot{e} \dot{\varrho} \nu \tau \tau \dot{\varrho} \dot{\varrho} \dot{\varrho} c$  ('what is touches what is'). In other words, a body cannot be made up of 'units.' Similarly he had denied the reality of all temporal succession. Time is not made up of 'moments,' because what is 'never was made up of 'moments,' because what is 'never was and never will be, since it is now, all at once, one, unbroken' (enel vûn eστιν, όμου παν, εν, συνεχές). This conclusion would be immeasurably strengthened by the discovery of surd or 'irrational' lengths (i.e. lengths which have not, to the unit of measurement we assume, the λόγος, or ratio, of one whole number to another). We may put the difficulty thus. The Pythagorean conception of the point as a 'unit' of length involves the view that, if on a terminated straight line AB we mark off points corresponding to the successive integers, we have only to make our unit of length sufficiently small (i.e. to take our successive points near enough together) to exhaust all the points of the line. The discovery of a single 'surd' length is enough to show that this is false. However close together we take our points, we shall never have included one which lies from the origin at a distance equal to the diagonal of a square on the funit' length; or again, there will not be among them any point at which a straight line is divided in 'extreme and mean ratio.' Such a conclusion would, of course, be destructive of Geometry, because it would invalidate some of its most fundamental construcand see therefore ultimately made of points, and a mean ratio.' Such a conclusion would, of course, points simply a 'unit having position' (hords been be destructive of Geometry, because it would excoval. The point differs from the 'unit,' or 'number 1, only in the additional peculiarity that

But, even without the explicit study of surd magnitudes, results equally fatal to the Pythagorean identification of Geometry with applied Arithmotic can be derived from the argument from infinite divisibility, and it was this argument which was specially pressed home by Parmenides' pupil, Zeno of Elea (fl. c. 450, according to Plato). To appreciate Zeno's employment of the argument, we need to bear in mind that what the Greeks called \$\frac{apple}{appreciate}\$ is always a natural whole number or integer. (Even in Euclid, the notion of a rational fraction does not occur. What we regard as rational fractions he always treats as ratios of one integer to another.) Now, argued Zeno, any length, however small, can be bisected, but no number of repeated bisections will over leave us with an indivisible 'unit,' but only with a length which can be bisected again. Or, since the argument shows that the 'units' in any length must be infinitely numerous, if the 'unit' has any magnitude at all, every length will be infinite, while, if we take the 'units' to be zeros, every length will be infinitely small, since the sum of an infinity of zeros is still zero. Yet again, if a point has magnitude, the addition or subtraction of one point will alter the length of a line, while, if the point can be added or subtracted without affecting the length of the line, it has no magnitude, and is nothing at all (see the fragments of Zeno in Diels, Vorsokratiker', i. [1906] 130, 133 f.). The famous 'paradoxes' of Zeno, dealing with the concept of motion (for which see Diels, loc. cit. p. 131 f, Burnet, Early Gr. Philosophy?, pp. 366-369; Milhaud, Les Philosophes-gomètres de la Grèce, pp. 130-140), are all aimed at the same notion of space and time as made up of minima of length and duration, and, as against this conception, are unanswerable. They do not, however, really prove all that Zeno meant they should.

From Plato (Parmevides, 128 D) we learn that Zeno's object was to 'renforce' the doctrine of Parmenides that 'the All is One,' by show

From Plato (Parmenides, 128 D) we learn that Zeno's object was to 'renforce' the doctrine of Parmenides that 'the All is One,' by showing that the rival theory that it is Many leads to absurd results. He meant, then, to show that space and time cannot be continua of points or moments. All that he really proved was that they cannot consist of points or moments which themselves have magnitude, that the 'elements' of a continuum cannot be 'units' homogeneous with the continuum constructed out of them. He has, in fact, shown that there must be more points on the line, more moments in the shortest lapse of time, than there are members of the series of natural numbers, or, what comes to the same thing, that, though every continuum is infinitely divisible, infinite divisibility is not an adequate criterion of continuity. He has not shown that the number-

tion in their conception of Geometry. indeed, clings to the old view of number as the foundation of Geometry, but that was probably, as we shall see, merely because he did not share the common view which identified number with whole number But the Academy, whose results are represented for us by the work of Euclid (the last of a sciles of oroixeioral, all whose piedecessors seem to have been connected with the Platonic school), re-arranged the curriculum of Mathematics in a way which can have been due only to the Eleatic criticism. In the final form given to the oroixea, or A-B-C, of the subject by Euclid, Plane στοιχεία, or A-B-C, of the subject by Enclid, Plane Geometry comes first (bks. i.-vi.), embracing the theory of Proportion as re-east by Eudonus, so as to make it applicable to incommensurables and commensurables alike (bk. v.), then Arithmetic (where all the magnitudes are ex hypothess commensurable [bks. vii.-ix.]], then the study of Incommensurables (which, for the Greeks, meant expressions involving quadratic surds [bk. x.]], finally Solid Geometry, culminating in the inscription of the dodecahedron (bks. xi.-xiii.). The effect is that the question of the commensurability or incommensurability of the lines dealt with is never raised in the books which treat of Plane Geometry. Only once does Euclid in these books explicitly undertake the construction of a suid explicitly undertake the construction of a suid magnitude—viz. in ii. 11, the construction of the 'golden section,' which had to be dealt with early because it is required for the inscription of the pentagon (iv. 11), and this in its turn for that of the dodecahedron (xiii. 17). In ii. Il alone is it tacitly presupposed that a straight line possesses a continuity which is more than the capacity for being inimitely divided into aliquot parts, and it is interesting to see that the schola to the proposition (Euclid, ed. Heiberg, v. 248-251) specially call attention to the fact that the 'problem cannot be represented by numbers,' 'is not explicable by counters.' We may note that the researches of Euclid x., do not go beyond the consideration of various types of suids involving the extraction of a square root. This limitation is, in fact, the theoretical counterpart of the practical restriction to constructions which can be carried out with ruler and compass, for 'an analytical expression is capable of construction by ruler and compass only when it can be derived from given magnitudes by a finite number of rational operations and square roots, since the intersection of two straight lines, of two circles, of a straight line and a circle, is always equivalent to a rational operation or the extraction of a square root' (F. Klein, Vortrage uber ausgewahlten Fragen der Elementargeometrie, Leipz. 1895, ad inst.). A further discovery of the 5th cent., which, if it could have been followed up, would have been even more fatal to the old arithmetical have been even more fatal to the old arithmetical treatment of Geometry, was that of the so-called quadratrix ( $\tau$ erpaywrlforda), made by Hippias of Elis. This curve, which gets its name from the fact that, if it could be mechanically described, it would solve the problem of 'squaring the circle,' has for its equation in polar co-ordinates  $\rho = \frac{\omega}{\sin \omega} \times \frac{2 \text{ R}}{\pi}$ , and is thus the first example in

Greek mathematics of a transcendental function. Summing up, we may say that the actual effect of the Eleatic criticism was to establish a sharp common measure, and are therefore incommensurable. The point is put very clearly in the introductory scholium to Euclid x. (Heiberg, v. 415):

'The Pythagoreans first began to investigate commensurability, being the first to discover it from their study of numbers. For, whereas the number 1 is a common measure of all numbers, they failed to find a common measure of magnitudes (µereθων). The reason is that any number, however you divide it, leaves you with a least part which admits no further division. But no magnitude, though you divide it ad infinitum, leaves you with a part which is a minimum. . . but only with a part which can itself be divided ad infinitum.'

Thus, owing to the criticism of Zeno, infinite divisibility came to be regarded as the sufficient criterion of continuity. In language the effect of the polemic was that the old definition of the point the polemic was that the old definition of the point as a 'unit with position,' which we know to be Pythagorean, was replaced by that which now stands at the opening of Euclid's Elements, 'A point is that which has no parts' (σημεδόν ἐστιν οῦ μέρος οὐθέν). In thus being indivisible the point does not, of course, differ from the 'unit,' or 'number 1' (μονάς) (cf. Plato, Republic, 525 E), but it can no longer be called μονάς, because it is now clearly seen that, unlike the 'unit,' the point cannot be a 'measure' of saything. Hence in Plato and be a 'measure' of anything. Hence in Plate and Aristotle µorés always means the number 1; for Aristotle μονάs always means the number 1; for 'point' Aristotle always says σημεῖον οτ στιγμή, while Plato (see Aristotle, Μεταρλ. A 992°, 21) employed the designation ἀρχὴ γραμμῆς, 'the beginning of the line.' There are perhaps still perceptible traces of 5th cent. opposition to the consequences which Zeno had drawn from infinite divisibility. Protagoras, like Zeno, a member of the Percelan circle, argued, in 'refutation' of the geometers, that a circle and tangent have a stretch not a that a circle and tangent have a stretch, not a single point, in common (Aristotle, Metaph. B 997<sup>h</sup>, 35). This looks like an attempt to deny the infinite divisibility of the line, and to identify the minimum visibile with the unit of extension, and thus to get rid of the notion of incommensurability. Hence it may be, as Burnet has suggested (op. cit. 188), that the formula Protagoras chose for his relativism, 'Man is the measure of all things,' was influenced by opposition to the new doctrine of magnitudes which have 'no common measure.' The anti-mathematical argument of Protagoras led to a rejoinder from his greater townsman Democritus, in the catalogue of whose works drawn up in the 1st cent. A.D. by Thrasyllus we find one on 'the contact of the circle and the sphere,' and another on 'irrational lines.' According to Plato and Aristophanes (Clouds, 144 ff.), who are unwillingly confirmed by Xenophon (Mem. IV. vii. 3, 5), Socrates, too, was among the mathematicians, and it may be noted that in the three chief places where Plato makes him exhibit mathematical interests (Meno, 82-85 B, Theretetus, 148 AB, Republic, 546 BC) a problem involving surd magnitudes is, in each case, under consideration. Plato's attitude towards the problem raised by rejoinder from his greater townsman Democritus, in

Plato's attitude towards the problem raised by Plato's attitude towards the problem raised by the discovery of surds, and the recognition that the infinitely divisible cannot be made of 'units,' is, at first sight, perplexing. He is deeply interested in the study of surd expressions, and fully aware of the infinite divisibility of  $\mu e \gamma \ell \theta \eta$ , but refuses to take the step of sovering Geometry from Arithmetic, and of selecting elementary Plane Geometry (which can be studied without any reference to the existence or non-existence of 'units') as the subject with which Mathematics should as the subject with which Mathematics should begin. To the last he insists that Arithmetic, the theory of numbers, is the foundation on which all other branches of Mathematics should be based, and the clue to their meaning. We can exempt him from the charge of inconsequence only by supposing that his retention of Arithmetic as the corner-stone of Mathematics was due to a convic-tion that humber is not exhausted by the series of the natural numbers, the novačikol apionol, or

numbers made up of units, which Austotle always asserts are the only numbers there are. If the concept of number be widened so as to take in the suids, so Plato probably thought, we may still adhere to the notion of one-to-one correspondence of the points on a terminated line with the memof the points on a terminated line with the members of the number-series, without incurring any of the difficulties which were fatal to the old Pythagorean geometry. (Just so, our ordinary Analytical Geometry rests on assuming such a correspondence of the points of the line with the correspondence of the points of the line with the complete series of the real numbers.) That Plato had formed some such conception of a possible extension of the concept of number seems clear from more than one consideration. The suggestion, as Milhaud has shown (op. cit. bk. ii. ch. 5), explains why Aristotle regards it as a capital point against letter the invite that there is never of constitution. Plato to insist that there is no way of generating numbers except by the addition of units, and why so much is made in Metaphysics M of the complaint that the 'numbers' of which the Platonic 'Ideas' are composed are not all συμβλητοί, commensurable with one another Aristotle is, in effect, complaining that Plato's theory presents us with expressions like  $\sqrt{2}$ ,  $\sqrt{3}$ ,  $n + \sqrt{b}$ , and the like; whereas he himself holds that there is no place for them in the number-series, just as Euclid is always careful to speak of such magnitudes as  $\mu e \gamma \epsilon \theta \eta$ , and to symbolize them by straight lines and rectangles. Positive evidence to the same effect is furnished by a remarkable passage of one of Plato's latest works, the *Epinomis*, the point of which is to maintain that all Mathematics is really the study of the generation and properties of numbers (Epin. 990 C If.). We are particularly told here that the names 'geometry' and 'stereometry' are altogether misleading, and the former is said to be 'extremely absuid.' 'Geometry' is 'manifestly an assimilation, effected by reference to surfaces, of numbers which are not in their own nature similar'; and 'stereometry' is the 'study of numbers raised to the third power, and similar to the nature of the solid, where again those which are dissimilar are made similar by a further device.' (The passage should be read in Burnet's device.' (The passage should be read in Burnet's edition, the only one in which the text has not been perverted by editorial dullness.)

The passage just quoted represents the highest development of the Platonic theory of number. It is clearly an attempt to vindicate for the numberseries itself the same character of a continuum as that which belongs to the straight line, by finding room in it for numbers answering to the irrational lengths of Geometry. If we followed out Plato's suggestions in his own spirit, what they would lead to would be something of the following kind. Taking a terminated straight line, we might first assign the co-ordinates 0 and 1 to its end-points. Then, by infinitely repeated division, we should get one and only one point corresponding to each rational fraction between 0 and 1. Then, by inserting further points corresponding to all the series itself the same character of a continuum as rational fraction belween 0 and 1. Then, by inserting further points corresponding to all the irrationals between 0 and 1, we should obtain points corresponding to the whole series of algebraic numbers. The resulting number-series would not, however, exhaust the points on the line, and would therefore not possess the continuity of the point-series, since it would contain no terms whose co-ordinates are transcendental numbers, though it would contain an infinity of points not obtainable by the process of repeated division.

Aristotle's statement that Plate refused to speak

Aristotle's statement that Plato refused to speak of 'points,' but called them instead the beginning of the line,' seems to indicate another attempt to face a difficulty inherent in the current conception of whole number. From the earliest times of Pythagoreanism downwards, we find it regularly assumed that the number-series must begin with 1,

1 144 175

the 'unit.' But the cuticism of Zeno had shown that we cannot think of the 'point' as a 'unit length.' If the correspondence between Geometry and Alithmetic is to be kept up, as Plate wished it to be, we must begin our number-series with something which answers to a zero of magnitude in Geometry; the first number must be 0, not 1. It was, no doubt, this character of the point as a zero which led Plato to avoid recognizing it as a distinct entity, and to call it the beginning of the line.' It seems most probable, however, that he did not clearly draw the right conclusion that, in the same way, 0 is the beginning of the number-series. More probably he thought of the point, as Xenocrates is known to have done, as an 'infinitesimal line,' and must be added to the list of thinkers like Leibniz, who have been led astray in their theory of the continuous by this phantasm of a thing which is somehow at once something and

Further interesting contributions are made to the theory of continuity in the puzzling dialogue Parmenides. Without raising the question of the Parmenides. Without raising the question of the purport of the dialogue as a whole, we may note the references made in its antinomies to the difficulty of regarding a continuum as constructed out of real elements. We may take first the treatment of 'contact' (p. 148 D ff.). When a number of things are in contact, each 'lies next to'  $(\epsilon \phi \epsilon \xi \hat{\eta} s \kappa c \hat{r} r a)$  that which is in contact with it; e.g. if a straight line is made up of distinct 'units' in contact with one another, the units must leave no gaps between them, and each must have a definite 'next adjacent' unit. In modern phraseology, the 'next adjacent' unit. In modern phraseology, the line must be a 'well-ordered' assemblage of points. me must be a 'well-ordered' assemblage of points. Honce, in a series of n members there must be (n-1) contacts. It is therefore inferred that, 'if there is not number in τὰ ἀλλα' (the things 'other than the One,' 'the Many'), the 'One' cannot 'be in contact with them.' For Geometry this plainly means that, if the points on the line are not 'units' and the critisism of Zana had above that the (and the criticism of Zeno had shown that they are not), no point on a line has an immediately adjacent or next point. Since every integer has a next integer in the actual number series, this means that the points on a terminated straight line, taken in the order of their distances from one of the end-points, cannot be symbolized by the series of integers. Continuity, as exhibited in the line, must be something other than the mere unbroken succession of the whole number-series 1, 2, 3, ... n, ... Later on (155 E-157 B), we have an argument to show that the very concept of change leads to the thought of time as a series of 'moments' which have no duration, just as the points on a line have no extension. When a body which was moving comes to rest, or vice versa, there is a transition from the one state to the other. This cannot take place 'in time,' i.e. there is no interval, however place 'in time,' i.e. there is no interval, however small, in which the body is neither moving nor at rest, but passing out of motion into rest; in any given interval it is either moving or stationary. Hence the transition occupies no duration, but happens instantaneously, and we are compelled to form the 'paradoxical' (trons) conception of the 'instantaneous' (70 & \$\xi\_{\infty} \text{ulphyn}\_{\infty})\$. The paradox seems to lie in the fact that it is hard to decide whether the moment at which the velocity 0 is reached should be counted as the last moment of motion or as the first moment of rest. We must, in the one case, think of the time during which the body moves as having no last moment, in the other of the timeduring which it is stationary as having no first moment—an immediate consequence of the con-sideration that no moment has a 'next' moment. In Aristotle we meet with none of the anticipa-

explicit account of continuity, in so far as infinite divisibility may be taken as a sufficient criterion of it. The notion is fundamental in the Aristotelian system, because the steady and uninterrupted pro-cess of the development of latent potentialities into actualities, which, for Aristotle, constitutes 'Nature,' depends in the last resort upon the unform and continuous movement of the heavens, and continuous movement demands the continuity of time and space. Hence any denial of the continuity of extension, duration, and movement is fatal to Alistotle's whole Nuturphilosophie. The tract on the Categories gives us the general view current in Academic circles and presupposed by the more special discussions in Aristotle's discourses on 'Physics.' τὸ πόσου (quantum) has two species on 'Physics,' τὸ πότον (quantum) has two species

—τὸ διωρισμένον (elsewhere also τὸ διαιρετόν), 'the
discrete'; and τὸ συνεχές, 'the continuous.' The
vital difference between them is that the 'parts'
(μόρια) of the 'discrete' quantum have no κουδε
δρος, or 'common boundary,' at which they join;
e.g. 10 (for Aristotle always confuses the number
of a collection with the collection itself, and many
of his attacks. The course from weaking the of his attacks on Plato arise from mability to see that, though there are many pairs of things in the world, there is only one number 2, and thus number itself is not a 'pair') consists of 7 + 3, but no one of the 'units' of the 7 is identical with any unit of the 3. But the 'parts' of a 'continuous quantum always have such a 'common boundary, which, in the case of the line, is a point; i.e. when the terminated straight line AB is divided at C, the writer reckons C as belonging both to AC, of which it is the last point, and to CB, of which it is the first, thus illogically counting the one point C twice over. Similarly with time: the present moment 'joins on' (συνάπτει) both to the past and to the future. It may be taken either as the first or as the last moment of an unbroken time-series. This is the really important point in the distinction drawn for us between the two kinds of quanta, since it implies, of course, that the ource's noov or continuum is infinitely divisible, and therefore does not consist of units or minima. It is added that not all continua are composed of parts which 'have position'; a.g. since the past, present, and future are not all co-existent, no part of time is 'anywhere' relatively to the rest. The parts have not position, but only 'order'  $(\tau a \xi_{is})$ , and so far resemble the members of the whole number series. (We must not, of course, press this analogy too far, since it would lead to the view that the 'parts' of time form a 'well-ordered' aggregate, in which each term has an immediately next term. Time would then be made up of minima of duration, and would not be continuous in the writer's sense [Categories, 5b-6a].)

continuous in the writer's sense [Categories, 5<sup>b</sup>-6<sup>a</sup>].)

More characteristic is the account given in Metaphysics Δ 1020°, 7ff. — πόσον (quantum) means that which can be divided into constituents inherent in it, whereof each is one and "this" (τὸ διαιρετὸν els ἐνυπάρχοντα ἄν ἐκάτερον ἡ ἔκαστον ἔν τι και τόδε τι πέφυκεν είναι [1020°, 8]). Such a quantum is a πλήθος, or assemblage, if it can be numbered; a μέγεθος if it can only, be measured. Thus a πλήθος can be divided into countable non-continuous elements, but a μέγεθος only into continua. (We cannot, e.g., divide a line into points, but only into lesser lines, so that infinite divisibility is taken as the criterion of μέγεθος, 'continuous quantity.') A delimited (πετερασμένον) πλήθος is a whole number; a delimited μέγεθος is a line, surface, or body, according to the number of its dimensions. Thus there is only one kind of magnitude which is continuous in its own right (καθ' αὐτό). tude which is continuous in its own right (καθ' αὐτό). sideration that no moment has a next, moment.

In Aristotle we meet with none of the anticipations of a riper thought which fascinate us in Plato, but we have, by way of compensation, a very superfixed by the straight of their connexion with the superfixed process.

a moving body is a continuum, the motion is a continuum also, and therefore also the time occupied in the transit. A fuller, but logically unsatisfactory, account is given in the *Physics*. The Eleatics had held that the continuous is indivisible Eleates had held that the continuous is indivisible (a theory which meets us again in Spinoza). Aristotle points out that, on the contiary, only the continuous is infinitely divisible (185<sup>h</sup>, 10). So we are told in bk. I that 'motion' (the fundamental category of a science of 'Nature') is generally held (δολεί) to be one of the continua, and it is in the continuous that the 'infinite' first makes itself noticeable. Hence, those who give definitions of continuity commonly presuppose the contions of continuity commonly presuppose the concept of the infinite, on the ground that 'what is divisible ad infinitum is continuous' (200<sup>b</sup>, 18). The point that the one primary continuum is spatial recurs in bk. Δ, ch. xi. Time is relative to change (μεταβολή), since it is only where we perceive change that we are conscious of duration. If the 'seven sleepers' woke up, they would not be aware that time had clapsed during their sleep. They would 'connect the former now with the sub-sequent now, and make one of them.' To know what time is, we have to ask in what way it is related to motion (τΙ τῆς κινήσεως ἐστιν). But what moves, moves from somewhere to somewhere. The character of motion depends on that of the path it traverses. Motion is thus continuous because its traverses. Motion is thus continuous because its path is so, and time is continuous because motion path is so, and time is continuous because motion is. Time is 'the number of motion in respect of before and after '(220°, 24). The use of the word 'number' is unhappy, since Aristotle is never tired of insisting that there are no numbers but the  $\mu orable harden har$ that time is the measure (μέτρον) of motion, which Aristotle sometimes repeats, is thus much more accurate.

We finally reach Aristotle's own formal definition of το συνεχές in Physics E 227a, where it is given as the last resultant of a whole series of previous definitions. Things are 'together' (άμα) when they are in 'one and the same primary place' (ἐν ἐνὶ τόπφ πρώτφ), i.e. enclosed in the same circumanhient surface. Two things of which the extremities are 'together' are 'in contact,' or 'touch' cach other. A thing is 'between' (μεταξύ) two others, when something which is continuously changing arrives at it 'before it reaches the end of the process of change' (i.e. C is between A and B, if, in moving continuously from A to B, you pass C before reaching B. Thus the 'derivative' notion of continuous movement is illogically employed to We finally reach Aristotle's own formal definition C before reaching B. Thus the 'derivative' notion of continuous movement is illogically employed to define the 'primary' continuum of extension!). We now define 'next after,' and 'immediately adherent.' A torm in an ordered series is 'next after' (ἐφεξῆς) another when there is no term of the same kind between them. The phrase 'adherent to' (ἐγδιενον) means both 'next after' a given term and 'in contact' with it (ὁ ħν ἐφεξῆς δν ἄπτηται). Finally, continuity is a special case of immediate adherence, which arises when the two 'ends' (πέρατα) of things which immediately adhere become one and identical (λέγω δ' είναι συκεχές δταν ταὐτὸ γένηται καὶ ἔν τὸ ἔκατερον πέρας οῖς ἀπτονται). Alexander of Aphrodisias, as we learn from Simplicius, found this passage hard to interpret, and with good reason. Apart from the logical hysteron proteron reason. Apart from the logical hysteron proteron already noted, there is a further difficulty involved in the definitions of 'together' and 'contact.' What is meant by 'the same primary place'? Simplicius, escapes from Alexander's uncertainty subhbari of arms a bures on

1 -3

it a purely relative sense; it may mean at will 'in the same town,' 'the same house,' 'the same room,' etc. In fact, it has no definite meaning at all. The same defect attaches to the subsequent definitions, which depend on that of 'together.' Two things are 'in contact' when their extremities are 'together.' And such contact may exist without continuity. The extremities, as in the case of things which are morely 'adherent,' may be 'together' and yet remain distinct. Such a definition does not satisfy our geometrical notion of 'contact.' However small we take the 'primary blees' of the two extremities the second they are the place' of the two extremities to be, so long as the extremities remain distinct, there is no contact. However small the distance between a straight line and a circle may be, so long as it remains finite at all, the straight line is not a tangent; it becomes a tangent only when there is one point, and only one, which hes both on the circle and on the straight line. Thus, surfaces which 'adhere' must be absolutely identical. Aristolle is, in fact, assuming (with an eye to his astronomical theories) that we can have a set of concentric spheres enclosed within one another so that no space is left between the convexity of one and the concavity of the next outermost, and yet that the convexity and

the concavity remain distinct surfaces. But this is geometrically impossible.

The one point of real interest which emerges from the discussion is the hint of a connexion between the notion of continuity and that of series. As Aristotle states the connexion, it is open to unanswerable criticism, since the very impossibility of dividing the continuous into 'units' shows that a continuum, as given, cannot consist of members each having a 'next following term,' but the main idea has borne remarkable fruit in our own days in Cantor's 'ordinal' definition of the continuum, and a striking attempt has been made by Zermelo (in Muthematische Annulen, LIX. 1v. 514 ff.) to show that any continuous series (e.g. that of the points that any continuous series (e.g. that or the points on a terminated straight line) permits of an arrangement of its members such that every one has a 'next following' member. That no member of such a series as given in experience has a 'next' member is, with laudable inconsistency, insisted on by Aristotle himself. 'Nothing continuous can be account of indivisibles and a line cannot be be made out of indivisibles, e.g. a line cannot be made out of points' (*Phys.* Z 231a, 24). For, by definition, the extremities (ξσχατα) of things which definition, the extremities (&σχατα) of things which are continuous coalesce, but an indivisible point or moment has no extremities. The consequence is that the line cannot 'consist of' points, since even by infinitely repeated division we can only, break it up into lesser lines, which are, again, divisible. συνεχή can be divided only into συνεχή, or, as Bradley has put it, space (and time) are 'lengths of lengths of—nothing that we can find' (Appearance and Reality's, London, 1897, p. 37). On the straight line, e.g., we can find nothing but points, yet it is not a series or class of points, but something more, though what that something is we cannot say. This leads Aristotle to break with the Platonic view that Arithmetic, Geometry, and Kinematics form a single science with a single kinematics form a single science with a single body of postulates. Physics, so he unhappily concludes, is distinct from Mathematics, and Mathematics itself falls into two distinct doctrines, each with its own peculiar postulates—the theory of the διωρισμένον πόσον, or number, Arithmetic; and Geometry, the theory of the oweges wood and it is a logical fallacy to attempt to prove a conclusion which belongs to the one science from the postulates of the other (our apa korn eg allow) What is meant by 'the same primary place'? Simplicius escapes from Alexander's uncertainty as to whether the notion of continuity is not tacitly presupposed by such a phrase only by giving

To consider the way in which Aristotle goes on to develop the view that the regular and continuous development from potentiality to actuality which makes up the life of Nature, as we see it in the evolution of the adult organism from the germ, and of the germ, in turn, from the adult organism, or even in any steady qualitative change from one 'opposite' (e.g. white, hot, dry) to its contrary (black, cold, moist), depends upon the domination of Nature by the unending 'uniform' and continuous encular revolutions of the celestial spheres—would take us too far from our immediate subject. We may merely note that it is an indispensable feature of this view that these revolutions are 'irreversible,' and always take place not only with uniform velocity, but in the same sense, since a sudden reversal would be equivalent to a momentary beach of continuity. The moving body would, Aristotle thinks, have to be twice at the same point \(\lambda\), if \(X\) is to be both the goal of the movement in one direction and the starting-point for the movement in the other. Motion in a straight line without reversal is excluded by the assumed limitude of the universe, and thus, according to Aristotle, only the circle remains, since it is the only curve of which 'every part is congruent with every other,' i.e. the only curve of constant curvature. (For all this, see Physics \(\theta\), de Calo, and de Generat., passin; Metaph. A., chs. vi -vii.)

From the special tract against Xenocrates and his assumption of infinitesimal lines which are indivisible (de Lines Insecability), a work of some early Peripatetic, apparently not Aristotle himself) nothing can be drawn for our purpose, though the

From the special tract against Xenocrates and his assumption of infinitesimal lines which are indivisible (de Lines Insecatibilities, a work of some early Peripatetic, apparently not Aristotle himself) nothing can be drawn for our purpose, though it is historically interesting, as showing that the study of at least some of the irrationals examined in Euclid x, goes but it o Plato and his immediate followers, as does also the notion of the infinitesimal. Some interesting notices are preserved to us by Sevtus Empiricus, in bk. x, of his attack on Dogmatic Philosophers, which reveal the fact that the polemic of the Megarian formal logicians against Aristotle's whole conception of the gradual development of potentiality into actuality, of which we read, e.g., in Metaphysics © 1016b, 29–32, was connected with a revival of Zeno's arguments against motion Diodorus Cronus (Saxtus, contra Mathematicos, x, 80) specially attacked the notion of a 'state' of motion, i.e. a time at which one cannot say of a moving material point (an Δμερές σώμα, i.e. a 'material point,' not an 'atom' in the sense of Democritus or Epicurus, since the atom was not Δμερές) that it is at any position, but only that it is moving from one position to auther, though one can, Unodorus admits, say that such a body must have moved, when it is seen first at A and afterwards at 11. The view of the reality of a 'state of movement' here attacked is, in fact, one of the chief difficulties inherent in Aristotle's whole treatment of continuity.

Nothing would be gained by following the history

Nothing would be gained by following the history of the notion of continuity in Greek philosophy beyond the time of Aristotle. The Stores, to be sure, influenced later thought considerably by their vigorous insistence on the idea of the absolute continuity of mutter, but neither they not the Neo-Platonists, whose doctrines may be called the final outcome of Greek speculation, added anything to what Aristotle had laid down as to the logical analysis of the concept of the continuous itself. The sharp division between the two kinds of  $\pi \delta \sigma a$ , those which are divisible into ultimate 'units' (the 'discrete' quanta) and those which are not (the  $\sigma w e \chi \hat{\eta}$ , or continuous  $\pi \delta \sigma a$ ), the adoption of infinite divisibility as the criterion of continuity, and the consequent view that incommensurables belong to Geometry and have no place in Arithmetic—were the permanent legacy from the ancient to the modern philosophy of the continuous.

3. Modern attitude.—The general acquiescence in Aristotle's distinctions makes it unnecessary to treat at any great length of the views of most modern philosophers on the nature of a continuum For the most part these views have been determined by the conception of infinite divisibility as the sufficient and necessary condition of continuity. Even Descartes seems to have been blinded to the real difficulties of the subject by his familiarity with the practice of employing the symbols of Algebra indifferently to denote rational and irrational magnitudes. He appears never to have asked himself what conception must be formed of number, if we are to recognize such expressions as  $\sqrt{3}$ ,  $\sqrt{2}$ , and the like as numbers, and thus his Géometrie, with all its historical importance, can scarcely be called a contribution to the philosophy of Mathematics. Nor does it appear that the continuity which he claims for matter amounts to more than infinite divisibility,

the absence of real 'atoms' or 'units' of extension. Hobbes explicitly accepts the Aristotelian definition, 'Continua inter se tum spatia tum tempoia duo dicuntui, quorum est aliqua pars communis' (de Corpore, vii. 10); 'Coipoia etiam duo . . . continua dicuntur eadem ratione qua duo spatia' (1b. viii. 9). Spinoza even reverts to the Eleatic position, according to which extension, because continuous, is not really divisible at all, and is supposed to have parts or elements only by an illusion: 'Substantia absolute infinita est in-divisibilis' (Ethica, i. 13); 'ex his sequitur . . . nullam substantiam corpoream, quaternus substantia est, esse divisibilem' (1b. corollarium). Hence he infers that quantitas is divisible only so long as we merely imagine it—i.e. think inaccurately about it; when we form the concept of it, we see it to be 'infinita, unica, et indivisibilis' (Ethica, 1. 15, schol.). It should follow that we can form no concept of a plane, a straight line, or a point a conclusion, which would be the reductio ad absurdum of Spinozism. Similarly Kant's critical philosophy throws no real light on the nature of a continuum. Indeed, if we take seriously the Aesthetik, with its account of the way in which the mathematical concepts of space and time are generated, we shall clearly be led to think of both as composed of minma, and therefore not continuous, though, to be sure, this account conflicts with the repeated assertion that both are 'infinite given wholes.' (The 'synthetic unity of apperception' cannot help us here, since it is just as much manifested in the counting of the units of a group of 'discrete' quanta as in that 'diawing' of a line of which Kant has so much to say.) So, when we are told in the account of the 'Schematism of the pure Concepts of the Understanding' that if we think of any number, e.g. 5 or 500, this thought is 'the representation of a method for representing in an image an assemblage conformably to a certain concept,' we see at once that Kant is thinking exclusively of the natural integers, which do not form a continuum. How it can be true that 'the pure image of all magnitudes (quantorum) of the outer sense is space, and that of all objects of the senses in general is time,' and that 'the pure schema of magnitude (quantitatis) as a concept is number, which is a representation which comprehends in one the successive addition of one to one, remains an unsolved mystery, unless space and time are to be non-continuous; and the difficulty is only increased when Kant goes on to say that both space and time are quanta continua because no part of them can be given, . . . except in such a way that the part is once more a space or a time.' Nothing can conceal the fact that Kant is trying to combine Aristotle's denial that a συραχές can consist of minima with a theory which requires the construction of space and time out of such minima. He even repeats in this very connexion the old criterion of continuity, that it is 'that property of magnitudes in virtue of which no part of them is the minimum (no part simple). It is, therefore, not to be wondered at that the 'antinomies' of the Transcendental Dialectic have really nothing to do with the problems of continuity. What their theses presuppose is merely the summation of infinite series, and the difficulties Kant professes to find in such a summation exist just as much where every term of the series has a next term as where it has not; e.g. the difficulty; if there is one, about the completion of the synthesis exists just as much when we consider 2 as the sum of the series  $1 + \frac{1}{2} + \frac{1}{2^2} + \cdots + \frac{1}{2^n} + \cdots$  as when we ask whether the world had a beginning in time, as Hegel correctly saw. In principle, Kant, like Aristotle, identifies the infinitely divisible with the continuous.

Hegel's own account is so largely coloured by metaphor, and so distorted by his determination to prove that every concept is precisely what it is not (that, e.g., perfect continuity and absolute discreteness are the same thing), that it is far from easy to say what his real meaning is. Since, however, he supposes Kant's second antinomy (everything must be, and yet cannot be, composed of simple elements) to be concerned with continuity (Werke, in. 216), he, too, presumably means by continuity no more than divisibility ad infinitum. His enthusiastic praise of Zeno, and of Aristotle's treatment of the problems of space, time, and motion, points to the infolens of space, time, and motion, points to the same conclusion (ib. p. 227). The vagueness of Hegel's notions may be seen from the fact that he actually regards the Anzahl, or cardinal number, of a group as taself a group of 'units,' and asserts that it is at once 'continuous' (because it is one group among others) and 'discrete' (because it is a group of paints [ib. p. 2225 it)

units [ib. p. 233 f.]).
Leibniz may fairly demand separate consideration, in virtue of the peculiar stress which he lays on the Principle of Continuity as fundamental, not only for Mathematics, but for Metaphysics. This principle, as stated by him, is much more than an assertion of the continuity of space, time, than an assertion of the continuity of space, time, and motion. Since his philosophy requires a denial of the validity of a vacuum, he is led further to maintain the continuity of matter against all forms of the atomic theory. Further, the conception is regarded as holding not merely of phenomena, but of the substances or 'monads,' whose interrelations and internal self-development are the reality of which the extended and temporal world is symbolical. Real substances form a conworld is symbolical. Real substances form a continuous hierarchy, in which each member differs from some other by a purely infinitesimal differ-ence. Or, as Leibniz himself states the principle in a letter to Malebranche, dated 8th Dec. 1692, in a letter to Malebranche, dated 8th Dec. 1692, 'datis ordinatas etiam quaesita sunt ordinata et consentanca.' Hence the absolute continuity of the series of monads has the continuity of the various  $\mu e \gamma \ell \theta \eta$  as an immediate consequence (Couturat, Logique de Leibniz, p. 233 ff.). A special case of this principle is the correspondence between soul and body, which Leibniz describes as follows Couturat, Opusc. et frag. p. 521): 'God has from the beginning constructed soul and body with such skill that the opinion gas in use in the first per such skill that . . . omnia quae in uno fiunt per se perfecte respondeant omnibus quae in altero flunt.' As to the nature of the continuity thus asserted, we learn much from the dialogue on motion composed by Leibniz on his journey of 1676 to visit Spinoza (op. cit. pp. 594-627). The question there raised is whether the moment at which a man dies may be regarded as at once the last moment at which he is alive and the first at which he is dead (as it must be, according to the Aristotelian account of to surexes). To say that Aristotle's view is correct seems to violate the law of contradiction; to reject it seems to imply that two moments—the last of life and the first of death—are immediately adjacent, and, if moments can be immediately adjacent, why not points? (ib. p. 601). But we are thus led to conceive of extension and time as made up of series of indivisible points and moments (ib. p. 608), and find ourselves involved in the 'labyrinth of the continuum.' For we are forced to say that the number of points in the side of a square is infinite, and, since we can draw one and only one parallel from any point in the diagonal to a given side, and since this parallel cuts two of the sides of the square in determinate points, the diagonal will contain the same number of points as the side, in the series of all fractions having algebraical

and will therefore be equal to it. This Leibniz legards as a proof that the line cannot be an aggregate of points (ib, p. 611). The number of points in each will, in fact, he argues, be identical with the 'number of all numbers,' since in both cases it is infinite. Leibniz's way out of the difficulty is to deny that there is a 'number of all numbers,' since, as he holds, such a number, if there were one, would be the greatest possible integer, but there is no apparent possible integer. integer, but there is no greatest possible integer. Hence there is no such thing as a ratio of one ministe to another (ib. p. 612 f.), and no assignable number of points on a line. There are as many as we choose to take, but we never take all there are to take. It is indeed true that are now income. are to take. It is, indeed, true that every portion of extended matter is actually infinitely divided, but it is divided into portions which are themselves continua, not into points, and no portion is actually divided into all the minor parts possible. Thus, in the end, Leibniz adheres to the position that the continuous cannot be composed of simple elements, and it is for this very reason that space and time and motion are regarded by him as merely phenomenal, since the real, as we read at the beginning of the Monadology, must be com-posed of simple elements. How these views are to be reconciled with the further positions that there is at least one continuum, that of the monads themselves, which does consist of simple elements, and that order in space is phenomenal of the order

of real monads, it is not very easy to see.

4. The number-continuum in modern Mathematics.—Under this head it is impossible to say more than a few words in the present article. The reader who wishes for more information may be referred to the works mentioned in the annexed bibliography, especially to the brief and luminous chapter on the continuum in Couturat's work, Les Principes des mathématiques. As we have seen, the first discovery of the continuum was due to the discovery of incommensuable magnitudes in Geometry, which led to the age-long severance of the originally united studies of Arithmetic and Geometry. It has been the great achievement of the modern Theory of Assemblages to show that the number-system is so far from being inadequate to cope with the continuity of the points of the straight line (the so-called 'linear continuum') that the only precise definition of continuity we can obtain is one which can be stated in terms involving nothing but the properties of ordered numerical series, and that the only certainly known linear continuum is that of the 'real' numbers. In other words, it is no immediate datum of inuition that the straight line is absolutely continuous. Its continuity is postulated, not intuited, and means no more than the assumntion that there are on every terminated straight line as many distinct points as there are distinct real numbers in a given segment of the numberseries, such as that composed of all the 'real numbers' >0<1. To begin with, we have to see that none of the old familiar criteria of continuity is really adequate to express the property which we have in mind when we speak of the continuousness of this number-series. It is clear that infinite divisibility is no such criterion, since it gives us only a series corresponding to that of the rational fractions. By no process of infinite divi-sion of a unit length could we ever arrive at such quotients as  $\frac{1}{\sqrt{2}}$ ,  $\frac{1}{\sqrt{3}}$ . This corresponds to the

arithmetical consideration that the complete assemblage of rational fractions between 0 and 1

does not form a continuous series, since it omits

all the fractions which have surds for their numer-

ator or denominator or both. Even the inclusion

surds in their numerator or denominator would not make it completely continuous, since we should still have no place left for the infinitely numerous tractions involving 'transcendental' numbers in their numerator or denominator. In fact, it is possible to make such an arrangement of the series of national fractions, and even of algebraical fractions, that each term of the series has an immediately next term. In other words, both series can be so arranged that each member corresponds in order to one and only one member of the series of natural integers, 1, 2, 3. . . Their ordinal number, or 'type of order,' is thus the same as that of the series of integers itself. Nor, again, is the number-continuum adequately defined by the property that no term of the series as taken in ascending order has an immediately adjacent term. For this would obviously be true of the assemblage of rational numbers, and again of that of all algebraic numbers, though neither of these exhausts the whole of the number-series. The task of the modern theorist is thus a twofold one. He has first to formulate a satisfactory definition of the concept 'real' number, showing not only how the assemblage of 'real' numbers is logically related to that of integers or 'natural' numbers, but also how the existence of the 'real' numbers follows from that of 'natural' numbers. Secondly, he has to identify the peculiar characteristics which distinguish the whole assemblage of 'real numbers' from those of 'natural' or 'rational' or 'algebraic' numbers; that is, he has to point out the criterion of the continuity of a series.

It is the achievement of Cantor to have first stated this criterion exactly, and afterwards to have re-cast it in terms involving nothing but the notion of serial order, and entirely independent of any appeal to our intuition of space. We can here do no more than give Cantor's two definitions of the linear continuum with such brief explanation as is necessary for their comprehension. To understand his original definition we have first to make clear the meaning of the terms 'point manifold,' 'limiting point,' and 'derivative.' By a 'point manifold' is meant any aggregate of numerical values whatsoever. Any 'point' X is said to be a 'limiting point' of such a manifold M, if, given a finite number e, however small, there is always at least one 'point' of the manifold M which is at a finite 'distance' less than e from X. (Such a a inite 'distance' less than e from X. (such a limiting point may, or again may not, be itself a 'point' of M.) The 'derivative' of M is the assemblage formed by all the limiting points of M. When every 'point' of M is one of the limiting points of M, and every limiting point of M also a 'point' of M, that is, when the manifold M is identical with its own 'derivative,' M is said to be exercise. Truther, M is said to be exercise. be perfect. Further, M is said to be zusammenbe parather than the same of the property of the parather hangend, or cohesive, when, if any two points of M,  $p_0$ ,  $p_1$  be given, it is always possible to find in M any finite number of points  $p_1$ ,  $p_2$ ...  $p_n$ ... intermediate between  $p_0$  and p such that the distribution of the property of tances  $p_0 - p_1$ ,  $p_1 - p_2$ , . . .  $p_n - p$  are each less than a given finite number e, however small e may be. The definition of the linear, or one-dimensional, continuum is, then, that it is a 'point manifold' which is both perfect and cohesive. It is manifest that the except of the  $p_1$  is the same of the  $p_1$  in the same of the  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of  $p_1$  in the same of  $p_2$  in the same of that the series of 'real' numbers between 0 and 1 satisfies these conditions, and that the removal of satisfies these conditions, and that the removal of oven a single term from it would prevent this realization. The series of 'rational fractions,' on the other hand, would satisfy the demand for cohesiveness, but would not be 'perfect,' since the surd fractions are obviously limiting points of the series of rational fractions. With the postulate that to every real number from 0 to 1 we can assign one and only one corresponding distance on the straight line the straight line it also obvisurd fractions are obviously limiting points of the series of rational fractions. With the postulate requires as to ascribe any different kind of conthat to every real number from 0 to 1 we can assign one and only one corresponding distance on the straight line, the straight line is also obvibute the straight line, the straight line is also obvibute. Some of the straight line, the straight line is also obvibute that we have no reason to think that tecometry requires as to ascribe any different kind of continuity to the straight line. We are thus finally enabled to remove the apparently insuperable on the straight line, the straight line is also obvibute.

ously a linear continuum satisfying the definition (Couturat, Principes, p. 91 f.). It still, however, remains the fact that Cantor's first definition retains the appearance of an appeal to geometrical intuition. The notion of 'distance,' in however metaphorical a sense, is employed in explaining both cohesion and perfectness. And this means, as Couturat says, that the definition is essentially relative. 'It defines a continuous manifold only by reference to another manifold (metaphorically called space), which is already continuous, in which it may have limiting points not contained in itself' (op. cit. p 92). Hence it is only in Cantor's second definition, where no notions but those of second definition, where he hadden but those of second order are presupposed, that we get an absolute definition of a continuum by means of its intrinsic properties. To obtain the definition, we start again with certain auxiliary conceptions. We consider the type of order exhibited by the rational numbers which are >0 and <1. This series has three peculiarities: (1) it is denumerable, that is, we can rearrange its terms so that they correspond one to one with the successive integers; (2) it has neither a first nor a last term; (3) between any two terms there is always a third; and these three characteristics are proved sufficient for the complete determination of the type of order exhibited by the series. Any series possessing them may then be called u series of the type of order  $\eta$ . Next we have to introduce the notion of what Cantor calls a 'fundamental series.' We may confine our attention to the case of an ascending fundamental series. By this is meant a series in which the terms have the type of order  $\eta$  just defined. Such a series S is said to have a limit in  $\eta$ , if there is a term in  $\eta$  which is the *first* after all the terms a term in  $\eta$  which is the jurisance: and the terms of S. We then call any manifold perfect if all the 'fundamental series' contained in it have a limit in it, and if all its terms are limits of 'fundamental series' contained in it. With these presuppositions, the type of order  $\theta$ , belonging to a one-dimensional continuum, is defined as follows: The manifold  $\theta$  (1) is perfect, and (2) contains within itself a denunerable manifold E, such that there is always at least one term of E between any two terms of  $\theta$ . The definition is manifestly satisfied by the series of 'real' numbers, since it can readily be shown that the series is 'perfect' in the sense defined, and that, moreover, there is always at least one term of the series of the 'rational' numbers between any two 'real' numbers bers (Couturat, op. cit. p. 93 f.; B. Russell, Principles of Mathematics, London, 1903, vol. i. ch. 36).

The two definitions are not exactly equivalent,

since we can construct series which satisfy the second without satisfying the first (e.g., to take an example from Continuat, the manifold composed of the real numbers < 1, together with those from 2 to 3 inclusive, satisfies the requirements of the 'ordinal' definition, but not those of the other, since there is always a finite interval >1 between the number 2 and any of those which precede it). But every assemblage which satisfies the first, or 'relative,' definition clearly also satisfies the second, or 'absolute.' This might be regarded as a ground for doubting whether Cantor's final result is quite the same thing as an analysis of what is implicitly contained in the simple prescientific notion of continuity as unbrokenness. But it remains true that his analysis succeeds in defining for us, by means of purely intrinsic properties, the continuity of the freal numbers, and that we have no reason to think that Geometry

tween Geometry and the theory of number. Every geometrical proposition can once more be stated in terms which involve only the notions with which the study of number has already made us familiar. This fact, as Continuat says (op. cit. p. 97), finally refutes all the doctaines which regard the notion of the continuous as arising from sensuous intuition and refractory to the understanding.

finally refutes all the doctimes which regard the notion of the continuous as alising from sensious intuition and lefiactory to the understanding.'

CONTRACT.—i. DEFINITION.—If one makes an engagement to go to dinner at a friend's house, no contract arises, because the purpose of the engagement is not such that the law will deal with it; or again, if one buys an article in a shop for ready money, that is not usually termed a contract, because there the whole transaction is terminated, as it were, on the instant; but, if one undertakes to pay for the article afterwards, a continuing contract emerges, because in this case, the agreement gives rise to an undertaking which can be ment gives rise to an undertaking which can be appropriately enforced by law. From these examples we see that contract is really the combination of two legal ideas—that of agreement and that of obligation. In the case of the invitation to dinner there is agreement, but no legal obligation connected with it; in the case of the sale of goods for ready money, the obligation fades away as soon as it arises. But, according to the Indian Contract Act, for example, 'an agreement entorceable by law is a contract' (Seet. 2'(h)); and, where we find such an agreement, we find a legal 1 The ordinary collected texts of ancient and modern philo-

1. The ordinary collected texts of ancient and modern philosophers have been emitted from this list.

tie, an obligation, something for the law to take hold of, directly affecting the contracting parties. In other words, the agreement, as it has been put, contemplates something to be done or forborne by one or more of the parties for use of the others or other,' to which the law can attach itself, and it other,' to which the law can attach itself, and it is generally said that it must be the intention, or implied intention, of the parties that the relation should have a legally binding effect. Sir Frederick Pollock, writing with reference to the English law, adds to the word 'agreement' the word 'promise' (Principles of Contract', 1902, pp. 2, 3, 5). But that is a minor subtlety. Theoretically, at least, we can fix our attention on an agreement as the starting point in which there must be as it is starting-point in which there must be, as it is frequently stated, the meeting of two minds in one and the same intention. And thus the more technical treatment of contract fits into those statements of the doctrine in which it is regarded as a phase of the legal will, constantly to be found in the works of philosophical jurists—especially German jurists. The rolation represents the meeting of individual wills in one intention, as opposed to the individual's endeavours to realize bis will by means of the materials found in the world around him, which gives rise, logically, to the conception of property. In the former case, the individual meets his fellows; in the latter, the

the individual meets his fellows; in the latter, the external, material world.

It has, however, been suggested that it is not necessary, in order that a contract should be entered into, that the wills of the parties should be really at one (Holland, Jurisprudence 10, 1906, ch. xii.). Should we not say, it is argued, that here emphatically the law regards not the will in itself, but the will as manifested voluntarily? There are well-founded expectations which the law endeavours to protect by its enforcement of con-tract, and these do not always arise from expressions which truly represent the intention. What of the case in which a party enters into a contract, resolved all the time not to perform his part, yet inducing another party to enter into it on the contrary supposition? Surely the contract will hold good. Is it not the will, as expressed, and nothing more, that the law regards, leaving the question of a true consensus on one side, as beyond its province altogether? The language of positive systems of law, it is said, moreover, is ambiguous on the point; for the question is practically a new one, and it has not till recently been seriously considered how for a true consensus, in the significance explained above, is needed. In answer to this doctrine, it may be maintained that, although the inner agreement is a fact to be proved, and in some case in which a party enters into a contract, resolved inner agreement is a fact to be proved, and in some cases is not allowed to be disproved, the agreement itself is vital to the theory of contract. The inference drawn is that there was an agreement; and such inferences depend for their reasonableness and usefulness on the fact that in the vast majority of cases they are sound. Without reference to the will—to the inner intention, if one chooses—the expression of agreement would be meaningless. It must in the last resort be connected with the man, with the personality; and not merely attach itself to outward forms of expression. Unless this is done, we obtain a view expression. Unless this is done, we obtain a view of contract which is too scholastic to be satisfactory

The two main aspects of the agreement by which The two main aspects of the agreement by which the tie is created find their typical form in the ideas of offer and acceptance, which give rise to a large body of law in a developed system. On the other hand, such facts as eiror, fraud, misrepresentation, undue influence, and force operate on the consent embodied in the agreement, and may vitiate it wholly, or create a flaw which renders it reducible from one side. These are most usefully studied in relation to some definite legal

system. Again, the State itself places certain legal restraints upon contract generally, with negard to its subject-matter; these are more important from the standpoint of the general neader. In Pollock's work on Contract, agreements are said in English law to be unlawful and void (1) if the matter of purpose with which they deal is contrary to positive law; (2) if it is contrary to positive morality recognized as such by law; (3) if it is contrary to the common welfare, as tending to prejudice the State in its external relations, or in its internal relations, or as tending to improper or excessive interference with the lawful actions of individual citizens (op. cit. 275). And we may say generally that the State will refuse to recognize a contract not only when it is simply illegal (without further explanation being offered), but also when the object is contra bonos mores, or when it is against 'public policy' and cannot be allowed free scope in the State's own organization. In the case of public policy, the disputable points which arise are numerous, and the dividing lines between what the State should, and what it should not, do are extremely difficult to find. Then we may couple with such restraints the complicated subject of form. The modern tendency is towards simplicity of form. Complexity is undoubtedly repugnant to the spirit of our own days, when the bustle of commercial enterprise demands essentials and nothing but essentials. A complicated form, however, prevents a bargain from being rashly made, and it renders it easier to prove afterwards what has taken place. The tendency to reduce the 'solemn form' can have free scope only so far as is possible with a due regard to the exigencies of proof

ii. ČLASSIFICATION .- Contracts have very frequently been divided into principal and accessory; and this division is a good one. It is not so clear that the division of the first class into onerous and gratuitous, often made, is equally useful (although Kant declared that it was the rational one); for principal contracts seem rather to fall into several distinct groups. The following list will afford the reader a bird's-eye view of the field of modern contract. It follows mainly the arrangement given by Holland in his Jureprudence.

r. Principal contracts.—Principal contracts are those which are entered into, so to speak, for their

own sake, as opposed to accessory contracts.

(1) Contracts of alienation.—These may be gratuitous, when they are contracts to give, but are not generally so. In fact, a contract to give is generally enforceable by law only in certain limited cases. But gifts made in view of marriage are not considered as more cifts for marriage in second considered as more cifts for marriage in second considered as more cifts. are not considered as mere gifts, for marriage is an onerous consideration. Then under this head fall barter and exchange, when regarded as contracts; and, more important, sale. A distinct line should be drawn between barter and sale; the essence of sale seems to be, in the simplest words, the giving of something for money. Specific formalities are generally imposed upon contracts for sale of certain important classes of property, such as the res mancipi of the Roman Law, 'real property,' immoveables. Apart from these, perhaps the most important variation in the views taken of the contract by different legal systems is connected with the transfer of the property sold. Sometimes a contract of sale, in the usual case, per se, transfers the property—it has the power of transference by itself. Sometimes it has no such legal consequence; the duty of the seller is to deliver the goods, and the duty of the purchaser is to accept and pay for the general principle. On the other hand, it them. These duties, regarded from the point of must be noticed that the agent does not really act

view of rights, yield the main rights of purchaser and seller.

(2) Contracts dealing with hiring, loan, etc.— Hning has largely superseded gratuitous loan; and the law of lining has been extended in many directions. Two important branches of it in the commercial world are contracts for carriage and agency. Both in commercial and in domestic life we find contracts for the hire of servants engaging much attention. As regards immoveables, hiring is generally guarded by specific restrictions. In a loan for consumption, we find money or certain kinds of things given to the opposite party on the undertaking that he shall on a future day return, not necessarily the things themselves, but their equivalent in kind. It is in connexion with this branch of the law that the interesting problems of how to treat usury from the legal point of view arise. In a loan for use, again, which is in essence gratuitous, the identical thing lent is returned. In deposit, one gives a thing to another in order that the latter may keep it for him gratuitously and restore it upon demand.

It will be observed that this group of contracts is very miscellaneous. Holland has attempted to minimize the confusion by making the two principal minimize the confusion by making the two plineipal divisions of (a) contracts for permissive use, and (b) contracts for service. In the first class (a) he places (1) loan for consumption; (2) loan for use; and (3) 'letting for hire.' In the second (b) he places contracts (1) for care-taking; (2) for doing work on materials; (3) for carriage; (4) for professional or domestic services; (5) for agency; (6) for partnership. Then, under a separate head (c) he places contracts for negative services, in which one party undertakes to abstant from certain acts—a party undertakes to abstain from certain acts-a mode of contract somewhat grudgingly recognized by law. This procedure helps to introduce some order into the mass of almost intractable material; although, for example, it places contracts for partnership under contracts for service-a doubtful begin by taking the whole of the large class of contracts with which we are dealing as capable of being split up into three divisions—permissive use, service, negative service—although he may afterwards come to consider the principles of grouping somewhat strained. Partnership, which is thus disposed of under 'service,' is said to be the relation which subsists between persons carrying on a business in common, with a view of profit (Partnership Act, 1890); and the law of partnership widens out into the whole law of Joint Stock

Companies. Agency deserves special notice. It is itself a contract, as has been pointed out; but it is also an important instrument in extending the power of contract. It enables us, as it were, to move objects at a distance. Through it, the contractor can work at the other side of the world. In the ordinary use of the term, agency is constituted where one person is employed to act for another—to represent him in dealings with third persons. A distinction between a general and a special agent is often made; but it is of doubtful value logically; it seems to be most consistently drawn between an agent whose business has a defined scope and character, spart from the terms of his agreement with his principal, and one who is merely empowered to do certain specific acts. The main logical point to be noticed in the law of agency is that, when the agent contracts as an agent with third parties, he binds his principal, and then, so to speak, drops out of the transaction. If he binds himself, he is something more than a mere agent; and any exceptions are modifications

as the blind instrument of his principal, as the pen or the hand acts. His real usefulness arises from his being an intelligent instrument, and without the help of such intelligent instruments many of the tasks of modern commerce would be quite

(3) Contracts of marriage -But mairiage is only technically and in a somewhat strained sense a contract. No doubt it cannot be entered into without the consent of at least two parties. But the relationship stands by itself, and even in a system of law, like that of Scotland, which favours the contractual construction, there are grave difficulties in regarding it as a contract in anything more than a very technical sense. In contract, the tendency is to allow the contracting parties to attach what conditions they please to their bargain, provided these are not against 'good morals' or 'public policy'; it may be conditional in its origin, and its duration is dependent on the will of the parties. In marriage these features are not present. When it is entered into, it is not governed by private contract in its most important particulars, but by the fixed rules of the law of husband and wife. It cannot be entered into on condition that a certain event shall happen, or that it shall be dissolvable at pleasure, or that it shall last for a certain fixed period of time. The relation between the two persons, also, extends an influence to their relatives and maintains that influence even after death ends the marriage. The husband and wife create not only their own status, but the status of their children; and that status can never be taken away or infringed by the acts of the parties (Fraser, Husband and Wife<sup>2</sup>, 1876, ch. ii.). Such considerations, primarily applicable to Scots Law, show us how marriage must be differentiated from a district contract of the contra from an ordinary contract. Of course, it may be said that all these restrictions are made merely with the object of maintaining 'good morals' and furthering 'public policy.' But the whole tendency of contract is to leave the parties as far as possible to shape their own bargain; and, where we have a relation so governed in its essentials by the law —so restricted to meet the needs, as the law conceives them, of family life—as marriage is, it is only in a very peculiar and, as we have said, teclnical sense that it can be called contractual. It derives its type not from the contracting parties, but from moral and social considerations, which are held to be superior to their wishes; and these considerations not only restrict it, but shape it.

A distinction must, of course, be drawn between an engagement to marry in the future—an 'engagement' in popular language—and an engagement which actually amounts to a marriage. engagement which actually amounts to a marriage. The former more nearly approaches a contract of the ordinary type than the latter, provided it is recognized by the system of law which governs it as a fit subject for legal interference. When that is the case, we find unfulfilled engagements frequently giving rise to actions for breach of promise of marriage. On the whole, such actions seem to be discouraged by the systems of law in seem to be discouraged by the systems of law in vogue on the Continent; and many jurists are of opinion that they ought to be abolished in our own country. But this opinion, it should be noted, does not imply that actions for seduction should be discontinued.

(4) Wagering contracts.—This is an unfortunate name for an important group. In these contracts, one of the effects of the contract, as regards profit and loss, either for all the parties, or for some of them, depends upon an uncertain event. But it is almost impossible to define them satisfactorily; and that statement must be taken as merely explanatory. Broadly, bets and stakes are not enforceable in modern law. And the most im-

portant group under the general head is formed by contracts of insurance—marine, fire, and life insurance, and less important types. Of course, these are not logically gambling transactions, but are rather attempts to eliminate the risks of the

2. Accessory contracts .-- There is a large number of contracts which may be entered into as accessory to the main transaction; and these form, as previously stated, a second main branch of the subject. It may suffice to name a few of them—indemnity, suretyship, warranty, rathication. A promissory note forms such a contract. Suretyship is in many systems a formal contract; and the guarantee may sometimes support an obligation which is merely natural, i.e., which itself

cannot be enforced—a curious point.

3. There are certain legal relations placed on the bonders, as it were, of contract proper, which must not be forgotten. Thus the Indian Contract Act speaks of certain relations resembling those created by contract. Broadly speaking, they correspond to the Roman division of obligations which arise not ex contractu, but quasi ex contractu. They may, therefore, be described as quasi-contracts; they have also been called 'implied contracts'; but it is perhaps better to reserve this name for those cases where the implication is most clearly seen. They are, at any rate, analogous to contract; for it is necessary, in following out the ramifications of a legal system, to hold that a nexus analogous to that of contract is sometimes created from force of circumstances, though not by express agreement. Often the person bound may reasonably be held to have agreed to the formation of the tie, but that is not perhaps essential in all circumstances. Thus the doctrine of negotiorum yesto consists, in principle, in the management of the affairs of an absent person (or sometimes of a person merely unable to attend to his affairs himself) by one who undertakes that task without the knowledge of the other; and, it is not infrequently stated, on the presumption that the other, had he known the circumstances, would have approved. There does not seem to be any peculiar difficulty in treating of such relations, except that they do not yield very readily to

except that they do not yield very readily to analytic classification.

iii. EXTINCTION OF CONTRACTS.—Contracts may be extinguished in various ways—by performance, by such legal facts as events which excuse performance, or by release of performance. Or there may be a substitute for performance interjected; or it may simply happen that the non-performance of the contract alters the whole aspect of affairs and gives rise to a new set of rights. of affairs and gives rise to a new set of rights. Performance is the natural, and undoubtedly also

the usual, mode of closing the transaction.

iv. Social Rearing of contracts.—Contract, standing as it does at the centre of the great department of Private Law, has many important. bearings on the general problems of society. It forms an endeavour made by the State to set up a forms an endeavour made by the State to set up a sanction for expectations of good faith which have grown up through the dealings of the averagely fair-minded man. True, it has been suggested that contract is merely the taking of a risk, since the only universal consequence of a contract is to make the defaultor pay damages; but, as already pointed out, it is the observance of contract that is usually contemplated; it is performance, and not payment of damages, that makes the social wheels go round. And the State, having brought its sanction to bear on this enormous mass of relations, finds itself compelled to interpose certain restrictions—to lay down those limitations of which we have spoken before. What precisely these ought to be, and how they ought to operate, depends on

his G

many different social considerations. Is the exploitation of the individual by his fellows-the plotation of the individual by his fellows—the driving of a hard bargain wrung from a mail's necessity, when his poverty, but not his will, consents, or the over-reaching of one not worldly-wise—a fit matter for State interference? Are combinations of 'labour' to be recognized wholly or partially, or altogether condemned? Are contracts for service to be regulated, when the claims which saise under them bid fair to reduce one party to the position of existing merely as an instrument for the realization of another's personinstitument for the realization of another's personality instead of being an end in himself? Slavery, it is certain, cannot now be tolerated; but how far will the law, if it attempts to abolish various forms will the law, it it attempts to abous various forms of so-called practical slavery, accomplish good, or how far will it merely afford encouragement to laxiness and fraud? These questions and many others are among the implications of contract, though doubtless they lead us far beyond the subject of contract itself. Probably most of them must be appeared not abstractly but in relation must be answered, not abstractly, but in relation to the particular community with which we have for the time being to deal. What is one man's freedom is another man's ruin. The character and state of social advancement of the community must always be taken into consideration. But, however that may be, the importance of the great branch of law which deals with the right to another man's conduct can never be safely ignored.

LITERATURE.—In addition to the works mentioned in the text, the following may be consulted: W. R. Anson, Principles of the English Law of Contract 11, 1908; G. J. Bell, Principles of the Law of Scotland 10, 1899, for the Scots Law; F. Pollocis, First Book of Junisprudence, 1890, pt. 1. ch. 8; Kant, Philosophy of Law, Eng. tr. 1827, sect. 31; W. A. Watt, Theory of Contract in its Social Light, 1807.

CONTROVERSY .- I. The term 'controversy is not exclusively applied to the weapon with which battles have been fought in the field of theology and philosophy, and skill in disputation has not been valued by professed dialectricians alone. Professor Edward Carrd tells us that the philosopher Kant was keenly alive to the uses of controversial methods as a mental training, and that in the year 1758 he announced to his class on metaphysics that on two days in the week he would treat polemically the doctrines expounded on previous days, this being 'one of the most excellent means to attain to profound views of any question' (Critical Philosophy of Kant, i. 162). This polemical method consisted in first proving a proposition and then trying to prove its opposite—an exercise of the intellect to which attention has often been devoted in schools of learning, with has often been devoted in schools of learning, with a view to cultivating a high standard of controversial ability. To Kant it did not so much bring dialectic skill as rivet into the attitude of criticism a mind already critical, even sceptical. The essential thing for him, as for Socrates, was the problem of knowledge, the limitations of our knowing, the question how far we can know anything at all. So throughout life he practised earnestly the polemical method which he recommended to his students, using it as a touchstone to test what is knowable and expose the illusions of the understanding. To this attitude of mind, this deep-seated love of inquiry and discussion, we owe what is considered the greatest system of philosophy of modern times—a philosophy critical alike in spirit and in name.

alike in spirit and in name.
2. The Kantian 'dialectic,' however, is not a 2. The Kantian 'dialectic,' however, is not a new phenomenon in the history of philosophical thought. In the connotation which it bears for him, that of an arguing for and against, Kant inherited the term from the Stoics and Aristotle. But the practice of dialectic is to be connected with the name of Socrates. As friendly discussion the sphere of history and the sphere of history

in the market-place about the ethical problems which alone were of interest or moment to him, Sociates held it to be the ideal method of philosophizing. He thought that there were answers, more or less definite, to these questions, and that this was the way in which the answers were to be got. This earnest conviction, this seeking after truth in the belief that it is to be found, is one of the essential respects in which Socrates is to be distinguished from the class of professional Sophists to which, in the eye of the ordinary Athenian, he undoubtedly belonged. These men were in the first place teachers of argument and rhetoric, and regarded disputation of this kind as an end in regarded disputation of this kind as an end in itself. They argued in order to show their pupils how arguing should be done; they talked for victory. But they did not stop here. They were from some points of view extremists in philosophy, and they often took up a concept or idea with the deliberate purpose of showing it to be full of contradictions, and hence unthinkable. The Sophist did not hesitate to tackle any question, or, as did not hesitate to tackle any question, or, as Aristotle would say, to 'talk persuasively' on any subject. As the exponents and popularizers of an esoteric philosophy—they were not for the most part originators of new doctrine—they raised problems in the spheres of ethics, politics, and religion, debating freely, in a spirit of tolerant scepticism, questions the mere discussion of which in the eyes of the old-fashioned was not only new, but impious and depraving. Like Abelard, who has been called the medieval counterpart of such a teacher as Protagoras, the Sophist at his best, they thought that every question could be argued for and against, or in Abelard's phrase, sic et non. To them none was sacred. At the first glance, erticism of this kind seemed wholly destructive; many of its immediate effects were undeniably pernicious. But this beating about, this disputing and overturning, was of supreme value, not only and overtuning, was of supreme value, not only in the interests of education, but also in the narrower field of dialectic. It was owing to the Sophists mainly that Aristotle was able to draw attention to a clearly marked difference in the matter of our thought. He saw that relatively few problems belong, like those of mathematics, to the sphere of what is strictly demonstrable, and that beyond this, on the vast mass of questions which puzzle and interest mankind, we can have discussion, but can never have certainty. discussion, but can never have certainty.

3. It was, however, in the Middle Ages that dialectic or discussion in the Platonic and Aristotelian sense became professedly the vehicle of philosophical inquiry. Bound as they were at every step by tradition and authority, the methods of the Schoolmen were formal and pedantic; in this respect they were less fortunate than the thinkers of antiquity. At the same time the medieval method of exposition, in so far as it was a method of argument, was that of Hellas. To write dialogues in the Platonic manner was no white dialogues in the Flationic manner was no longer the fashion, nor was it, perhaps, within the powers of men of that age; but, though the written word was untouched by the finer graces of poetry and imagination, yet never in the history of philosophy and theology—a sphere of leaning at that time co-extensive with literature leaning at that time co-extensive with literature—have skill in controversy and dialectical ability brought wider fame to their possessors; never were these talents enthroned higher among the objects of intellectual ambition than in the time of Abelard and his rivals. These wandering teachers of the Middle Ages, whose mission it was, after the manner of the ancient Sophists, to popularize the learning of the schools, were also in the most literal sense gladiators in the arena of philosophical controversy.

speculative thought to that of everyday life, we find that here the uses of controversy are less obvious, but not less real. In the ordinary sense obvious, but not less real. In the ordinary sense of the word it may be nothing more than negative criticism, the mere raising of objections to a doctrine or theory brought forward. But, even so, it is of practical value in sharpening the faculties and clearing up confusion in the mind. For contradiction, whether it proceeds from conviction or not, is always stimulating, and even a superficial discussion of most questions is enlightening. When however, controvers is fault entired. ing. When, however, controversy is fairly carried on, that is, with candon and moderation, in a spirit of honest inquiry, it is of great ethical and educative value. The projudices of the fairminded rarely withstand the presentation of fact or the persuasion of sincere conviction. We start, most of us, knowing but one side of controverted most of us, knowing but one side of controverted questions; an argument with an intelligent opponent will show us the other side, and expose the weaknesses of both positions. If our conclusions are sound, we shall realize their value; if they are faulty, light will be thrown on the premises on which they are based. John Stuart Mill in is pleaned defence of liberty of thought. Mill, in his eloquent defence of liberty of thought and discussion, says that every one ought to make a habit of seeking this experience, and that out-side the sphere of mathematics no man's opinions deserve the name of knowledge except in so far as he has gone through the mental process which would

has gone through the mental process which would have been required of him in carrying on an active controversy with opponents (On Liberty, ch. 2).

5. The benefit to the individual of such a knowledge of most subjects no open-minded person is likely to deny. But there is a deeper aspect of the question. It has often, and rightly, been said that controversy is the battlefield upon which truth comes into college, with error, and that lead to the law. truth comes into collision with error, and that by means of it alone we can acquire new truth. progress of the race is thus best served by unlimited freedom of discussion, by such a right 'to argue freely according to conscience' as Milton held to be among the first of human liberties. Mill lays stress upon another point. It is a matter of history that the ethical and religious doctrines of the world owed their preservation and development to the fact that they were vigorously defended against attack in the earlier stages of their winter with the street of their stages. existence. What is true of sects and nations applies equally to the spiritual life of individuals. It is the convictions for which we must fight that It is the convictions for which we must fight that we are in least danger of losing. It is beliefs which are most universally accepted, most rarely questioned, that are apt to become least full of meaning to us, even to be accepted by us mechanically. It would be easy to multiply instances of this. Can the precepts of Christianity, for example, be said to bear the same literal meaning for us as they did for the Founder and the persecuted of the early Church? Or, to take the case of religion in Scotland, is there in Scotsmen of to-day the fire, the blind devout faith, Scotsmen of to-day the fire, the blind devout faith, the love of the Church, which animated their forefathers? Most people, even allowing for change of circumstances and conditions, are inclined to answer these questions in the negative. Certainly creeds and opinions do seem to draw the breath of life from the heat of battle, to grow faint and languid when the struggle is over. This is one sense in which peace and harmony do not make for progress.

retrogressions, bears always onward and upward, its course is, as Hegel says, a zigzag movement, tending now in the direction of one of these opposite poles of thought, now in the direction of another. Dogmatism (to use Kant's expression for these extremes), criticism, and scepticism follow one another, and are succeeded by dogmatism—a new dogmatism—again. But in this tism—a new dogmatism—again But in this struggle of theory with theory, of half truth with half truth, the way is gradually becoming clearer, the fresh starting-point is always a little higher, and house intelligence heing living and fallible. and, human intelligence being limited and fallible, all this can come about only in this way.

all this can come about only in this way.

Lithrature—The reader will find the source of most of the ideas suggested above in such works as. E. Caird, Crutical Philosophy of Kant, 1889; Hegel, History of Philosophy, Eng tr 1892-90; and J. S. Mill, On Liberty, 1850, pt in. See also well-known Histories of Greek Philosophy, such as that of Zeller, of Ueberweg, of Erdmann, and of Schwegler. On the significance of the work of the Sophists, the student may be referred to G. Grote, History of Greece, new ed., 1870, pt ii.

M. CAMPRELL SMITH.

CONVENTIGIES.—The world is derived from

CONVENTICLE .- The word is derived from Lat. conventiculum, dim. of conventus. According to Bingham (Orig. Eccles.), it originally signified no more than an assembly, and was frequently used by ancient writers for a church. It came to used by ancient writers for a church. It came to be applied specifically to incetings of religious associations, particularly private and secret gatherings for worship. Later it became a term of depreciation or reproach, implying that those of whom it was used were in opposition to the ruling ecclesiastical authorities; for example, it was applied to a cabal of mutmous monks in a convent or monastery. Illimately it came to mean reor monastery. Ultimately it came to mean religious meetings of dissenters from an Established Church, held in places that were not recognized as specially intended for public worship or for the exercise of religious functions. It implied that a condition of affairs obtained in which the State made a distinction between a form or forms of religion whose plactice and propagation were authorized by statute, and such as were expressly prohibited by enactment. This usage has received legal sanction in Britain.

legal sanction in Britain.

In this sense the term 'conventicle' may be, and has been, widely applied. Harnack (Mission and Expansion of Christianty, 1908, it. 818) uses it of the meetings of the adherents of Mithraism in the Eastern parts of the Roman Empire throughout the domain of Hollenism (Greece, Asia, Syria, Egypt, etc.), in which regions it was a banned cult, while those who inofessed it were regarded as belonging to a barbarous and illicit sect (F. Cumont, Mystères de Muhra?, Brussels, 1903). To attend 'conventicles' was the ball-mark of fanaticism, according to Colsus, who represented the contemporary opinion which cherished a lively contempt for all who attached themselves to religions competing with the Imperial cultus.

In accordance with the accepted usage of the

In accordance with the accepted usage of the word, Church historians properly assert that Christianity took its rise ecclesiastically from a conventicle. Such was the meeting in the Upper Room of the first disciples of Christ after the Ascension (Ac 113). This gathering was the type of those which soon began to meet for prayer, mutual edification, and memorial observances, in private houses such as that of Mary, the mother of John (Ac 1212). Within a short time they drew upon themselves the suspicions of the Jewish ecclesiastical authorities, who branded the new faith as impermissibly heretical, and instituted a persecution directed to the harrying and suppression of these conventicles, one of their most zealous agents being he who became the Apostle Paul.

When Christianity became a world-religion and spread in all directions throughout the Roman Empire, it was at first tolerated, and enjoyed Government protection, along with many other cults in vegue. Religions had to receive licence for progress.

6. Every theory, however sound, has its limitations. All doctrines may be, in the main, erroncons; at the best they can contain only a part of the truth, for the truth lies always somewhere between the extreme positions on which man takes his stand. While the progress of knowledge, in spite of apparent disheartening through the influence of political considerations (see Gwatkin, Hamack, Dill, Weinel, etc.) Christianty soon became suspect, and a religio illustia. Its meetings thus became strictly conventicles Hamack applies the term to characterize such house-meetings as that mentioned in Col 4<sup>15</sup>, and Schaff uses it in his account of the primitive period as descriptive of the 'ecclesiolae in ecclesia,' the independent separate units of the Church as they existed in the various centres in which it had found footing—Rome, Corinth, etc. (Kirchengesch., 1851, i. 454). In the succeeding century the catacombs (g.v.) were the scene of Christian conventicles (Withrow, The Catacombs of Rome, new ed., London, 1895. p. 104).

With the establishment of Christianity by Constantine as the State religion, all its meetings were legitimized, and the term of odium could no longer be rightly applied. In the 4th and 5th centuries the description again became applicable to the meetings of such Christian nonconformists as the Montanists and the Donatists, which were prohibited by the State under penalty of proscription and death. This policy was rigorously encouraged by the leaders of the Churches enjoying State

recognition and support.

When the corruptions of the Church of Rome aroused a growing hostility in the 13th and 14th centuries, those who were united in the attitude of protest began to abandon the churches and to associate themselves in private or secret meeting-places. Against these the machinery of suppression was quickly put into operation, and once more conventicles entered into history. In England the word was early applied to the meetings of the followers of Wyclif, who, recognizing the incompetence and neglect of the regular clergy, sent out peripatetic preachers to meet the spiritual needs of the people. Both the practice and the word were carried by the Lollards (as the most determined supporters of Wyclif were called) to Scotland, where they did much to initiate or strengthen the movement of revolt from the ecclesiastical domination of Rome.

It was not, however, till after the Reformation that 'conventicle' became a term with a legal connotation, according to which it was descriptive of the meeting-place or assemblage for worship or consultation of those who departed from the Established Church of England. Queen Elizabeth, in her contest with Puritanism, strenuously asserted the royal supremacy in matters religious and ecclesiastical, and insisted upon the rigorous application of the Act of Uniformity, which demanded that all subjects of the realm must conform to the usages and tenets of the Church established by law. Clerical nonconformity was punished by deposition. As the result of the inquisition that followed, so many ministers were deprived of their livings that their places either could not be filled at all or were filled by incompetent and unpopular substitutes. Large numbers of the people refused to accept the ministrations of these substitutes, and gathered together for worship in private houses or other suitable places. These conventicles were, under that name, expressly declared illegal. The 11th Article of the Book of Canons (drawn up in 1603) censures 'the maintainers of conventicles'; the 12th, 'the maintainers of constitutions made in conventicles,' and the 73rd runs thus:

Forasmuch as all conventicles and secret meetings of priests and minusters have ever been justly accounted very hateful to the state of the Church wherein they live, we do ordain that no priests or ministers of the Word of God, nor any other persons, shall meet together in any private house or elsewhere to consult upon any matter or course to be taken by them, or upon their motion or direction by any other, which may any way tend to the impeaching or depraving of the doctrine of the Church of England, or the Book of Common Prayer, or any part of the government or discipline now established in the Church of England, under pain of excommunication inso fuctor.

Under these enactments the adherents of Anabaptism (q.v.), which had been propagated in England by refugees from the Continent, were ordered to leave the Kingdom. Even during the subsequent reign of Puritanism, the meetings of this particular body were regarded and treated after the same fashion by the Protector Cromwell, who was incensed by their aggressive fanaticism. For other persecuted sects, with only one or two exceptions, there was a heathing-space of toleration and freedom.

After the Restoration of the Stuat dynasty, established Episcopacy once more became intolerant under the ægis of Charles II. An Act of Uniformity was promulgated in 1662, which ordained the expulsion from his charge of any clergyman who refused to subscribe to everything contained who refused to subscribe to everything contained in the Book of Common Prayer and to the doctrine of the King's supremacy in matters ecclesiastical, and held by the Solemn League and Covenant of 1643, prohibiting such from exercising his religious functions in private houses. 2000 clergymen were ejected from their livings in one day for declining to comply with these tests. This enactment was reinforced in 1664 by a statute called 'the Conventicle Act,' which rendered illegal any gathering in a private house for religious worship attended by a number exceeding by live the regular members of the household, under penalty of fine, imprisonment, or transportation. A second version of this Act deprived these outed ministers of the right of trial by jury, and em-powered any justice of the peace to convict them on the oath of a single informer, who was to be on the oath of a single informer, who was to be rewarded with a third of all fines levied (D. Neal, Hist. of the Puritans, new ed., Lond. 1822, iv. ohs. 7, 8). Large numbers of nonconformists were put in jail. Pepps, in his diary of August 7, 1664, observes: 'I saw several poor creatures carried by, by constables, for being at conventicles . . . I would to God they would conform.' He refers to Quakers, who were amongst the worst sufferers during the persecution consequent on the sufferers during the persecution consequent on the passing of the Acts. Bishop Burnet, in his History of his own Time, 1724-34, i. 471, admiringly describes how they resolutely declined to obey the law, and openly and fearlessly continued their prohibited meetings. They would hold them in the street before the closed doors of their meetinghouses, when these were shut by order. The children, who might not be arrested because of their youth, would also hold conventicles in the street in the absence of their parents in jail, suffering patiently the jeers and cuffs of magistrates and unsympathetic onlookers (F. S. Turner, Quakers, London, 1889, p. 164).

Identical measures were taken during the same reign to secure the suppression of Presbyterianism in Scotland, where it had been the popular and dominant form of religion since the Reformation. From 1662 to 1678 various Acts were passed by the Privy Council and the Court of High Commission, prohibiting conventicles and imposing penaltics of increasing severity upon those who attended them, masters being made responsible for their servants, landlords for their tenants, magistrates for the citizens of the burghs over which they presided. It was forbidden to supply denounced persons with meat or drink, or to harbour or have intercourse of any kind with them. These measures proving unavailing to effect their purpose, it was inlimiately enacted that attendance should incur the penalty of death. Those in command of the military, and even the common soldiers themselves, were given authority to inflict it immediately on the spot of capture, without the formality of a legal trial an authority which was used without scrupic or mercy in numerous instances by such as

Claverhouse. Claverhouse. This policy proved, however, quite abortive. The bulk of the religious population in the south and south-west districts continued to attend the conventicles, which were arranged and conducted by the outed ministers. Where the congregation was too large for any suitable private house, resort was had to barns, granaries, or such like commodious buildings. Frequently, however, the number of those who flocked to these illegal gatherings amounted to thousands, and the result was the institution of field-conventicles—meetings was the institution of neid-conventicies—meetings held, sometimes under cover of night, in the open air, on moois or hills, or in glens and ravines, or wherever safety and suitability could be combined. These frequently lasted for hours, the preaching taking up a large portion of the time. At such conventicles, the ordinances of the Church according to Presbyteriamsm were farthfully observed. Bautism was administered, and Communicary as Baptism was administered, and Communion was dispensed, often to hundreds together, and even thousands, the rite taking days to celebrate, several ministers officiating in turn. When repressive measures became more severe and attendance at these gatherings was enacted to be a capital offence, the men came armed with such jude weapons as were obtainable—soythes, flails, etc. Sentinels were posted at look-out points; for the royalist soldiery, aided by spies and informers, often succeeded in surprising these meetings. It was the attack upon such a conventicle that precipitated the battle of Drumclog, 11th June 1679, which issued in the only victory gained by the Covenanters (as the upholders of Presbyterianism were called), and the only defeat sustained by Claverhouse (known in song as Bonnie Dundee'), the most zealous and efficient of the military persecutors. During the years of persecution culminating in the 'Killing Times,' it is calculated that some 18,000 people suffered in one way or another for attending these conventicles. Yet they kept alive and deepened an intense religious faith in the land, while greatly raising the moral tone of many districts in which they were held, as, e.g., at places on the borders where pillagers and moss-troopers became peaceful and honest. impressive solemnity, intensified by the conditions under which they were held, frequently turned the hearts even of enemies present in disguise (A. Smellie, Men of the Covenant, 1904; R. Simpson, Cleanings among the Mountains, 1846; W. H. Carslaw, Heroes of the Covenant, 1900).

After the Revolution of 1688 and the accession of impressive solemnity, intensified by the conditions

After the Revolution of 1688 and the accession of William of Orange to the British throne, an Act of Toleration was passed, relating to England, which exempted from the penalties of the laws against conventicles those who took the oath of allegiance conventicies those who took the oath of allegance and subscribed to the doctrinal sections of the Thirty-nine Articles. Meeting-houses were required to be registered, and then came under protection of the law. In Scotland all the repressive Acts were alregated; Presbyterianism was restored by the State to its ecclesiastical

supremacy.

supremacy.
Similar measures of suppression in Continental countries resulted in the resort of the persecuted to similar kinds of meeting. During the merciless and prolonged attempt of Philip II. of Spain in the Netherlands to compel conformity to the Roman Catholic Church, the Protestant party headed by Les Gueux ('The Beggars') were forbidden free exercise of their worship, and immediately field-preachings were organized all over the country, of the same character as those in Scotland—conducted by the excommunicated ministers and surrounded by armed guards and sentinels (Lindsay, History

by amed guards and sentinels (Lindsay, History of the Reformation, Edinburgh, 1906-7, vol. ii. bk. iii. ch. y.). The same scenes were enacted in the southern districts of France during the heroic

4 /

struggle of the Huguenot Camisaids ('les Enfants de Dieu, as they called themselves [see Camisards]) to assert religious freedom against the suppressive measures of Louis XIV., inspired by Cardinal Richelieu's vision of a unified France, spuried by the incitements of Madame do Maintenon (herself once a Huguenot), and encouraged by the eloquence of the great preacher Bossuet. Their field-conventicles were called deset-preachings—the name 'desert' being borrowed from the Bible as descriptive of the solitary places, in wild mountain-regions, in which the meetings were commonly held. A peculiarity of these Camisard gatherings was the large part played by the 'prophets'—men and women, and occasionally children, generally quite uneducated and often normally of small capacity for speech or thought—who spoke or were accepted as speaking under the direct inspiration of the Holy Spirit, after the manner of the prophets in the primitive Church (Peyrat, Hist. des pasteurs du désert, Paris, 1842; C. Tylor, The Cumisurds, London, 1893).

In the history of German Protestantism the conventicle played a part in Pretism (q.v.). The collegia metatis, established by Spener and his followers, provoked the opposition of the strictly orthodox Lutherans, and considerable disturbance was the result, as at Frankfort, where the police interfered. All sorts of scandal were rife about these conventicles, and the over-enthusiastic manner in which some of them were conducted lent colour to the charges In Wurttemberg a wise middle course was adopted. Those conventicles in which the great principles of Lutheranism were respected received legal sanction, while the more radical assemblages were banned (cf. PRE<sup>3</sup> xv. 790, xvii. 612). In Sweden, Pietism roused similar opposition, and a law of 1726 forbade all conventicles conducted by laymen, though private devotional meetings under the direction of the clergy were permitted, this law not being repealed until 1858

(PRE<sup>8</sup> xviii. 33, 36). At the present time, it is perhaps only in Russia, with the Greek Church in a position of ecclesiastical supremacy recognized by the State, that conventicles in the strict sense can still be said to continue. Measures of repression are from time to time directed by the Government against dissenting sects which have incurred its suspicion and hostility, such as the Stundists (q.v.) and the Doukhobors (q.v.), who were denied the liberty of private meetings for worship. The spirit of tolerance seems, however, to be rapidly gaining ground, and nonconformists of any kind, on giving satisfactory assurances to the police, are generally permitted liberty of worship according to their accepted mode. The signs of the times point to the spirit of religious toleration soon becoming universal, with the consequent cessation of that hostile and repressive attitude of State or Established Church to any form of religion which resulted in conventicles. sects which have incurred its suspicion and hosin conventicles.

LITERATURE.—This is sufficiently indicated in the article.

A. MITCHELL HUNTER.

CONVERSION.—I. Ethnic Conversion.—
Conversion, the greatest of moral events, is not the monopoly of one religion. It is a human as well as a Christian fact. As there is one blood in the veins of all nations, and one breath in all nostrils, so there is one Divine Spirit brooding over and striving within all souls. God has made all men with a capacity for conversion, with possibilities of response to the highest call (Ac 1721). And in every age and race there have been minds that have turned to the light, hearts that have felt the 'expulsive power of a new affection,' wills that have striven, and not all in vain, to attain the ideal. We need not grudge the name or the idea

of conversion to many experiences recorded in non-Christian literature. 'Faciasne quod olim mutatus Polemon'' (Hor Sat. II in. 253 f.).

The movement which was initiated by the religious teachers of Greece led to many conversions from polytheism to monotheism, and it had its saints and martyrs. Dill has shown that, towards the beginning of the Christian era, Græco-Roman philosophy became evangelical; it sent out an array of preachers to convert men to a higher and purer ideal (Rom. Society from Nero to M. Aurelius, London, 1904, bk. iii. ch. ii.). 'Some of the schools even developed a true pastoral activity, exercising an oversight of their members, and seeking to mould their noral life and habits according to the dictates of true wisdom' (Menzies, Hist of Religion, London, 1895, p. 301). 'I regard myself,' said Seneca, 'not so much as a reformed, but as a transfigured man' (Ep. 6). The science of Comparative Religion is proving the truth of the intuition that there is 'a light which lighteth every man' (Jn 1°). The conversion of Gautama, afterwards known as the Buddha, is as real a fact as that of Saul of Tarsus, Francis of Assisi, or any other spirit that has ever obeyed the heavenly vision. This pampered child of fortune turned from his pleasures and palaces as illusion and vanity; he sought and found, as he believed, the cause of sorrow and the way to subdue it; and he drew a vast stream of mankind after him to the religion of renunciation. It was the best they could do; they followed the glean; they loved the highest when they saw it. Similar phenomena are found in Confucianism, Islām, and all other great religions. God has not left Himself without witness in any nation, and the same choice between good and evil, between self-seeking and self-sacrifice, presents itself in some form or other to every human being. The spiritual ascent of man has human being. The spiritual ascent of man has been accomplished by a long series of conversions, from the lowest fetishism to the highest theism. To Christian philosophy, every upward movement of the human mind suggests that 'Christ, in His universal relation to humanity, may be able to pour His new life into open hearts, even when there is complete ignorance concerning the facts of His history and work' (Clarke, Outline of Christian Theology, Edinburgh, 1898, p. 398). And yet, so great is the difference between all such movements and the experience which is called Christian conversion, that one cannot but acclaim the essential truth of a well-known passage in Carlyle's Sartor Resartus:

\*\*Islame not the word [conversion]; rejoice rather that such a word, signifying such a thing, has come to light in our modern Ena, though indden from the wisest Ancients. The Old World knew nothing of Conversion; instead of an \*\*Ecce Homo, they had only some Choice of Hercules. It was a new-attained progress in the Moral Development of man: hereby has the Highest come homo to the bosoms of the most Limited; what to Plato was but a hallucination, and to Socrates a chimera, is now clear and certain to your Zinzandorfs, your Wesleys, and the poorest of their Pletists and Methodists' (bk. ii. ch. 10).

2. Conversion in the Bible.—The term 'conversion' (deversed is queues but once in the Rible (Acceptable).

sion' (ἐπιστροφή) occurs but once in the Bible (Ac 153). At the close of his first great mission, St. Paul went to Jerusalem to take counsel with the Apostles and elders, and he and Barnabas passed through Phonicia and Samaria 'telling the whole

through Phonicia and Samaria 'telling the whole tale (ekolyyoueva) of the conversion of the Gentiles, to the great joy of all the brethren.' It was a momentous event, prognant with the mightiest issues, marking an epoch in the history of the 1 'Polemon was a youth of Athens, the son of Philostratus, who spont the greater part of his life in riot and drunkenness. He once, when intoxicated, entered the school of Xenocrates, and was so struck with the eloquence of the scademician, and the force of his arguments, that from that moment he renounced the dissipated life he had led, and applied himself totally to the study of philosophy. After the death of Xenocrates he succeeded in the school where his reformation had been effected '(Lemprière, Class. Dict., ed 1839, s.v. 'Polsmon')

In the LXX the verb ἐπιστρέφω stands for world In the LXX the verb ἐπιστρέφω stands for τρη, από μος, and times without number for απο παρό, από μος, από times without number for μος από μος, από τος από μος το κατένοι και από μος το κατένοι και από μος το 'convert'; but this word appears only twice in RV (Ja 5<sup>19,20</sup>), being everywhere else changed into 'tuin' or 'turn again.' But, wherever the Gr. word is followed by ἐπὶ τὸν κύριον, ἐπὶ τὸν θεόν, or the like, it undoubtedly connotes all that is commonly signified by 'convert,' e.g. in Ac 935 1121 1415 2620, I P 225.

The Bible is the drama of the conversion of the world, of the turning, or rather the return, of man to God. The sacred writings must, in the last resort, always determine and control our concep-tion of the origin, growth, and nature of the spritual life. Without them there would be no Christian conversion, for there could be no adequate knowledge of God as revealed by Christ Jesus. If we are able to trace the lineaments of the soul of a Christian, it is because we have in the Bible the gradually perfected norm of the

new life.

i. THE OT .- The OT is a mine of gold for the inductive study of the facts of conversion, but the prospector has to encounter certain initial difficulties. The subject of conversion is often the nation as a whole, and the part played by the individual is usually left to be inferred instead of mind is not analytic; it reasons a priori; it is noumenal rather than phenomenal. Where the West says, 'Felix qui potuit rerum cognoscere causas,' the East is content with 'causam.' To search for secondary causes, to pry too curiously into the subjective conditions of spiritual experience seems to it not only superficus but over ence, seems to it not only superfluous, but even a little profane. 'This is Jahweh's doing' (Ps 11822), 'The king's heart is in the hand of the Lord as the watercourses: he turneth it whithersoever he will' (Pr 211), 'None can stay his hand' (Dn 425), are characteristic Eastern utterances. Once more, the Hebrew habit of thinking in pictures—due in great measure to the absence of abstract terms from the language—causes many spiritual experiences to be clothed in a figurative or symbolical garb. The psychologist must be a very skilful as well as reverent exegete who would re-tell in modern scientific phraseology the story of the conversion of Jacob at Bethel, of Moses in Arabia, of Solomon at Gibcon, of Isalah in Jerusalem. The last of these experiences, enshrined in an incomparably vivid and illuminating page of autobiography (Is 6<sup>1-8</sup>), presents a type of conversion in Israel which is no doubt, in some respects, unique and incommunicable, but in its broad outlines may be regarded as normative. Four distinct momenta are enumerated in the thrilling and transforming experience. There is a vision, flashed upon the young Hebrew's inner eye, of the King, Jahweh of hosts, whose glory fills the earth. There is a conviction of sin, personal and national, concentrating itself like a subtle poison in unclean lips. There is the unutterable comfort of absolution, which comes in the hand of a Divine messenger, by the way of the altar, to a heart wrung with anguish. And there is a mission, Divinely offered and humbly accepted, to live in the service of God for the welfare of men.

Just because larael's moral and spiritual ideal,

their conception both of God and of man—was so much higher and purer than that of any other nation of antiquity, conversion was to them a more real and radical experience than elsewhere. Theologically construed, conversion was, in their eyes, always a reversion, not to a low but to a high type, not to an animal but to a Divine pattern. This was not a movement contrary to nature; it was man finding himself, realizing his own true nature. But the general point of view was intensely ethical rather than speculative. Historically, the one aim of the spiritual leaders of Israel was to constrain the backshding nation to 'return,' to 'be converted,' unto Jahweh. 'Let the wicked return unto Jahweh,' Return ye, and turn yourselves from all your transgressions,' 'Turn yourselves, and live,' 'Take with you words, and return mito Jahweh' (Is 557, Ezk 1820 32, Hos 142). The Prophetic Intensture rings with the clear call to a definite change of spiritual attitude. Conversion is always equivalent to repentance and faith. But the same Hebrew word (200) expresses both the turning to and the turning again from Jahweh, conversion and perversion, and the two movements form the perpetual systole and diastole of the heart of Israel. The possibility of conversion is based upon the consciousness of Divine redemption in the past and the hope of Divine co-operation in the present. 'Return unto me; for I have redeemed thee,' 'Turn thou me, and I shall be for, that I may be turned' (Is 4422, Jer 3128). God alone can replace the old antagonism by a new disposition, can change the stony heart into one of flosh. The command, 'Make you a new heart and a new spirit' (Ezk 1821), would be a mockery if it were not accompanied by the promise, 'A new heart also will I give you, and a new spirit will I put within you' (3620), and unless there were a Divine response to the prayer, 'Create in me a clean heart, O God, and renew a right spirit within me' (I's 5140).

The Book of I'salms gives lyrical expression to the goy of conversion, to the triumph of

The Book of Psalms gives lyrical expression to the joy of conversion, to the triumph of the soul's return unto its rest in God. The Psalms have many authors, and it matters little whether any singer clescribes his first or a subsequent spiritual experience, or whether 'the I Psalms' are intended to mirror the heart of the nation as well as the individual. Be that as it may, no human document has greater value for the psychologist of conversion. Here (especially in the Penitential Psalms, 6. 32. 38. 51. 102. 130. 143) he finds 'the sick soul' signing, greaning, despairing, sure that God has hidden His face, spending nights in sleepless agony, tossing wearily to and fro, watering the couch with tears. Here is the tertured conscience, whose sms are exposed in the light of God's countenance, gnawed with remorse, seized with the pains of Sheol. Here is the sense of inward uncleanness, of hereditary sin, the horrible feeling of being sunk in the miry clay of a deep pit from which there is no deliverance. Here is the piercing cry out of abysmal depths, the prayer for Divine mercy and forgiveness. And here is the glimmering light in the darkness, the blaze of spiritual illumination, the clear vision of God, the sense of His redeeming love; and, lastly, the rapture of deliverance, the gratifude that words can never utter, the desire to tell to others what Jahweh hath done for the soul,

that sinners must be converted unto him.

At an early period the Hebrey nation began to devote much care to the training of the young. There was an enthusiasm for education (see EDU-QATION [Jewish]), and the discipline was never interely intellectual, but always primarily ethical and spiritual. 'The fear of Jahweh is the beginning for, it may be, 'the chief part'] of wisdom' (Pr 17). Here wisdom' is almost equivalent to

The state of the s

'religion.' It was often personified by its lovers, and pnaised as a mother or a bride (Pr 2. 3), and even as the eternal companion of Jahweh (Pr 8). The great aim of Hebrew parents—no mention is made of schools—was so to 'train up a child' in the service of God and in the atmosphere of healthy piety, that in his manhood he should need no sudden, violent, convulsive return unto Jahweh from a life of sin and shame. How entirely such pædagogy corresponds with our latest ideals of education, we shall see later. That the end was often realized, we cannot doubt. Some of the noblest servants of God knew that they were sanctified from their mother's womb (Jer 16, Lk 116). There was no time when they did not reverence and love Jahweh, no time when they played the fool, no time when they needed to hear the airesting trumpet-voice, 'Turn ye, turn ye... why will ye die?' (Ezk 3311). But there are incalculable elements in human nature as well as defects in the best education, and the sons of many servants of Jahweh—such as Eli, David, Josiah—showed that it is always in man's power to abuse the mystery of his freedom and defeat the grace of God.

Conversion in the OT was often a profound and radical change. The desire for God—the hunger, the thirst, the panting, the fainting—was pathetic as it was passionate, and the response to the human cry was the outstretching of a strong arm that not

Conversion in the OT was often a profound and radical change. The desire for God—the hunger, the thirst, the panting, the fanting—was pathetic as it was passionate, and the response to the human cry was the outstretching of a strong arm that not only wrought deliverance from evil, but drew men into close and satisfying fellowship with God. Yet the joy of conversion was never quite full. It was for a long period troubled by the idea that spiritual restoration must necessarily be followed and attested by material prosperity. To the end it awaited a fuller revelation of the Fatherhood of God, the atonement of sin, and the hope of immortality. There was to be a final answer to the oft-repeated prayer, 'Turn us again, O God, and cause thy face to shine, and we shall be saved' (Ps 80<sup>3-7-19</sup>).

ii. The NT.—In the NT, conversion is the chief end of all teaching and preaching. It has rightly been called (Ecce Homo 11, London, 1873, p. 243) 'the true articulus stantis aut cadentis ecclesiae.'

ii. The NT.—In the NT, conversion is the chief end of all teaching and preaching. It has rightly been called (Ecce Homo 11, London, 1873, p. 243) 'the true articulus stantis aut cadentis ecclesiae.' Jesus began H1s ministry by preaching repentance and faith (Mk 115), which are together equivalent to Christian conversion. The call of the early Church was, 'Repent ye, therefore, and he converted, that your sins may be blotted out' (Ac 319). The language in which conversion is described varies greatly, as do the subjective experiences of individuals; but the root or core of the change is always the same. It is figured as a translation out of darkness into marvellous light (1 P 29), as a being boin again, or 'from above' (Jn 33), as a redemption from all iniquity (Tit 214), as a passing out of death into life (Jn 524), as a turning from the power of Satan unto God (Ac 2618), as a now creation (2 Co 517), as putting off an old and putting on a new man (Col 39), as becoming children of God (Ro 816), as having Christ dwelling in the heart by faith (Eph 317), as a dying and rising again (Ro 62-8). Practically, it is a new life which turns all the forces of one's being into a new channel. All the energies that formerly made a man a sinner are now employed to make him a saint. His carefulness, indignation, zeal, and revenge are directed against his sin (2 Co 711). The converting power is never the mere force of truth, or the beauty of holiness, but always the fascination of a Person. The whole life of the convert organizes itself anew around Christ living, dying, rising, and reigning; He is the power of God unto salvation (Ro 130). The NT tells of multitudes who have been reclaimed from vice, and never gone back. Science regards all facts with reverence, and the NT abounds in such transfigured realism as the fol-

lowing: 'Neither fornicators, nor idolaters, nor adulterers, nor effemmate, nor abusers of themselves with mankind, nor threves, nor covetous, selves with mankind, nor threves, nor coverous, nor drunkards, nor revilers, nor extortioners, shall inherit the kingdom of Cod. And such were some of you: but ye were washed, but ye were sanctified, but ye were justified in the name of the Lord Jesus Christ, and in the Spirit of our God (1 Co 69-11). NT conversions have been classified as moral, spiritual, intellectual, and practical (John Watson, Inspiration of our Faith, p. 79 ff.); and such groupings are useful, if not logically perfect. There are conversions from sin to holiness, from doubt to faith, from legality to grace, from selfishness to service. But we must beware of analyzing the indivisible self into so many faculties, and asculling conversion to the exercise of one of them, to the exclusion of the others Conversion is the response of the whole personality—whether regarded as mind, or heart, or will—to the personal Christ. It is man's meeting with Christ, believing in Christ, gaining new life in Christ. Intelligence, emotion, volition are all mastered by the Author and Finisher of Christian faith. The harmonious functioning of every energy of the mind is the perfect spiritual life.

Jowett, in a fine essay on 'Conversion and Changes of Character,' calls attention to the fact that 'with the first believers the influence of Christianity was almost always sudden.' He finds that this lay in the nature of things. The earliest converts had no Christian training in childhood and youth. When they heard the gospel, they were pricked with the sense of sin, they were melted with the love of Christ, and they needed no time of probation. But their conversion, however, the conversion of the conversion, however, the conversion of the conversion, however, the conversion of the conversion of the conversion. ever sudden, and however wonderful the attending circumstances, was none the less sincere and lasting. They became the very opposite of their former selves; their spiritual nature came again like the flesh of a little child (Jowett, Theological Essays, p. 40). Sometimes the change was violent and dramatic, as in the case of St. Paul, whose conversion is the most momentous in history; sometimes it was quiet and unsensational, as in the instances of Zacchæus, Matthew, Lydia, Timothy. But, whether the type was explosive or gentle, the change was radical and complete. And it is important to note that it was always the opposite of a gradual and laborrous reformation.

a gradual and abortous reformation.

'Easier to change many things than one is the common saying. Easier, we may add, in religion or morality, to change the whole than the part. Easier, because more natural, more agreeable to the voice of constience and the promises of Senpture. . . Take care of the little things of life, and the great ones will take care of themselves, is the maxim of the trader. But more true is it in religion that we should take care of the great things, and the trides of life will take care of the great things, and the trides of life will take care of themselves. Obristianity is not an art acquired by long practice; it does not carve and polish human nature with a graving tool; it makes the whole man; first pouring out his soul before God, and then casting him in a monial (Jowett, ep. cit. 55).

For certain purposes, theology distinguishes conversion from regeneration. They are the human version from regeneration. They are the human and the Divine side of the same experience. Regeneration is the gift of God's grace, the power or principle of the new life implanted by His Spirit; conversion is the act of human freedom, the voluntary turning of the heart to God. The one is a necessity—'ye must be born again' (Jn 37); the other, a duty—'repent and be converted' (Ac 319). Regeneration occurs but once, conversion may have to be repeated. 'Convert your conversion' is the keen counsel of Adolphe Monod (Saint Paul's, Paris, 1859, p. 114). St. Peter's faith never failed, for his Master prayed for him, and his love never grew cold; but in a moment of temptation he denied his Lord, and his need to be re-converted was painfully evident (Lk 2232). And if there is any truth in the

version at the very end of his life, and it was again a look on the face of Christ that wrought the change. 'And Peter turned, and rushed on Rome, and died' Conversion plays too important a part

to be exhausted in a single decision.

10 be exhausted in a single decision.

'The whole life of a man'says Fraser of Brea, 'is a continued conversion to God, in which he is perpetually humbled under sense of sin, and diaws nearer and nearer to God, with more fervent faith and love, and daily walks closer with the Loid, endeavouring at perfection. And God doth, as it were, act over and over again this work in the heart, forming His people more exactly than before, and therefore no wonder they meet with something like a second, yea, and a third and four the conversion, especially where there are backslidings' (Memoirs, Edinburgh, 1738, ch. v. 3).

St. Paul describes his cour generalism bis chirality.

St. Paul describes his own conversion objectively in the Acts, and subjectively in his Epistle to the Romans. Ro 7 is the most searching analysis ever given of the divided self, the homo duplex. Whether it mirrors a first or second or still later spiritual conflict in imputation for each crisis is in many conflict is immaterial, for each crisis is in many respects the same. How forcibly the Apostle's self-dissection illustrates the teaching of the modern

psychologist!

psychologist!

'The ... basis of the twice-born character seems to be a certain discordancy or heterogeneity in the native temperament of the subject, an incompletely unified moral and intellectual constitution "Homo duplex, homo duplex!" writes Alphonso Daudet... Heterogeneity may make havoe of the subject's life. There are persons whose existence is little more than a series of surgags, as now one tendency and now another gets the upper hand. Their spirit wars with their flesh, they wish for incompatibles, wayward impulses interrupt their most deliberate plans, and their lives are one long drama of repentance and of effort to repair misdemeanours and mistakes... The higher and the lower feelings, the useful and the erring impulses, begin by being a comparative chaos within us—they must end by forming a stable system of functions in right suboidination' (James, Varieties of Religious Experience, London, 1902, lect. vin p. 107 ft.).

While the battle rargs in the Apostle's soul.

While the battle rages in the Apostle's soul, while his heart is a kingdom divided against itself, and in all the chambers of his being his moral ideal and in all the chambers of his being his moral ideal is torn between friends and focs, his anguish is pitiful. 'O wretched man that I am,' he cries, 'who shall deliver me?' (Ro 724). But in the end, by the power of Christ, his higher self triumphs over his lower; his divided spirit is healed; peace and harmony take the place of civil war and turmoil; and the most tragic lament in the Bible is

followed by the finest prean-song.

3. Conversion in Church history.—The supreme task of the Church is the conversion of the world the making disciples of all nations (Mt 28<sup>19</sup>). The apostolic and evangelic continuity of spiritual life is to be maintained, the Christian faith is to be propagated, the Kingdom of God is to come, through an unbroken succession of conversions. All the preachers who have profoundly moved the heart of mankind—master-spirits like Chrysostom, Savonarola, Luther, Wesley—have made conversion their theme. And, from a scientific point of view, the

evidential value of conversions is the highest.

'Si. Augustine,' says Romanes, 'after thirty years of age, and other Fathers, bear testimony to a sudden, enduring, and extraordinary change in themselves, called conversion. Now this experience has been repeated and testified to by countless millions of civilized men and women in all nations and all degrees of culture. It signifies not whether the conversion be sudden or gradual, though, as a psychological phenomenou, it is more remarkable when sudden and there is no symptom of mental aberration otherwise. But, even as a gradual growth in mature age, its evidential value is not less' (Thoughts on Religion<sup>6</sup>, p. 162).

The theology of the Country of the

The theology of the Church was early caught in the meshes of the problem of the relation of Divine grace to human freedom in the experience of conversion. Thought has moved between two extremes. On the one hand, the severeignty of God is emphasized, grace is irresistible, the number of the electic contains and must be midd up the of the elect is certain and must be made up, the Divine good pleasure is certain to take ellect. Under such conditions, man, impotent in the grip of original sin, is converted almost against his will. He is scarcely more than an automaton; his Domine, quo vadis? legend, he had yet another con-salvation appears to be due to his mere good. entropy (Tarley)

fortune; he chances to be a vessel unto honour. On the other hand, human liberty is accentuated; conversion is viewed as the outcome of forces resident in man himself; he has a native power to repent and believe, and the new life is from first to last a hard-carned, self-obtained, personal possession. The age-long controversy between Augustinian and Pelagian, Calvinist and Arminan, regarding the fact of conversion has now spent much of its force. With the help of a better psychology we can do justice to both the Divine and the human initiative. God is all-operative love, and man's whole equipment is His gift. All the conditions of human life are Divinely ordered, and man has an intense consciousness of dependence. He has nothing that he has not received. But part of his equipment is his freedom. He is above the mechanical order of nature. He has a real and not an illusive sovereignty. He is conscious of acting of his own accord, and of using the causal order for ends which he himself chooses. He is a free, self-determining personality, and his conversion can only mean that under the impulse of love he voluntarily and joyfully surrenders himself to God. A German theologian illustrates the interaction of Divine sovereignty and human freedom in conversion by the familiar process of persuading and being persuaded—Anregung und Ucherzeugung (Seeberg, art. 'Bekehrung,' in PRE'3). Every man is constrained by the love of Christ' but every man is fully persuaded in his own mind. If the convert calls the grace or fascination of Christ 'irresistible,' he speaks with the enthusiasm of a lover; but it is bad theology to change the warm logic of the heart into a cold dogma of the intellect. Man may after all use the Divine gift of freedom to oppose—it may be to thwart—the will of God. The wise use of individuality is to make Divine ends personal ends, and to pour forth all the energy of one's being in the service which is perfect liberty.

Conversion meant in the Middle Ages, as it still does in Roman Catholicism, the adoption of a creed and submission to the authority of the Church. In Protestant theology it always means the rebirth of the soul, but in the Anglican Church there is a strong tendency to regard regeneration and conversion as independent experiences, separable in time, and different in important aspects. Certainly, if regeneration is mediated by haptism, the subject of which is usually unconscious of the rite, while conversion is the deliberate turning of the will to God, the personal acceptance of Christ by faith, then the second process is often separated from the first by a long interval; and it is possible to contend, as Anglican theology sometimes does, that 'a regenerated man is not necessarily a converted man.' If the effect of baptism is that 'it remits all sin, original and actual; that it bestows sanctifying grace, and endues the soul with the heavenly virtues of faith, hope, and with the heavenly virtues of faith, hope, and charity; that it makes the recipient a member of Christ, the child of God, and an inheritor of the kingdom of heaven' (V. Staley, The Catholic Religion, London, 1893, p. 243), there can be little need for another religious phase called conversion. But this view appears to lose all touch with the central truth and vital experience of the NT, to empty the Christian religion of its moral and spiritual contents, and to reduce it to the level of a magical formula.

4. Conversion in the light of science.—Professor Henry Drummond was an eye-witness of the facts of conversion, as the youthful comrade of Mr. Moody in a great revival of religion. From that time he never ceased to advocate a scientific treatment of the phonomena of the spiritual life, which he happily called the contemporary activities of

the Holy Chost.' There can be nothing presumptuous in the endeavour to classify the facts and discover the laws of the new life. To the man of science all facts are sacred, and before the fact of conversion, as before any other, he will sit down 'as a little child' Far too scanty attention has been given to the human side of soteriology. In order to understand the Saviour better, we must look more to the saved. Christ asked that He might be beheved 'for the very works' sake' (In 14<sup>11</sup>), and He worketh hitherto (5<sup>17</sup>). The serious study of the facts of conversion may be the best present-day mode of handling the Word of life. The Christ of history may be reached through the Christ of experience. Christianity, as Harnack retterates, is 'eternal life here and now in the power of God and in His presence.' Its best evidence is the logic of life. Solvitur ambulando, it is proved by its present spiritual movements and triumphs. In the realm of experimental theology, the twentieth century may join hands with the first.

During the last dozen years there has been a remarkable response to the plea for a science of conversion, for an empirical study of 'the soul of a Christian.' It has fittingly come from the psychologist rather than the theologian; and the new quest has characteristically been urged with special keenness in America. The publication of Starbuck's Psychology of Religion in the 'Contemporary Science Series' (1899) marked an epoch in the modern Church. In this book and its numerous successors the whole spiritual realm has been annexed by science. Religious experiences without number have been collected, classified, and described. 'That cruel reticence,' whereof Ruskin complained, 'in the breasts of wise men which makes them always hide their deeper thoughts,' has to a great extent been overcome. Law and order have been introduced into an apparent chaos. Theology, which has been too long metaphysical, has become experimental; it has been brought into line with the whole scientific movement; it has found a concrete basis in the facts of the spiritual life. Dynamics have taken the place of statics. Conversion is no longer regarded as a mere mystery or portent, before which we must stand in silent amazement. It expresses itself in the language of the modern mind. It welcomes the application of the canons of science, and yields up many of its scerets to patient and reverent research. It has a rationale. It is seen to have discoverable relations to other known psychological facts. And, in the spiritual as in the natural world, God is a God of order. He arranges everything upon definite principles. The law of cause and effect controls the spiritual life. Arbitrarness must once for all be eliminated from the fortunes of the soul. God's action is always causal, never casual. His sovereignty is as different from the 'mere good pleasure' of an Eastern despot as day is from night. The science of conversion is still in its infancy, but certain conclusions seem to have been securely won.

(1) There is a conversion period.—The re-birth does not take place with the same frequency in all the seven ages of human life, though a man may be born again when he is old. Conversion is in general a fact of adolescence. It is closely related to those great physical and mental changes which mark the transition from childhood to youth and manhood. It is the time of storm and stress, in which Nature calls for readjustment all along the line. As reason, feeling, and moral sense mature, they precipitate a spiritual crisis. The soul awakes and aspires. The spiritual development proceeds, as a rule, pari passu with the physiological and

psychological development, and a wide induction proves that

among females there are two tidal waves of religious awakening. 'among remales there are two bidat waves of religious awakening, at about 13 and 16, followed by a less significant period at 18; while among males the great wave is at about 16, precided by a wavelet at 12, and followed by a suigning up at 18 or 19' (Starbuck, op at p 34) 'Feeling plays a larget pat in the religious life of females, while males are controlled more by intellection and volution' (bb 65). 'Conversion for males is a more violent modernt than for females, and more suiders' (bb 95). And 'one may say that if conversion has not occurred before 20, the chances are small that it will ever be experienced' (bb 23).

(2) Conversion is often sudden -This statement is sometimes received with incredulity and even contempt, but psychology completely justifies it by binging it into idlation with other well-known mental processes. There are moments, as Browning says in his Cristina,

'When the spirit's true endowments Stand out plainly from its false ones.'

Our best thoughts are often startling intuitions, 'flashes struck from midnight.' The seeker after truth utters his sudden 'Eureka,' and so does the seeker after a Saviour (Jn 141 16). Love, both natural and spiritual, is often love at first sight; when two souls, like two dewdrops, rush into one, the time element counts for nothing; the psychological moment has in it the quality of eternity. Our wills and our hearts are ours to make them God's, and life's most momentous decisions may be swiftly over.

'The world and its laws,' to quote Jowett again (op cit. p 58), 'have nothing to do with our free determinations. At any moment we can begin a new life.' R L Stevenson prays the Celestial Surgeon to stab his spirit broad awake (Underwoods, p. 40). 'A word did it,' said Savonarola of his own conversion.

Even those who have never avoided God, never dishonoured Christ, often become suddenly and profoundly conscious of their need of conversion; and there are creative periods of the mind when the repulsion from evil and the attraction to good are tremendously strong. While, however, the actual change is frequently swift, there is almost invariably a season of preparation for it. Conversion is the climax of a gradation, the crisis of a process more or less drawn out. The evidence on this point is all but unanimous. We may even accept Vinet's strong statement: 'Rome might more easily be built, than a man converted, in a day. Such a prodigy is possible with God; but in a thousand, in ten thousand cases to one, we may safely predict that He will not perform it' (Outlines of Theology<sup>3</sup>, 1870, p. 84). Vinet is here perhaps misusing language, confounding the means with the end, the way with the goal. He does not for a moment deny that the final coup is often instantaneous. In such cases conversion is the firing of a slowly-laid train, the bursting of a silentlymaturing bud, the transformation scene in the life-long drama of the soul. It is evident that much is lost by the deliberate postponement of decision.

'Convert me, but not yet,' was Augustine's prayer. 'Men are quick to feel, and keen to know; but they are not only slow, they are averso to decide. Yet it is for decision that Christianity calls, it is for decision that the energetic universe calls, far more than for a mere impression in reponse. A crisis has from time to time to be forced, a crisis of the will' (P. T. Forsyth, Preaching and the Modern Mind, 1907, p. 181).

(3) Conversion may be unconscious.—There is a happy class of Christians who cannot tell when or how they began to believe; who have 'no bitter regrets, no broken lives, no ugly memories.' Theirs is the anima naturaliter Christiana, the schone Seele that has always been on the side of the angels. It was the teaching of Bushnell that, under the pervasive influence of the Christian family, the child should grow up a Christian, and never know himself to be otherwise. The Christian life, being natural to man, should begin with the beginnings of conscious experience; and a great wrong is done to a child when he is led to imagine that he must wait till he comes to years of discretion and

then have an experience which will make him a Christian. If God's will for him is realized, there will be no tude break, but a beautiful continuity, in his spiritual life. 'Of such is the kingdom of God' (Mk 1011), said Jesus of the children of Galilee, and the prevention of a fall from the grace vouchsafed to childhood should be the aim of all education

"That is the ideal type of conversion in a Christian land; and it is the scandalous neglect of duty by Christian parents and by the Chinich which has made it less frequent than it should be' (D. W. Forcest, The Chirls of History and of Experience, 368).

'The child is father of the man,
And I could wish my days to be
Bound each to each by natural picty.'

Some indeed, dray that, in this experience there

Some, indeed, deny that in this experience there is any conversion at all. Francis Newman distinguished the 'once-born' from the 'twice-born' Christian, and this idea—legitimate enough as a protest against an exclusively revivalishe type of conversion—has been taken seriously by some psychologists and greatly overworked. It is not a Christian idea. Jesus assumes in many indirect ways the natural suntulness of the human heart and its need of regeneration. Even the child who is 'sanctified from his mother's womb' is twiceborn. The most 'sky-blue' and 'healthy-minded' Christian is regenerated. Science is here rendering a valuable service to theology. It has proved that every man has a sub-conscious as well as a conscious self, and that changes both small and

great occur in the subliminal legion of the mind.

'Consciousness is a very poor witness to what takes place in the abysses of soul life. The remembered experiences of individuals are pitifully fragmentary and puerile, and often absurdly mistaken as to cause, process, issue, and object '(Hall, Adolescence, p. 341).

We are largely the creatures of instinct and unconscious imitation, and, if many things are

wrought into the fabric of our being without our

wrought into the fabric of our being without our knowledge, why not the grace of God?

'Think you, 'mid all this mighty sum
Of things for ever speaking,
That nothing of itself will come,
But wo must still be seeking?
God 'giveth his beloved in sleep' (Ps 127°), and
His beneficence is as wonderful in an unconscious as in a conscious regeneration. But see, on this whole subject, art Consciousness, p. 53.

(4) Conversion must not be stereotyped.—The phenomena of the spiritual life are marvellously complex, and psychology teaches us to resist every attempt to standardize, normalize, conventionalize it. Every individual has his own ancestry, his own history, his own idiosyncrasy, and therefore his own spiritual experience. The variety of grace is like the variety of nature. God does not repeat Himself; He loves originals more than duplicates. The conversion on the way to Damascus cannot be a pattern for all men. There need not always be the same tragic intensity, the same high lights, the same deep shadows. The diversities of operations of the selfsame Spirit must all be orthodox. But every man is tempted to make his own experience a kind of law for other people. Schleiormacher thinks that the religious life is, in its inception and growth, the product of feeling; Herrmann believes that 'greater and higher than all the emotions within the Christian, there rises and towers religious thought.' The type of religious experience that seems native to a cultured community is calm and restrained; but the fervours of the Salvation Army and the Methodist meeting

moments, and whose 'very organic impulses and desires are so utterly transformed that he can scarcely recognize immed? (Pratt, Psychology of Religious Belief, p. 251).

(5) Conversion is still a mystery —In being studied

scientifically, spiritual phenomena lose none of their Divine significance. Psychology has done much and will yet do more; it even asserts that, 'if we know the person psychologically, we can prophesy quite correctly the type of his conversion, whether sudden or gradual, quiet or excited '(Cutten, Psych. Phen. of Christianity, p. 255). But, after all, psychology can see only the under side of conversion. Spiritual life, like natural life, is its final cause and real nature inscrutable. Nothing can be more crude than the notion that to discover the reign of law is to eliminate God and mystery.

Law is only God's uniform method of working,
and 'He is in the field when He is most invisible.' We have not to deal with a God remote from the world and manifested only through occasional interferences with the order of Nature, but with a God whose dwelling and working are in the lives of men. Just as the correlation of brain states with mental states does not prove the case of the materialist, so the correlation of conversion with certain mental and physical forces is far from proving that the inception and growth of the spritual life is not a Divine act.

spiritual life is not a Divine act.

'That it [conversion] may all be due to so-called natural causes,' says Romanes, 'is no evidence against its so-called supernatural source, unless we her the whole question of the Divine in Nature' (op cit. p 163) Even Rilschl, with all his dislike for mysticism, never denies that God Himself is present and operative in regeneration, using the religious community as His medium, not His substitute. 'This wonderful change,' says Pfleiderer, 'is not arbitrarily brought about by man limiself, but experienced as a thing that has happened to him; it appears to him as the operation of a higher power, as the gift of undeserved divine favour or grace. And is not this in truth the case? Careful thought, in fact, can do nothing but confirm what the believer holds as a truth requiring no proof' (Philosophy of Religion, Eng. tr. iv. [1889] 128)

Froude complains that conversion, like other

Froude complains that conversion, like other Christian doctrines, has been 'pawed and fingered by unctuous hands for now near two hundred years. The bloom is gone from the flower. The plumage, once shining with hues direct from heaven, is soiled and bedraggled. The most solemn of all realities have been degraded into the passwords of technical theology' (*Life of Bunyan*, London, 1880, p. 34). But all that is needed to bring back the bloom to the flower and the plumage to the wing is a new springtime. Human errors and caricatures do not alter Divine facts, any more than the mists extinguish the stars. survey of the data of the spiritual life leads to the conclusion that the majority of conversions have little of the picturesque or dramatic in them; that some take place beneath the threshold of consciousness; that others are but dumb yearnings of penitence and faith towards God; that the memorabilia of soul-life are usually very brief, the convert sometimes limiting himself to the wondering exclamation, 'Whereas I was blind, now I see' (Jn 925). Yet every conversion enfolds in itself a Divine scoret—the mystery of life—whose power and beauty will gradually be unfolded to the eye, but whose inner significance no mind can be supported. The psychological study of the New penetrate. The psychological study of the New Lafe will probably do more than anything else to convince the twentieth century of the immanence and the transcendence of God.

and the transcendence of God.

CONVICTION.-I. Conviction in relation to belief .- Conviction that certain doctrines of religion are true is seldom or never the result of a rational process, it rather springs from a feeling in the mind that the doctrines suit a mental and emotional condition and bring peace to the soul.

As Schopenhauer has well said:

'Man has, as a rule, no faculty for weighing reasons and discriminating between what is false and what is true; and, besides, the labour which nature and the needs of nature impose upon him leaves him no time for such inquiries, or for the education which they presuppose. In his case, therefore, it is no use talking of a reasoned conviction, he has to fall back on bellef and authority' (Religion: a Dialogue, ti. by T. B. Saunders, 1889, p. 10)

Conviction insules active accordance of proposi-

Conviction implies active acceptance of propositions as indubitably true It is not in itself any proof of truth, because different people may have diametrically opposite convictions, and some convictions have led to most lamentable results in persecutions, and in denial of equality in human rights and liberties. Bagehot remarks, in discussing 'The Emotion of Conviction':

'Nor is this intensity a sign of tuth, for it is precisely strongest on those points in which men differ most from each other. John Knox felt it in his anti-Catholicism; Ignatius Loyola in his anti-Protestantism, and both, I suppose, felt it as much as it is possible to feel it '(Lit. Studies, 1879, il. 414).

All experience shows that the personal equation, idiosyncrasy, or state of development of each ego is a prominent factor in the determination of convictions. The convictions of the two clever men, Cardinal Newman and his brother F. W. Newman, were widely apart, although their heredity was the same, and their upbringing was under identical general circumstances. In the case of these two thinkers, the divergence, of course, could only have been due to their different emotional and mental natures in different stages of development, for the same subject matter of conviction was before the mind of each of them.

Conviction, then, as a feeling of reality indicating truth, is not fully trustworthy in respect of pro-positions as a whole, yet we may be assured that when the feelings are stirred, there are elements in the doctrines believed which are true relatively both to some universal principles and to the corresponding principles in man. For man is potentially, though not actually, the measure of the universe. The outer form of beliefs is often false, while the inner life-that which awakens emotional response -is true either for higher or for lower stimulation to development. Convictions suitable and useful to low stages of human evolution are eventually outgrown and seen to be erroneous. They are then replaced by others more true to outer and inner conditions, and more efficacious in promoting the

growth of the soul.

There is also what may be called a coercive element in belief and conviction. This proceeds from pressure of environment, eventuating in the imposing of the customary opinion of those around on the unresisting and undiscriminating mind.

G. F. Stout has said :

'There must... in the framing of a belief be always some endeavour to conform to conditions other than, and independent of, our own subjective fundencies. Our inability to attain ends otherwise than through certain means constitutes a restriction of mental activity within more or less definite channels' (Manyal of Psychology 2, 1901, p. 567 t.).

It is only the thinker who can stand alone; most nearly do not thinker who can stand alone; the

people do not think, but readily come under the

personal influence of those who confidently and plausibly proffer doctrines and statements for the

acceptance of ill equipped minds.

Respecting conviction as the result of a mental process, and determined by evidence, there is usually a change of belief and of mind-content. Here we have the force of evidence driving out old belief and substituting new; conviction then leaves old opinion and clings to new. In this case the feeling of reality comes as a response to the force of evidence applied by comparison and judgment.

of evidence applied by companion and judgment. 'What is believed to be real (and so said to be known) is indeed mainly a matter of intellection; but it is also a matter of both feeling and will. In respect of all the higher intellection, esthetical, ethical, and religious realities, feeling and choice largely determine knowledge through the dependence of this belief on them. Yet we have spoken of this belief as feeling not because it is a special form of affective phenomena, but because as conviction—having that warmth of colouring which the world implies—it may be regarded as a sort of universal affective accompaniment of the intellectual and voluntary aspects of all knowledge' (G. T. Ladd, Psychology, 1894, p. 514). p. 514).

Convictions are beliefs accepted and vitalized by the emotions of those convinced that realities are indicated by them. The acceptance of beliefs is partly determined by the absence of contradictory beliefs in the mind when the new propositions are tendered. This fact Buckle long ago pointed out.

'The sense that anything we think of is unreal can only come when that thing is contradicted by some other thing of which we think. Any object which remains uncontradicted is 1980 facto believed and posted as absolute reality' (W. James, The Principles of Psychology, 1905, vol. ii. p 288f).

The absence of antagonistic ideas in the mind permits indiscriminately the acceptance of true and of false forms of belief. Children may be brought up to believe almost anything religious. In the same way the presence of beliefs antagonistic to proffered ideas may as often keep out the true as the false. Bias towards false forms, and erroneous prejudice, make impossible the advent of certain truths to the soul. Hence it is that new general truths are seldom acquired after Minds usually become hope-before middle age. While cremental maturity. Minds usually be lessly biased long before middle age. dulity may sometimes permit the truth to enter, constant incredulity resists the truth and hugs old errors.

The test of actuality we find in our own consciousness and life. 'Whatever things have intimate and continuous connexion with my life are things of whose reality I cannot doubt' (James, op. cit. p. 298). Doctrines strongly stirring the higher emotions, and not conflicting with prejudice, appeal with a force which carries conviction with it, though the doctrines may vary with all the religions of the world. Truth hides under many forms. We may be sure that, in all these varying doctrines as applied to the human heart, there is a linear element of the world in the Code docs not is a living element of eternal truth. God does not forsake the beings that have emanated from Himself. Each soul has the conditions and the knowledge it can bear and make use of under the religion it is born to or adopts.

z. Conviction of sin is usually present in the state of consciousness known as conversion (q.v.), or change of heart. It is a 'sense of sin,' a feeling of unworthness and general wretchedness, accompanied by a strong desire to lead a better life. It is shown by a more or less sudden distaste for accustomed thought, language, and conduct, and by a new-found yearning within for an improved state of being. Conviction may last for days, months, or years before the crisis, or conversion, supervenes, and this is followed by rest-fulness of mind and lightness of heart. Conversion is described by Starbuck as a sudden forsaking of the lower for the higher self:

"A process of struggling away from sin, rather than of striving toward righteousness; . . . it seems to be a step in growth which calls into activity the deeper instincts. . . . The feelings,

which are the primal elements in consciousness, function so strongly. In the tendency to resist conviction we see, also, an indication that the new life is forcing its way even against the person's will '(The Psychology of Religion, 1809, p. 64)

Though the proximate cause of conviction of sin is often fear of torments to come, yet we may be suie that behind this fear there are cortain emotional and mental conditions ripe for a change

to a higher state.

Viewing the phenomena observable at great religious icvivals, such as the movement among the Welsh people in the years 1904-1905, we may recognize, desprte certain objectionable features and mistaken views and conduct, the action of the Holy Spirit in meeting the aspirations of those who are struggling amid the difficulties and illusions of the lower planes of emotion. It is through the power of the Spirit, which is the life-force of the universe, that the transmutation of the emotions is effected, and this must be at the bidding of the lower nature. The raising of the emotions to higher levels is part of the process of evolution, and, when accomplished, is a sign of the soul's development, or growth in grace.

Literature.—The literature is given in the article

G. A. GASKELL.

CONVOCATION .- This is the name given to the general assembly of the clergy of the Church of England. The older name was 'synod,' of which 'convocation' became the equivalent when English began to take the place of Latin in the official documents of the Church. We read of the 'Synode of London' in 1553, but of the 'convo-cation holden in London' in 1562. The synodal activity of the Christian Church is coeval with her life. It gradually took form in diocesan, provincial, and national synods, and these different forms of synods were held wherever Christianity was established. The British Church, in common was established. The british Church, in common with the rest of Christendom, was familiar with conciliar action—witness the Council of Verulam in A.D. 446. In Anglo-Saxon times, Church Councils were assembled 'acourse with our Parliaments' as national synods, while the bishops and clergy in addition were constituent members of the great council' of the nation In Norman times the conciliar activity of the

Church became still greater. Bishops, abbots, priors, archdeacons, and deans were summoned; but the first known instance of the representative element occurs in 1225 under Langton. Later in this century, however, we have proof of direct representation in a provincial synod, for in 1273 we find Archbishop Kilwarby issuing his mandate

to the Bishop of London in these terms:

You are to direct on our part each of the suffragan bishops of our Church to call and bring with hun to the aforesaid synod three or four of the greater, more discreet, and prudent persons of his Church and diocese, that by the assistance of their common counsel such important affairs of the Church of God by His aiding mercy may be brought to a happy conclusion.

Four years later 'proctors of all clergy of each diocese' were specifically named in a similar mandate. In 1283, Archbishop Peckham ordered the attendance of two proctors for the clergy of each diocese as well as one for each cathedral and collegiate church, and this seems to have become the rule for the Province of Cantorbury. In the Province of York, the rule, dating from 1279, was that two proctors for the clergy should attend from each archdeaconry. Side by side with provincial synods were diocesan synods, which were held under their several bishops to enforce the decrees of the provincial synods. National synods fell into disuse through the jealousy felt by the two

Archbishops of their respective claims.

It is to be noted that this synodal action of the Church preceded the attempt made by Edward 1 in 1295 to incorporate the clergy into his newly-

devised parliamentary system. The king hoped that the clergy would not only meet, as heretofore, as the spiritual councillors of the Archbishops, but that they would also add to their spiritual duties the further duty of sitting in Parliament as his council, especially to make it easier for him to raise money by taxation. The king's attempt, however, failed through the refusal of the clergy to obey the royal summons addressed to them, through the Archbishops, in the famous premumentes clause. The Grown acquesced, after 1340, in the rule that the clergy should tax themselves in their Convocation, and in consequence the attendance of proctors in Parliament did not outlive the following century. The writ with the præmunientes clause is still issued at the summonring of every Parliament, but is never obeyed. Convocation, however, is still summoned in both Provinces whenever Parliament is summoned, though it would seem that there is nothing to hinder its meeting at other times 'if the existence of affairs shall so require.

Convocation, in common with the Church of England as a whole, lost much of its independence, and at the same time much of its power and influence, at the Reformation. The Act of Submission (25 Henry VIII. c. 19) embodies in its pre-amble an Act of Convocation abjuring all power to make or act on any canons without the king's consent; and it affirms that Convocation always had been, and ought always to be, assembled only by the king's writ. Accordingly, Convocation was reduced to an instrument of the 'Supreme Head' or 'Supreme Governor' for ecclesiastical purposes, and was given the duties of considering forms of public worship, articles of religion, and canons, though not as possessing any independent effective authority. Indeed, it is now an estab-lished rule of law that canons made by the elergy in Convocation are of no binding power over the

laity.

After the Restoration, Convocation prepared in 1661 the Act of Uniformity, revised the Prayer-Book, and re-modelled the canons. The same Convocation is remarkable as being the last to grant a clerical subsidy-acting, it is said, in dropping the custom, upon a verbal agreement made between the Lord Chancellor Chaendon and Archbishop Sheldon. This has been declared to be 'the greatest alteration in the constitution ever made without an express law.' Since this change Convocation has ceased to enjoy any political importance.

After the Revolution, the history of Convocation After the Revolution, the instory of Convocation is a story of bitter conflicts between the two Houses, in which Atterbury, Wake, and Burnet played leading parts. This conflict culminated in 1717, when the Lower House was about to censure the writings of Bishop Hoadley, whereupon Convocation was prorogued by royal writ, and met no more (except formally till 1741) until it was again summoned for business in 1852, through the efforts of Bishop Wilberforce and others.

Convocation now assembles concurrently with

Convocation now assembles concurrently with Parliament, being summoned by a royal writ addressed to the Archbishops. In Canterbury the ddressed to the Archibishops. In Canterbury the Upper House consists of 23 members, the Lower of 154. In the Province of York the corresponding numbers are 9 and 69. The custom of separating into Upper and Lower houses dates from the end of the 14th cent., when the inferior clergy began to withdraw into a lower room, viz. one under the chapter-house of St. Paul's Cathedral, or a school-grown in the crupt

the chapter-noise of 200, school-room in the crypt.
Though Convocation is described in Canon 189 of 1804 as 'the true Church of England by representations on unreformed body. The sentiation it remains an unreformed body. The official element is preponderant, and the large

body of stipendiary curates is without any voice in the election of clergy-proctors It is not surprising, therefore, that Convocation exercises but little influence over the minds of the majority of the members of the Church of England, though it affords an excellent opportunity for the more highly-placed dengy to discuss affairs as they affect the Church, and though its debates and reports are of a uniformly high order, and are frequently of permanent value. See also art. Church of ENGLAND.

CO-OPERATION.—Co-operation (i.e. literally 'working together') might express any combined action of two or more persons for any purpose. is used in general, and will be employed here, to denote the combinations of working men for production or distribution of commodities, including inculentally some other forms of mutual help. In 1794, Dr. Shute Barrington, bishop of Durham, established a co-operative store at Mongewell, in the county of Oxford, for the benefit of the poor of that and three small adjoining parishes. A of that and three small adjoining parishes. A quantity of bacon, cheese, and other articles was procured from wholesale dealers to be subdivided and sold at prime cost for ready money. The salesman was an infirm old man who could not read or write, but his honesty was unimpeached, and he was allowed a shulling a week as well as the benefit of the shop. The transactions of 1796 amounted to £223. The net saving to the poor in the cost of their supplies was 21 per cent. In 1800, the Rev. Dr. Glasse opened a similar village shop at Greenford in Middlesex. The receipts for six months exceeded £150, and the margin of saving was from 15 to 25 per cent according to the nature of the article sold. A third was established about the same time at Hanwell, by the Rev. G. Glasse, vicar of that parish, with like success. In all three cases, great good was done by avoiding the three cases, great good was done by avoiding the burden of debt.

In 1795, a co-operative saw-mill was established at Hull, and it continued in operation for a hundred years. In 1796 a parish windmill was erected by subscription on Barham Downs in the county of Kent, and in 1797 one at Chislehurst. A cooperative society at Nottingham has existed for

more than 100 years.

In 1844, a few workmen of Rochdale joined in establishing a society called the 'Equitable Pioneers,' and that Society was so successful that their example was followed in many parts of the country. It now has more than 16,000 members country. It now has more than 16,000 members holding £300,000 in shares, and its sales amount to holding £300,000 in shares, and its sales amount to £340,000 a year. A portion of its profits is yearly applied to educational purposes. The paid up capital consists largely of accumulation of past profits. No credit is given. By its means the workmen of Rochdale have been enabled to supply themselves with necessaries of life, genuine in quality and at a cheap price, and to accumulate out of their savings and the profits of their trade a capital sum averaging nearly £20 for each shareholder. This Society was registered as a Friendly Society under the Act of 1846.

In 1850, the Rev. F. D. Maurice, the Rev. Chas. Kingsley, Mr. J. M. Ludlow, Mr. T. Hughes, Mr. E. Vansittart Neale, and others, joined in the formation of a Society for promoting Workmen's Associations, and commenced a Working Tailors Association. The excellent motives and aspirations

by which they were actuated had been eloquently set forth in a series of tracts by those accomplished men; and, if they could have found a body of members and officers capable of carrying out then ideas in a business-like manner, the associations which they formed might have done lasting good. As it was, their enterprise greatly impressed the public mind and rendered it familiar with the idea of co-operation. Though their initiative as patrons of co-operation was a failure, they remained the true friends, and in some sense the apostles, of the co-operative movement, and to their advice and counsel is due much of the success that has attended that movement under the direct management of the working men themselves.

The undertakings which experienced this early check were productive; those which followed the lines laid down by the Rochdale pioneers were distributive, though, in the long run, it has not been unusual for a distributive store to find it worth while to undertake productive business as well. It is obvious that a productive enterprise has elements of difficulty that are absent from a mere distributive store. The essential principle of co-operation seems to be that the man who contributes his labour to the production of the commodity is entitled to share in the produce after a sufficient sinking fund to replace the capital expended in the plant has been set aside, and hence a system of profit-sharing has been introduced, upon which, of late, attempts have been made to establish productive businesses. There is reason to think, however, that the distributive element in co-operation will remain its more prominent feature.

The sharing of profit implies logically the sharing of loss; and this is the lock upon which some productive enterprises have split. Yet it is evident that the social reforms which were in the minds of the early promoters of co-operation are to be realized rather by the productive element of it than by mere distribution, useful as that is in many

respects.

A further development of co-operation has arisen in the union of a number of stores to form a wholesale society; and the wholesale societies of Manchester and Glasgow are striking examples of the power of associations of working men to carry on gigantic undertakings by means of small savings. The Manchester society (to which more than 1000 societies contribute) effected sales of goods for nearly £25,000,000 and earned profits exceeding £600,000 in the last year recorded. It acts as the banker of the smaller stores, and transacts a vast business in that capacity. It owns a fleet of ships, and has warehouses both at home and abroad in which a variety of industries are carried on. The total number of societies registered under the Industrial and Provident Societies Act in the United Kingdom is 2800; the number of members exceeds 2,500,000; the amount of funds, £58,000,000. It will be readily inferred from these figures how great has been the influence of these societies upon the welfare of the industrial population. The same inference may be drawn from the fact that, according to a previous return, 344 societies had built or aided in building 37,000 houses for their members, while more than £8,000,000 had been expended in building those houses or been advanced to the members to enable them to do so.

Another branch of co-operative enterprise has had more success abroad than in this country. People's Banks and agricultural credit societies flourish in Italy and in Germany, and are now being actively promoted here. In Ireland, Sir Horace Plunkett has established a number of co-operative creameries with excellent results.

COPTIC CHURCH.—Introductory.—When Christianity was first introduced into Egypt, it found itself confronted not only by the religious environment common to all Hellenistic provinces of the Roman Empire, but also by the influence of the old native religion. The latter, although be-ginning to show signs of the rapid decay which was soon to overtake it, was still immensely powerful, especially in the towns and villages situated at some distance up the Nile, away from Alexandria. In certain ways it had scarcely been touched by Hellenic influence, and had, indeed, rather itself influenced Hellenic thought. It had certainly impressed itself strongly on the imagination of the Platonic idealists of Alexandria, as is evidenced by Plutarch's treatise de Iside et Osiride and by bk. xi. of the Metamorphoses of Apuleius. But, although at the beginning of the Roman period the native priests still kept alight the sacred lamp of religious knowledge, the general mass of the people had become ignorant of a great number of the lesser-known deities, and of the meaning of much of the ceremonial. Nevertheless, the main doctrines of the old religion were as firmly rooted as ever. worship of the gods of the dead was still paramount, and especially there remained unshaken the belief in the dead man-god Osiris, who had been slain by the power of Evil, but who lived again as king of the dead. The people still believed in the so-called 'resurrection,' that is to say, they thought it was possible that the dead might live for ever if the same ceremonies were carried out which enabled Osiris to escape corruption. Also, if we may rely on such papyri as that containing the tale of Setne Khaemuas and Si-Osiri, not only was the weighing of the dead man's good and evil deeds still thought to be necessary before the soul could pass the judgment-hall of Osiris, but very elevated notions of morality and justice played an important part in the hopes pertaining to eternal felicity. On the other hand, the Greek syncietists of Alexandria had adopted the cult of Osms and Isis, and had transcendentalized it out of all knowledge, to suit the current Platonic doctumes of the day; according to them, the mysteries of the Egyptian religion were to be understood only by the esoteric, after long study and strict asceticism. Platonism had also involved the large Jewish community in Alexandria, and demanded from its devotees, as we know from Therapeutic ideals, the practice of asceticism and contemplation. There can be little doubt that these two things—(1) the belief in a future life to be obtained through a god who had himself overcome death, and (2) the transcendentalized form of Osiris- and Isis-worship adopted by the Greeks, which demanded asceticism and abstention from the desires of the flesh-largely influenced the early Christian communities in Egypt.

T. Introduction of Christianity into Egypt.—The tradition that St. Mark was the earliest to preach the gospel of Christ in Alexandria is first related by Eusebius, but prefaced by the word φάσι. In spite of the tradition being firmly rooted to this day, it has little historical value. When and by whom the gospel was introduced into Egypt is unknown, and, indeed, the whole history of the Alexandrian Church is enveloped in obscurity until the episcopate of Demetrius (A.D. 189-231), when it appears as a flourishing institution, with a school of philosophic learning attached to it which must already have made its influence felt far beyond the city itself. Eusebius (H.A.VI. 11-13) states that thought the control of the city itself. Eusebius (H.A.VI. 11-13) states that thought the control of the city itself.

Thebaidduring the persecution of Septimus Severus in 202; and Clement (Strom. vi. 18), writing at about this date, tells us that Claistianity had spread to 'every nation, village, and town,' so that, even allowing for exaggeration, there can be no doubt that the new faith had made great progress during the first two centuries of our era. (Expansion of Christianity<sup>2</sup>, 1908, ii. 166 ff.) has collected a list of districts where we have definite collected a list of districts where we have definite evidence of Christian communities prior to the persecution under Dioelectian in 303. Archeological research has borne out the literary evidence in several of the localities. They are as follows: the districts of Prosopitis, Athiribis, Sais and Arsinoc, Antinoc, Thimnes, Philadelphia in the Arsinoite nome, Alexander Insula in the Fayyum, Hermopolis Magna, Nilopolis, Ptolemais in Pentapolis, Berenice in Cyrenaica, Oxyrhynchus, the oasis of Khargeh, and Esneh (Latopolis). As to the form of Church government during the callest the form of Church government during the earliest period little is known. It is possible, though by no means certain, that the *Didache*, or *Teaching of the Twelve Apostles*, was compiled in Egypt, and may represent the primitive form of Church government in that country. From this work, generally assigned to the earliest age of the Church, the order of bishops and deacons would appear at first to have been entirely subordinate to that of the 'apostles' and 'prophets,' and to have been, at the time of the writer, a comparatively recent organization. The 'apostles' were itinerant missionaries and evangelists, while the 'prophet' alone was allowed to have a fixed abode in any locality. The latter commanded extraordinary reverence, and the first-fruits of the community were his by and the first-fruits of the community were his by right. He spoke in ecstasy, and presided at the Aqupe. Nevertheless, both from the warnings uttered in the Dulache against false prophets, and from the Shepherd of Hermas, we know that the office of prophet was frequently abused by fraudulent persons, and it gradually lost prestige until the more thorough organization of bishops and deacons eventually supplanted it. By the time of the eniscounts of Themetrins the form of governthe episcopate of Demetrius the form of government represented by the Didacks would have disappeared (if it ever had been in force in Egypt), disappeared (if it ever nat been in force in Egypo), and we know that Demetrius himself was the first to appoint other bishops (three in number) outside Alexandria, thus probably bringing the scattered communities for the first time under his central jurisdiction. Hitherto they had probably been probably been and the direction of denounced the direction of denounced the direction of denounced the direction. under the direction of deacons and presbyters.

It is probable that the earliest Gospels in circulation in Egypt were not the canonical ones. In Clement's day, besides the four canonical sources for the life and teaching of Christ, there were still in general use two other Gospels known as the Gospel according to the Hobrews, and the Gospel according to the Egyptians. There is every reason to suppose that these two documents preceded the four Apostolic Gospels in Egypt, and were in all probability the ones used by the earliest Christian community there, for it is not likely that they would have forced themselves into popularity if the four sources bearing more authoritative names had been in the field from the first. Clement, however, sharply distinguishes between these two Gospels and the four canonical ones; and, although they and the four canonical ones; and, although they were apparently used side by side, it is evident that the two earlier were beginning to be dropped by the more orthodox at the commencement of the 3rd century. The Gospel according to the Hebrews was read chiefly by Jewish converts, either in Arampic or in a Greek translation. It appears to have had Ebionite tendencies, in spite of its close parallelism with canonical sources. The Gospel according to the Egyptians implies by its title that it was intended for use either by the native

Egyptians, as distinct from the Alexandrians, or else by the Gentile converts in distinction from the Jewish. The latter inference is the more probable, as there seems to have been little attempt at first to reach the masses of the native Egyptians, the appeal of the new faith being made almost entirely to those of Hellenic birth or education. Here again we find that, in spite of the close parallel between the known fragments and the canonical sources, there is not only a tendency to Modalism, but also a strong tinge of Englatism. The latter was the doctrine of the Englatites (q.v.), The latter was the doctrine of the Englatures (J.v.), a very early seet within the Church, which set up extreme asceticism and abstinence from sexual intercourse as the Christian ideal. There can be little doubt that the asceticism affected by the devotees of Isis and the Jowish Therapeutæ had become thus introduced in very early times into the Christian communities of Alexandria. Clement, however, defends the Gasnel according to the Eagurhowever, defends the Gospel according to the Egyp-

tians from the charge of extreme Encratism.

It was hoped that the finding of the now famous 'Sayings of Jesus' at Oxyrhynchus by Grenfell and Hunt would have thrown some light on these early uncanonical versions; not only have they not done so, but then own origin is extremely

uncertain.

not done so, but then own origin is extremely uncertain.

The flat series of these 'Sayings' (eight in number) was found in 1807 with a host of other valuable literary fragments, and their date, on palsographical grounds, is to be assigned to about the year 200 or shortly after. Each saying is prefaced by the words 'Jesus saith'; four have their equivalent in the canonical sources, one is foo fragmentary to be made out; and three are new, with a tendency to my stocken and a haish and severe judgment of mankind. Harnack saw in them excerpts from the lost Gaspel according to the Egyptians (Expositor, Nov., Dec. 1807), but other theologians and the finders themselves were not by any means unanimously in agreement with him. The second series, found in 1003 on the same site, written on the back of a land-survey list, is attributed to Thomas and another disciple whose name is missing. This, however, may only be a bold claim on the part of the writer. They agree in form and in date with the first series, but differ in being less akin to canonical sources. One of the sayings is almost exactly parallel with a quotation of Clement's from the Gaspel according to the Hebrews, and can therefore be assigned to that work without hesitation. But whether each series is a selection of sayings from any one Gospel or from different Gospels is a matter of considerable doubt; Grenfell and Hunt themselves came to the conclusion that the flud was a collection of 'sayings' as such, and that the theory of extracts was unjustifiable.

There was also found at Oxynhynchus a fragment of an uncanonical Gospel, which unfortunately breaks off just where it appears to be closely parallel with the known passage from the Gaspel according to the Egyptians, in which Jesus is represented as advocating extreme ascencism as the Clinistan ideal. Altogether it must be admitted that the Coxyrhynchus finds have served to puzzle rather than to enlighten us with regard to the early Christian documents of Egypt.

But we are at least able to surmise that the

was considerable uncanonical competition with the canonical sources, and that the uncanonical Gospels were strongly tinged with the ascetic ideals pre-valent at the time in Alexandria; also, incidentally, that a Christian community flourished as far south as Oxyrhynchus in A.D. 200, if not carlier.

Archaeology also helps to throw light on this early period of Christianity in Egypt, although here again the evidence is scattered and obscure. It was the custom at this time to ferry the numnies of the dead down the river, with wooden tickets, or tesseræ, tied round the neck, bearing the name of the deceased and of the cemetery to which the body was to be consigned. A large number of these tesseræ exist in museums to-day. One at least (in the Berlin museum) from Akhmi'n was that of a Christian; and, although the symbol on it has caused it to be considered post-Constantinian in date, there are good reasons for assigning it to an earlier period. There are also other tickets couched in phraseology known to be Christian, but which cannot be absolutely identified as such. They at least prove that in this neighbourhood Christians were munimified and buried in the same

cemeteries as their pagan brethren—from which we may presume that these early Egyptian Christians still believed in the necessity of preserving the body in order that the existence of the soul might be assured (see Death, etc. [Coptic]). From the same site there came the fine collection of tapestry, some of which dates from the earliest times of the Roman empire. The symbols of the fish and the cross occur as patterns, and these have been thought to have come from very early Christian burials. If this be so, it points to a Christian community existing in Akhmim early in the 2nd century. We also have as evidence the hibelli, several of which have been preserved to us. These were certificates issued, during the persecution of Decius (A.D. 250), to those who had recanted by sacrificing publicly to the gods. Those to whom they were issued were known as hibellative; and, although it is not always certain that it was a Christian to whom the libellus was granted, the probability that it was so is very strong. Mention must be made of the Epistle of Psenosiris (a presbyter who had fled to the oasis of Khargeh, probably during the Decian persecutions), in which he commends a female exile Politike to a fellow-presbyter. It is also probable that one at least of the mummies found at Antinoe is the remains of a Christian burial that may be dated as early as the close of the 2nd century.

is the remains of a Christian burnal that may be dated as early as the close of the 2nd century.

The name of the deceased, according to Cayet, was Euphemian, a devotee of some Gnostic sect. The evidence for the latter supposition is, however, slender. The cords which bound the should were sealed with a curious mixture of pagan and Christian sealings, including the post Constantinian age be correct, the early date assigned must be abandoned. Another remarkable object from the same site is a shroud, with the figure of a handsome woman painted on the exterior, in the manner of the clasping a peculiar form of gilt 'crux ansata,' or symbol of life. Whether this is Christian there must be considerable doubt.

2. Gnosticism and Arianism. - Although our knowledge of the early Christian communities in the upper country is so remarkably slight, when once the Church became well established in Alexandria the Christians began to form an important part of the community of that city, while the works of Clement and Origon prove that the intellectual stimulus of the pagan Hellenic schools was not lost upon the Christians. The famous 'catechetical' school, founded, according to Eusebrus (HE v. 10), in the earliest days of the community, and presided over in turn by Pantænus, Clement, and Origen, was designed not only to teach catechumens, but also to appeal, by a system of philosophy, to cultivated pagans. In an age of apologists its influence was very considerable, but confined entirely to those of Hellenic education. Such a propaganda was useless to the natives of the upper country. The power, too, of Demetrius, as sovereign bishop of all Egypt, was very great; and sovereign bishop of all Egypt, was very great; and he must have occupied a position similar to that of the pagan 'Chief Priest of Alexandia and all Egypt,' and the Jewish Ethnarch. This powerful position was retained by his successors until it reached its highest point under Athanasius, and lasted, indeed, until the Council of Chalcedon. On the whole, too, at first the Alexandrian Church had good opportunity of developing itself free from had good opportunity of developing itself free from interference; for, with the exception of the persecu-tions of Severus in 202 and of Decius in 250, there was little or no external pressure brought to bear on the Christians. The real enemy at this time lay within the Church itself in the shape of the Gnostic The earliest record of the conflict between those who professed a higher guosis and the preachers of the simple gospel is the dispute between St. Peter and Simon Magus, the latter of whom appears to have been the first to associate Christianity with Gnostic mysteries. From Pales-

tine the esoteric cult quickly spread to Egypt by what was called a 'counter-Apostolic succession' of famous Gnostic teachers, and perhaps reached its height in the systems promulgated by Basilides and Valentinus, both of whom laboured in Egypt (Epiphanius, Hær. xxiv. 1, xxxi. 7). See Basilides, Gnosticism, Pistis Sophia, Valentinus. We know from the Christian writers and apolo-

We know from the Christian writers and apologists, chiefly from Hippolytus and Epiphanius, how wide-spread Gnosticism became in Egypt, and how it threatened to become a menace to the Church in the early part of the 3rd century. Perhaps the so-called letter of Hadrian to Servian (in reality a 3rd cent. document) may be interpreted in this light when it speaks of

problem in Signit when it appears while those who call themselves bishops of Christ are adherents of Scrapis.

No Christian presbyter but is an astrologor, a soothsayer, a vile wretch. When the Patriarch himself visits Egypt, he is forced by some to worship Scrapis, by others to woiship Christ.

In spite of the venom which characterizes this attack on the Alexandrians, it points to the fact that the syncretism rife at the period had attacked the Christian religion also. This is borne out to a considerable extent by archæological discoveries in Upper Egypt. The excavations at Antinoe conducted by Gayet have revealed Christian burials of a very peculiar type Some of the rock-cut tombs had chapels built before the entrance, stuccoed inside and covered with frescoes, most of which have unfortunately perished, but what frag-ments have been discovered are typical of the earliest forms of Christian symbolism. Two of the bodies at least in this cemetery were equipped with wine-jars and baskets for bread, perhaps intended for a mystic Eucharist for the dead, while another burial contained a model in terra-cotta of another burial contained a model in terra-cotta of several persons seated at a table, the whole forming a group, supposed to represent the Agape.

Many peculiar objects were found, including a kind of primitive rosary, or board for counting prayers, surmounted by a cross. It is possible that the old Egyptian idea that the welfare of the soul depended upon the nourishing of the body by magical food still survived. The bodies of Christing at this time were always numpified. Christians at this time were always munmified, and in some cases the remains of martyrs were preserved in the houses, for the gaze of the faithful, n accordance with the pagan custom of the time (Athanasius, Vita Antonii [PG xxvi. 967]). The chapels and provisions of food may therefore be a continuation of the old pagan custom whereby the soul of the deceased was nourished by the mystic food of the Eucharist. This is borne out not only by one of the Acts of the Council of Hippo (393), which forbade the burnal of the holy elements with the dead, but also by the fact that in the casts of Khargeh a number of Christian tombs were provided with a chapel containing a niche for Man, 1901, No. 91). On the other hand, we may perhaps see in these peculiar customs traces of some Gnostic rite, such as the mystic sacrament mentioned in *Pistis Sophia*, performed for the remission of sins. Syncretism can go no further than the mummy of the so-called Christian priest from Dar el-Bahari. It is probably of very early date—possibly the beginning of the 3rd century. On the shroud the deceased is represented holding in one hand a cup, in the other corn-ears—according to Naville (Deir et Bahari, 1898-1901, ii, 5), emblems of the Eucharist. On his left shoulder is the swastika emblem, and below is the barque of Socharis adored by the gods Anubis and Apuat.

Although, during the persecution of Decius in 250, large numbers of Christians appear to have recanted, the persecution of Diocletian in 303 found the Church stronger and resistance much more stubborn. Many were martyred, and the

The state of the s

Copts reckoned their dates from this stormy period—the era of martyrs.' In the succeeding reign, numbers languished in the dye factories of the Thebaid, and in the perphyry mines of the desert ('Mart. Pal.' in TU xiv. 4); but with the accession of Constantine to sole power, Christianity was adopted as the State religion, and thus placed in a stronger position than ever before. But, although, within the Church, Gnosticism was fast waning, and the more fautastic seets had become objects of ridicule, a new trouble broke out in 319, owing to the preaching of Arms, a preshyter of the Church of Saint Baucahs in Alexandria, on the relationship of Christ to the Father.

the Church of Saint Baucalis in Alexandiia, on the rolationship of Christ to the Father.

This is not the place to go into the full details concerning the doctrinal struggle which shoot the Church to its foundations. It is sufficient to say here that Arius implied that the Son was inferior to the Father. He argued that, as the Son was inferior to the Father. He argued that, as the Son was inferior of the Father, there must have been a time when the Son did not exist. Therefore the Son was not co-eternal with the Father, and not of the same nature, but of like nature The Son was not God, or eternal, or omniscient, but a creature (extopia), although, as such, beyond all mortal comparison. The opposition to this doctaine was headed by a young deacon in the household of the patriarch Alexander, named Athanasius The quartel proceeded with unprecedented bitterness and integring on both sides. The Emperor was appealed to, but, rather than give a decision, he summoned a council of bishops at Nicea to formulate a creed. Their decision led to the formulation of the famous creed of the orthodox party and to the excommunication and banishment of Arius; but, on his oftening a written explanation, the Emperor directed that he should be received back into the Olinroh. Athanasius, who had meanwhile (328) succeeded Alexander as bishop of Alexandria, refused to obey the Emperor's order, and, at a council of bishops held at Tyre, he in his turn was deposed and banished on the death of Constantine in 337, Athanasius returned to Alexandria, with the support of Constantine in and Constans; but, on the death of Constantine in 340, Constantius ii, partner in the Empire and an Atlan, succeeded in deposing him, and had diegory elected as patriarch by a council of hishops held at Authoch. Athanasius withdrew only when an armed escort and threats of violence on the part of its commander, who conducted the Atlana putriarch to the city, compelled him to retire. In the absence of Athanasius his supporter, level up constant include, and burnt

But the seeds of discord had already been sown in the Egyptian Church before the Arian controversy broke out. During the persecution of Dioeletian, Peter, who was then histop of Alexandria, and was in the end martyred, fled from Alexandria. During his absence, Meletius, bishop of the important see of Lycopolis, ordained and intruded priests into other dioceses, and assumed the character of primate. He has also been charged by Athanasius and Socrates, but without good reason, with having denied the faith under persecution. When affairs had settled down somewhat under Alexander, Meletius's case was brought before the Council of Nicara, and that assembly severely censured him. During the life of Alexander, Meletius acquiesced quietly, but on the accession of Athanasius he flung himself into the ranks of the opposing party, seemingly not so much because he sympathized with the Arian doctrines as out of dislike to Athanasius, and, as he possessed a considerable following, the quarrel was thereby embittered and intensified.

3. Bremite movement.—The foregoing tends to show that, as soon as Christianity began to get the upper hand in Egyph, the Church itself was rent with violent factions, which led to the dispersion of the continuous control of the second that and fith centuries. Meanwhile a new factor had appeared on the second new movement which was to have world wide influence throughout the whole

of Christendom. We have seen how, even in the only days of the Church, when Christianity was confined mainly to those of Hellenic birth or education, there was a tendency to asceticism or mysticism. In their extreme forms these two movements led to fautastic Gnostic systems, but the more sober and quiet side manifested itself among those Christians who carried out their ascetic ideals, not by withdrawing from the world, but by living in the midst of their own households, observing fasts, abstaining from marriage, and devoting themselves to prayer and the care of the sick and the poor. But, although these ascetic ideals, which affected the Egyptian Church to such a remarkable degree, and, through it, in later times the Church throughout the world, seem to have had their origin in Egypt, it is curious to note that the native Egyptian character in the past had exhibited little or no tendency either to asceticism or to mysticism. Magic in pagan Egypt was, and had always been, of an eminently practical kind, and, so far as we can judge, never included philosophic mysticism of any soit; indeed, the native mind was incapable of any of the higher subtleties of thought. It seems, therefore, that these two potent forces were introduced into Egypt by the Greeks, through the medium of Platonic and Pythagorean philosophers, and associated with the native Egyptian religion by the Platonizing of the Osiris and Isis cult. We know that the Jewish community in Egypt was subject to an identical process. The fragments of lost Gospels, as well as the works of Clement and Origen, prove how these ideals, prevalent in the pagan and Jewish communities of Alexandria, exercised their influence on the early Christian Church. During the 3rd cent., however, Ourse-tianity began to make many converts among the native worshippers of Osiris and Isis, among those of the population who were little influenced by Hellenic ideas, had little or no Greek blood in their reins, and were quite as incapable of understanding Clement's or Origen's conception of Christianity as Plutarch's theories about Osinis and Isis. Nevertheless, the ascetic side of the new faith seems to have appealed strongly to them, although the avertic and pulposphic idea, into although the mystic and philosophic ideas interwoven with asceticism were not in the least comprehended. The literal practice of asceticism became at once a thing of paramount importance, and its wide-spread influence was due in the first place to the example of one man—Anthony, the first to cut himself off from intercourse with the world, and to perform those extraordinary feats of endurance which appealed so strongly to the Egyptians, and produced countless hosts of imitators.

Our chief authorities for the history of this movement are The Life of Anthony (a work attributed to Athanasius), Cassian, and especially the Lausiae History. The arguments of the school of Weingarten, that these are monastic works of the 6th cent., may be said to have been finally disposed of by Dom Cuthbert Butler in his admirable edition of the Lausiae History. From these sources we draw a wealth of material concerning the ascetic movement, which is supplemented by the later Coptic documents. The first man who actually led the ascetic life, cut off from his fellow-men, was one Paul, who was driven into the desert during the Decian perscentions in 250, and there may well have been others who were forced to lead solitary lives owing to the same circumstances; but it is to Anthony that the world looks as the founder of eremitic solitands.

Born probably about the year 250, of fallah parents, Anthony was converted to Christianity as a boy by hearing the Gospols read in a church. (As he is said to have known no Greek, this presupposes three-gristenee of a Copile version at this early data.) For fifteen years he lived with excelles, who at that time practised the excelles, the town;

but, deeming this insufficient, he withdrew to the desert, and enduted a life of strict solitude in a cave for upwards of twenty years. During this period large numbers were firred with his enthusiasm, and the burning deserts of Lower Egypt, especially those of Secte and Nitrle, swanned with solitaries who were following his example. About the year 305 he was induced to quit his cave and organize these bands or molits, and, later, he was even persuaded by Athanasius to come to Alexandria to preach against Ariansm. He died at an advanced age, and left special directions that his body should not be preserved by mummification, as he had explessed his detestation of the Christians continuing this pagan custom. The ideals of monachism that he left as a heritage are remarkable for the fact that they possess little system. There was no particular Rule of Life in the Antonian communities, although the elder and more leading ascelacs were looked to for advice, and songh has arbiters in disputes. The monks would visit one another frequently, and discourse on the Scriptures and the his of the Spirit, but those were also those who dwelt in the further desert of 'cells,' who were heimits indeed, living out of sight and hearing of their fellow-men and one another, enduring the mosts extraordinary physical deprivations, and waiding off absolute intellectual stagnation by repeating long passages from the Psalms and other Scriptures learnt by heart. Although the monks assembled on Saturdays and Sundays in the great church, the other days of the week were spent mostly in solitude. The whole system was individualistic, each working for his personal advance in vitue, contending against his fellows in severtices and mortification of the fissh, and striving, as Dom Butler soys, 'to make a record' in austertices, and to outfor the others in the length of his fasts, and his general observance of the ascelic life.

Hittler Says, 'to make a record in austerities, and to outric of the ascelle life.

About the same time that Anthony left his desert cavern to organize his followers, Pachomius, another Egyptian, founded a more cohesively stem of monachism in the south, at Tabennish and the communities of starps at Shenessi (Chenoboscium). These communities of Starps at Shenessi (Chenoboscium). These communities, although hardly ascetic in the stricter sense of the word, were priestly organizations bound by definite rules; and it is quite possible that Pachomius may have utilized some points in their system when, after he had been converted to Christianity, he founded his comobitic monastery of monks Briefly, the Pachomian organization was as follows. In place of the friendly and almost family relation of the monks to one another in the Antonian communities, he substituted a much more definite system. The monastery was divided into owhich the monks carried on a particular trade—gardening, husbandry, carpentry, fron-work, dyeing, tanning, and so forth, and these trades were carried on, not as penances, but as a useful occupation in life. It would appear that the austerities of the northern monks were not attempted, although any one monk could practise especial severities if he pleased. Pood was to be eaten in sufficient quantities for a man's daily need, and meals were to be taken in common, although the cowl was to be daten over the head so that each should be invisible to his fellow while eating. They learnt the Sciiptures by heart, and assembled in the great church only on the more soluminestivates. So rapid was the extension of Pachomius's system, that at his death (c. 345) it included eight monasteries and many hundreds of monks, while his silve had founded a similar institution for women.

It is difficult to give a just estimate of this movement, which is the most, ourstanding not

It is difficult to give a just estimate of this movement, which is the most outstanding, not only in Egypt, but in the entire Church of the time. That the monks offered in many cases examples of great patience, self-denial, and single-ness of heart and spirit is not to be denied. On the other hand, few of his followers seem to have been possessed with the kindliness and shrewdness that are generally attributed to Anthony. Many of them outdid one another in the severity of their ascetic self-discipline, but it would appear in many cases that the general result was a stunting of the intellect and a narrowing of the outlook on life. Amélinean, whose acquaintance with the documents of this period is very extensive, has said that it has been customary to hold up the monks of the pro-Chalcedon days as a patter of virue, and the Jacobite as a picture of vice ereas, as a matter of fact, there is little to tringuish between the two; that the Egyptia took, although given to asceticism, was it is a very conk, ala very
cc, and
ve the
bi ankli lual
li all
ir the though given to asceticism, was ordinary mortal, 'mangeant net, prone to irregularities of life. Of most admining chroniclers relate with ness sad lapses from virtue on the ascetics. This, however, does no were bad, and there is no doubt ascetics were, on the whole, ani-ideal. They threw themselves pa

side of Athanasius during the Arian controversy, and sheltered hun in their desert communities while he was in exile. It is highly improbable that they understood the complicated doctrinal point involved; it was sufficient for them that Arms seemed to desire to dethrone the Son from His equality with the Father. But, as time went on, they became fiercer, more bigoted, and a prey to the inherent superstitions of their race. Childish miracles and belief in innumerable devils took the place of the old magic and demonology which had fascinated the Egyptians in pagan times, while in the following century the fact that hordes of fierce monks could be summoned to Alexandria by the patriarch led to the morease of religious turbulence and sectarian strife.

There is no doubt that the adoption of Christianity as the State religion and the use of monasticism were the immediate forerunners of a period of steady deterioration throughout the Egyptian Church. The death-knell of paganism was already rung, and with it that of the culture and freedom of philosophic thought that had made Alexandria the intellectual centre of the Hellenistic world. In 379 the Emperor Theodosius attempted to force the Christian faith on the entire population of the Roman Empire, and this was followed in 385 by the sack of the temple of Serapis and the conversion of other pagan temples into churches. Meanwhile the character of the illiterate monks began to assert itself, and their child-like faith in angels and demons led to the communities of Scete being accused by the patriarch Theophilus of Origenism, while the unscrupulousness of the latter's methods, as revealed in the incident of the Tall Brothers, led to recriminations and unedifying quarrels. In fact, the power of the patriarch had risen to such a pitch that he did not hesitate to consider that those who were his theological opponents were rebels against the Emperor, and, acting in accordance with this idea, he took some troops and destroyed several of the Nitzian monasteries. During the reign of his successor, Cyril, turbulence and disorder increased rather than diminished. The Christians organized a wholesale plundering of the Jews in Alexandria, whose quarters were sacked by hordes of monks and fanatics, and the richest element of the community was driven into exile. This was followed by the murder of Hypatia, a young and beautiful woman, who strove to keep alight the lamp of pagan culture by lectures on Neo-Platonic philosophy. The bigotry and turbulence of the Christian mob at this period seem to have known no bounds. But, as the Patriarchs grew more powerful, and the Christians more fanalical, the relations between the Egyptian Church and Constantinople became more and more strained, until open rupture took place on a question of doctrine, which was decided at a Council held at Chalcedon in 451.

4. Monophysitism.—The controversy which had

been the cause of the Council of Nicea was concerned with the relationship of the Son to the Father. The fresh divisions that were taking place in the Church were now due to disputes on the nature of the Son—whether that nature was human or Divine, or both. Cyril, who had already been on had terms with the See of Constantinople when it was occupied by John Chrysostom, had when it was occupied by John Chrysostom, had later taken a violent part in opposing the doctrines of Nestorius, which implied that the Divine nature was not incarnate in Christ, but subsidiary to the human nature. The chief opponent of the doctrine of Nestorius was a young priest named Eutyches, who, in his zeal to assert the Divine nature of Christ, went further than the Alexandrian school and Cyril were prepared to go, by asserting that, after the Incarnation, Christ had only one nature—the Divine. Meanwhile, Cyril had died in 444, and Dioscuros, his successor, warmly supported the cause of Eutyches, backed by the majority of the Egyptian monks. Eutyches was finally declared excommunicate and banished, at the Council of Chalcedon, but he counted among his adherents the majority of the Egyptian Chris-Added to the ever-increasing friction between Constantinople and the Alexandrian See, due to the turbulence and fierce independence of the Christians of Egypt, was the peculiar bent of the Egyptian mind, unable to appreciate the subtletics of argument indulged in by the Greeks and Levantines. The attempts of the Arians to dethrone Christ from His equality with the Father they could understand, but two natures which were yet one nature—this was beyond their comprehension. Henceforward the cry was 'One Nature,' and it has remained so to this day. Egypt at this time might be described almost as one wast monastery, and the fierce ascetics of the desert stoutly maintained the doctrine of the single nature of Christ. The power of the monastic institutions was now almost paramount, and the authority exercised by such monks as Shnoute and Bgoul was enormous. The tendency was to unite the systems of Pachomius and Anthony by combining the econobitic or true monastic organization with the strict asceticism of the Antonian eremites, and the network of monasteries was fast

oxlending all over the country.

5. During the 6th century.—The century following the separation of the greater part of the Egyptian Church from the orthodox at the Council of Chalcedon is remarkable in Alexandria only for the unedifying disputes between the Monophysite patriarchs and the orthodox, or Mellites, as they were called because of their adherence to the Imperial influence of Constantinople, and, in the imperial inmence of Constitutionic, and, in the upper country, to the growing power of the monastic system. The land was held largely by the monasteries, whose runs now are not the least remarkable feature all over Egypt. The cultivation was chiefly in the hands of the monks. It is stated in the Life of Shnoute that his monastery and the pricare continued from a prior of the state of the control of the state of the st fed the prisoners captured from a raid of the Blemmyes for three months at a cost of 265,000 drachme, with 85,000 artabai of wheat and 200 artaba of olives. The numerous inscribed ostraha, and the commencement of a vast Coptic literature, consisting chiefly of Lives and Sayings of holy consisting chiefly of Lives and Sayings of holy men and monks, show the commercial and literary activity of the monks. They were strong enough to prevent Imperial pressure for the over-exaction of taxes, and in this way maintained to a certain extent the dwindling prosperity of the country, although the minority who were not connected with the monastic institutions were crushed by cruel burdens. But religious life was gradually sinking to a low ebb, and was distinguished by little spirituality. While the Alexandrians were occupied with the opposing factions of Melkites occupied with the opposing factions of Melkites and Monophysites, the monks of Upper Egypt were engrossed in petty squabbles between monas-tery and monastery, or the enumeration of absurd miracles wrought by the foremost ascetics. Re-ligious life, like political, was fast losing all dignity

and dopth.

6. The Persian and the Arab domination.—In the year 016 the break-up of the Imperial power in Egypt began with the occupation of the country

· 经数件 的转点点

the Monophysites into orthodoxy, the Copts had been harried and oppressed by the Imperial power. The whole nation now looked to their own elected Patriaich, not so much as the champion of the Monophysite doctrine, but as the leader of the nationalists against the minions of Imperial bigotry and corruption. The wonderful victories of Handling who down and the Daviers and of Herachus, who drove out the Persians and re-conquered Jerusalem and the Holy Sepulchie, were a cause of rejoieng to orthodox and Monophysite alike throughout the Eastern Empire, and it is possible that a wiser statesman than the Emperor might, amid the universal rejoiengs of Christophysikaria and the control of the co Christendom, have secured some kind of reconciliation. But Heraclius would extend no tolerance to heretics, with the result that a few years later, when a sterner and more implacable enemy was at the gate, the Copts of Egypt were ready to welcome

the gate, the Copts of Egypt were ready to welcome him. In 642, Egypt was ceded to 'Amr ibn al'Asi, who had conquered it in the name of Islām.

The Arab tradition is that the conquest was aided by the treachery of one called Mukaukis (probably the Byzantine honorific title \(\textit{\rm p} \neq \pi \neq \pi \neq \pi\), who is generally supposed to have been the Coptic Patriarch. It must be mentioned, however, that it has been ably argued by A J. Butter in The Arab Conquest of Egypt (1002), that the Copts were intensely hostile to the Arabs, and that the treacherous 'Mukaukis' was none other than Cyrus, the Melkite Patriarch. It is probable that the Copts, after years of oppression on the part of the orthodox and Imperial party, welcomed their new masters as a change which, as they thought, could not in any case be for the worse.

Tropy the doctrinal and ethical point of view.

From the doctrinal and ethical point of view, the Coptic Church has little history of interest during its long subjection to the rule of Islam. The Arab invaders imposed a poll-tax on all infidels, and it is probable that from the first many were converted to the faith of Muhammad in order to avoid payment. For the first three centuries or more, it is true, considerable activity is evinced by Coptic literature, which is represented during this period by countless MSS, chiefly of a homiletic character, or containing Lives of holy men, although such important historical works as the Chronicles of John of Nikion must not be overlooked. Such art as was still possessed by the Christian workman was other suppressed or forced into the service of his masters. The Copts, as they gradually became a smaller and smaller section of the population, were estracized by the Muhammadans and cut off from all intellectual stimulus and growth. They do not seem to have shared in any way in the artistic and intellectual triumphs characteristic of certain periods among the Muslims. It is true that under some rulers individual Christians rose to high office, but their position was usually even more precarious than that of their Muhammadan colleagues. Frequently they were subjected to severe persecution, and were forced to wear dark cloaks; and under Hakim, since Muslim and Christian were much alike when naked in the public baths, they were compelled to have a cross branded on their bodies in order that none of the faithful might wittingly be polluted none of the faithful might wittingly be polluted by contact with the infidel. Such a system was bound in time to crush the Christians almost out of existence. The monasteries dwindled, and finally, in the 17th cent., the Coptic language itself ceased to be spoken, although certain portions of the Scriptures are still read in the churches to this day in the ancient language. The Copts seem to have been little influenced by the victories of the Crusaders, and, indeed, as Crusaders and Copts looked on each other as heretics, little co-operation would have been possible. It is interesting to note that the surrender of Constantinople to the Turks seems to have reacted badly on them signs began with the occupation of the country by the Persians on behalf of the Sasanian king Chostocs. For ten years they held sway in Egypt. Whether the Copts welcomed their new masters is a matter of some doubt. That they hated the Byzantine domination is certain. Ever since Justinian had given the Melkite Patriarch the military authority of a prefects in the futile hope of coercing to George Abbot, archiishop of Canterbury, we

read. 'On account of our sins we are become the most contemplible of all nations; and with the overthrow of the Empire have lost the liberal arts' (Neale, Hist. of the Eastern Church, 11. [1850] 385). From the 16th cent. onwards the Roman Church has made intermittent efforts to convert the Copts

has made intermittent efforts to convert the Copts to Roman Catholicism, but with little success. They have clung to their own Monophysite doctrine, and to their ritual of St. Mark, with the same doggedness with which they have resisted Islām.

7. The Coptic Church of to-day.—After centuries of oppression and ostracism, the Copts to day are naturally a people apart. The males having intermarried little with the Arabs, they are supposed to represent more faithfully the old Egyptian type; but thus is doubtful. Several of their fine churches, some of them dating from Byzantine times, are still in use, although stripped for the most part of their woodwork and pictures. The most part of their woodwork and pictures. liturgy and ritual of St. Mark are in use. Eucharist is in one kind, only the priests taking the wine; the bread is given to the communicants in wooden spoons, and confession is obligatory before receiving the Eucharist. Women are not allowed into the body of the church, but confined to the narthex. There are five great fasts: (1) the to the narthex. There are five great fasts: (1) the Fast of Ninevel, for three days and three nights before Lent; (2) the Great Fast (Lent), occupying 55 days; (3) the Fast of the Nativity, during the 28 days before Christmas; (4) the Fast of the Apostles, following the Festival of the Ascension; (5) the Fast of the Virgin, for 15 days prior to the Feats of the Assumption. The Festivals are those of the Nativity, of Ghitts, or Baptism of Jesus, the Annunciation, Palm Sunday, Easter (the Great Festival), Ascension, and Whitsunday. Baptism is universal, and, though attempts have been made by the Patriarchs in the past to enforce its carly application, boys, as a rule, are not baptized till they are 40, and girls till they are 80, days old. Circumcision is general. The Inerarchy to-day consists of the Patriarch, 12 bishops, and priests and deacons. The Patriarch is always elected from among the monks of the Monastery of St. Anthony. among the monks of the Monastery of St. Anthony. In recent years the Copts have acquired considerable wealth, and in some districts have become able wealth, and in some districts have become important members of the community. Their willingness to be educated is shown by the fact that, though they are only 6 per cent of the population of Egypt, 17 per cent of the children at school are Copts. This education is enhanced by the schools of the foreign missionaries, which supply teaching of a sort that enables the Copts to heaven clerks and heak-keepers—accumutions to become clerks and book-keepers—occupations to which their talents are admirably adapted; but attempts to turn them into Protestants or Roman Catholics are of doubtful wisdom. The monastic system is still in force, and some of the ancient monasteries are inhabited by a few monks; but the monks themselves are narrow and ignorant, while in a few cases they have not a very good reputation for an orderly life. With regard to marriage, and more especially death, the Copts have adopted many of the customs of their Muslim neighbours.

neighbours.
This article cannot be closed without some mention of the Copis as missionaries. During the 6th and 7th centuries the whole of Nubia was Christianuzed, and for many years the Arabs were opposed by the Christian kingdoms which had their centres at Dongola, Alwa, and Soha. But the missionary efforts of the Copis did not stop here, for Christianity was afterwards introduced into Abyssinia. In connexion with this, mention may be made of the recently found gravestone of a Copis bishop of the island of Sai, beyond the second cataract, probably dating from the 6th cent.; the ruins of churches between Kair Ibrahim and Wadi Halia, the subject of a recent monograph by Mileham (Churches in Lower Nubia, Univ. of Pennsylvania, 1910); and also the newly discovered Nubian version of the Life of St. Menss, published (1909) by Budge for the Trustees of the British Museum The Christian communities of Nubia, which at one time extended from Assuan to the Blue Nile, gradually orumbled away, from pressure exerted either by the neighbouring heating

tribes, or by the Mushims, until they were finally exteriminated by the powerful Fung dynasty of negro kings at the end of the 15th century. Abyssinia, however, remained Christian and Monophysite, and its Metopolitan is still a Coptic hishop appointed by the Patriarch of Alexandria.

CORN. CORN-SPIRIT.—See Harvest.

## CORN, CORN-SPIRIT.—See HARVEST.

CORNERS. - Among the Semitic peoples, as among others also, an especial sacredness or significance was supposed to pertain to the corners of structures, fields, and other objects. The evidence for this conception can be most widely traced among the Semitic peoples in con-

nexion with buildings.

1. Bab.-Assyrian.—Among the Babylonians and Assyrians it took the form of making a deposit of Assyrians it took the form of making a deposit of inscriptions and images under the corner or corners of a temple, palace, or tower. The inscriptions were, in the Assyrian and Neo-Babylonian periods, usually in the form of hexagonal, octagonal, or decagonal cylinders, or cylinders in the form of barrels. Such deposits, placed under the conners or built into them, were found by Taylor at Mugheir, Loftus at Senkereh, Rawlinson at Birs Nimroud, Botta and Oppert at Khorsabad, and Rassam at Kouyunjik. The great cylinder of Rassam at Kouyunjik. The great cylinder of Ashurbanipal was found at the corner of a room, not at the corner of a building. Many of the chronicles of the Bab, and Assyr, kings were prepared and deposited in little receptacles of masonry at the corners of walls. At Telloh, de Sarzec found similar receptacles which contained bronze statu-ettes of human figures, both male and female, and of animals. The making of these deposits and of animals. The making of these deposits was probably, as in Egypt, accompanied by sacrifice. Thus Sargon of Assyria (722-705 B.C.) says (Cylinder Inscription, 1. 60): 'To the brick-god, the ford of brick foundations, and to the chief architect, Bel, I offered a sacrificial lamb, I poured a libation, I raised the lifting up of hands.' In emphasizing the importance of this custom Perrot and Chiplez are led into one slight error. They state that king Nabuna'id (555-538 B.C.) says that he sought for the cornerstones of Hammurabl and of one of the Lassite kings, digging until he found them. The impression is that he identified the corner-stones of the respective kings by reading the inscriptions deposited in connexion with them—an idea which is gained from a translation of an inscription of Nabuna'id made by Oppert when the science of Assyriology was young. We now

know that a tomenu was not a corner stone, but a paved court or terrace. Since such pavements were usually made of bricks, each one of which was stamped with the name of the builder,

they were easily identified

2. Egyptian.—In Egypt, foundation deposits have been found at several places. One made by Thothmes IV. of the XVIIIth dynasty is reported Thothmes IV, of the XVIIIth dynasty is reported from Memplus; another set was found at each of the corners of a temple at Nebesheh built by Aahmes II of the XXVIth dynasty; another, under a XXVIth dynasty building at Defenneh founded by Psanetik I.; a complete set belonging to a building of Hophrah, at Naukratis; and the grants of a temple of the Ptologues. at three corners of a temple of the Ptoleman period, at Gemaiyemi. At Thebes, foundation deposits showed that a temple built by Queen Tausert of the XIXth dynasty once stood on a spot south of the Ramesseum, although the temple itself had entirely disappeared. At Abydos, itself had entirely disappeared. At Abydos, foundation deposits, or the receptacles for them, were found from Thothmes III. and Amenophis III. of the XVIIIth dynasty, Sesostria III. of the XIIth dynasty, and Pepi of the VIth dynasty. At Koptos, a box (though robbed of its contents) was found under a threshold. at Kahun, a rewas found under a threshold; 10 at Kahun, a receptacle (still full) under the middle of a building of Sesostris II. of the XIIth dynasty; 11 and, at Highnn, deposits at the corners of a temple also by the last-mentioned monarch. At Cizch no such deposits were found under the temples be-longing to the IVth dynasty. These deposits in Egypt consisted of plaques of copper or stone on which the name of the builder was inscribed, together with models of the tools and materials which were used in the construction. At Defenneh, however, the bones of birds and animals offered in sacrifice were also found, together with the ashes of sacrifices which had been con-sumed. These showed that the sacrifice was the important feature connected with the deposits, and that the other objects were incidental to it. A similar deposit has recently been found under the corner of the castle of a Nubian chieftain of the time of the XVIIIth dynasty in Egyptianized Nuhia. This differed, however, from the Egyptian deposits in that it consisted of ten mud-scalings. These represent a conqueror wearing the Nubian ostrich feather, who holds a crouching captive by a cord. On a level with the chief's shoulder is the figure of an animal like a dog.14

3. Canaanite.-The evidence for the sacredness of corners and for foundation sacrifices in ancient Palestine is of a more grim nature. At Gezer the skeleton of a woman was found built into the wall of a house at the corner. 18 More numerous, however, were the skeletons of children found under the corners, children having been used for such sacrifices oftener than adults. The sacrifices at Gezer, like the Egyptian deposits, were not always placed at the corners. The skeleton of a man, and sometimes those of children, were found buried under the middle of a house or a room. With these sacrifices, vessels to contain food for the victims were also buried, as sometimes were lamps. Later, the sacrifices themselves were omitted, but the bowl and lamp were still used as foundation deposits. At Megiddo and Taanach,

foundations were apparently consecrated by human sacrifices, but those reported were not found at the corners, but in the centre of the houses or rooms,1

4. Hebrew.-From the sacred nature and importance of corner-stones, which in the earlier time led to such ceremonies as have been described, certain literary uses have survived in the Old Testament. Thus Jer 5125 and Job 385 use corners' and corner-stones' as synonyms for foundations.' In Jg 202 and 1 S 1425 corners' is used figuratively for chiefs'; in Zec 104 'corner-stone' is apparently a synonym for 'ruler.' In Is 2816 it occurs in an enigmatic passage, where, whether the 'corner-stone' is a figure for a king or a kingdom, or for trust in Jahweh or the relation of Jahweh to His people, the result is right-coursess. Such figurative uses of 'corner' led in two late passages to the thought that it was the

two late passages to the thought that it was the crowning stone of a corner, not the foundation stone, which was important (see Ps 11822, Zec 47). In Zec 916 the 'corners of the altar' are mentioned as being 'filled.' These were projections which were sometimes called 'horns' (see Altar [Semitic], § 17). Possibly, like the corners of buildings, the corners of the altar were thought to be specially second.

to be specially sacred.

The sacredness which attached to corners was applied by the Hebrews to the hair. Ly 1927 reads, 'Ye shall not round the corners of your heads, neither shalt thou mar the corners of thy As under certain circumstances hair was regarded by the Semites as sacred to Jahweh (see W. R. Smith, pp. 323-331), possibly the corners were all considered to be sacred to Him. One might infer from the statement of Herodotus (iii. 8) about the hair of the Arabs that they sacrificed the 'corners' of their hair to their god. Whatever the motive of the Levitical regulation, -whether to differentiate their custom from that of the heathen Arabs, or simply to keep locks sacred to Jahweh untouched,—it has produced among the Jews of modern Palestine and elsewhere in the Orient and in Eastern Europe, as well as among the strictly orthodox Jews of Russia and Poland, the curious custom of permitting the lock at each side of the forehead to grow long. These locks are curled and permitted to hang down in front of the ears, presenting a peculiar appearance, and distinguishing the Jew from all other religionists in that land (cf. Mannheimer, in JE ix. 595).

Another Hebrew regulation, arising from the sacredness of corners, was the law which forbade a man in harvest to reap the corners of his field (Lv 19 232). Because the corner of the field was sacred to Jahweh, the grain which grew m it must be left, that the poor might come and gather it. This regulation was generally observed in OT times, as the Book of Ruth shows. Since the law was indefinite, however, just what this law de-manded of a farmer became a matter of debate when the oral law developed. The results of these discussions were afterwards embodied in the Mishnic tract Pe'ah, or 'Corner.' Perhaps because the Bab. Jews were nearly all engaged in commerce, this tract is copied in the Bab. Talmud without additions. But in Palestine, where the Jews were still agriculturists, the law of the 'corner' was still vital and developing, so that the Jerusalem Talmud contains a Gemara upon

the Mishnic text.

The first problem to which the Rabbis addressed themselves was how much the owner of a field must leave for the poor in order to satisfy the law. It was agreed that a just man would leave one-

<sup>&</sup>lt;sup>1</sup> See Schumacher, Tell ol-Muteschim, Leipzig, 1903, pp. 45, 54; Seilin, Tell Ta'unnek, Vienne, 1904, p. 61. real openings of

sixtieth of the field as a 'corner,' though the amount might vary with the size of the field, the number of the poor, and the richness of the yield If a man left one stalk standing, he could not be held to have broken the law, for the sacred text did not define the size of a corner. Seemingly all possible questions were raised and decided by the Rablis For example, they decided that a man fulfilled the law if he left the proper amount in the middle of the field instead of in a corner; that the law applied to leguminous plants as well as to grain; that it applied to the following trees: tanners' sumac, the carob tree, nut trees, almond trees, vineyards, pomegranates, olive trees, and the date palm. They had to decide when the 'corner' should be estimated before the tithes were paid, and when after; when two men shared a field, whether they must both leave a 'corner'; a man raised two kinds of grain in his field,

forner' for the poor and they did not take long he must wait before he could take it A; whether, if something more than what Atended were left in the field through forgetss, the owner could return for it, or whether fust be counted as a 'corner'; whether a lich in, who, when on a journey, had been compelled avail himself of pe'ah, was obliged to restore it; and many other points such as arose in administering the law.

CORRUPTION AND BRIBERY .- I. Ancient Rome.—For first-hand information on bribery in ancient Rome we naturally turn to the speeches of Cicero, pro Cn. Plancio and pro L. Murena. As we study these, we feel inclined to subscube to the dictum of Montesquieu upon the condition of Rome and her provinces under the Republic: 'La libert's était dans le centre, et la tyrannie aux extrémités. The provinces were the faim of the Roman people, and the provincials were the live stock to be fleeced by the governor. Whether a Cæcilius or a Cornelius obtained a province, it is at once clear that the main aim of the governor, during the year of his provincial life, was to acquire enough money to purchase that supreme object of his ambition—the consulship. In order to ingratiate himself with the people, he therefore supplied the citizens of Rome with large quantities of corn below cost price, the deficiency being made up by the province. When the rivalry for the consulship grew acute, it became usual for a candidate, anxious to secure his election, to give the people a munus, or 'treat,' in the way of a gladiatorial show. A munus, it may be remarked, sometimes cost the candidate a matter of seven thousand pounds. All this expense came out of the amount accumulated during the year of provincial life, and an ample margin had likewise to

vincial life, and an ample margin had likewise to be provided to bribe the jury who should try the successful candidate for bribing the tribes. This indirect bribery of the people dated from the beginning of the 6th cent. of Rome.

"For five hundred years," writes Mommsen (Hist. iii. 40), "the community had been content with one festival in the year, and with one cross the first Roman demagogue by profession," Calus Finninus, added a second testival and a second circus [in the year 220 n.o.]; and by these institutions—the tendency of which is sufficiently indicated by the very name of the new testival, "the plebelan games"—he probably purchased the permission to give battle at the Trasmene lake."

In 159 B.C the lex Cornelia punished with exile those found guilty of bribing the electors with money; it is, therefore, evident that the direct purchase of the votes of the electors must have existed a considerable time before the passing of that law. Indeed, as early as the year 432 B.C., we meet with the first law against ambitus, for-bidding persons to add white to their dress to signity that they were candidates. 'Ne cut album,'
Livy informs us (IV. xxv. 13), 'investmentum
addere potitionis liceret causa.' This measure reminds us of the (English) Corrupt Practices Act of 1854, prohibiting the giving of cockades to voters. The lex Poetelia (358 B.C.) torbade candidates to carry on their canvass anywhere save in the Forum and Campus Martius. 'De ambitu,' writes Livy (vii. xv. 12), 'ab C. Poetelio tribuno plebis auctoribus patribus tum primum ad populum latum est; eaque logatione novorum maxime hominum ambitionem, qui nundinas et conciliabula obire soliti erant, conpressam credebant.' The laws against ambitus increased in number, but decreased in value. In 181 B.C the lex Cornelia Baebia was passed (Liv. XL. XIX. 11). Attempts were made to lemedy the corrupt practices of the day by the lex Gabinia, of Ballot Act (139 BC), and the lex Maria. In the former it was enacted that in elections voting should be by ballot, i.e. by writing the name of the candidate on a ticket or tablet (tabellu). By the latter, C. Marius, in his second consulate (104 B.C.), established the pontes, or narrow passages to the voting-booths, by which he designed the protection of the voters against the evil influence of the astute electioneering Regular agents (interpretes) were emagents. ployed to arrange the bargain with the elector, and the money promised (pronuntuata [cf. Cic. pro. Planc. 45; Ep. ad Att. 1. xvi. 13]) was paid by the candidates themselves, either directly to the paymasters (divisores [cf. Ep ad Att. 1v. xvi. 7; pro Planc. 55]) for distribution, or to trustees (sequestres) appointed by the parties, who the decision were over. Cicero, in the de Lege Agr. (ii 4), terms the lex Gabinia the law whereby 'Liberty can assert herself without a word '; but in practice the voice of Liberty was as much stifled then as it was afterwards in the case of the English boroughs. In Rome, as in England, electors appear to have habitually adhered to their contracts.

By the lex Ælia Calpurnia (67 B.C.), a heavy fine was imposed on the candidate who should use bribery, whether successful or not; and this law deprived him for ever of the right of holding an office or sitting in the Senate, in this respect surpassing in stringency even the Corrupt Practices Prevention Act, under which the disability to sit in the House of Commons or to vote at an election to Parliament lasts only seven years. This just law contains a provision which grates somewhat harshly on our ears. If a person convicted of bribery secured the conviction of another on the same charge, in the eyes of the law his guilt was wiped out. The lea Ælia Calpunia seems to have inflicted a fine on chvisores and other agents, thus recognizing a principle which was long ignofed in English legislation. The law in question was repeated, with additional rigour as to its penal clauses, in the lex Tullia de ambitu, which was passed in Cicero's consulate (63 n.C.). The purport of this measure is given in the Scholia Bobbiensia (p. 309) and in Dio Cassius (xxxvii, 29), as well as by Cleero himself in several passages of the speeches pro Murena (47, 89), in Vatinium, and others (pro Sest. 133; Interr. in Vat. 37; pro Planc. 83). In his desire for reform, Cleero was supported

by all true patriots, amongst others by Servius, Sulploins, who wished for some change of the lay THE THE BEST

relating to elections under certain conditions, viz. to establish confusio suffragiorum, or 'mass-voting,' as a means of proventing in thery, whenever a fresh election took place in consequence of an elected also begin to hear of indices edition to by eases of bribery. The Senate, on Creero's motion, declared by a scratus-consultum the provisions of the lew Elin Culpurnia applicable to any candidate who should keep about him hired followers, or who should entertain the people with gladiatorial shows—except under the peenhar circumstantes of its being required by a testamentary disposition—or refreshments of any kind. The last clause is penhaps the earliest law against 'treating' of which we find record. In the provinces the lex Colonia Genetive likewise forbade treating at municipal elections. By it—and the provisions sound wonderfully modern—no candidate is to give, or cause to be given, dinners; he is not to have more than nine any day at dinner; nor is he to give, or cause to be given, bribes or gifts; nor is any one else to give dinners or bribes for him. The penalty for the violation of this statute is five thousand sesterces. The lex Tullia of Cicero's consulate confirmed the provisions of the lex Elia Calpurnia, punished corrupt candidates with ten should entertain the people with gladiatorial shows Calpurnia, punished corrupt candidates with ten years' exile, and inflicted severe penalties on corrupt electors. It prohibited the candidate from exhibiting gladiatorial shows or public amusements within two years of the commencement of his candidature.

If efficiently enforced, the lew Tullia should have stamped out bribery. Roman history, however, shows how little effect this law exercised in putting shows how little effect this law exercised in justing an end to corruption. The price of the consulate showed no tendency to fall. The quotations for the year 54 B.C. show the enormous figure of ten million sesterces—practically £100,000—offered for the first voting division alone. A few facts about some of the chief men speak eloquently as to the spread of bribery. In the year 62 B.C., Cæsar owed nearly £250,000 sterling. When twenty-four years of age, Marcus Antonius owed £50,000; fourteen years later his liability was no less than £300,000. Cicero (Ep. ad Att. IV. xv. 7) writes to Atticus: Bribery is at boiling point. Ecce signum! On 15th July interest on money rose from 4 to 8 per cent. This means that money was so much in demand for the electors that the rate of interest doubled. The Senate felt impelled to take action, and in 61 B.C. two noteworthy decrees were passed. By one it was rendered lawful to search the houses of magistrates suspected of having money deposited of magistrates suspected of having money deposited of magistrates suspected of naving money deposited with them to be used for corrupt purposes (ib. r. xvi. 13). By the other it was enacted that any magistrate in whose house bribing agents should be harboured should be held guilty of a State offence. When Cicero (pro Planc.) speaks of a sum of money hidden in the Flaminian circus, and sum of money hidden in the sealers in pulse that soized by the authorities, he clearly implies that the concealors thereof meant the voters to find it.

This ancient plan has been imitated in modern times. For example, in 1898 each freeman in the city of Dublin received his Ed note from a hole in the wall. At Shaftesbury, in 1774, an atterman of the town, disguised as Punch, passed through a hole in the door twenty guiness to each voter, for which each was obliged to sign a bill payable to a flotitious Glanbucket, in order to disguise the nature of the transaction.

The two decrees of 61 B.C. were as ill obeyed as their predecessors. In the year 50 n.c. was carried the lex Licinia de Sodaliciis, which forbade the their predecessors. In the year 50 n.c. was carried the lew Livinia de Sodaliciis, which forbade the corruption of the tribes by means of the illegal organization of clubs. This law brings before us the difference between legal and illegal canvassing, and at times the border line between the two was thin. For example, it was right and proper to ive treats of public shows to the voters in their results in the harbour of Syracuse, of the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicias knew that he could reckon on the spirit of Imperialism when he reminded his soldiers, in dire straits in the harbour of Syracuse, of the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicias knew that he could reckon on the spirit of Imperialism when he reminded his soldiers, in dire straits in the harbour of Syracuse, of the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicias knew that he could reckon on the spirit of Imperialism when he reminded his soldiers, in dire straits in the harbour of Syracuse, of the fact has the fact that Imperialism and party spirit prevailed to a large extent in Greece. Accedence of the fact that Imperialism and party spirit prevailed to a large extent in Greece. The fact has the fact that Imperialism and party spirit prevailed to a large extent in Greece. The fact has the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicias knew that he could reckon on the spirit prevailed to a large extent in Greece. The fact has the fact that Imperialism and party spirit prevailed to a large extent in Greece. The fact has the fa

the people en masse (vulge). It was right and proper to employ liberalitus in the conduct of the election, while it was wrong and improper to use dates should look to their sodulum, or 'brother-hoods,' for assistance at the time of election, but, if they employed the sodales to mark off the tribe into small companies (decurrae), each to be brought by the wiles of one of the brotherhood to favour a particular candidate, then the Lieman law pronounced this candidate guilty of using undue in-fluence (on the modus operandi, cf. pro Plane, 44-47, also 37, 39). Unsuccessful candidates could be punished for ordinary ambitus, but only suc-cessful ones could be tried under the provisions of the Act de Sodaliciis. In 52 B.C. Pompeius introthe Act de Sodalicis. In 52 R.C. Pompeius introduced a measure against bubery, intundation, and illegal influence, which applied to offences committed so far back as 20 years before his third consulship. That the offenders were many is evident from the letters of Cicero. In Fam. VII. ii. 4 he writes: 'I am kept incessantly at work by the number of trials under the new Act.' The retrospective clause proved of grave importance, and in the issue hastened the fall of the Republic. Julius Casar perceived the hopelessness of attempting to suppress corruption by statute, and he endeavoured to minimize its effects by reserving to himself the choice of half the candidates. Under the Empire the all-important power of the Princeps left no room for ambitio, save in the restricted sphere of election to municipal office. The attention of Augustus was directed not against electoral corruption, but against the bribing of jurymen. Ciccio's reference to this is well known. Clodius had been acquitted on the charge of violating the lites of the Bona Dea, when Cicalo gave evidence against the alibi which he set up. 'The jury,' against the bona bea, when Clean gave evidence against the alibi which he set up. 'The jury,' sneered Clodius, 'did not give you credit on your oath.' 'Yes,' retorted Cleero, 'twenty-live out of the fifty-six did; the remaining thirty-one refused you credit, for they took the briba in advance.'

When we bear in mind the scanty amount of legislation in early times, it is obvious that strengens afforts—at least on paper.

down corruption. In practice, however, little was done, and we feel inclined to think that many of these laws savoured of the pious resolutions often these laws savoured of the pious resolutions often passed at public meetings nowadays. The laws, like the resolutions, looked well. An unenlightened electorate like the Roman may have a vague sense of public duty which we may call Imperialism. Unless moved by this spirit, or unless highly organized by the party system, it is almost inevitable that bribes will be employed with such voters. The Roman lacked this sense of Imperialism and he certainly lacked the next spirit. rialism, and he certainly lacked the party spirit.

rialism, and he certainly lacked the party spirit.

Tarty phrases, writes Mountsen (iii. 369), 'were in free circulation: of the paulies thenselves there was little trace in matters really and directly practical. Throughout the whole seventh century the samual public elections to the coul magnetizates, especially to the consulsing and censorship, formed the real standing question of the day, and the focus of political gridation; but it was only in isolated and rate instances that the different candidates represented opposite political principles; ordinarily the question related purely to persons, and it was for the course of affairs a matter of Indifference whether the majority of votes felt to a Carollian or to a Cornellan. The Romans thus lacked that which outwelgls and compensates all the evils of party-life—the free and common movement of the masses towards what they discorn as a leaditing cim—and yet endured all those evils solely for the benefit of the paltry game of the ruling ceteries.

a political education superior to the Roman, and her citizens developed a sense of duty to the City of the Violet Crown, not possessed to the same extent by him who owed allegrance to the City of the Seven Hills When no longer moved by these better feelings, party spirit  $(\epsilon \mu u \theta e i a)$  exercised much influence. Solon saw the useful aspect of loyalty to party when he punished the citizen who, on the outbreak of any sedition or attempt at revolution, should stand aloof and take part with neither side—an enactment that we find in some Continental constitutions. Aristotle (Pol. v. ix. 11) records the terms of an olgarchical oath taken on assuming office 'And I will be malignant,' it assuming office runs, 'against the people, and I will devise against them whatever evil I can.' In order to meet with a parallel to this frank statement of one's duty to his party, we must refer to the notorious remark of President Andrew Jackson when he proclaimed the doctrine, 'To the victors belong the spoils.' The dependence of office on lot, the mode of electing The dependence of office on lot, the mode of electing the elders in Lacedæmon (Plutarch, Lycurg. 26), rendered electoral corruption impossible in Greece. One fact is highly significant. The word δεκάζευ, the only Greek word for 'to bribe,' is a very rare verb indeed, and its normal use is for tampering with juries rather than with electors. Aristotle does not recognize electoral corruption at all, nuless such be his meaning when he says that in Carthage the most important offices, including Carthage the most important offices, including even the throne and the command of the forces, were 'purchasable' (wurtas, Pol. II. xi. 10), adding the outspoken reflexion, 'It is natural that a man should make money of his office if he has to pay should make money of his office if he has to pay for it.' Perhaps his meaning is that it may have been possible to purchase high office in Carthage, just as it was possible, till our own day, to purchase commissions in the British army or judicial positions in France. If his meaning is that office was accessible only by bribery,—and thus seems to be the view of Polybius (vi. lvi. 4),—then in this respect Carthage, in the opinion of Aristotle, was unique in the ancient would.

The payment of persons invested with public

The payment of persons invested with public functions to induce them to use them unjustly, and of junes to procure verdicts against the evidence, were, however, glave forms of corruption. The quarrels of Demosthenes and Aschines show how untrustworthy the public functionaries became, and the history of Sparta illustrates the same matter (Herod. ix. 87, 88).

same matter (Herod. ix. 87, 88).

Pausanias, for example, when attainted of treason, returned to Sparts in the certainty that he could buy off his punishment (Thuc, i. 181). Lactychides, Pleistoanax, Astoyohus, Cleandridas, and Gylipius all took bribes. Thucychides tells us (vii. 45) that the trierarchs and generals of the Lacedemonian and allied fleet—all save Hermocrates—took money from Tissaphernes to botray the interests of their country. Themistooles (Herod. vii. 4, 5) took and administered bribes; but it was to save, not to betray, his country. Anstotle evidently thought that the ephorally in Sparta was corrupt. 'The ephors,' his remarks, 'are chosen from the whole body of the people, so the office often falls into the hands of very needy persons, who accordingly have shown themselves corrupt' (Pol. II, IX. 19), As he terms the ephoralty 'the keystone of the constitution,' we may infer that Sparta was more corrupt than the majority of the Greek Slates.

One remark of Aristotle shows clearly how little cleetoral corruption prevailed in Greece. He condemns canvassing; he condemns even the candidate's application for office. 'The man,' he informs us, 'who is fit for the place should have it, whether he wants it or not. No one would apply for office if he were not ambitious; and ambition and coverousness are the most common motives to crime (Pol. 11. 1x. 27). With regard to corruption, Aris totle was plainly afraid of the embezzling of public moneys, and the dishonest discharge of public functions. To meet the former abuse, he proposes (v. viii. 19) that transfers of public money should. In the East, i be made in the presence of all the citizens, and is always the 

that duplicates of the accounts should be deposited with certain bodies; and, to counteract the latter, that there should be 'certain distinctions ordained by law for those who have a good name tor probity. In England and other countries the latter provision is customarily observed. Aristotle holds that public officials should be absolved from the necessity of supporting themselves while serving the State. They must have lessure to govern. But at the present time, he writes (Pol. III. vi. 10), 'for the sake of the profit to be made out of the public purse and official position, men want to be always in office. They hunt after places with such eagerness that one might imagine they were invalids to whom health was impossible except when in office.' Those official salaries, however, must not be so great as to excite cupidity. mere competence was not the goal of that 'ambi-tion' which Aristotle regarded with such alarm.

3. The East.—In the West we are accustomed

speak of the dangers of democracy; but in this, to speak of the dangers of democracy; but in this, as in so many other particulars, no such language prevails in the East. In India—till lately, at least—the people are not to be feared. 'Blessed are the poor and negdy' is the familiar account of Holy Writ. St. James, however, stands in some dread of the influence of the 11ch and powerful (cf. chs. In the East the masses are never the objects of attempts at corruption, but the classes are; whereas in the West the exact reverse holds good. The corruption in the East assumes the terrible form of being directed from below upwards. The aged Samuel, when he invites the closest examination of his conduct, exclaims, 'Whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith?' (I S 123). Amos, in his denunciation of the rule of Jeroboam II., exclaims, 'They afflict the just, they take a bribe, and they turn aside the

poor in the gate from their right' (Am 5<sup>12</sup>).

In the OT the acceptance of a bribe is expressly forbidden (Ex 23<sup>1,6,8</sup>, Dt 16<sup>19</sup>), and one of the grievous wees of Isalah is launched at them 'which justify the wicked for reward, and take away the nightcourses of the rightcous from him' (Is 52s; cf. Job 153, Am 29), while 'he that despiseth the gain of oppressions, that shaketh his hands from holding of bribes... shall dwell on high' (Is 331st.). holding of bribes... shall dwell on high' (Is 33\formalls). Accordingly, Jehoshaphat forbade his judges to accept bribes (2 Ch 157; cf. Ex 18\formalls), though it is only too obvious that the Hebrews were by no means unfamiliar with corruption (Is 1\formalls, Ezk 22\formalls, Mio 7\formalls, Mt 23\formalls, among the cases being the betrayal of our Lord by Judas. Talmudic Judaisne,), was very severe on bribery, though it seems fudihave been permissible, before the time when fribes judge received a regular salary, for him to \( \pi \)em. A an equal amount from each of two litigant i into the before trying a case (JE iii 379-381). meonscious Zoroastrianism, with its intense horre from Chris-

Zoroastrianism, with its intense horre from Chris-hood, was naturally strongly opposed with legends though no specific mention of corrupti

Pallavi vision of Arta-Viraf (ch. lychy that legends and West, Bombay, 1872, p. 194) ant and contradic-bribe-taker suffered horrible tononized and unified bribe-taker suffered horrible tononized and unified to come. Both in China and ins speculation. Cospidge is severely punished; out exception, seek to noted that in ancient Americ world from the fewest such a judge suffered the gable Babylonians, where cases of bribery, while for ystems of cosmogony may he was degraded from element of the universe was contumely of having fand, ruled by Tiamat, the riss der ethnolog, durchaos, until she was slain by it 328.

In the East it

the difference between East and West is conspicuous. It is perfectly true that the Hindu law-books rank bribery in the class of 'open thefts,' and that the crime was punishable by fine, confiscation of property, banishment, loss of the case, etc. (July, Recht und Sitte [=GIAP, 118], pp. 125, 142); but, in spite of this, the native Indian under British rule in creative puglisher. is greatly puzzled by the apparent purity of the English officials. That they are really incorruptable he cannot believe. He looks on incorruptibility as Charles II. looked on honour and virtue. Yet he knows that he could not dare to offer a bulle to the 'Burra Sahib' directly. It must, he thinks, be conveyed through successive grades of native servants about the Court, and it will surely-for, atter all, an Englishman is not different from other mortals—he accepted, if offered with sufficient discretion. No experience can teach him that pure administration of justice is an existing fact, or anything else but a means subtly devised for making small bribes meffectual.

small bushes ineffectual.

A native became an Indian Civil Servant, and, as such, accepted presents. His principle in so doing was that of Francis Bacon. He gave his judgment on the mouts of the case. If the plaintiff won, he kept his gift and returned that of the defendant, and vice versa. The hard thing is that the Indians understood and admired the attitude of this judge, while that of his British collengue was incomprehensible to the native mind. That incorruptibility is regarded as a rare virtue is clearly shown in a memor of the Hon. Onocool Chunder Mockerje, who attained the position of a judgeship in the High Court, 'Such was the integrity of this remarkable man,' writes his nephew, 'that, baving taken a busef from one party in a cuse and read it, he invariably refused a fee from the other side.'

4. Great Britain and Ireland.—We turn from the East to the West, and we find the whole situation changed. With us the tendency is to corrupt the people in many insidious ways. In Stuart days the members of Parliament were corrupted because they were not easily amenable to public opinion. It was then thought necessary to lubricate the wheels of political machinery with golden oil; but, as the people gained more control, this bribery of their representatives slowly passed away. Tampering with judge and jury was once common in England.

representatives slowly passed away. Tampeting with judge and jury was once common in England. A statute of the reign of Henry van. in the year 1494 recter that 'perjury is much and customanly used within the city of London among such persons as passen and been impanelled upon issues joined between party and party. The Dance of Death, translated from the French in the same reign by John Lydgate, and adapted to the England of his day, mentions a juror who had given a false verdict for money. Stowe tells us that in 1408 many London jurors were punished by having lyrer fastened to their heads, setting forth hlow they had the tampered with in such and such a suit. A letter from the capture of London to Cardinal Wolsey, given by Grafton in his braiders, says that a London jury would find Ahel gulty of a murder of Cain. Jardine, in his Criminal Trials, p. 8, 15th and the 'proceedings against persons accused of the name of trials; they were a mockery of justice. The impeachment of Bacon made possible the magnetic that justly forms the glory of England, offence by the want of publicity gave a longer sum of microstals; they were a mockery of justice. The impeachment of Bacon made possible the magnetic that justly forms the glory of England, offence by the want of publicity gave a longer seized by the want of publicity gave a longer seized by the want of publicity gave a longer by the conceal painfully apparent in the roign of This ancient to the existence of brilery by bestowal an adderman of the bugland, i. 282). and at times the border line bethe days of George III. thin. For example, it was right Oct. 1779, the king ive treats or public shows to the umberland requires les (tributing) but it was illegitim it would be wrong the control of t

was a political animal, but the evidence of election petitions goes to prove that man is an aurivorous If Rome gave her citizens bread and anımal. encuses, England was no whit less lavish to her clectors. Charles II. held that every man had his puce, and the perusal of the details of electioneering almost tempts us to agree with him. If the struggle for the consulate in the 700th year of the Roman Republic produced an offer of nearly £100,000 for the vote or preroquetra, it is humiliating to reflect that a little over a hundred years ago, in 1807, when Wilherforce contested Yorkshire against Lord Milton and the Hon. Henry Lascelles, the total expenses of the candidates exceeded a quarter of a million In the same year, at Wootton Bassett, the price of a single vote rose from twenty gumeas to forty-five. From the will of Lord Vernon, £5000 seems to have been the recognized sum paid in 1812 for a seat in Par-At so recent a date as the General liament. Election of 1874, corruption was organized on a large scale. The moment the trumpet is sounded for a General Election, deposes a witness before a Norwich Election Commission, there seems to spring from the ground, as it were, a host of employment-seekers. This form of corruption, the bribing of voters by offering good wages for the discharge of nominal functions during the period of election, is now the subtlest form of bribery, except perhaps the bribery which takes the form of munificent donations to local charities. The days are gone when the beautiful Duchess of Devonshire could buy a butcher's vote with a kiss, when the genial Dick Steele could win over the women with an apple—stuffed with guineas—as a mize for the last, wife prize for the best wife.

5. America.-In the far Western world, our cousins do not seem to have got rid of corruption. Parts of the United States are no better than the small boroughs of Southern England were before the Corrupt Practices Act of 1883. Venality occurs, according to J. Bryce (American Commonwealth, ii. 238), chiefly in connexion with private legislation. Foreign missions and consulates, department bureaus, custom-house and revenue offices, army and navy contracts, postmasterships, agencies, and places of all sorts are the spols of the victors. The essence of the United States the victors. The essence of the United States system is that paid offices are given and taken away for party leasons. In England, less than sixty men vacate their places with a change of ministry; in America, all officials do so, except those who are appointed after passing the Civil Service examinations. Corruption, of course, is not confined to the taking or giving of money bribes, for by graft there is the taking or giving of bribes in kind. Thus the person corrupted may receive the allotment of a certain quantity of stock receive the allotment of a certain quantity of stock or shares in a company, or of an interest in a profit-able contract, or of a land grant. Another form may be the doing of a job, c.g. promising a contractor that he shall have the clothing of the police or the cleaning of the city thoroughfares, in return for his political support; giving official advertise-ments to a particular newspaper which puffs you; promising a railroad president, whose subscription to party funds is hoped for, to secure the defeat of a hill seeking to regulate the freight charges of his road, or threatening its land grants.

The effects of Andrew Jackson's famous doctring of 'To the victors belong the spoils' can perhaps best be seen in the operations of the Tammany Ring in New York City. The cost of receiving and furnishing the County Court House was estimated in 1868 at \$250,000, but before the end of 1871 about \$13,000,000 had been expended upon it, and it was still unfinished. The items of \$404,\$47 for safes and \$7500, for the receive show how the extra money had disappeared. The total price which the city paid for the privilege of being relied by Tammany from the beginning of 1860 to Sept. 1871—bhad is, thirty-two months—amounted to no less a sum than \$21,000,000.

6. France.—France believes as thoroughly as America in the creed of Andrew Jackson. As in Greece, so in France, direct tampering with the electorate hardly exists. The Wilson scandals showed that political corruption was wide-spread in the Republic. The public and private bribery of the supporters of the Second Empire left many evil traces behind it. The embellishment of the capital fostered a spirit of jobbery, infecting all the departments of the State. The most dreadful of all the scandals was the Panama affair. The thrift of France had subscribed fifty millions storling for the piercing of the Isthmus of Panania, undertaken by M. de Lesseps. In 1892 it was known that most of the money had disappeared, and at the trial it was clear that corruption accounted for the disappearance. Floquet avowed that, when Prime Minister, he had laid hands upon that, when Filme Minister, he had had hands upon £12,000 of the Panama funds, and had utilized it in combating the enemies of the Government on questions unconnected with the Canal (Bodley, France, p. 503). He based his defence on the perilous doctrine that, un ler normal circumstances, it was the right and the duty of the Ministry to supervise the distribution of such subsidies so as to supervise the distribution of such subsidies so as to prevent them from being used to the prejudice of the Government (Chambre des Députés: Séance du 23 Décembre 1892) This principle has been followed by ministers both before and since the days of Floquet. The party system is probably the strongest purifying agent in Parliamentary government under extended suffrage. But, as in Rome, so in France In neither country did the party system exists and consequently in both con-Rome, so in France In neither country did the party system exist, and consequently, in both, corruption prevailed. No doubt, the general working of the Parliamentary system assists the operation of a corrupt policy. It is, however, clear that the absence of government by parties means the presence of hilbery. 'The great motive power,' concludes Bodley (p. 515), 'to keep wavering members on the path of parliamentary integrity is the party system, and this is wanting in France.' Indirect

tampering with the electorate can always be observed. There is a bridge to be built, or a lycéc to be instituted, especially in the arrondissement which shows itself faithful to the Government. Here we must meet with the kind of corruption we are certain to encounter in the future.

We all County to encounter in the future.

'Perhaps we are not at therety to forget,' writes Sir Henry Maine in his Populan Government (p. 100), 'that there are two kinds of bribery. It can be carried on by promising or giving to expectant partisans places paid out of the taxes, or it may consist in the duector process of legislating away the property of one class and transferring it to another. It is this last which is likely to be the corruption of these latter days.'

Conuption used to appeal to individuals; now it appeals to classes. The faimer is bribed with an anticipation of pranie rent, and the artisan is bribed by the prospect of protective legislation. The future alone can disclose whether the old form or the new

form of corruption is the more dangerous

alone can disclose whether the old form or the new form of corruption is the mone dangerous Litheature — T. C. COSMOGONY AND COSMOLOGY (Introductory).—By cosmogony is meant the theory of the origin of the universe. The existence of a developed cosmogony seems to be characteristic of a somewhat advanced degree of thought. Among the Australians, for example, such careful observers as Spencer, Gillen, and Howitt record no cosmogonic myths, and the South American Indians and even the Finns have but scanty legends of this type. On the other hand, the Polynesians and North American Indian stocks have cosmogonies of considerable elaboration. The reason for this deficiency in certain parts of the world evidently lice in the appropriate of the state than the state of the state o lies in the amount of abstract thought required for the development of a cosmogony; for, though the existence of living beings, especially those of human kind, presents a creation problem which even primitive man endeavours to solve in many ways long before attempting to account for the be traced, the primal element of the universe was beginning of the universe, these solutions do not come, strictly speaking, within the scope of cost personification of chaos, until she was slain by Pos or your postulation to the 5 J. 17.

mogony, but rather within that of creation (q.v.). Yet it must be remembered that at least the rudiments of cosmogonic ideas may exist among tribes which are not now known to entertain them. A further element of difficulty is introduced into the study of primitive cosmogonies by the unconscious absorption of foreign elements derived from Christian missionaries, just as is the case with legends of the Flood.

Throughout all cosmogony run certain basal principles, and it is also noteworthy that legends of this character, at first discordant and contradictory, gradually become harmonized and unified with the progress of religious speculation. Cosmogonic myths, almost without exception, seek to explain the creation of the world from the fewest possible elements. Among the Babylonians, where at least two divergent systems of cosmogony may

the god Marduk. This cosmic ocean recurs in other systems as well, notably in some of the Hindu cosmogomes and in the Egyptian legend of the Creation Yet in various parts of the Nile Valley different cosmogonies were held; at Ele-phantine it was believed that Khnum had made the cosmic egg from the mud of the Nile; while at Memphis, Ptah was said to have carved the earth, Memphis, Ptah was said to have carved the earth, like a statue, into its present form. Among the Greeks, with their highly developed philosophic and abstract thought, a large number of cosmogonies were devised, the prime component of the universe being ocean, according to Homer; earth, according to Hesnod; air, according to Epimenndes; ether, according to the rhapsodic cosmogony; water and earth, according to Hieronymus and Hellanicus; water and sline, according to Athenagoras; and water, according to Thales. The Greek cosmogonies may be divided into three classes; those beginning with a spiritual principle, as Zeus; those beginning with an abstract principle. those beginning with a spiritual principle, as Zeus; those beginning with an abstract principle, as Chaos, Time, and Night; and those beginning with a material principle, such as water, earth, and other. Of these, the third category is doubtless the most primitive, although even the Hestodic cosmogony is so highly developed that it is a system of philosophy rather than of religion. An almost equal degree of speculative thought appears in the agree of speculative thought. An almost equal degree of speculative thought appears in the earliest record of India's cosmogony. The late 129th kymn of the tenth book of the Rigveda describes the 'That,' or abstract universe, as fired with inward meditation that resulted in the creative Kāma, which corresponds strikingly and curiously with the cosmogonic Eros of the Greeks. Other Vedic hymns vaguely ascribe the creation of the world to various deities, while a late hymn of the Rigveda (x. 90) declares that the world was formed from the different members of the body of a giant. In the later development of Hindu thought the universe is the creation of Brahma (or of Piajapati or some other All-God), while the universe itself is conceived as a cosmic egg—a legend as early as the Brühmanas, and re-calling the cosmic egg of Egypt, the Polynesian creation-myths, and the Greek Orphic mysteries. It is also noteworthy that creation is ascribed to sexual congress in cosmogonies so diverse as the Hindu, Maori, and Taoist.

The Greek and Hindu cosmogonies may be the Greek and Himin cosmogonies may be termed quasi-philosophic, while the Babylonian creation-nayth is rather one of opposition. In the Iranian legend of the origin of the universe the same element of opposition appears, and at the same time it may possibly illustrate the bond which links the two. The earliest form of the legend is marked by a conflict between Ormazd and Ahrman, marked by a conflict between Ormazd and Ahrman, and the entire cosmic process is a series of beneficent creations by the former and of maleficent counter-exections by the latter, thus affording an analogue, in a certain sense, with the conflicts of the children of Papa and Rangi in the New Zealand creation-myth. At a later period, however, philosophic speculation evolved the doctrine of boundage time from which both Owners and Ahringen. less time, from which both Ormazd and Ahriman, represented by Light and Darkness in Manishreism, were sprung. It is clear that this unitarian tendency is a later development; and if one may

tendency is a later development; and if one may argue from analogy it would seem that the earliest Greek cosmogony, instead of being philosophic like the Hesiodic version, was based on opposition, as Hesiod's account itself seems in places to imply. The order of creation naturally varies in different cosmogonic legends. In one of the numerous systems of Egyptian cosmogony the primal spirit longs to create thus recalling the cosmic Desire (Kāma, Epist) of the Hindu and Greek systems, This

results in motion of the primal material, whose basal qualities thus become visible. With the aid of one of them the cosmic egg is formed, from which arises Itē, the god of light, who forms the world and all that it contains. In the Iranian account, as given by the Bāndukiša, the order of earthly creation is sky, stars, moon, sun, land, sea, river, plants, animals, and man. A certain similarity with the Greek cosmogonies, as represented by Hesiod, is shown in the Germanic version given by the Volugid, in that the creation of the gods, to which the Babylonian creation tablets also refer, is claborately described. The basal elements are primeral time. Granumagan tablets also refer, is claborately described. The basal elements are primeral time, (innungagapi (which corresponds, in many respects, to the Greek Chaos), and primeral matter. The gods Odin, Hoenir, and Lödhur raise aloft the sun and moon (or the earth). After this Midhgardh, the home of mankind, is built; the plants are produced by the warmth of the southern sun; the seasons are ordained. The home of the gods is then built, and the three Norms, or Fates, appear, while the cosmogny closes with the creation of dwarfs and men. In this last system the cosmic erg, which plays so In this last system the cosmic egg, which plays so prominent a part in many creation-legends, is replaced by the cosmic tree, which is, at least to a certain extent, panalleled by the golden lotus of the Hindu Puranus.

the Hindu Purinus.

A curiously isolated cosmogony is found in Chinese Taoism, which derives the four seasons from the conjunction of the male and female principles Yang and Yin. The four seasons in their turn, produce the eight hwa, or phenomena of Nature, which are the source of the universe. Equally isolated is the general type of the North American Indian cosmogony, which is essentially one of opposition. It presupposes the prior existence of another world before the earth of man. In this world dwelt the gods, who gradually came into conflict with each other, and in the struggle all, with a few exceptions, were transformed into those with a few exceptions, were transformed into those objects, both annuate and manuate, to which giving rise to heasts, birds, reptiles, trees, rocks, and everything else. Meanwhile, the divinities who had escaped metamorphosis departed to other regions, the present world being occupied by American Indians.

In entire keeping with the late development of cosmogony and its pre-eminently philosophic character, there is almost no instance of an ethical character, there is almost no instance of an ethical import being attached to it. Few peoples seem to have thought of a design for which the world was brought into being. The Iranians, however, held that the universe was created for the glory of Ormazd, who should finally triumph completely over the machinations and creations of the evil Ahriman. In conclusion, it must be noted that the concept of creation as while was practically unknown to the ancient world. It is present neither in Bahylonian. Egyptiant, nor Greek; and neither in Babylonian, Egyptian, nor Greek; and its existence in Iranian thought is at least problem-atical. On the other hand, the keenest philosophers of antiquity, the Hindus, evolved the idea as early as the Rigveda, even though but vaguely, declaring in a late hymn (x, 72. 2): 'in the primal age of the gods being was born of non-being' (devānām pūrve yuge'satah sad ajāyata).

whose eyes were fire, whose glances were lightning, and the clapping of whose wings was thunder. On his descent to the ocean, the earth instantly rose, and remained on the surface of the water. From this being, also, the Athapascans traced their descent. Yetl by name, it saved their ancestors from the flood, and succoured them by bringing them fire from heaven. It probably sprang, with the Mexican god Quetzalcoatl, from some common original form. The more eastern Athapascans believe their ancestors to have sprung from a dog, probably an

eponymous totemic being.

2. Iroquoian family (Huons, Mohawks, Oneidas, etc., situated from the St Lawrence to the Roan-oake, and the Cherokees in Eastern Tennessee).— The Iroquois tribes believe in a similar myth. Their original female ancestiess fell from heaven. There was as yet no land to receive her, but presently it 'suddenly bubbled up under her feet, and waxed bigger, so that ere long a whole country was perceptible.' Some Iroquois tribes, however, believed that amphibious animals, such as the otter, beaver, and musk-rat, beholding her descent, hastened to dig up sufficient earth from beneath the waters to provide her with an island upon which she might dwell. Several Iroquois tribes regarded a mountain near the falls of the Oswego River in New York State as the locality in which their forefathers originated, and the name of the Oneida ('People of the stone') is held to indicate some such relationship.

3. Algonquian family (formerly distributed over a rea embracing a space from Newfoundland to Pockies, and from Churchill River on the north 'ico Sound on the south).—The words for 'rabbit' in the Algonquian tongue are hat Manibosho or Michabo, the sun,

Azie, Hist. of the Fur Trade, 1801, p. 88, Richardson, predition, 1851, p. 289. Hist. of New York, c. 1650, iv. 180. Jacton de la Nouvelle France, 1686, p. 101. their present places, and gave the dry land to the men whom he had made. Here we cannot doubt that the appearance of the two pigeons signifies the brooding of the creative spirit upon the waste of waters. The similarity of this myth to the Creation story of Genesis is most remarkable.

5. Siouan family (Dakotas, Winnebagoes, Mandans et al welling on the malt, boule of the Min.

dans, etc., dwelling on the right bank of the Mississippi and Missouri valley).—The Mandan branch of the Sioux possess a very complete creation-myth, which bears a strong resemblance to those of the Karaya Indians of the Amazon and the Warrau Indians of Guiana They affirm that the entire great subtorianean lake. The roots of a grape-vine penetrated to their habitation, and some of the more adventurous of them clumbed up the vine, and were rewarded with a sight of the earth, which they coveted because of its lichness in fruits and the plentifulness of buffalo meat. The pioneers returned laden with grapes, the taste of which so enchanted the people that they resolved to forsake their subternanean dwelling for the delights of the upper world. Men, women, and children clambered up the vine; but, when about half the nation had ascended, a corpulent woman who was climb-ing up broke the vine with her weight, and by her fall filled up the gap which led to the upper world. At death, the Mandans expect to rejoin their forefathers in their original seat, the good reaching the ancient village by way of the lake, which the burden of the sins of the wicked will not allow them to cross. The cognate Minnetarees had a tradition that their original progenitor emerged from the waters of a lake, bearing in his hand an ear of maize—a typical example of the culture-hero myth. As regards the actual creation of the earth, the Mandans had a vague tradition, resembling that of the Muskhogees, concerning the brooding of pigeons upon the primeval waste of waters.

6. Californian sub-families.—California was, and

is now, sparsely peopled by a number of Indian tribes belonging to as many as twenty-one distinct linguistic families. The mythologies of these tribes were, however, very similar to one another, and were characterized by unusually well-developed and consistent creation myths, which are perhaps best typified by that of the Maidu, formerly dwelling in the Sacramento Valley and the adjacent Sieria Nevada. Their mythic era appears to fall into a number of periods, each of which is dealt with by a group of myths. It is in the first of these that their creation-myth makes its appearance, with the coming of Kodoyanpe the Creator, and Coyote. They discovered the world, and proceeded to place it in fitting order for its first inhabitants. These they made from small wooden images, but, as they engaged in violent conflict, they were metamorphosed into animals. Kodoyanpe conceived an antipathy to Coyote, whose evil desires clashed with his beneficent wishes, and resolved upon his destruction. In this he was assisted by a being known as the Conqueror, who destroyed many monsters and evil beings which later would have endangered the life of men who were yet unborn. In the last scene of the cosmic drama Kodoyanpe is defeated by Coyote, and takes his flight eastwards - which shows, at least, that he is not a sun-god. The Indians then spring from the places where the small wooden figures of the 'first people' had been Unlike most American creation-myths, buried. this is a veritable creative act, not a mere re-construction of the universe. In the beginning was only the great primeval waste of waters upon which Kodoyanpe and Coyote dropped in a canoe. the origin of these supernatural beings the Maidu were ignorant; but a neighbouring people, the Achomawi, pushed their cosmogonic legend much

14 3 16 16 18 16 1 2 1 1

further back. According to them, at first there existed only the shoreless sea and the clear sky. A small cloud appeared thereupon, which gradually increased in size, and then condensed until it became the silver-grey fox, the Creator. Then arose a fog, which, condensing, became Coyote. The Ashochimi of California told of the drowning of the world so that no man escaped. But, when the waters retired, the Coyote went forth and planted the feathers of various birds, which grew into the various tibes of men. 1

7. Chinookan family (a distinct iamily, formally dwelling on Columbia River).—The creation-myth of the Chinooks is practically the same as that of the Maidu, and relates how Italapas, the Coyote, encountering a heavy surf at a place called Got'at, was afraid that he might be diffed away, and threw sand upon the surf, saying, 'This shall be a pranie, and no surf. The future generations shall walk on that prairie,' The Chinookan mythology is rich in myths of the other world, and in cosmogonic sun-, incon-, and star-myths, which are dealt

with at length in art. CHINOOKS.

8. Caddoan family (Pawnees, Kichai, Wichita, etc., dwelling in Nebraska and Aikansas).—The Caddo believed that they came originally from the under world, and related that the first individual to emerge into the light of day was an old man, carrying in one hand fire and a pipe, and in the other a drum. He was followed by his wife with corn and pumpkin-seed. They spoke of a creator, Atius Tinawa, intangible and omnipotent, whose house was the heavens, and whose messengers were the engle and the buzzard. He it was who called sun, moon, and stars into being, and ordered them their various circuits.2

g. Shoshonean family (Hopi or Moqui, Comanches, etc., inhabiting a lact from Oregon to Texas, and from Nevada to Colorado). -The Shoshonean stock had originally no conception of a Great Spirit. They speak of the earth as always having existed, and of the human race as having emerged through an opening in the earth called the Sipapu, which was identified with the Grand Canon of the Colorado, The dead they suppose to return to the under world. The Sky-father and Earth-mother they hold as re-

sponsible for the upkeep of the universe.

10. Pueblo Indians of New Mexico (Zuñis, etc.). The Zuftis believe that the Creator Awonawi-lona, Maker and Container of all—existed before the beginning of time, in the darkness which knew no beginning. He then conceived within himself, no beginning. He then conceived within himself, and, projecting his creative thoughts into the void of night, evolved fogs potent with growth. He next took upon himself the form of the Sun, the father of men, who thus came into being, and by whose light and brightness the cloud-mists resolved themselves into water, gradually evolving into the princeval sea. Then from his flesh, 'outdrawn from the surface of his person,' he made the seed of two worlds, and fecundated the sea therewith. By the heat of his rays green seums formed, which became the 'Fourfold containing Mother-earth,' and the 'All-covering Father-sky.' Terrestrial life sprang from the embraces of these, and they life sprang from the embraces of these, and they separated. These twain were described as 'transform at will, as dancers may by mask-making (Coshing, op. cit. 379 f.). Then, from the lowest of the four wombs of the world, the seed of men atid living things took form and grew, until the lowest cave or womb grew over-full of living and half-finished creatures, men among them, and the press became so great that Poshaiyankya, the

wisest and foremost of men, arising from the nethermost sea, obtained egress from the first world-cave through such a dark and narrow pathway that movement was difficult. Alone did Poshaiyankya come from one cave to another into this world, then island-like, lying anidst the world-waters, vast, wet, and unstable. He sought and found the Sun-father, and entreated him to deliver the men and the creatures from that nethermost world. In another variation of the legend the people were delivered by one Janaulula, a the people were delivered by one Janauttha, a master magician, who, bearing a stall plumed and covered with feathers, guided imprisoned humanity upward to the light. He then created birds of shining plumage, the raven and the macaw, who were the spirits of winter and summer, and the totems of the two original class of men

LEWIS SPENCE.

COSMOGONY AND COSMOLOGY (Baby-Ioman). - The cosmology generally accepted in Babylonia had its origin at Endu, the primitive scaport of the country, on the shores of the Persian Gulf. Here the land was constantly growing through the deposition of silt, and the belief consequently arose that the earth had originated in the same way. The water of 'the great deep,' accordingly, came to be regarded as the primordial element out of which the universe was generated. The 'Deep' was identified with the Persian Gulf, which was conceived as encircling the earth, and as such was called the Naru Marratu, the 'Bitter' or 'Salt River.' On its unner bank in the extreme north was 'the Mountain of the World,' on which the sky rested and the gods had their sent. An early Babyloman map of the world (Cunciform Texts, axii. 48) places at certain distances from one another on the outer bank a number of nage, or 'coastlands,' which, however, seem to owe their origin to the discovery of the existence of countries beyond the region of the Euphrates and Tigris, made subsequently to the period when the primitive system of cosmology first became an article of belief. In one of the islands off the mouths of the Euphrates and Tigris the Babylonian Paradise was located, where the Chaldean Noah and other ancient

heroes were supposed to dwell.

Apsu, 'the Deep,' belonged to the orderly framework of Nature; the waters of the annual mundation which irrigated the Babylonian plain poured

into it, and the trading vessels which brought wealth and culture to Erdu passed over its bosom. Hence it became the home of Ea, the culture-god of Eridu; his palace was within it, and his throne, the holy paper is was identified with Du-azagge, the holy mound, was identified with an Island which had been formed on the custern side of the Gulf. But there was another aspect under which the watery element could be regarded; the thunderstorm and the whirlwind rose out of the the thunderstorm and the whirlwind rose out of the Gulf, carrying destruction in their path, and the deep itself had once burst its honds and destroyed mankind with a deluge. Under this destructive and anarchic aspect the watery element was known as Tiamtu or Tiamti (Heb. Tihon), which was mythologically pictured as a drugon, the enemy of the gods of light and law. While Apau, the Deep, had been the origin of all things in the present orderly universe, Tiamat was a yet older principle, whose anarchic waters still existed beyond the limits of the universe, in the waters above the firmament and the waters helow the earth and

the firmament and the waters below the earth and sea, which were always ready to break forth once more as soon as the barriers of law that confined

them were removed. The conception of Tiamat

probably emanated from Nippur in northern Babylonia, and was harmonized with difficulty with the cosmology of Eridu (Sayce, Religions of Ancient Egypt and Babylonia, pp. 378, 377). The cosmological beliefs of Eridu are embodied

in a bilingual (Sumerian and Babylonian) poem, discovered by Pinches (JRAS, 1891, pp. 393-408), which, however, in its present form has been much modernized by the introduction of lines referring to Babylon and the other chief cities of later Babylona, and the substitution of Merodach, the god of Babylon, for Ea, the god of Eridu. The original version began as follows:

'No holy house, no house of the gods in a holy place had as

No holy house, no house of the gods in a holy place had as yet been built, No reed had grown, no tree been planted, No bucks been made, no brock-mould formed, No house been built, no city founded, No city built, no man (adam) made to stand upright; The deep was uncreated, Endu unbuilt, The seat of its holy house, the house of the gods, uncreated: All the earth was sea, While within the sea was a current '(hterally 'watercourse,' mannas).

## Then we are told how

[Ea] tred (reeds) together to form a weir in the water, He made dust and mixed it with the reeds of the weir, That the gods might dwell in the seat of their well-being; The cattle of the field (Edinna), the living creatures in the

field, he created;
The Tigris and Euphrates he made and set them in their place,
Giving them good names.
Moss and seed-plant of the maish, rush and seed he created,
He created the green herb of the field,
The earth, the marsh, the jungle,
The cow and its young, the ealf, the sheep and its young,
the lamb of the fold.

Of far later date is the so-called Epic of Creation, which is really a hymn in honour of Merodach and his overthrow of Tiamat and the powers of chaos. As this involved the creation of the existing world, As this involved the creation of the existing words, the poem is prefaced by an account of the origin of the universe as it was conceived in the schools. The cosmology is frankly materialistic, abstract principles taking the place of the gods who are themselves the offspring of the principles, in flagmant contradiction of the rest of the Epic, in which the god Mandada appears as the contradiction. flagrant contradiction of the rest of the Epic, in which the god Merodach appears as the creator. The Semitic idea of generation is invoked in order to explain the creation, which thus becomes a process of evolution, the old animistic objects of Sumerian worship being introduced to form the links in the chain of development. Water remains the primordial element, but an attempt is made to reconcile the antagonism between the two conceptions of this element, according as it is regarded as anarchic or as under the dominion of law, by making Apsu (the Deep) and Tiamat (the watery chaos) complementary principles whose union resulted in starting the evolutionary process. The first lines of the Epic run thus:

rst lines of the Epic run thus;

'When above unnamed was the heaven,
(And) earth below by a name was uncalled,
Apsu (the deep) in the beginning (resta) being their begotter,
(And) the flood (Mummu) of Tiamat the mother of them all,
Their waters were embosomed together (in one place),
But no reed had been harvested, no marsh-plant seen;
At that time the gods had not appeared, any one (of them)
By no name were they called, no destiny [was fixed].
Then were the gods created in the midst of [heaven?],
Lakhmu and Lakhmu appeared [the first]
The ages multiplied, they
Ansar and Kishr (the Upper and Lower Frunaments) were
created...

created . . . Long were the days, forth came . . . Anu their son, [Bel and Ea].'

The cosmogony of the Epic is reproduced by Damascus, a contemporary of Justinian (de Prim. Princip. 125 [p. 384, ed. Kopp, 1826]).

\*Trmcvp. 125 [p. 384, ed. Kopp, 1826]).

"The Bubylonians,' he says, 'like the rest of the barbarlans, pass over in silence the one principle of the universe and constitute two, Taythe (Tiamah) and Apason (Apsu), making Apason the husband of Taythe, and denominating her "the mother of the gods.' And from these proceeds an only-begotten son Möymis, which, I conceive, is no other than the intelligible world (voyrbs kóruso) proceeding from the two principles. From Vol. 1V.—9

them also another progeny is derived, Lakhé and Lakhos (conjupted in the MSS into Dakhé, Dakhos); and again a third, Kisaua and Assóros; from which last three others proceed, Anos and Illillos (corrupted into Illinos) and Aos. And of Aos and Dayké (Damkina) is bein a son called Belos (Bel-Merodach), who, they say, is the fabricator of the world."

Here Munmu, 'the flood' or chaos, who is identified with Tiamat in the cunerform text, becomes the son of Tiamat and Apsu, and is accordingly explained by Damascius as the ideal world—that is to say, the world as it exists in the wind hefore it is replaced extraplly. Such as mind before it is realized externally. Such an explanation, however, is excluded by the Epic, where Mummu would rather correspond with the 'darkness' which in Gn 12 is said to have been

'upon the face of the deep.

According to the Babylonian legend, the appearance of the gods of light and order was followed by the revolt of Tiamat (or, as it would seem, according to another version, of Apsu). But the powers of darkness and chaos were overthrown by Bel-Merodach, who cut Tiamat in two, and stretched the sky across one of the two halves, thus preventing the waters which were in her veins from breaking forth again, while the other half was similarly confined under the earth and sea, the springs of which it feeds. The conquest of Tiamat was followed by the creation of man, who was brought into existence in order to build temples and alters and offer sacrifices and prayers to the gods. The world, however, had to be prepared for the recep tion of man by fixing the movements of the celestial luminaties, and so regulating the sacred calendar, and then by creating plants and animals which could be offered or used in the service of the temple. The heavenly bodies had existed before the war with Tiamat, since the deities with whom they were identified had been the offspring of the trimity or triad of Anu, En-lil, and Ea. Indeed, Bel-Merodach himself was originally a Sun-god.

In the Epic, allusion is made to another system of cosmology, which ascribed the universe to the creative word. Merodach is described as destroying and creating by his word alone, and so proving his fitness to destroy the forces of anarchy and create a world that should be governed by law

Another system of cosmology was that which emanated from Nippur (now Niffer) in northern Babylonia. In this Tramat, the dragon of the subterranean waters of chaos, was the elementary principle, the earth having risen out of it in the form of a mountain. The brood of chaos, composite creatures who belonged to a first and imperfect creation, continued to exist in the dark underground, which was also the dwelling-place of the ghosis and demons of night. How the world-mountain was believed to have been formed How the we do not yet know. At the Syrian Hierapolis (Membij) the waters of the deluge of the Babylonian Sisythes were believed to have drained off into a cavern beneath the temple, which was accordingly kept securely closed, and Simi, the daughter of the supreme god Hadad, was said to have put an end to the attacks of a demon by filling the pit in which the monster lived, with the water of the sea (Cureton and Renan, in Pitra, Spicilegium Solosmense, ii. p. xliv).

the researches of natural science: when a monk wants to know where the material elements (earth, water, etc.) stop in their extent, the Buddha explains, by way of answer, how people are delivered from desire and from existence. Obviously that is where the problem hes, the exterior would, in fact, exists only as long as one; conscious of it (Dipha, 1 215).

It is probable that a large number of Buddhists, in the extent with the constant of them, matter.

imbued with the 'moraham' of their master, avoided frivolous curiosities,—'non-Buddhist' 'mundane' disciplines (lokāyutu),"—and were content with denying, on the one hand, a supreme personal creating power (a lord, Iśvara), against the theists, the Brāhmans; and, on the other, the innate independent power of things (svabhāva), against the svabhavavaduns, the materialists. The formula, 'The diversity of the world comes from the act,' s contains for a well-informed Buddhist the Alpha and Omega of the necessary cosmological information.

But, long before the time when the Mahayanist books demanded that the learned Buddhist, the preaching Bodhisattva, must have a knowledge of lay sciences, a Buddhist cosmology was formed, constituting a very well developed collection of various opinions and systematizations; and, in fact, accurate information on cosmological questions seems to have been as ancient as the state-ments defending or ridiculing the speculations of

ments defending or ridiculing the speculations of this kind which we recalled above.

The aim of the present attale is to give an outline of Buddhlat cosmology, without entering into details (except on a few points which have not yet been published, or are obscure), and without spending time over variants. It should prove interesting, and profitable for the history of the sects, to study the history of the various theories, to distinguish the most ancient elements and aspects of them, and to note the succession of borrowings, inventions, and arrangements. Such a study, however, is possible for only a limited number of the theories; we shall endeavour to pursue it wherever we can with prudence

(2) Meaning of the word.— Cosmology seems to be the most accurate translation of lokuprujūapti, 'world-teaching,' a term denoting that part of

'world-teaching,' a term denoting that part of the Sarvästwädin Abhidharma ('summaries and systematization of matters of doctrine' [see Abhidhamaa, vol. i. p. 19]) which deals with cosmological problems—the origin, arrangement, and destruction of the universe.

and destruction of the universe. But the lokaprajnapti deals also with questions that we do not include as cosmological: the Buddhists, in fact (at least the Sarvástivädins), distinguish two 'worlds' (loka)—the bhājannloka, 'receptacle-world,' b the universe as the abode of heings (statua), and the sattvaloka, 'world of heings,' i.e. the mass of living beings. There are, accordingly, two lokaprajnapti, the first a 'cosmology,' the second a 'zoology' (sattva=too).' There are, naturally, close connexions between these two 'worlds,' for the first 19 made for the second, being created and arranged to form a shelter for it. The whole of demandors, anthopology, and theology (i.e. pantheology) is connected with cosmology. Although it is difficult to separate the two, we shall give special prominence to the facts considered by our sources as relating to the 'recephacie-world' (bhājanuloka); e.g., the abodes of the gods, the length of their lives, the dimensions

while their psychology and the right they possess or do not possess to the evercise of virtue are '700logical' (adtivatatisha). The beings, likewise, in one and the same class, unlabiting the same part of the 'receptacle-world,' may differ in their method. of generation; men, seipent-diagons, and gandas (mythrebids) are not always born from the womb of the egg, the challavartin longs (see art. Charravartin, vol ni. p. 336f) issemble gods far more than men, etc —none of this is cosmo-Nevertheless, in order to understand the cosmo-

of their bodies, and their 'non-embryogeny' are 'cosmological,'

logical system, we must know the main lines of the distribution of beings (sattvalolus). There are the distribution of beings (sattvaloka). There are (1) 'immaterial' beings, who form the 'immaterial' category (dhātu), the ārūpya; they are nowhere; they have no place in the 'ieceptacle-world' (but see below, §8); (2) beings called 'material' (rūpin), but of a subtle material; they inhabit the higher part of the 'receptacle-world,' i.e. the rūpadhātu, or 'material category or region,' according as we regard the beings or their habitation (see § 7); and (3) material beings, of crosser substance the lower (3) material beings, of glossel substance the lower they are in the scale, living in a world of gross material, concupiscent (kāmāvachura, kāmubhug, kāmaprabhāvita), and subject to sensual and especially sexual desire (men alone are capable of continence, sameara, in this respect); these beings occupy the lower part of the 'receptacle-world,' the kāmadhātu, or 'concupiscence category or region.'s

On the other hand, beings are divided into five categories, two good and three bad, called gati, 'destinies,' 'kinds of existence,' themselves further subdivided into numerous sub-gatis: (1) the gods (devas) of three classes, according as they constitute the first dhātu (four kinds), or inhabit the second dhātu (sixteen kinds and sixteen 'places,' āvāsa), or inhabit the third dhatu, the kamudhatu (six kinds and six 'places') (see below, § 6); (2) men, who are allotted four places, the four continents (see below, § 4); (3) ghosts (precas), one place [see below, § 5 (ii.)]; (4) annuals, one place [see below, § 5 (ii.)]; and (5) the danned, eight places: eight hells [see below, § 5 (i.)]. According to this division, there would be twenty places in the kāmadhātu. Indeed, it is not at all a satisfactory division, for there are numerous categories of beings who have no place in it, notably the of beings who have no place in it, notably the

of beings who have no place in it, notably the asurus.

Many treatises, some of them of ancient date, regard the asurus as a sixth gatt, placing them between men and chosts (see JPTS, 1889, p. 106 (this is the opinion of the Andhakas and several Utturāpathakas); Burnouf, Lotus, 1862, p. 309 (SBE xxi. 7); Pitāputrasamāgama, ad Hodhicharyāvatāra, ix. 73; JPTS, 1884, p. 158, etc.). But the authorities on Abhidharma (Rathawatha, yinl. 1); the Sarvaistivādin sangitiparyāvajūn JPTS, 1905, p. 1023; Chandrakīrti's Panchaskandhaprakaraga) hold that the asuras are not a gatt. Some of them have the same colour, pleasures, and length of life as the gods or the ghosts, and internarry with them. Nevertheless, the sauras have a weil-defined place or places (see below, § 5 (iv.)). As regards the numerous demi-gods, good and had genii, vampires (rākṣasas), dragoms (nāgas), du ine birds (garufas), and celestial musicians (gandharras, cf. Mahāvyātpatāt, § 160), some of them have a definite place in hell (demons of lorture), at the foot of Meru, or near the detiles whose followers ocommensals they are (see below, § g ad fn.); others have the position rather of magician-ghosts. Popular mythology had shrewd theories concerning them, but they do not appear to have much importance in "cosmology" (lokaprajūapti).

(3) Sorucces.—The most systematic work on Buddhist cosmology is undoubtedly the second I Rūpa is usually translated "form, arāṇa, "formless," and ārāyā, "formless," and ārāyā, "formless, and inter" (see C. A. F. libys bavids, Buddhist Psychology, London, 1000, p. xilii JPTS, 1834, p. 271. Mahāvyūpatti, § 101, etc.).

2 Generally translated "device-phere," but "desire' is inaccurate. There is desire, attachment (rāga), in the "region of concupiscence there is also 'attachment to sensual pleasures' (kāmarāga), 'concupiscence.'

3 Cl. al-Birāni on 'the different classes of aveated beings and their names,' India, tr. Sachau (1910), ch. vili.

On karma as the cause of the universe, see art. Karma.

4 e.g. Bodhisattradhiumi, ch. vili.

5 This last part, the destruction of the universe, has been treated in the art. Acrs of the Wolld (Buddhist), vol. i. p. 189. The Athidharma of the Pall language does not seem to include any lokapaithattis.

6 This expression does not appear to exist in Päh, where we find sahiharatoka, 'material world' (including trees, etc.) (see Childers, Dict. of the Pall Language, London, 1875, p. 463), and okazatoka (=carahastaloka), 'room-world.' Spence Hardy (see Childers, p. 299) translates 'the world of space,' 'the farestended vacuum' (see Visualthimagga, yil. I'PTS, 1891-5, p. 991).

7 The maggala pahitatis, which constitutes one of the sections of the Pall Albidharma (I'PTS, 1883), is the enumeration and definition of the various categories of 'individuals,' noble individuals' (Brapaudpalus), etc., from the moral standpoint, particularly from the point of view of their progress in the 'wey' of hirodia (I'PTS, 1805, p. 183).

treatise of the Abhidhai ma (Abhidhai maśāstra) of the Sarvāstivādin school, entitled Prajūaptišāstra, the first section of which is the Loluprajianti (Tanjui, Mdo, lxii.; see Takakusu, JPTS, 1905, pp 77, 117, 142). On this section is based the Abhidharmakośa of Vasubaidhu² (ch. iii st 1-14 sattvalolu, 45-102 bhāyanalolu), known particularly tor the commentary of Yasomitra, Abhulhurma-

kośavyākhyā 3 A Tibetan work of the end of the 18th cent Dpag-bsam-ljon-bzan (=Kalpadruma), ed. by Šarad Chandra, Calcutta, 1908, refers to the same Abhidharmakosa, which is quoted by Georgi, Alphabetum Tibetanum (Rome, 1762), p. 470, and used, along with other Sarvāstivādin sources and the Chinese literature of the two vehicles, by S. Beal, Catena of Buddhist Scriptures (London, 1871), p. 15 f., the most complete work that we have on the subject

as yet.
'The ancient sources (Pāli and Skr. 'Intile Vehicle'), which are the most interesting of all, are somewhat scanty and scattered; they will be mentioned ad locum.

The Palı commentaries have had little attention from this point of view. Probably most of the information they contain has passed into the works of Spence Hardy, Manual of Budhism (London, 1860), and Legends and Theories of the Buddhists (London, 1866),4

2. Foundation of the universe the 'great elements.'—(a) An important cosmogonical feature can be traced in the earliest Buddhist\_texts, and is evidently pre-Buddhistic. When Ananda inquires as to the causes of earthquakes, Buddha answers as follows: 'This great earth, Ananda, is established on water, the water on wind, and the wind rests upon space. And at such a time, Ananda, as the mighty winds blow, the waters are shaken by the mighty winds as they blow, and by the moving water the earth is shaken.' Another Rasyapa: 'On what rests the earth?'—'On the circle of water.' 'And the circle of water?'—'On the wind.' 'And the wind?'—'On the ether.' 'And the ether.' The ether does not rest on anything; it has no

And the ether '?'—'You go too far, O Biāhman The ether does not rest on anything; it has no support's (see below, § 9).

1 By the kindness of Dr. Cordier, the present writer has been enabled to use extracts from this work, for the dvipas in particular (see below, § 4) Prof Takakusu seems to be mistaken when he says the section does not evist in Chinese (see p 118 of his art).

2 On this work see the article in vol. 1, p 20, Burnout, Introduction a l'hist. du bouddhisme indien, Paris, 1844, pp. 663-574 ft.; and the article of Takakusu The present writer is indebted to Mr. F. W. Thomas for a copy of ch in (Tibetan tr.).

3 This source will be quoted as A K.V., and the folio in the MS of the 'Souché assatique' will be given, sometimes reference will be made to the MS of Burnouf (Burn.) in the 'Bibliothèque nationale.'

4 The European works most frequently referred to in this art, arc: Warren, Buddhism in Translations (Cambridge, Mass, 1896); Burnouf, Lotus de la bonne loi (Paris, 1852), and Introduction à l'hist, Au bouddhisme indien (Paris, 1844); Remusat, Melanges posthumes (Paris, 1848); Georgi, Alphabetum Tibetanium (Rome, 1762); Koppen, Retagion des Buddha (Berlin', 1857-65); Waddell, Buddhism of Tibet (London, 1896); G-A. F. Rhys Davids, Buddhist Psychology (London, 1900). See also literature at art. Aces of the World (Buddhist).

5 See Dipla, il. 107 (SBE A. 46), and ct. Divipacation, p. 204; also Anguttara, iv. 312; Milinda, p. 68 (SBE xvvv. 100), Beal, Cutona, p. 47. The authorities of Remusat, Melanges post-humes, p. 70 ft., sometimes and a cincle of fire between water and wind, and a circle of diamond (where the relies of the Buddhas at e enclosed) between wind and ether.

6 Quoted in A.K.V., and translated by Burnout, Introd. p. 448 (see SBE xxxv. 100); cf. Madhjamakawrtt, p. 166, n. 5; Sankara, ad Brahmastirus, n. ii. 4, Rämännija, ad n. iii. 1. For the Vedic origins of this notion, spoken of hy Burnouf, ef. Brhaddiravapakop n. 6; Alitaraparahmakan, the vaters, the waters on the reality (tuth, satya),

(b) The Buddhists admit four 'great elements' (mahābhāla), called great because they are the sub-same of all material things, they are earth, water, the, and wind, or, as Mis Rhys Davids expresses it, earth element, find element, film element, and an element (for their specific qualities reference may be made to Dhammassingam, § 9021-80 A. P. Rhys Davids, Bud. Psych. p. 2111, and to Vivuldhanagaa, v. [11. by Waiten, ap. cit. p. 157], where then functions in the human body are especially treated Cf. also Majhima, 1 185 and in 240 ignoted in A K 1. Burn 12a], and Sidvāvamachohaya, p. 244, a te cast of Majhima, ii 1210). The 'great elements' constitute the bhātarāpa, 'element matter,' whence is derived 'elementary matter,' 'dependent matter' (bhautikuh iūpam, upādāja jūpam), eg. the sense-organs, in so far as they are distinct from 'the eye of flesh,' etc. This kind of matter is subtle and gross (sūkṣma, manīta, audārīka, hīna).

The common Indian belief that there is a lifth great element, viz ether (or space, āktāsa),2 is accepted by the Valbhāsikas, who quote the sūtha mentioned above [a (a)]; and it would not be difficult to film documentary or logical aiguments in then favou. [Ākūša is reckoned a dhātu (a teim that often denotes 'element', prithichidut, 'carthy-element,' etc.), and the Abhūdha ma ranks it in the category of rūpa (natter) | But for the Sautiāntikas and Mādhyamikas ākūša is simply 'space' (not 'ether'), 'vou' 'vyoman-sky, not a thing (arīta), but simply the absence of anything (angible, that which gives place to things, whence its name (arakāšath ādažātiy ākūšam),3 This is only a name, as the past, nārvāna, and the person (pudgāla) are only names (says a sūtra). But the Buddhists do not deny a 'far extended vicuum,' eternal, infinite, not made (asañski la), the great nonentity to which, according to the materialists (Dūpha, i. S. Sanyūta, ii 207), the senses and melligence return at death.

3. The small universe ' general notions.—
We shall see below (§ 9) that the Buddhists magined great 'cosm

the old Indian and Brāhmanic geographical notion: in the centre of the world is a great mountain (Meru, Sumeru = Himālaya), where the gods dwell, and round which the sun moves. To the south hes India (Jambudvīpa); to the other sides, the other continents. The following is the Buddhist description, in its most systematic form (Abhidharmalosa and commentary). When the time has come for a new creation, after chaos, when every-thing is burnt up or 'volatilized' (see art. AGES OF THE WORLD-[Buddhist]), the heaven of Biahmā appears first of all (and the gods who had been re-boin in higher heavens come to be ie-born here); then the heavens of the gods Parani mitavasavartus, Nurmānaratis, Tusitas, and Yāmus (see § 6); next, much lower, come (1) the wind-earch s oj; next, much lower, come (1) the wind-circle (väyuynandala), mfinite in surface, resting on space, and 1,600,000 yojanas (or leagues) in thickness. On this wind-circle, the cloud of the creation pours a sea of 1,120,000 leagues of golden water in a circle of 1,203,450 leagues' diameter. This sea, set in motion by the wind, gives (2) the water-circle (āpmandala), of 800,000 leagues' thickness, and (3) the golden earth (kānuhanguana) ness, and (3) the golden earth (kānchanamayī bhāmi), which rises to the top like cream on milk, 320,000 leagues in thickness. The cloud then pours on this golden earth gold, precious stones,

pours on this golden earth gold, precious stones,

10 A. F. Rhys Davids (op cit. pp. 166, 197, 205) translates

mahābhūta 'the things-that-lave become, die grossen Gewordenen, 'a vyrybew, a tar mure scienthic term than elements or

orocycla'; but possibly the expression nuchābhūta is preBuddinst, and is used in a sense that is not specifically

Buddhist. What is not matter (rūpa)—thought, etc.—although

becoming 'par excellence, is not bhūta.

2 There is a good summary on alaša, 'space' or 'ether,' in

Vasudev Anant Sukhtankai, Vedānta according to Rāmānuja

(Vienna, 1908), p 52. See also Burnout, Lotus, p. 515, Sūka

Davids, op. ctt. p. 198 (ct. Yisuādhimagya, JPTS, 1891, p. 124,

and JPTS, 1834, pp. 27, 29).

4 Akāša is great, since it gives place to the production

(bhawa') of all rūpa, but it is not a bhūta' (Chandrakīrtī,

Padohaskandhaprākaraya, p. 275a).

4 Certain sources give the names of the whiriwinds of this

wind-cipel; see Beal, ('atena, p. 101; of. below, p. 187.

According to Abhātharmikoša, iii. 87, tha yiqana = 8 kroša (=

the length the voice can carry) = 4000 'arcs' (danāda 7) = 16,000

hands (Aasta, i.e. 'oubits') = 16,000 × 24 lingers (angut).

earth, water, iron, etc., which form (a) in the centre of the system, Mount Meru; (b) eight mountains, or concentric chams of mountains, soven of which (of gold) are quite near Mein and near each other, while the eighth (of iron) is almost at the very edge of the system; (c) oceans flowing between the concentric mountain-chains; and (d) islands, notably four great islands or continents situated in the largest of the oceans the 'exterior' ocean, between the 7th and 8th mountains.1

The outside mountain is called Chakravala, and this name is also applied to the entire 'small universe,' lokalhātu, or chāturdvīpakalokadhātu,

'four-continents-universe.'

four-continents-universe.'
Chakanāla (wila, viāda, file Salwala of Sp. Hardy) = curcle, 'Chraclet', 'horizon' (see E. Senatt, Essat sur la légende du Buddha 3, Paris, 1892, p. 6 ft.). In the northern sources there are a chakvarāla-mountain and a great-chakva alda-mountain called 'black mountains' or 'time-mountains' (kālaparvada: see Mahesvara, ad Amarakoša, 2, 2, 2; Dharmasanan aha, \$ 124; Lalitavistara [Halle, 1903], p. 132; Lutus, in SBE and 233; Elsevanuchehapu, p. 240) Perhaps the 'great chakvavāla' envelops a group of small universes (see below, § 9). Between three nunciese, which four three tangent circles, there is a dark region, 'intramundane darkness' (lokāntarīka), a special hell—a cesmie abys, which recalls the anarambhanan tamas, 'unsupponted darkness,' of Rigreda, I. 182, 0, vii. 104, 3 (see Digha, com. on i. 12, Sp. Hardy, Lepends, p. 110; Burnouf, Lotus, p. 832; and Beal, Latena, p. 61).

The from-mountsin-range, Chakravāla, lika the

The iron-mountain-range, Chakraväla, like the continents, rests on the golden earth. It is 3121 leagues high and 3121 broad, and 3121 leagues above the level of the exterior ocean which it surrounds. This ocean is 322,000 leagues in extent, and is bounded on the inner side by the Neminand breadth, and 312½ leagues in projection (above the ocean's level). Then there is an ocean of 1250 leagues; ³ then Vinataka, 'nadined,' 1250 in height and breadth, 625 in projection; an ocean of 2500 leagues; ¾ Sukarya, 'horse-car,' 2500; an ocean of 5000; Sudarsana, 'heantiful,' 5000; an ocean of 10,000; Khadiraka, 'acacia (2),' 10,000; an ocean of 10,000; Khadiraka, 'acacia (2),' 10,000; an ocean, 20,000; Isūdhara, 'plough-pule-bearing,' 20,000; an ocean, 40,000; Yugundhara, 'yoke-hearing,' 40,000; an ocean, 80,000 leagues above the letter of the ocean, 80,000 leagues broad, and 320,000 leagues in perimeter. The distance, therefore, from the axis of Meru to the Chakravala-mountain is 600,437 5 leagues; the diameter of the whole is 1,200,875 (Athidharmakosa). dhara rango ('felly-bearing'), 625 leagues in height 1,200,875 (Abhidharmakosa).

1,200,375 (Athithurmakoša).

As regards the order of the mountains, we have followed A.K.V., Dinyivadina (p. 217), iteal, Eirel (Hamiltonk of Chinese Buddhism, London, 1888); there are currous variations in Maha-ayutpatti, § 191; Dhurmasahuraha, § 125; Mahawastu, 1, 300; Siksus, p. 246; Visuddhinayaga, and Nempidtaka (Vaiaka, vi. 126). Cl. a curious discussion in Burnoul, Lotus, p. 344, on the commentators on some of these divergencies; cl. also Sp. Hardy, Legends, p. 82. The names of the mountains are sometimes doubitul, e.g. Isadhara, Isa

is 10und, i.e. it has three sides of 2500 leagues (perim. 7500); length of human life, 500 years; height, 16 cubits. (4) In the north, the Uttura-kuru, Northern Kuru-land (2 (Auttarakurava), is an oblong, 4×2000 leagues. There are neither villages nor towns; length of life, 2000 years; height 22 cubits. height, 32 cubits

Villages for bowns; length of the, 2000 years; height, 32 cubits

The above dimensions are those of the Lokaprajuapt and the Abhadharmakosa (i 53 f). The Latitanstara has them arranged in this order—9000, 7000, 8000, and 10,000 lengues; Sp. Haidy has 7000, 10,000 (in length and breadth), 7000, and 8000

In the diagrams which the Buddhist cult (Great Vehicle and Tantrism) uses for the 'offering of the universe,' the continents are represented '(1) half-moon (arahachandia) and white, (2) tilangular (tryas'a) and golden, (3) orcelar and ied, and (1) square and dark blue

According to the 'northein' sources, there are alongside of each continent two small continents (upadvipas), of the same shape but half the size, in the following order, starting from N E E: Deha and Vidcha, Chāmara (Chowie [?]) and Aparachāmara (Western Chowrie), Sātas-island and Uttaramantrinsara monstrous creatures with three eyes, legs, and ears (Kalpadruma). According to Jātaka, 1 63 (Warren, p 64), there is an archipelago of 500 islands round each continent.

The Mahāvyutpath nomes the last four 'little continents' according to the names of their inhabitants (of. uttarāh kwavāh [Mahābhārata, vi. 208])—Sāta, an inhabitant of Saṭa, an ancient goographical name, although the readings Sāṭa and Sāṭhā have a feminine appearance; Tibetsai gyo-tāda, 'deceitār!'(= saṭhā); Uttaramantrin=lam-mahog-hayo, 'bestway-going.' For kwi us and kauravas (gya-ma-ma-sātan-zāa, according to Desgodins), see Waddell, p 399.

5. Unhappy existences (apāya).—(i.) The

5. Unhappy existences (apāya).—(i.) DAMNED.4—(a) Hot hells.—Twenty the thousand DAMNED. —(a) Hot heurs.—I wenty information leagues under Jambudvīpa (the southern part, or part under Bodh Gāya) is the Avīch hell ('no release' [?]), forming a cube of 20,000 leagues. Above it are seven other hot hells, called (in ('no release' [1], forming a cube of 20,000 leagues. Above it are seven other hot hells, called (in descending order): (1) Sañjīva, 'reviving,' because winds re-animate the dying danned; (2) Kālasūtra, 'black sting,' which cuts the danned into pieces (cf. JPTS, 1884, p. 76); (3) Sañghāta, 'dashing together,' between mountains, etc.; (4) Raurava, 'weeping'; (5) Mahāraurava, 'great weeping'; (6) Tāpana, 'heating'; and (7) Pratāpana, 'gleatly heating' (A.K. V. ad iii. 58)

Some authorities (cf. A.K. V. and Beal, Catena, p. 57) think that the hells are pyramidal in shape, each of them being smaller towards the upper part, 'like a heap of grain'. We are told also that each hell is 4000 leagues deep. According to the Kalpadarma, there is, first of all, a layer of 500 leagues of white clay, then 500 leagues of black clay, then the Sañjiva and the other six hells occupying 10,000 leagues, the last of them. Pratipana, reaching 19,000 leagues underneath the surface of the Jambulavipa; then the Avichi is 20,000 leagues.

No name seems to exist in the earliest Pāli texks for the burning 'great hell' of Majhima, i. 337, ni. 167, 183 (cf. Anguttara, v. 76, etc.). This hell is clearly the Avichi of the later therature of See, e.g., the description in Majhima of the ma-

1 π=3 in the Abhidharmakośa. Sp. Hardy has 3 14285

1 m=3 in the Abhidharmakosa. Sp. Hardy has 3'14285 (Manual, p. 10).

2 Different from the Kurus (Central India) and the Southern Kurus. It is Ptolemy's Ottorokorra (see art. Blest, Abode or the Ebest, Abode or the Ebest, Abode or the Ebest, Abode or the Ebest, and also achyetica, iv. 396, on the moral and spiritual characters of the Uttarakurukas). The Thetan translation of this word, like several others, is onomatopoetic, syra-ma-shan, 'disagreeable sound (ku-yava; ku-\rangle ru, u, a pejorative, ru, 'to make any noise'), 'for during the seven days before death, one heavs the disagreeable sound of the death.'

3 See 'Adikarmapradipa,'in Pousin, Bouddhame, Etudes et Materiauxa, Brussels and London, 1808, p. 224; Waddell, Lamaism, p. 38 (wite plate); Georgi, Apph. Tibetanum, p. 472.

4 See art, Hed. Buddhish. The chief sources for the Buddhist hells are A.R. V fol. 266; Kalpadruma, p. 57; Mahdaustu, i. 4; Nāgāsrjuna's 'Epistle,' in JFTS, 1884, p. 154; Ball, Ottanu, p. 57; Waddell, Lamaism, p. 92; and on the pains, Arguitara, i. 188 (Warren, p. 257); Divyāvadana, p. 875; Mahdaustu, i. 189 (Warren, p. 257); Divyāvadana, p. 875; Mahmanical and Hindu sources is instructive and necessary (see especially Feer, 'L'Enger radiem,' m. JA, 1892, ii, [partly translated in the JBT'S of India, 1894, pl. iv. app. 11.).

6 Of. Sp. Handy, Manual, p. 27. Waddell makes the hells begin 11,000 leagues below the surfaces:

6 Avicht, 'no refuge,' 'no release.' The Chinese sources mention varnous regions in the Avicht; of. the Eaddharmusmrtyuntshana (Nanjio, Catalogue, 1883, pp. 679, 804) quoted in Sikrāsamunchauga, p. 681, the 'terribe birds' (8000 leagues), 'the infernal precipice,' 'the hole with wheels,' etc.

hānvaya, which has three names (1) chhuphassāyatanika (cf. Sanhyutta, 1v 126), 'sıx olgans (suffering)'; (2) suhkusamahata, 'ieumon of jas elins,' because every thousand years (cr. every hundred years) two javelins pierce the heat of the damned, and meet inside it; and (3) pachchattavedaniya, 'to be known only by personal experience.' After innumerable centuries the guilty one passes into the utsada, a zone which suriounds the great hell, and where there is access through four gates to the four cardinal points, and there suffers the pain called viithānima.

On each of the four sides of each hell there

On each of the four sides of each hell there are four utsadas (ussada; osupat in Sp. Hardy, Manual, p. 27), excrescences (cf. narakakumbha, 'hell-jar,' 'hell-prominence'), ante-chambers, or rather 'post-chambers,' of hell, in which the damned in succession are tortured on leaving hell damned in succession are tortured on leaving hell (in which they are sometimes finally rejected). They are: (1) hukūla (hukūlu), 'fiery pit,' 'chaff-fire'; (2) hunupa, 'corpse-quagmire' (cf. gūthaniraya); (3) hsuramārga, 'nazor-road,' etc. (etc. = asspattravana, 'sword-leaved forest,' and sādmalīvana, 'seemul-forest' with cruel birds); (4) the nadī, 'river,' by its name Vastaranī, the Indian Stry, which is conjectured to be as early as Indian Styx, which is conjectured to be as early as the Brähmanas (cf. Khārodakā nadī [Majjhima], A K. V. iii. 59).1

A K.V. iii. 59).

Hell contains suxteen utsadas (bryyad-po kun-la lhag bou-drug, to each of the eight, sixteen utsadas '[A.K.V.]) A primitivo idea, which is more satisfactory, is to legard the four utsadas as so many zones surrounding the igneous cage in the centre.

The damned of the Sanpiva live there for 500 years of 12 months of 30 days, but each day is equal to the length of the life of gods in the heaven of the Four Kings (see below, \$6), and so on, life in the Tāpana being calculated as a function of the life of the param mitaasasvaviting ods (see ib.). In the Pratiquan life lasts for half of an antaralalpa (see art. Ages of the Pratiqual (A.K.V.). The interpretation of the Kosa is, therefore, similar to Buddhaghosa's (Kathāvatthu, xm. 1), which fixes the existence of the damned, called kalpastha, 'Insting a kalpa,' at ½ of a (great) kalpa, while the Rāyagurikas understand a great kalpa here (see the texts concerning schimators quoted above) 2

(b) Cald hells.— According to the northern

here (see the texts concerning schismatics quoted above) 2

(b) Cold hells.—According to the northern sources, eight cold hells are distinguished: (1) Arbuda, (2) Nirarbuda, (3) Atuta, (4) Hahava, (5) Huhava, (6) Utpala, (7) Padma, (8) Mahāpadma. (1), (2), (6), (7), and (8) are named from the shape of their inhabitants; in (1) and (2) the damned are like arbudas, 'a round mass' ('bubble,' tumour,' first-month fetus'); in (6), (7), and (8) they resemble lotuses. The names of (3), (4), and (5) are onomatopoetic: the teeth of the damned, knocking against each other with the cold, produce knocking against each other with the cold, produce the sound atata, etc. (A.K.V.).

These hells, which are 2000 leagues deep, are arranged in stages, like the hot hells, and near arranged in stages, like the hot hells, and near them (Kalpadruma); or—a view which seems preferable—they are placed in the 'intra-mundane darkness' (lokāntarika niraya), among the Chakravālas (Beal, Catena, p. 64, according to Abhidharmasāstra; Dialogues, ii. 9). Sp. Hardy (Manual, p. 59) places the ghosts (pretas) in this darkness. The ancient Pāli texts, Samyutta, i. 152, Anguttara, v. 172, and Suttanipāta, p. 123 (SBE x. 119), give the same nomenclature with a few variants and additions (Kern, Manual of Ind. Buddhism, Strassburg, 1896, p. 58); but the names, originally at least, did not refer to distinct hells. They denoted the periods, increasing by the multiple 20,

noted the periods, increasing by the multiple 20, during which the damned person lives in hell: 'If there were a load of sesamum seed containing sixty bushels (20 khārīs), and a man after the lapse of

bushels (20 lehārīs), and a man after the lapse of tavasu, geomy's count's count cou

every hundred years were to take from it one sessimum seed, that load would sooner dwindle away than one Abbada hell; and even as are away than one Abbuda hell; and even as are twenty Abbuda hell, so is one Nirabbuda hell. The Abbudha makośa (ii. 81) has the same method of counting for the arbuda, etc. Arbuda, etc., are what are called 'high numerals' (Abahavyutpatti, § 246 [191-192], § 250 [9-14]; see Aris of the World [Buddhist], vol. 1. p. 188b).

WORLD [Buddhist], vol. 1. p. 188<sup>h</sup>).

(c) There are some helts about which we know nothing but the name, e.g. the Schisaraka (Vinnina atthu, p. 50), and the traditions of the treat Vehicle are iten in multiple inventions. We may mention the helts that the Thecas call's phenomena, by by, Shi problem, a creptional relief of Beal (l'atena, p. 50), Shi problem, a creptional analysis of Beal (l'atena, p. 50). They are issued to small sins or for special categories of sinners (see all Boom striva, vol. li, p. 7419). They are found on the borders of the hells, in the occan, in the world of men, and in the deserts of Jambudelipa. There are \$1,000 of them.

(ii) A NIMALS = The amirnals form the class im-

(ii.) Animals.—The animals form the class immediately above the damned. They are divided into many categories (e.g. Majhimi, no 129), and their special abode is the 'exterior ocean'; but, as everybody knows, they are met with in the world of men, and (in spite of what certain heretic-say) not in the world of the gods (Kathavatthu,

xx. 4).
(iii.) Pretas, 'the dead' or 'ghosts.'—The

(ii.) Pretas, 'the dead or 'ghosts,'—The popular beliefs concerning the dead have not yet been systematized, as may be seen from the Priawatthe and the literature of every epoch (see art.) Death, etc. Buddhish, State of the Diad linddhish, etc.). Speaking generally, we may say that the pretas dwell almost everywhere throughout the world of men, but especially in the kingdom of Yama, which is divided into 36 provinces, situated 500 leagues below Jambadapa. There they live 500 years, a day being equal to a human month.\(^1\) (iv.) Asuras, 'non-tods'\(^2\)—There also de is especially in the caverns of Mount Meru, below the level of the sea, where there are four towns of 11,000 leagues, at depths of 20,000, 40,000, 60,000, and 80,000 leagues, namely, 'Shining,' 'Startassel,' 'Deep,' and 'Golden town,' with Rahu (the spirit of the celipse), Kanthamälädhara, Puspamälädhara, and Vennachitia as kinga.\(^3\) But they often leave their abysses to conquer Meru, and fight with the 'Thirty-three gods' and their vanguard (dragons and yaksas); hence the mistake made by some authors in saying that they dwell on the hourth stage of Man.\(^3\) made by some authors in saying that they dwell on the fourth stage of Meru.

There is an infinite number of gakşas (gakkha, 'a being to be worshipped,' a poworful spirit' [Kern, Manual, p. 59]), terrestrial (bhauma, living on the surface of the earth and under the earth), atmospheric, etc. There entegories occupy a special place in our sources (Abhudharmakosa, iii. 56) as inhabitants of Mount Meru.

On Mern there are four terraces (purisanda, ban-rim) of 16,000, 8000, 4000, and 2000 leagues, separated from each other by 10,000 leagues. The fourth is reserved for the Four Kings, who are classed as gods (devas) (see below, § 6); the other three are inhabited by (1) the yakyus karotapānis, bowl in hand, (2) the yakyus mālādharas, 'bearing

1 A study of the pretus 'with magical power,' and of the king of the pretus (petitraja), as well as that of the 'guardians of the hells' (who may bear the name of god [Kathavatthu, xx. 8]), ato, belongs to the doctrine of existing beings rather than to accomplare.

sto., belongs to the dockrine of existing beings rather than to cosmology.

3 On the asuras, see above, p. 130; and art Pairy.

3 According to Rainedrinac. p. 5; Berl (Catom, p. 51) is of a different orbiton. See Purnoud. Introduction, 1. 6th (incore ct); Köppen, i. 246; Nagariuna's 'Epistle,' in IPTS, 1883, p. 27; Mahdeyntratte, § 17; Dinguratina, pp. 126, 148, 22; Mahdashi, 280, i. 324, ill. 188, 264. The Mahdashi speaks of five armies of asuras, but mentions only three kings—Vennachitrin, Rähu, and Muchlinda. The Kathavatthu (vin. 1) associates the companions of Venachitti with the gods, and the katakahakas with the pretas. On the war of the asuras with the suras, see Admuttara, iv. 433; IPTS, 1903, p. 148, etc.

4 We may mention the twenty eight generals of the yaksas referred to in Lallanstara, p. 202.

1 Expense 2 May 1 1/5 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 - 1/4 -

garlands,' and (3) the yaksas sadamadas (sada-mattas [Tagha, ii. 260]), 'always drunk.' 1

6. Heavens of the concupiscence-world (kamudhatu) -- (a) On the fourth terrace of Meru is the dhātu)—(a) On the fourth terrace of Meiti is the retinue of the Four Great Kings (chātur methārā μέλας), 80,000 m all (\*), and (higher up, if we are to believe Digha, i. 216) the Four Great Kings, rulers of the cardinal points. These are the first beings who regularly receive the name of 'gods,' and are classed as such. The length of their life is 500 years, a day being equal to 50 human years, and then height is 1 Liosa (= 1 yeyana, 'league'). Perhaps the numerous servants and courtiers of the Great Kings, the yeartheorems, 'celestial musicians,' etc., although they are not devas, ought to be regarded as belonging to this entegony

Half-way up Meru are the chariots or the sun (51 leagues), of the moon (a league further down), and of the stars. These detties do not form a special

class,3

(b) On the summit of Moru are the gods 'who have the Thirty-three at then head' (trayestrinhave the Thirty-three at then head (trigastrin-sas; taratensas), to the number of 100,000 (?), and, above them (according to Digha), as their king Sakra, devānam unda, 'the India of the gods.' Their town, 'Lovely view,' is 2500 miles square, and contains the Palace of Victory (vaijaganta [Majjhima, i. 253]), etc. They live for 1000 years, one day heing equal to 100 human years (Digha, ii. 327),<sup>4</sup> and their height is ½ kroša.

Then there are palaces which might be called aerial (vanāna).<sup>5</sup>

aerial (remaine).

(c) 160,000 leagues above Jumbudripa, i.e. 80,000 above the Thirty-three, and 80,000 leagues broad, the palace of the yamas gods, whose king Suyama, according to Dighe, dwells higher up. Length of life, 2000 years, one day = 200 human years; height,

life, 2000 years, one day = 200 human years; height, 4 krosu.

(d) The abode of the twitas, satisfied or 'blissful'; the re-idence of a future Buddha before his last existence; king, Sambusita; length of life, 4000 years; height, I krosu.

(e) The abode of the nirmānaratis, 'who have their pleasure in creation,' 'happy creators'; king, Sanirmita, 'well-built.' According to the A.K.F., the meaning of this name is 'enjoying self-created pleasures,' in contrast with the inferior gods, who enjoy objects which are presented to them on account of their desorts (cf. Itivutaka, p. 94). Length of life, 8000 years; height, 14 krosa.

(f) 1,280,000 leagues above Jumbudnim, 640,000 leagues broad, the abode of the 60,000 paranurmitavasamartins (paranirmita, and sometimes

milauskamartins (paranirmita, and sometimes wrongly [?] pari\*\*), having Vasavartin, 'the sovereign,' as king (Digha, i. 219). The name of these gods means 'tulers over the things created by

I See Mahanyatnatti, § 163, 36-38; Burnont, Introduction, p. 563 (quoting Georgi, p. 480); Maharastu, i. 30; Divyanatana, p. 213 (which mentions nāyas, dragons, resting on the water (udakanišrita) at the fool of Meru); Morris, JPTS, 1831, pp. 21-25. These yent, dit aninores, are sometimes called devis, especially the karotapānis (Divyanatana and Maharyatyatti); so also the thaunas devas in katitaristara, etc. Deve-putra, 'god-son,' divine,' is sometimes an epithet of greater gods.

2 According to katitaristara, p. 40, 10
3 See A.K. V. iii. (d); Beal, Cutena, p. 71; Spence Hardy, Manual, p. 26.

4 Here, as elsewhere, years consisting of 12 monilus of 30 days are meant. In Divyanadana, p. 223, the day of sakia and of the Thirty-three is equal to only one human year; hence a total of 209,000 human years.

5 The Thotan translation means 'non-recasurable (vi-māna) mansions.' These palaces may be spiritual, i.e. they are composed of subtle matter: 'splendid, paguda-shaped palaces, morable from place to place by an effort of will' (Childers, Dick. p. 574); see Vinānavatītu, and Bohtlingk-Robh, s.v. 'Vināna.'

Vilman. OThe meaning of yamas is not clear. The Thotan is hthab-brai-ba, 'free from buttle,' because they have not to wage war with the amiras, as the Thirty-three have to do. The yimas, as we have seen (§ 3), are created before the chakravala. The kings are named in Latitavistora, p. 44.

Pr.

others,' 'disposers of others' creations' (C. A. F. Rhys Davids' tr.), i.e. they themselves create, or they cause others to create, the objects of enjoyment which they desire Length of life, 160,000 years, one day = 16,000 human years; height, 1½ krośa.

Some sources regard Māra, the Satan of early Buddhism, as the Supreme god of the world of concuprocence, and assign a special place to him, Mārabhavana, with 68,000 good assistants Length of life, 32,000 years (see Latitavistara, index, and Beal, Cateria, p. 33, who adds, from the Chinese Displagama, the weight of the clothing of each class it works from 1 or to Catena, p. 88, who adds, from the Chinese Dinghagama, the weight of the clothing of each class, it varies from 1 oz. to

The gods of 'concupiscence' (kinnahhogan) enjoy sensuous "The gods of 'concupiscone' (kāmahhogm) enjoy sensuous pleasures: but there is a progressive refinement in their food (see C.A. F. Rhys Davids, Buddh Psych. p. 197) In the higher spheres the sexual act is accomplished by binding (dūnyara, among the yāmas), by joining hands (pānyāpt, among the issitas), by smiling (hunta, among the nirmānaratis), or by a simple look (kīķita, among the parani mitavāšuvartins) (see A. K. V. til 62, and Georg, p. 483) On the birth of the gods, who do not come out of the womb, although they are not 'apparitional beings' (see § 7), see Beal, Catena, pp. 74, 78, and cf. Waddell, Lamaim, p. 86

The Four Kings and the Thirty-three are well-known in the Brāhmanical sources, and are much older than Buddhism

The Four Kings and the Thirty-three are well-known in the Brähmanical sources, and are much older than Buddhism There are several Biāhmanical references to the yāmas suyāmas), turitas, minnāpanatas (Hahābhānata, xiii. 18, 74; see Burnout, Introd. p. 6017), but they are probably borrowed from Buddhism (tuṣitā brahmakāyās).

The seakuple division of the gods of concupiscence appears in the earliest Buddhist books, e.g. Majhhma, i. 194, iii. 100, Dū/ha, i. 216, and the longth of the lives is fixed just as in the scholastic era (Vibhaāŋa, p. 422). But hists of gods, like Dūgha, ii 256 (six series of ten divine groups, kāyas), seem to be older than this seakuple division (see reference to yāmas, etc., on p. 261).

7. Heavens of the material world (rūpadhūtu) or Brahmā-world.—Probably the most ancient documents on divine beings superior to the devas properly so-called, to the gods of desire, are  $D\bar{\imath}gha$ , i. 17, 34, 195. The following is a summary. According to the 'names, expressions, turns of speech, designations in common use in the world' (the indifference of Buddhists to what is not the way of salvation is clearly shown in these precautions of the ancient editor, who seems to have been conscious that the Buddha regards such things as accessory and un-sure), there are three classes of gods (or kinds of existence, attabhāva), which must not be called by each other's names, viz. (1) 'divine, having form (or material, rapi), belonging to the sensuous (or sexual) plan (kamavachara), feeding on solid food, in a word, 'solid' (olarika), 'formed of the four great elements'; (2) 'divine, having form, made of mind, with all major and minor links complete, not deficient in any organs, in a word, 'made of mind' (manomaya); 2 (3) immaterial (formless), made up of consciousness (or thought, sañā) only.

To the first class belong the six categories of cods 'who enjoy pleasures' (kāmabhuj), the Four Kings, . . . the paranirmitavasavartins.

We must now consider the second class, rūpāvachara, or gods of the realm of matter, of whom Brahmā is the ancient type and the representative par excellence to such a degree that the 'world of matter' is called the 'world of Brahma.' The gods here are born without parents, by apparitional bith (aupapātika); they are not immaterial, but their matter is subtle (sūkṣma, pranīta), for they feed on joy (prītibhakṣa), and are luminous—the same as the first men (see art. Ages of the World [Buddhist], vol. i. p. 190"). We may compare the ribhus of Mahābhārata, iii. 15461: 'They have riohus of Manabhurata, in. 19461; They have divine bodies, and not material forms' (vigrahumürti). The idea of the progressive refinement of the body of the gods is old (Satapathabrāhmana, x. i. 5. 4; Taittirīya Upanisad, ii. 1-5 [Rhys Davids, Dialogues, i. 48]); and with the Brāhmans the worlds of Prajāpati (cf. Maijhima, i. 2) and

1 See Rhys Davids, Dialogues, i. 46, 250, 260 (line 2 to be read : 'The second has form.' . . .); of. Sumangalavitäsint, ad loa.

2 On manomaya, see art. Bodiisarrva, vol. ii. p. 742b, note §;
also A.K.V, 265.

also A.K.V. 265.

See Fausboll, Indian Mythology, p. 144.

Brahmā were placed above the heavens of the karma-gods (gods owing to their merit) and the bith-gods (Taitt. Up. ii. 8; Windisch, Buddha's Geburt, Leipzig, 1908, p. 15). Being by his nature invisible to the infoioi gods, Brahma cleates a 'solid' body for himself when it pleases him to show himself to the Thirty-three (Digha, i. 210). In this respect there is some resemblance between the Kenopanisad and Digha, i. 220. The connexion is still more marked with Majjhima, 1. 330, where Brahmā (the god Brahmā then called Baka, 'Heron') tries in vam to disappear from the eyes of Buddha; he was more successful with Varuna, the Vedic god.

he was more successful with Varuna, the Vedic god. The text which we have quoted, 'drivne... with all major and minor limbs complete' (cf. Najhana, n. 17, 126), is clear enough: the rāpa-gods possess all the organs of the body. This opinion, however, came to be regarded as almost 'heretical' by Fall orthodoxy as well as by Northern orthodoxy (see Vibhanga, p. 418: Kathāvatthu, viii. 7, with the commentary, and A.K. V. (Burn. 44). Since (gaadha) and taste (rasa) are sold food (kavadtkāvāhāvā), and consequently cannot be perceived by the gods of rāpadhātu; therefore noses and tongues are useless to them. If these gods possess these organs, it is replied that it is merely for reasons of beauty. The sexual organ is of no use to them, and it would detract from then beauty it it were not hidden as it was in the body of Sālvamuni (see Suttanipata, p. 99 = SBE x. 100, and elsewhere). This discussion, which we singht consider rather fivolous, is characteristic of a pait of scholastic Buddhism, there are some points in it which we shall never see clearly, and about which the Buddhists themselves are confused.

The Buddhists, making the most of the theory of the four dhyanas (jhanas, 'trances'), have established very coherent systems on the hierarchy of the so-called 'material' celestial spheres. The complete table is as follows:

(i.) FIRST-TRANCE HEAVENS.—(1) Brahmapār-ṣadyas (01 °kūyıkas),¹ retinue of Brahmā; length of life, 20 small ages of the world (20 antarakalpas =\frac{1}{2} great kalpa); height, \frac{1}{2} league. The heaven is situated 2,580,000 leagues above Jambudvīpa, and is 1,290,000 leagues broad. These numbers These numbers have to be doubled for the following heavens. (2) Brahmapurohitas, 'Brahmā-chaplains'; length of life, \frac{1}{2} great kalpa; height, I league. (3) Mahā-brahmānas, 'Great Brahmās'; length of life, \frac{2}{2} kalpa; height, 11 league.8

The common opinion is that there are as many stages as there are classes of gods. But some say that 'Inahmā has no distinct abode; only in the middle of the purchita-heaven there is a high storeyed tower, and this is the abode of Brahmā. Even y tance-heaven has a king, ministers, and people (Beal, Catena, p. 95, cf. Ariguttara, n. 126, where Brahmakāyaka [lite, 1 katpa]) is the general name of the gods of the first trance). Contrast with this Digha, n. 216: the retinue of the great Brahmā does not know 'where, why, whonce Brahmā is' This text is not familiar with purchitas. On the other hand, according to A.K. V. inter with purchitas. On the other hand, according to A.K. V. inter with purchitas. On the other hand, according to A.K. V. inter with purchitas from the great Brahmās. It will be noted that the plural, 'great Brahmās,' is strange, because there cannot be, and in former Buddhist mythology there was not, more than one Brahmā. But the early texts, when mentioning several 'pranomens' of different Brahmās, probably believed to belong to different cosmol or to different ages of the world, have opened the way for this new idea. On different classes of Brahmās, see below, \$9.

(il.) SECOND-TRANCE HEAVENS.—(1) Parāttābhas

(il.) SECOND-TRANCE HEAVENS.-(1) Parīttābhas ('Limited splendour'); length of life, 2 kalpas; height, 2 leagues. These figures are doubled for the next five classes. (2) Apramānābhas, 'Im-

<sup>1</sup> Mentioned in Sankyutta, i 145, 155. The Lalitavistara (p. 150) draws a distinction between okayikas and oparşadyas

hentioned in Samputal, 1 is, 155. The Indicationary (p. 150) fraws a distinction between okaythas and opargadyas (see also p. 44).

According to Kalpadruma. Feer (AMG v. 585) says 256, i.e. double the height of the heaven of the paranirmitavasavartins.

We give the heights and lengths of life according to the A.K.V. The first gods of the rupa-world are j. voluma in height; another j. voluma must be added for the following classes, and one must double from the partitablas. As regards the length of life, the Päll sources have for these three classes j. j. and I kalpa (Vultariya, p. 424; Warren, p. 200). The text quoted in the commentary to Kathavathu, xi. 5, however, issigns a kalpa to the brahmakayikas; but, according to Duddhafnose, it refers to a kappukadsas, i.e. a portion of a kalpa. The Abhidharmakosa has j. 1, 1j. kalpa (see Feer, AliG v. 556); Dut its commentary, the Vyakhya, maintains that kalpa must be taken to mean j. kalpa, therefore j. j. 1. It refers to a large kalpa; but, according to the Kalpadruma, the length of life in the rupa-vorid extends from a small kalpa (yo d a large kalpa) to 18 small kalpas.

every hundred years were to take from it one sesainum seed, that load would sooner dwindle away than one Abbuda hell; and even as are twenty Abbuda hells, so is one Ninabbuda hell.' The Abbidharmakośa (in. 84) has the same method

The Abhibharmalosa (in. 84) has the same method of counting for the arbuda, etc. Arbuda, etc., are what are called 'high numerals' (Mahāvyutpattı, § 246 [101-102], § 250 [9-14]; see AGES OF THE WORLD [Buddinst], vol. 1. p. 188b)

(c) There are some hells about which we know nothing but the names, ey the Sansavaka (Finanatatliv, p. 50), and the traditions of the Great Vehicle are nich in multiple intentions. We may mention the hells that the Tibetans call 'ephemeral' (nithe-ba), which are the 'nonher hells' of Beal (Catena, p. 65), Ski pidiesika on pattyekanataka: (f) (see Mahāvastu, 1. 458, and Butnouf, Introduction, p. 820). They are reserved for small sins or for special categories of sinners (see art Bodhisativa, vol. in p. 741b). They are found on the borders of the hells, in the ocean, in the world of men, and in the deserts of Jambūdviga. There are 84,000 of them.

(ii.) Animals.—The animals form the class im-

(ii.) ANIMALS.—The animals form the class im-(ii.) Animals.—The animals form the class immediately above the damned. They are divided into many categories (e.g. Majphina, no 129), and then special abode is the 'exterior ocean'; but, as everybody knows, they are met with in the world of men, and (in spite of what certain heretics say) not in the world of the gods (Kathāvatthu,

AX. 4).
(iu.) PRETAS, 'THE DEAD' on 'GHOSTS.'—The (in.) Pretas, 'The Dead' or 'Ghosts.'—The popular beliefs concerning the dead have not yet been systematized, as may be seen from the Petavathha and the literature of every epoch (see artt. Death, etc. [Buddhist], State of the Dead [Buddhist], etc.). Speaking generally, we may say that the pretas dwell almost everywhere throughout the world of men, but especially in the kingdom of Yama, which is divided into 36 provinces, situated 500 leagues below Jambudvīpa. There they live 500 years, a day being equal to a human month.'

(iv.) Asuras, 'non-gods.'2—Their abode is especially in the cavorns of Mount Meiu, below the level of the sea, where there are four towns of

cially in the cavorns of Mount Mein, below the level of the sea, where there are four towns of 11,000 leagues, at depths of 20,000, 40,000, 60,000, and 80,000 leagues, namely, 'Shining,' 'Startassel,' 'Deep,' and 'Golden town,' with Rāhu (the spirit of the celipse), Kanthamālādhara, Puspamālādhara, and Vennachita, as kings.<sup>8</sup> But they mālādhara, and Venachita as kings.<sup>9</sup> But they often leave their abysses to conquer Meru, and fight with the 'Thirty-three gods' and their vanguaid (dragons and yakṣns); hence the mistake made by some authors in saying that they dwell on the fourth stage of Meiu

There is an infinite number of yakṣas (yakkha, 'a being to be worshipped,' 'a powerful spuit' [Kern, Munual, p. 59]), terrestrial (bhauma, living on the burface of the carth and under the earth), atmosphene, etc.<sup>4</sup> Three categories occupy a special place in our sources (Abhūdharmakoša, ini. 56) as

place in our sources (Abhidharmakosa, iii. 56) as inhabitants of Mount Meru.

on Meru there are four terraces (parisanda, ban-rim) of 16,000, 8000, 4000, and 2000 leagues, separated from each other by 10,000 leagues. The fourth is reserved for the Four Kings, who are classed as gods (devas) (see below, § 6); the other three are inhabited by (1) the yakesa karotapanis, the roll and the set of th 'bowl in hand,' (2) the yaksas mālādharas, 'bearing

bowl in hand, '(2) the yalesas maladharas, 'bearing 1 A study of the pretas 'with magical power,' and of the king of the pretas (petiraga), as well as that of the 'guardians of the hells' (who may bear the name of god [Kathavathu, xx. 2]), etc., belongs to the doctrine of existing beings rather than to cosmology.

2 On the asuras, see above, p. 130; and art. DATYA.

3 According to Kathadavama, p. 5; Beal (Catena, p. 51) is of a different opinion. See Burnout, Introduction, p. 301 (incorrect); Köppen, i. 240; Magarinas's Episile, in JPTS, 1936, p. 27; Mahavattu, i. 80, it. 844; iii. 138, 254. The Mahavastu speaks of five armies of asuras, but mentions only three kings—Vermachittin, Bahu, and Muchilinda. The Kathavatthu (viii. 1) associates the companions of Vernachitti with the gods, and the Alakavataka while the pretas. On the war of the asuras with the arras, see Argustura, iv. 433; JPTS, 1933, p. 148, etc.

4 We may mention the twenty-eight generals of the yaksas referred to in Lalatavatdara, p. 202.

Company of the compan

garlands,' and (3) the yuksas sadāmadas (sadāmattas [Dīglut, 11, 260]), 'always drunk.' 1
6. Heavens of the concupiscence-world (kāma-

dhatu).-(a) On the fourth terrace of Meru is the comme,—(a) On the fourth tenace of Meru is the retaine of the Four theat Kings (chāturmahārājakāy)kas, catummaharājakas), 80,000 in all (?),² and (lugher up, if we are to believe Dīgha, i. 216) the Four Great Kings, rulers of the caidinal points. These are the first beings who regularly receive the name of 'gods,' and are classed as such. The length of they life is 500 years a day being causal. length of then life is 500 years, a day being equal to 50 human years, and their height is 4 krosa (= 1 yoyana, 'league'). Perhaps the numerous servants and courtiers of the Great Kings, the gandharvas, 'celestial musicians,' etc., although they are not devas, ought to be regarded as belonging to this category

Half-way up Meru are the charlots of the sun (51 leagues), of the moon (a league further down), and of the stars. These derives do not form a special

class.3

(b) On the summit of Meru are the gods 'who have the Thuty-three at then head' (trayastrinhave the Thuty-three at then head' (trayastrin-sas; tāvatīmsas), to the number of 100,000 (?), and, above them (according to Dīgha), is their king Sakia, devānam indu, 'the India of the gods. Then town, 'Lovely view,' is 2500 miles square, and contains the Palace of Victory (varyayanta [Majjhima, i. 253]), etc. They live for 1000 years, one day being equal to 100 human years (Dīgha, ii. 327),' and their height is ½ kroša.

Then there are palaces which might be called aerial (vimāna): 5

aerial (vimāna): 6

(c) 160,000 leagues above Jambudvīpa, i.e. 80,000 above the Thirty-three, and 80,000 leagues broad, the palace of the yamas gods, whose king Suyama, according to Digha, dwells higher up. Length of hfe, 2000 years, one day = 200 human years; height, & krośa.

ine, 2000 years, one day - 200 mintar years, neight, if krośa.

(d) The abode of the tuṣitas, satisfied' or 'blissiul'; the residence of a future Buddha before his last existence; king, Samtuṣita; length of life, 4000 years; height, 1 krośa.

(e) The abode of the nirmānaratis, 'who have their pleasure in creation,' 'happy creators'; king, Sunirinita, 'well-built.' According to the A.K. V., the meaning of this name is 'enjoying self-created pleasures,' in contrast with the inferior gods, who enjoy objects which are presented to them on account of their deserts (cf. Itinuttaka, p. 94). Length of life, 8000 years; height, 1½ krośa.

(f) 1,280,000 leagues above Jambuavīpa, 640,000 leagues broad, the abode of the 60,000 paranirmitavasavartins (paranirmita, and sometimes wrongly [i] pari\*), having Vašavartin, 'the sovereign,' as king (Digha, i. 219). The name of these gods means 'tulers over the things created by

gods means 'tulers over the things created' by

1 See Mahāvyutpatu, § 163, 36-88; Burnout, Introduction, p
509 (quoting Georg, p. 480); Mahāvatu, i 30; Drayāvadāma,
p. 218 (which mentions nāgas, 'diagons' resting on the water
indukants ital at the foot of Meru); Morris, JPTS, 1891, pp
21-25 These genti, dii minores, are sometimes called devas,
especially the karotapans (Drayāvadāma and Mahāvyutpatīs);
so also the bhaumās devā; in Lahtavistara, etc. Deva-putru,
'god-son,' divine,' is sometimes an epithet of greater gods.
2 According to Lahtavistara, p. 46, 10.
3 See A.R.V. in. 60, Beal, Calena, p. 71; Spence Hardy,
Manual, p. 26.
4 Here, as elsewhere, years consisting of 12 months of 30 days
are meant. In Divyāvadāma, p. 225, the day of Sakita and of
the Thirty-three is equal to only one human year; hence a total
of 360,000 human years.

6 The Theton translation means 'non-measurable (vi māna)
mansions. These palaces may be spiritual, i.e. they are composed of subite matter 'splendid, pagoda-shaped palaces,
movable from place to place by an effort of will' (Onlders,
Dict. p. 574); see Vinānavatīhu, and Bohtlingk-Roth, s.v.
'Vimāna.'
6 The meaning of yāmas is not clear. The Tibetan is hthab
bral-ba, 'free from battle,' because they have not to wage war
with the asuras, as the Thirty-three have to do. The yūmas,
as we have seen (§ 3), are greated before the chakravātā. The
kings are named in Latitavistāva, p. 44.

others,' 'disposers of others' creations' (C. A. F. Rhys Davids' tr.), i.e. they themselves create, or they cause others to create, the objects of enjoyment which they desire Length of life, 160,000 years, one day = 16,000 human years; height, 1½ krośa.

Some sources regard Māra, the Satan of early Buddhism, as the Supreme god of the world of concuprisence, and assign a special place to him, Mārabhavana, with 68,000 good assistants Length of life, 32,000 years (see Laltavistara, index, and Beal, Cateria, p. 83, who adds, from the Chinese Dirphägama, the weight of the clothing of each class, it varies from 1 oz to

The gods of 'concupiscence' (kāmabhogin) enjoy sensuous The gods of 'concupiscence' (kāmabhogm) enjoy sensuous pleasures' but there is a progressive refinement in their food (see C. A. F. Rhys Davids, Buddh Psych. p. 197). In the higher spheres the sexual act is accomplished by binding (ālmgana, among the yāmus), by joining hands (pānjāph, among the tusitus), by smiling (hasta, among the manarmitayastavartins) (see A. K. V. m. 62, and Georgi, p. 483). On the birth of the gods, who do not come out of the womb, although they are not 'apparitional beings' (see § 7), see Beal, Catena, pp. 74, 78, and cf. Waddell, Lumarsm, p. 86.

The Four Kings and the Thirty-three are wall-brown in the

The Four Kings and the Thuty-three are well-known in the Brāhmanucal sources, and are much older than Buddhism Theic are several Biāhmanucal references to the yāmas (swyāmas), twaṣtās, nurmāṇaratas (Hahābhārata, xiii. 18, 74; see Burnout, Introd p. 601f), but they are probably bornowed from Buddhism (uṣutā brahmakāyās).

The Bertuple division of the gods of concupiscence appears in the earliest Buddhist books, e.g., Majjhima, n. 104, in 100, Dūyha, n. 216, and the length of the lives is fixed just as in the scholastic era (Vibhārha, p. 422). But lists of gods, like Dūgha, n. 256 (six senies of ten divine groups, kāyas), seem to be older than this sextuple division (see reference to yāmas, etc., on p. 201).

7. Heavens of the material world (rūpadhātu) or Brahmā-world.—Probably the most ancient documents on divine beings superior to the devas properly so-called, to the gods of desire, are Dīgha, i. 17, 34, 195. The following is a summary. Accolding to the 'names, expressions, turns of speech, designations in common use in the world' (the indifference of Buddhists to what is not the way of salvation is clearly shown in these precautions of the ancient editor, who seems to have been conscious that the Buddha regards such things as accessory and un-sure), there are three classes of gods (or kinds of existence, attabhava), which must not be called by each other's names, viz. (1) 'divine, having form (or material, rūpī), belonging to the sensuous (or (or material, rāpī), belonging to the sensuous (or sexual) plan (kāmāvachara), feeding on solid food, in a word, 'solid' (olārīka), 'formed of the four great elements'; (2) 'divine, having form, made of mind, with all major and minor links complete, not deficient in any organs,' in a word, 'made of mind' (manomaya); 2 (3) immaterial (formless), made up of consciousness (or thought, sanāā) only.

To the first class belong the six categories of gods 'who enjoy pleasures' (kāmabhay), the Four Kings, . . . the paranirmitavasavartins.

We must now consider the second class, rūpāvachara, or gods of the realm of matter, of whom

chara, or gods of the realm of matter, of whom Brahmā is the ancient type and the representative par excellence to such a degree that the 'world of matter' is called the 'world of Brahmā.' The gods here are born without parents, by apparitional birth nere are born without parents, by appartional orth (aupapātika); they are not immaterial, but their matter is subtle (sūkṣma, pramīta), for they feed on joy (prītibhakṣa), and are luminous—the same as the first men (see art. AGES OF THE WORLD [Buddhist], vol. i. p. 190°). We may compare the ribhus of Mahābhārata, iii. 15461: 'They have divine hedica and not part to the product of the same as the first of the same as the same as the first of the same as the s ribhus of Mahābhārata, iii. 15461: They have divine bodies, and not material forms' (vigrahamūrti). The idea of the progressive relinement of the body of the gods is old (Satapathabrāhmana, x. i. 5. 4; Taittiriya Upaniṣad, ii. 1-5 [Rhys Davids, Dialogues, i. 48]); and with the Brāhmans the worlds of Prajāpati (cf. Majjiima, i. 2) and

1 See Rhys Davids, Dialogues, i. 46, 259, 260 (line 2 to be read;

'The second has form.' . . .); cf. Sumangalavitasmi, ad loo.

2 On manomaga, see art. Robbinsarrya, vol. ii. p. 7429, note §; also A.K. V. 265.

3 See Fausboll, Indian Mythology, p. 144.

\$ 10 C

Brahmā were placed above the heavens of the brainit were placed above the neavers of the Larma-gods (gods owing to their merit) and the brith-gods (Taitt. Up. 11. 8; Windisch, Buddha's Geburt, Lenpzig, 1908, p. 15). Being by his nature invisible to the inferior gods, Brahmā creates a 'solid' body for himself when it pleases him to show himself to the Thirty-three (Digha, 11. 210). In this respect there is some resemblance between the Kenopanisad and Digha, i. 220. The connexion Is still more marked with Mayhimu, 1. 330, where Brahmā (the god Brahmā then called Baka, 'Heron') tries in vain to disappear from the eyes of Buddha; he was more successful with Varuna, the Vedic god.

lic was more successful with Varuna, the Vedic god.

The text which we have quoted, 'divine... with all major and minor limbs complete' (of Maphana, i. 17, 126), is clear enough 'the rāpa-gods possess all the organs of the body. This opinion, howevel, came to be regarded as almost 'heretical' by Påli orthodoxy as well as by Northein or thodoxy (see Vibhahya, p. 418. Kathāvathu, vii. 7, with the commentary, and A.K.V. [Burn. 44]. Simell (gandha) and taste (rasa) are solid food (kwaāthāvāha), and consequently cannot be perceived by the gods of rāpadhātis; therefore noses and tongues are useless to them. If these gods possess these organs, it is replied that it is merely for reasons of beauty. The sexual organ is of ho use to them, and it would detract from their beauty if it were not hidden as it was in the body of Sākyamuni (see Suttanipāta, p. 99 = SBE x 100, and elsewhere). This discussion, which we hight consider rather frivolous, is characteristic of a part of scholastic Buddhism, there are some points in it which we shall never see clearly, and about which the Buddhists themselves are comfused.

The Buddhists. making the most of the theory

The Buddhists, making the most of the theory of the four dhyanas (jhanas, 'tiances'), have established very coherent systems on the hierarchy of the so-called 'material' celestial spheres. The

complete table is as follows:

complete table is as follows:

(1.) FIRST-TRANCE HEAVENS.—(1) Brahmapārsadyas (01 '\(^{1}\)kaylkas,\(^{1}\) retunue of Brahmā; length
of life, 20 small ages of the world (20 anturakalpas
= \(^{1}\)great kalpa; height, \(^{1}\)league. The heaven is
situated 2,580,000 leagues above Jambudvīpa,\(^{2}\)
and is 1,290,000 leagues broad. These numbers
have to be doubled for the following heavens.

(2) Brahmapurokitas, 'Brahmā-chaplains'; length
of life, \(^{1}\)great kalpa; height, 1 league. (3) Mahābrahmānas, 'Great Brahmās'; length of life, \(^{2}\)league, height, 1\(^{1}\)league.

The common outdon is that there are as many stages as there

The common opinion is that there are as many stages as there are classes of gods. But some say that 'Brahma' has no distinct abode; only in the middle of the purohita-heaven there is a high storeyed tower, and this is the abode of Biahma'. Every trance heaven has a king, numsters, and people (Beal, Catena, p. 95; cf. Anguttan a, i. 126, where Brahmakâyika [life, I Lalpa] is the general name of the gods of the first trance). Contrast with this Digha, 1. 216; the retinue of the great Brahma does not know 'where, why, whence Brahmā is.' This text is not familiar with purohitas. On the other hand, according to A.K.Y., the Kashmirians do not distinguish the pur ohitas from the great Brahmās. It will be noted that this plural, 'great Brahmās,' is strange, because there cannot be, and in former Buddhist mythology there was not, more than one Brahmā. But the early texts, when mentioning several 'pranomens' of different Brahmās, probably believed to belong to different cosmol or to different ages of the world, have opened the way for this new idea. On different classes of Brahmās, see below, § 9.

(ii.) SECOND-TRANCE HEAVENS.—(1) Parittābhas

(ii.) SECOND-TRANCE HEAVENS.—(1) Parittābhas ('Lmited splendour'); length of life, 2 kalpas; height, 2 leagues. These figures are doubled for the next five classes. (2) Apramāṇābhas, 'Im-

the next five classes. (2) Apramānābhas, Im
1 Mentioned in Samyutta, i. 145, 155. The Lakitavistara
(p. 150) draws a distinction between klytkās and oparaalyas
(see also p. 44).

2 According to Kalpadruma. Feer (AMG v. 535) says 256, i.a.
double the height of the heaven of the paranirmitavasupartius.

3 We give the heights and lengths of life according to the
A.K.V. The first gods of the rupa-world are \(\frac{1}{2}\) yojana in
height; another \(\frac{1}{2}\) yojana must be added for the following
classes, and one must double from the partitubhas. As regards
the length of life, the Fall sources have for these three classes
\(\frac{1}{2}\), and I kalpa (Vibhaba, p. 424; Warren, p. 290). The text
quoted in the commentary to Kathavatha, xi. 5, however,
assigns a kalpa to the brahmahaythas; but, according to
Buddhaghosa, it refers to a kappekadesa, t.e. a portion of a
kalpa. The Abhabamakasa has \(\frac{1}{2}\), 1, I kapa (see Feer,
AMG v. 535); but, its commentary, the Yyakhya, maintains
that kalpa must be taken to mean \(\frac{1}{2}\) kalpa, therefore \(\frac{1}{2}\), 1, It refers to a large kalpa; but, according to the Kalpadruma,
the length of life in the rupa-world extends from a small kulpa
(yo of albige kalpa) to 16 small kalpas.

measurable splendour.' (3) Abhāsvaras (Ābhas-

measurable splendour. (3) Abnasvaras (Abnassara), 'Radiant.' (iii.) Third-trance heavens.—(1) Partitasubhas, 'Limited beauty.' (2) Apramānasubhas, 'Immeasurable beauty' (3) Subhakrtsnas (Subhakinha, wrongly Subhakinha), 'Complete beauty'; length of life, 64 kalpas, i.e. until the return of the destruction of the cosmos by wind (see AGEs of the World [Buddhist], vol. i. p. 188); height, 64 leagues

leagues

(iv) FOURTH-TRANCE HEAVENS—(1) Anabhrakas ('Cloudless'); 125 kalpas and leagues (not 128, which would be double that of the Subhakertsnas); these numbers are doubled for the following classes. (2) Punyaprasavas, 'Merit-born' (T1b. bsod-nams-skycs), or perhaps 'Merit-begetting' (?). (3) Brhatphalas (Vehapphalas), 'Abundant fruit.' 2 (41-(8) beer the generic name of Suddhānās. (4)-(8) bear the generic name of Suddhāvāsa, 'Pure abode,' whence Suddhāvāskas, Suddhāvāsa, sakāyikas, 'inhabitants of the Pure abodes.' (4) Avrhas (Arrhas), 'Effortless' (?). (5) Atapas (atappa=atāpya), 'No heat,' 'Cool gods.' (6) Sudršas (Sudassa), 'Beautiful.' (7) Sudaršana Sudysas (Sudassa), 'Beautiul,' (7) Sudarsana (Sudassin), 'Well-seeing.' (8) Akanisthas, 'Sublime' (=' not youngest,' not smallest'), also called (or subordinated to) Aghanisthas, 'at the end (nistha) of the compact' (agha), i.e. 'at the top or the end of the material world'; 6 length of life, 16,000 kalpas; height, 16,000 leagues.

The total number of 'places' or 'stages' in the rūpa-world, therefore, is seventeen, according to the Abhāharmakośa (in. 2); the Kashmirians suppress one of them (see above, p. 185<sup>1</sup>). The Pall tradition of Abhāharma counts only sixteen; it has neither the Anthrakas nor the Punyaprasavas, but it adds the Asanhhasathus (edevas, 'unconscious beings,' 'gods') as follows: Fourni rance —(1) Asahhasattas, (2) Vehapphalas, (3) Pure abodes, five in number. [In later documents, e.g. in Abhāhammathasama aha, v. 2–6, 10, tr. Warien, Budhism, p. 289, the Asahhasattas come after the Vehapphalas, and the same arrangement occurs in Northern texts, vir Lahtavastas and p. 150, Dharmasandraha, \$123; Beal, p. 55 (according to Dirghāyama?), which add the Asamhasattvas to the list of the Kosa.]?

Lastly, certain sources place the heaven of Mahāmaheśvara, the Great Lord, Siva, above the Akanisthas—a non-Buddhist idea borrowed from

Hinduism (Mahāvyutpatti, § 161; Triglotte, 53; Rėmusat, Fo-koue-ki, p. 146).¹

We shall now venture to make some more or less hypothetical remarks on the origin and development of this theological cosmology. It is probable that Brahmā was at first legarded as the greatest god (see Dyha, i 222, ii, 210), and his name has remained attached to the rūpa woild (see, e.g., Index s.v. 'Visud dlimagga,' Warten-Lamman, Buddham in Translations, Cambridge, Mass, 1909, Subhakinhalvahmaloka, etc., and even Rupārūpabrahmaloka, matenial and immaterial Brahmā-world) Scholars have established a hierarchy of beings according to vyhānasthite (position [?] of intellect) (Digha, ii. 69, cf. Anguttara, iv. 40). (1) Brahmalāyika, (2) Abhassara, (3) Subhakinha, and, according to the trance (Angultera, iv. 40). . . . Asahīnasthata. On the other hand, Majhima, i. 2, enumerates Prajāpat, Brahmā, Abhassara, Subhakinha, Vehapphala, and Abhibhū. To get a scheme very near the classical (scholastic) scheme, the classes of Brahmā (pārṣadya, puonta), and this is what we find in Majhima, ii. 102: Parittābha, Appamānābha, Abhassara, Parittasubha, elc The Vehapphalas of Mayhima, 12, are kept, and in place of the Abhibhūs are put four categories: Avha. . . Akamtbha But Dīgha, ii. 52, adds the fifth category, Sudass (Sudassan) It is possible, therefore, to follow to a certain point the scholastic work which has amalgamated separate traditions and speculations, from an epithet like abhāsvara a class of gods was made, and in the end three classes and three heavens were deduced from it.

8. Immaterial sphere (avūpadhātu, ārūpya).—There are two views on the ārūpya. According to the first, which keeps to the letter of the canonical texts.² the ārūpya is not part of the receptacle-

There are two views on the arupya. According to the first, which keeps to the letter of the canonical texts, the arupya is not part of the receptacle-world; it contains only 'spiritual' beings, free from matter, disembodied intellects (vyñāna), consisting in thought (sañāāmaya). When the transmigrating vyñānas are re-born (if we may say and into this extension they greate the intellectual so) into this category, they create the intellectual apparatus (nāman) for themselves, but do not accumulate matter (rūpa), or organs of know-

ledge (sadâyatana).

reage (saaayatana).
Instead of 'places,' the ārūpya presents four 'aspects' (ākāra), according to the state of the pure intelligences which constitute it. There are (1) the realm of the infinity of space (ākāsānantyāyatana), (2) the realm of the infinity of intellect (viyāāna'), (3) the realm of nothingness (akimchanyāyatana), and (4) the realm of neither consciousness (or notion) nor not-consciousness (naivasana ness (or notion) nor not-consciousness (naivasam-

Mahāmalesvara, the Great Lord, Siva, above the Mahāmalesvara, the Great Lord, Siva, above the Akanisifats—a non-Buddhist idea borrowed from 1 Abhasara appears in several early texts, not as the name of the gods of the first rank (Samyutta, 1.11 dabove Brahma (cf. the gods of beings in the first rank (Samyutta, 1.11 dabove Brahma (cf. the gods of beyond (Idadutari) in Amattara, ii. 127); see, e.g., Digha, i. 17; Afigultara, iv. 26, v. 60. During the period of chaos the future Buddha devels among the 100, on the Buddhist Genesis); and (2) as the general name of the gods of the second trance in Anguttara, ii. 127 (Ide, 2 kalpas). In it. 231 title expression means completely happy, but stoke as taken to neath beauty in A.K.V. 3 Genoul name of the gods of the fourth trance in Anguttara, ii. 128 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as taken to neath beauty in A.K.V. 3 Genoul name of the gods of the forth trance in Anguttara, ii. 128 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as taken to neath beauty in A.K.V. 3 Genoul name of the gods of the forth trance in Anguttara, ii. 128 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as taken to neath beauty in Anguttara, ii. 128 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as the forth trance in Anguttara, ii. 28 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as the forth anguttara, ii. 28 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as the forth anguttara, ii. 28 (Ide, 8 kalpas). In it. 231 title expression means completely happy, but stoke as the forth anguttara, ii. 28 (Ide, 8 kalpas). In it. 28 (Ide, 8 kalpas). Ide, 18 (Id

But we must not regard the double negation 'neither consciousness . . . 'as an absolute negation of consciousness; thought (chitta) and its derivatives of consciousness; thought (charta) and its delivatives (charta) remain, although in a very attenuated state. In fact, if thought happened to cease in these immaterial existences, the result would be nirvāna; and we know (Anguttara, 1. 267) that 'non-converted' persons (prthagjana) may reach them without being worthy of nivana, without being free from the danger of falling back again into hell company the material. into hell or among the pretas.

into hell or among the pretas.

Several schools maintain the existence of 'mattai' in the 'Immaterial World' This iefers to a 'fine or attenuated form of matter,' according to the Mahasainghalas, but such that it includes the fivo kinds of perceptible knowledge (vyhāna-kāyas)<sup>2</sup>. The syllable ā of ā ūpya, 'foinlessnoss' (which is the yidāh, mithal emphasis, of the abstanct world derived from ārīpa, 'foinless'), is explained as a diminutive (sadai the). An avigument in favour of this opinion is that the intellect (vyhāna) needs a material support (āsruya), and this support must be the special 'mattei' called hidayavustu, 'healt-thing' (according to the AKV the opinion of the Tamaparijyas, i.e the Buddhists of Taprobane, the Sinhalese) Another argument is that, according to the formula of 'dependent origination' name (intellectual data) and matter (rūpa) proceed from vijāna.4

9. Cosmic systems, chiliocosms.—It is possible that the most ancient Buddhist cosmology did not imagine anything but the 'small universe,' the imagine anything but the shift introduce the chakravalla properly speaking; but, in documents which appear to be very archaic (agreeing, in fact, with what we believe we know of the teaching of with what we believe we know of the teaching of the Buddha), the notion of the infinity of the world is stated—from which arises that of the existence of other universes (lokadhātu) or chahravālas similar to ours; and in the Anguttura (i. 227) we find great combinations of 'thousands of universes,' which will remain the basis of the 'great cosmology,' if we may thus express it, namely: (1) A system of a thousand universes, 'small chilicossin,' sahassi chūļamhā lokadhātu,' or sahassadhā loka (ib. v. 59); (2) a system of a million universes, a thousand 'small chilicossins'; this is the 'middle chilicossin,' dvisahassī majjhimikā lokadhātu ('two-thousandth middle universe'); and (3) a system of a thousand million verse'); and (3) a system of a thousand million universes, 'great chilocosm,' or 'three-thousandth great-thousandth universe,' trahassī mahāsahassī lokadhātu."

On the hadayawathu, 'basis' or 'stac,' of the sensorium commune (manns), see O. A. F. Rhys Davids, op. cit. p. 129, note, cf. p. 178 and index 'JPTS, 1884, p. 28; Visudhimaga, JPTS, 1891, p. 124, and Burnouf, Introduction, p. 560; the 16le of the heart in the ancient Hindu philosophy is well known (Bohtlingk-Roth, s. v. 'Dhätu,' p. 9849.

4 Kathāvathu, viil. 8; of. Warren, Buddhism, p. 178, l. 15, and see also Sanyutta, iii. 58.

5 The Brāhmanas admit the infinity of the world upwards and sideways (see Pahchavinsabrāhmana, viii. 6, 2, in Hopkins, 'Gods and Saints of the Great Brāhmana,' Trans. Connecticut Acad. xv. 26, July 1909). The theory that the world is infinite across, and finite in upward and downward directions, is condemned in Digha. i. 23 (Rhys Davids, Dialogues, i. 86; see Aasostroism (Buddhist), vol. 1. p. 2245, note). A tradition which was long in being attested (Atthasātini, § 374, quoted in Burnouf, Lotus, p. 844, wanting in the 'Chapher of the Fours' of the Apputara, as Rhys Davids remarks, loc. cit.) slates that four things are infinite: space, the number of universes, the number of living beings, and the wisdom of a Buddha.

6 Lokadhātu, masc. in Mahdvastu, i. 40, 7, and Siksāsamuchōhaya, p. 246; fem. in Fili, Mahdwastu, i. 300, 16, Karunāgapanafurtka, p. 4, etc. The word sukhāvatī, 'the happy vorld,' and not as sukhāvatī bhūmi, 'the happy earth or storey.'

7 The Sir. forms in Mahdvastu, i. 40, 7, and Siksāsamahyamo...; trisdhasramahtsāhasro.... There are varnants in Mahdvastu, at the happy world,' and not as sukhāvatī bhūmi, 'the happy earth or storey.'

7 The Sir. forms in Mahdvutpatīt,' § 168, Bodhicharyāvatārnapāhyātā, ad il 14; sāhasras chādāto lokadhātu, the ha

The traditional meaning of the words duisahassi, tisahassi, seems to be quite clear. The Anguitaru says that the duisahassi, seems to be quite clear. The Anguitaru says that the duisahassi, seems to be quite clear. The Anguitaru says that the duisahassi, seems to be quite clear. The Anguitaru says that the duisahassi, seems to seem the seem and the teachassis—1000 duisahassi. Dui and ti are exponents, not multipliers. We find 1000, 10002, 10003. Schmidt's interpretation, 'das grosse Tausend der 3000 Velten,' is wrong, and Koppen (Buddhismus, it. 337) is also inexact, if we can trust the Anguitaru and the Abhudhurmakośa. But it must be remembered that the universes appear grouped in this in order to form the hell of 'intramundane darkness'—which justifies the number 3000. But in the multiplication of 1000 by 1000 there are other differences which strike scholars: 'The holy words of Buddha cannot be in disagreement, how is it then that there are so many differences in the accounts found in the sūtras and treatises (Abhūdharmasāstras)? For instance, in regard to the number of mountains called Sumeri (there is a Meru is each small universe, chaks andla [see above, p. 131]), if we rely on the Agamas (=Pāh mhūju, 'canonic collection') and the Kośa, each great chilicoosm has one thousand nullion, whereas the Suvarqamabhūsa and the Anatansaka (Great Vehicle) say there are only ten millions. Then with regard to the various measurements and the contradictory statements relating to the number of the rūqa-heavens, how are these differences to be accounted for ?'2

In order to establish a sort of coherence among these multiplications of universes and on account

these multiplications of universes and on account of theories on the more or less complete destructions of the world, the following arrangement has been imagined :-

been imagined:—
One thousand chakravalas make a small chilocosm, with 4000 containents, 1000 Merus, and 1000 heavens of Brahma-gods (gods of the first trance) This small chilocosm is surrounded by a mountain which separates it from the neighbouring small chilocosms; and there is by way of a root, so to speak, a heaven of gods of the second trance. The middle chilocosm includes 1000 heavens of this second trance, with as many small chilocosms beneath them; the walls reach up to the third trance; it is covered by a heaven of the third trance. The great chilocosm comprises 1000 heavens of this trance, and is crowned with a heaven of the fourth.

The decompacts which show this synarizmbouring.

The documents which show this superimposing do not seem to be very old (Koppen, i. 236; Rémusat, Mélanges posthumes, p. 94; but Beal, p. 103, cites the Vibhāṣāśāstra). The Lalitavistara (p. 150) certainly does not know it, for it informs us that the great chilicosom contains a thousand million (100 koţis) heavens of each kind.

(p. 150) certainly does not know it, for it informs us that the great chilicocom contains a thousand million (100 kctis) heavens of each kind.

We must point out a certain number of cosmic multiplications which are independent of and probably previous to the chilocosmic conception; e.g. Mahavagga, i. 6, 31 (Jataka, i. 63), ayam dasasahassi lokaahatu (where the reference is to 10,000 worlds and not to 10000 worlds, Digha, ii. 130, where the gods of ten universes (dasassa lokaahatusu) gather together to be present at the death of the Buddha. There are different kinds of Brahma-gods; in Digha, in. 261, Mahabrahma, 'the great Brahma', reigns over 1000 ls halma-worlds; Matjhma, iii. 101, distinguishes between a Sahasso brahma, 'thousandth Brahma', governing a sahassi lokaahatu (cf. Anguttara, i. 277), a Dusahasso . and a Dasasahasso (10,000th Bahma,), governing a dasasahassi lokaahatu (cf. Sarnyutta, i. 146). See Visudahimagga, xin. (Warren, p. 321; S. Hardy, Manual, p. 21; Burnouf, Loius, p. 363) on the three 'fields' or 'donama' (kşetra) of a Buddha: 'Birth-domain (gamas') comprises 10,000 worlds; all tremble at different moments in the life of a Buddha (cf. Mahāvagga, 1, 6, 31). Authority-domain (dyha) comprises a hundred thousand times ten millions of worlds (=100 great chilicosms); over all extends the protecting power of the 'formulae of protection' (the so-called partitus) given by the Buddha. Knowledge-domain (pidnas) is without limit. The Mahāvastu mentions a buddhakşetra equal to 61 great chilicosms, and an upakşetra equal to 24 great chilicosms (a. 121, cf. pp xxxii and 471, and ii. 341). In the later literature 'great chilicosm' and buddhakşetra equal to 61 great chilicosm, and army partitus of Buddha, is infinite in every direction (e.g. Lotus, xi.; SBE xxi. 232), and there are quoted, by the dozen, names of these 'great universes' (e.g. Karumāpundarīka); and in the Avalamsaku we get a systematic axrangement of these chilicosms. We are not told whether it is neverted in the form of a tranchs or of a tan

pyramid (1, 3°, 5², . . . . 30°). But, on the other hand, we learn that the universe in which we are, the Schulobeadhatt, I forms part of the thirteenth stage, and constitutes the 'field' of the Buddha Varrochana (see art. Adibutall v, vol. i. p 9°,4 note ||), and that, on the same level at the same stage, in the extreme west, is the blessed universe of the Buddha Amilabha, the Sukhāvatī, where a kulpa of our universe is equal to a day and a night (see art. BLEST, ADOBE OF THE [Buddhist], vol. ii. p. (885).2

688b).<sup>2</sup>
LITERATURE.—See preliminary note 3 on p. 130 f., and p. 131s, note 4, and works mentioned throughout the article. See also the tr. of the Abhidhammasahnaha by Shive Zan Anng and C. A. F. Rhys Davids under the title Compendium of Philosophy (PTS, London, 1910), the tr. of Digha, ii., by T. W. and C. A. F. Rhys Davids, Dialogues of the Buddha, ii. (Oxford, 1910). L. DE LA VALLÉE POUSSIN.

COSMOGONY AND COSMOLOGY (Celtic). -We do not know the ancient Celtic ideas with respect to the origin of the world. According to Strabo (IV. iv. 4), the Druids, as well as others, said that the soul and the world were immortal, and that one day fire and water would prevail. On the other hand, the Celts of the Adriatic said to Alexander: 'We fear only one thing, and that is that the sky may fall on us' (Strabo, VII. iii. 8). This belief in the fall of the sky is seen frequently in the oaths of Irish epic poetry. In a note on the hymn of Ultan (verse 9) mention is made of the two pillars of the sky.

These confused and contradictory ideas do not enable us to re-construct Celtic cosmology. It would be dangerous, besides, to look for this cosmology in the Christian legends of the Irish Middle Ages, or in the so-called secrets of the bards of the Island of Britain, or in the oral traditions of Armorican Brittany; for the elements contained in these different sources are either foreign or

modern in origin. See also art. CELTS, vol. iii. p. 298.

G. DOTTIN.

COSMOGONY AND COSMOLOGY (Chinese).—Chinese theories of cosmogony and cosmology may be said to be of comparatively modern date. They profess, however, to be based on a system which claims an almost immemorial antiquity, i.e. the 8 trigrams, which are usually attributed to Fu-hsi (2852 B.C.), though somewhat contradictory accounts are given as to their ultimate origin. These figures were intended to represent the stalks of the milfoil (Ptarmica sibirica), which were employed by diviners in close association with the lines which were produced on the shell of the tortoise, as described in art. Com-MUNION WITH THE DEAD (Chinese), vol. iii. p. 7319. The stalks were divided into longer and shorter lengths, and the order in which they were drawn

lengths, and the order in which they were drawn and disposed, in varying combinations of long and short or 'strong' and 'weak' lines, was interpreted <sup>1</sup> This expression seems to denote a great chilicosm, but it is certain that its natural meaning should be the small universe, the chabravala in which we live. Saha is an adjective; we find a rem. form saha (Mahayutpatti, § 154, 21; Divyānadāna, p. 293, 19; Mahāvastu, ii. 370, 21; Lankāvatāra, in Burnoui, Introduction, p. 595; Karunāpunārita, p. 119; Wilson, ii. 32; and probably Rājataranjun, 1. 172, where A. Stein reads mahī), and more rarely the masc, form saha (Triglotte, § 46, and sahalokanātha, in Mahāvastu, ii. 385). This expression, which has been translated 'enduring,' suifering,' or 'supporting' (from root sah, is not clear. The Tibetan mi mjed or mjed (see Jischke, Tib. Dict., Loudon, 1881, p. 174) does not shed any light on the question, and the designation of Brahmā as Sahānnyati (Sahāpath) remains obscure (Burnoui, Introduction, p. 594; Beal, Catena, p. 16; Eitel, Handbook, p. 134).

2 The present sources are Kemusat, Melanges posthumes, p. 96; Beal, Catena, p. 121. The two authors differ on many points; e.g. Beal regards Sahā as the name of the whole thirteenth stage. Between the Sahā (entre of this siage) and the Sukhāvatī (regarded not as a chiliccosm but as a privliged chabravēla, with no hall, and no cosmic mountains), there are 10,000,000,000 universes. The original source is the Avatamsaka—a word which denotes a part of the Chinese canon of the Great Vehicle (Nanji), Catala, 1883, p. 32ff., on which see Tāranātha, p. 63, and Wassilieff, Budahismus, esp. p. 157 [171] f.).

in accordance with the arbitrary methods which prevailed from time to time, but of which the details have not been handed down. It may, however, safely be assumed that the function of the trigrams was limited to questions of tribal or domestic interest, and that nothing of a theological or cosmological character was attached to them.

The trigrams were arranged in 8 groups thus:

A new arrangement was invented by Si-peh (1231-1135 B.C.), during his two years' imprisonment at the hands of the ruler of the Yin dynasty, and it is probable that to him is also due the combination of the original 8 trigrams to form the 64 hexagrams which are the basis of the Yi-king, or Canon of Permutations, commonly known as the Book of Changes.

Si-peh, afterwards canonized as Wên-wang (= King Wên), appended to each of the hexagrams an explanatory outline, giving the general sense supposed to be conveyed by the figure, but his son Tan, better known as Chow-kung (Duke of Chow), added an analysis, showing how each line of the hexagram was to be interpreted so as to contribute to the general conclusion which his father had established. The deductions of King Wên, with the analyses of the Duke of Chow, form the text of the Yi-king. Throughout the 64 chapters of the original work there is nothing whatever of a cosmological character; the compilers were entirely occupied with political and personal matters, endeavouring to learn from the omens furnished by the stalks and their representative symbols the probable results of certain courses of conduct which were in contemplation. The harmless which were in contemplation. trifling, as it seemed to his jailers, with which the prisoner, Si-peh, employed his leisure, was in reality a means by which he was able to develop his revolutionary schemes without let or hindrance; none but himself knew the significance attaching to the harmless straws with which he amused himself; and when, in course of time, his liberty was restored, he was enabled to consummate his schemes with complete success.

A new element is, however, introduced in the 10 Appendixes to the Yi-king which bear the imprimatur of Confucius, though it seems probable that only the first and second are properly attributed to him. To Confucius it seemed inevitable that the thought which had been expended upon the hexagrams, by sages so eminent as Si-peh and his son, could not fail to be of permanent value, and that, though the political conditions which had first inspired their studies no longer existed, the lessons which they contributed might be applied with equal value to the troublous circumstances of his own times. Hence Confucius, in later life, devoted a great deal of attention to the study of the Yi-king, frankly acknowledging the difficulty he experienced in the interpretation of its cryptic phraseology, and in adapting its lessons to his own enlarged conception of the scope of the work. Later commentators, building upon the theory that the three lines of the early trigrams represent the three powers—Heaven, Earth, and Man—attempt to transfer the lessons of the figures from the smaller stage of human affairs to the larger theatre of universal Nature. In the Appendixes, therefore, we discover, in an ever-ascending scale, the application of the hexagrams to the constitution and course of Nature, the later chapters furnishing some of the material out of which Chu-hsi (Chucius, A.D. 1130-1200) developed his scheme of cosmogony and cosmology, which now represents modern Chinese philosophic thought on the subject.

A word of explanation may here be necessary in order to show the mechanism of the developed

system of the Yi-king. Each trigram bears a distinctive name, as well as a local habitation or direction, together with a natural affinity, quality, etc. Thus the 6th group, as arranged by Si-peh, originally the first group according to the earlier system, consisting of 3 unbroken or 'strong' lines, is denominated k'ien, which means 'untiring,' 'strength,'etc., and represents Heaven, a sovereign, a father, etc. Its locality or direction is northwest; its affinity, ether; its quality, humidity, etc.

The hexagrams are formed by the combination of 2 trigrams, and also have distinctive names.

Each line bears a certain relation to the other lines; thus the first or bottom line in the lower trigram is related to the first line of the upper trigram, i.e. to the 4th line of the hexagram. The position of the various lines is a most important consideration-sometimes a 'strong' line is found

in a 'weak' place, and vice versa.

An illustration from Legge's Yi-king (SBE, xvi. 71) may serve to indicate the method of interpretation. The 7.h hexagram, known as sze, is written thus: == == consisting of the 2 tri-

\_\_\_\_\_, representing water, and kw'un grams k'an = the language of the diviner, multitudes of people mustering for purposes of defence or attack. The "strong' or undivided line occupies the most important place in the inner or lower trigram, i.e. the middle, second only to the middle place in the outer, or upper, trigram, which is the paramount position in the whole figure. The 'strong' line, therefore, occupying a secondary position, must stand for the leader of the host; were he to occupy the highest position, i.e. the 5th line from the bottom—the middle line of the upper trigram—he would represent the sovereign.

These, of course, are perfectly arbitrary preconceptions.

would represent the sovereign. These, of course, are perfectly arbitrary preconceptions.

The Duke of Chow thus interprets the figure: 'The first line (reckoning from below), divided, shows the host going forth according to the rules (for such a movement). If these (rules) be not good, there will be evil.' Legge adds: 'The line is divided, a weak line in a strong place, not correct; this justifies the caution which follows.'

'The second line, undivided, shows (the leader) in the midst of the hosts. There will be good fortune and no error. The king has thrice conveyed to him his charge.'

'The third line, divided, shows how the hosts may possibly have many commanders; (in such a case) there will be evil.' Legge explains: 'The third place is odd, and should be occupied by a strong line, instead of which we have a weak line in it. But it is at the top of the lower trigram, and its subject should be in office or activity. There is suggested the idea that its subject has vaulted over the second line, and wishes to share in the commander-in-chief. The lesson of the previous line is made of onone effect. We have a divided authority in the expedition. The result can only be evil.'

'The fourth line, divided, shows the hosts in retreat: there is no error.' Legge comments thus: 'The line is also weak, and victory cannot be expected; but in the fourth place a weak line is in its correct position, and its subject will do what is right in his circumstances. He will retreat, and a retreat is for him the part of wisdom.'

'The fifth line, divided, shows birds in the fields, which it is advantageous to scize (and destroy). There will be no error. If the oldest son lead the host, and younger men be (also) in command, however firm and correct he may be, there will be evil.' Legge interprets the Duke's findings thus: 'We have an intimation (in this passage)... that only defensive war, or war waged by the rightful authority to put down rebellion and lawlessness, is right. "The burds in the fields" are emblematic of plunderers and

His territories are at the disposal of the conqueror. The commander-in-chief has done his part well. His sovereign, "the great ruler," comes upon the scene, and rewards the officers who have been conspicuous by their bravery and slill, conferring on them rank and lands. But he is warned to have tespect in doing so to their moral character. Small men, of ordinary or less than ordinary character, may be rewarded with riches and certain honours; but land and the welfaire of its population should not be given into the hands of any who are not equal to the responsibility of such a trust."

To turn now to the main deduction of King Wên, of which the above is the detailed explanation. We find the lessons of the hexagram thus expressed: 'Sze indicates how (in the age which it supposes), with firmness and correctness and (a leader of) age and experience, there will be no error.

It will be observed, from this example, how the character of the lines (whether divided or undivided), their place in the hexagram (whether odd or even, e.g. 1, 3, 5; or 2, 4, 6), and their mutual relation to each other (2 corresponding to 5, etc.) are all of great importance in the exposition of the lessons they are supposed to convey. The mutual relation of the 2 trigrams in each hexagram

is also a matter of importance.

This specimen will serve to show how little there is of any cosmological element in the original Book of Changes, and how far the modern com-mentators have wandered from the intention of the compiler and his earliest expositor; in fact, it was only by an arbitrary forcing of the primitive modes of divination, and the introduction of entirely new ideas in the Appendixes, that Chucius succeeded in building up the system which is attributed to him, and which has only the slightest affinity with the diagrams of King Wen. A rough parallel might be established between the diagrams and our modern playing cards, in which the calendar may be said to be represented, though with no cosmological intention, the 4 suits representing the 4 seasons; the 13 cards in each suit = the 13 sidereal months; the 52 cards = the 52 weeks of the year; the 364 pips (including the value of the 'coat' cards) = the days of the year, etc.; and, as the cards are now employed by pretended 'fortunetellers' as a key to the secrets of human existence, so the hexagrams of King Wên came to be applied, in course of time, to issues much larger than were ever contemplated by their inventor.

The chief exponent of the modern system was Chucius, whose name is pre-eminent amongst the philosophers of the Sung school of the 11th and 12th centuries in China. Confucius and Meneius were practical philosophers, but Chucius was not content to accept the fact of Heaven and Earth, which had been sufficient for the great teachers who preceded him; he endeavoured to establish a who preceded him; he endeavoured to escaonsh a systematic theory of the origin of all things, finding in the *Yi-king*, as he supposed, a groundwork for his researches. He was further aided in his speculations by Taoistic and Buddhistic suggestions, as well as by other philosophic concepts which may well have reached China by that time, and which to an ardent and omnivorous student would prove attractive. It is not milkely that he would prove attractive. It is not unlikely that he was familiar with Persian and early Christian ideas propagated by the Nestorian teachers in the cen-

turies preceding him.

It is very important to bear in mind that the earliest conception of the Chinese regarding the universe was a theological one, while the later system of Chucius is philosophical; and it is owing to this fact that Chucius found himself involved in frequent difficulties in the endeavour to harmonize the two. The ancient or theological concept takes its starting-point from Shang-ti, or Heaven; the Taoistic or philosophic theory goes no further back than the "Great Extreme"; but Chucius, though professedly no theologian, appears unable to elimin-Territory

ate from his system some traces of the ancient conviction that behind all phenomena there is a power, variously described as Heaven, the 'Controller,' the 'Great Framer' (or 'Potter'), etc., while he shrank from any suggestion of anthropomorphism, and disclaimed the view that that power actively interfered in the affairs of men.

As a matter of fact, the theories of Chucius are not intended to account for ultimate beginnings; his conception of the present world is that it is but one of a long series of similar existences which have flourished in turn, and have been corrupted, each disappearing eventually from view and giving place to a new world. He makes no attempt to explain how the primal element came into being, but finds his starting-point in the theory of the existence of a Natural Law which he denominates Li (pronounced Lee), and a vital essence which he calls K'i (pronounced Chee). He does not inquire wherein this Law resides, or where this vital 'breath' is derived from. The theologian may breath' is derived from. The theologian may contend for the recognition of a Divine creator or framer, but Chucius, though he does not traverse the argument, declines to discuss the subject. In inquiring, therefore, into the evolution of this present world, he finds its material basis in K'i (vapour, breath, air, etc.), and its active principle in Li—both eternal in their nature, as existing before the clock of time began to strike, yet admitting of a priority of order in the case of Li. The alternate action and inaction of Li. in the The alternate action and inaction of Li, in the sphere of  $K^{i}i$ , produced the positive and negative forms, Yang and Yin, variously represented as Light and Darkness, Heaven and Earth, Male and Female, etc., whose vicissitudes constitute the Tao, or Course of Nature, as reflected in the 4 Two, or Course of Nature, as renected in the 4 seasons, the alternations of day and night, etc. The Yang and Yin contain the 'Five elements' in embryo, viz. metal, wood, water, fire, and earth, of which water and fire are regarded as the simplest the contains the samplest and the samplest t forms. Each element possesses a Yang and a Yin quality, and all are pervaded by Li. As a result of the interaction of these two forms'—the Yang and the Yin, which are in constant motion—a certain amount of 'sediment' is precipitated to the centre of the whirling mass and becomes Earth, whilst the more subtle excreta are flung upwards to the outer ring of the circle, and become Heaven. Earth remains motionless in the centre, whilst the Heavens revolve continually, as the movements of the heavenly bodies serve to show.

The myriad creatures were produced by the spontaneous coagulation of the finer essences of the five elements in the Yang-Yin, forming a hermaphroditic being or pair, which in course of time separated and gave birth to the male and female species which now constitute the human race.

It will be seen at a glance how far removed these theories are from the system of divination attributed to King Wên, and it seems inevitable that they represent an interpretation of that system entirely alien to the purpose which inspired its first exponents. From Chucius' own words, we are led to conclude that the study of the Yi had made little progress during the centuries which had elapsed from the days of Confucius until his own time. It seems probable that the later Appendixes, popularly ascribed to the great 'Master' himself, belong to a period long posterior, and they seem to reflect opinions which began to be current only in Chucius' days. Philosophers such as Shao-yung (A.D. 1011–1077), of whom Chucius says, 'From the time of Confucius no one understood this (i.e. the relation between the Great Extreme, the 8 diagrams, etc.) until Shao explained it,' and Chow Tun-i (A.D. 1017–1073), to whom is attributed the circular diagram of the Great Extreme, apparently made use of the Yi as a vehicle of

Taoistic ideas, and applied to the 'strong' and 'weak' lines of King Wên the system of Yang and Yin, which nowhere appears in the text of the Yi, but which is suggested by the words of Lao-tze in the Tao-Tê-King):

'Tao produced unity; unity produced duality; duality produced trinity; and trinity produced the innumerable objects; the innumerable objects, carrying the feminine or shadow principle on the one side, and the masculine or sunlight principle on the other, created a just harmony by their respective clashes of primitive impulse or ether (Parker's tr.).

It may be assumed, therefore, that the Chinese cosmogony is of comparatively recent origin, and that the ancients were content to accept the fact of the universe without abstruse theorizing as to its origin and method. The Sung philosophers adopted the trilinear figures of the Yi, but devised a new diagram of what they called the 'Great Extreme,' viz. a circle intended to represent the ultimate principle Li, which, in their system, indicates the limit of philosophical discussion. This circle was subdivided thus:

to illustrate the interaction and constant gyrations of the Yang and Yin, i.e. the primal essence, or K'i in its 2 forms, the motive power in which is Li. Another circle represents the K'i as divided into its constituent elements, i.e. the five active principles—water, fire, wood, metal, and earth. Sometimes the four seasons are represented.

From these we may learn that, according to Chaping the world came into existence as a result.

From these we may learn that, according to Chucius, the world came into existence as a result of the operation of Li, or 'Natural Law,' setting in motion the K'i, or 'vital essence,' which, by the interaction of its two forms, Yang and Yin, containing the 5 elements, threw off, in its perpetual revolutions, the excreta which coagulated respectively into Heaven, on the outward edge, and Earth, in the centre; and that the vicissitudes of Yang and Yin account for the regular succession of day and night, the alternate waxing and waning of the same being the cause of the four seasons; and that, when the great cycle, calculated as occupying a kalpa, or 129,600 years, is accomplished through the exhaustion of the Yang element in man, as exhibited by moral declension and universal corruption, the whole system is resolved into its constituent elements, and a new heaven and earth are called into being.

constituent elements, and a new heaven and earth are called into being.

Man's place in Nature.—As to the place which man occupies in this system, since man is compounded of the five elements constituting the K'i, or vital essence, in which the Li operates, he is described as a microcosm—a world in miniature—from which it follows that every man has within him a 'spark of the Divine.' In some men the Yang predominates; in others the Yin. Of the former are the Sages, the great men of past and present times; the latter are represented by the 'mean' men, the dull, the criminal, etc. As in the case of Nature, so man has his seasons of spring, summer, etc., and his days and nights, and, like the world, comes to an end by the exhaustion of the K'i, or vital breath. His great business, therefore, is to frame and fashion his life so as to live in conformity with the Tao, or observed order of the universe. 'No contrariety' must be his motto. By so doing he may attain in time the proud distinction of being an associate of Heaven and

Earth. As to his future, neither Lao-tze, Confrom the philosophical point of view, death to them, though they would not discuss it, meant a return to the original chaos, like the universe at the end of its cycle of existence; or, to express it in the polite but equivocal phrase of ancient and modern days, a 'return to Heaven.'

The philosophic idea was, however, too lofty

and illusive for common acceptance, and, during the Sung dynasty, the tradition of a 'first man' was evolved, ascribing the ancestry of the human race to a certain P'an-ku, of whom it is stated in the Lu-she (Mayers' tr.):

"When the great first principle had given birth to the two primary forms, and these had produced the four secondary figures, the latter underwent transformations and evolutions, whence the natural objects depending from their respective influences came abundantly into being. The first who came forth to rule the world was named P'an-ku, and he was also called the "Undeveloped and Unenlightened" (i.e. the Embryo)."

This idea is now almost universally accepted by the mass of the unlearned in China, and by not a few of the scholarly class, being, as it were, a sort of concretion of the indefinite theories of the Chucian philosophers as to the origin of man.

The place occupied by spiritual beings.—Though Confucius and Chucius (16 centuries later) were unwilling to enter into the question of spiritual existences, and though the latter expressly declared the difficulties involved in such a theory, the fact that the earliest records refer so frequently to the existence of spirits made it necessary that a place should be found for them in the Chinese philosophy, should be found for them in the Chinese philosophy, and, accordingly, the Kuci-shen, or spirits, were adopted as representing, so to speak, in personal form, the activities at work in the changing phenomena of Nature; but the ancient doctrine that the spirits are the ministers of God, carrying out His behests, on the analogy of the officers of State fulfilling the decrees of the sovereign, survives in a sovereign, survives in a sovereign. vives, in a somewhat debased form, in the popular opinion which invests the earth and air with a numberless host of good and evil spirits or demons.

The place of God.—In the earliest days of which we possess any record, Shang-ti, or God, appears to have occupied a chief place in the mind of China's rulers, but at the beginning of the Chow dynasty (12th cent. B.C.) we find the terms 'Heaven' dynasty (12th cent. B.C.) We find the terms Theaven and 'Earth' coming into prominence, representing the operations of God in Nature and Providence, and, as a consequence, Shang-ti is removed to a greater distance than that intimate relation in which he seems to have stood vis-à-vis his votaries in the earlier days. Later developments contributed towards the increasing of this distance and buted towards the increasing of this distance, and and transcendental questions tended to widen the chasm. Chucius appears to have relegated God to as position of infinite remoteness and unknowable a position of infinite remoteness and unknowable a position of infinite remoteness and unknowable a position of the grass and the good, and the good, and there be individual to tailing power, of whose there being individual to tailing power, of whose there being individual to tailing power, of whose there is individual to tailing power, of whose existence and he Great Extra gust satisfy them existence and he Great with the first and the good, and the unjust '(Mt 1825), the evil and the good, and the unjust '(Mt 545), feeds the birds of the grass of the fields (Mt there is the individual to the first and the grass of the fields (Mt there is the individual to the first and the good, and the unjust '(Mt 1825), who is the evil and the good, and the unjust '(Mt 1825), who is the evil and the good, and the good, and the unjust '(Mt 1825), who is the evil and the good, and the unjust '(Mt 1825), who is the evil and the good, and the good, and the unjust '(Mt 1825), who is the evil and the good, and the good, and the unjust '(Mt 1825), who is the evil and the good, and the unjust '(Mt 1825), who is the evil and the good, and the good, and the good, and the unjust '(Mt 1825), who is the evil and the good, and the unjust '(Mt 1825), who is the evil and the good, and the unjust '(Mt 1825), who is the evil and the good, and the g the attitude of Confucius towards metaphysical

of Chucius was unable to overcome the immemorial persuasion of his fellow-countrymen, that the Supreme Ruler' interferes actively in the affairs of the nation, and sends forth His agents, including spirits and sages, to fulfil His beliests. Hence it happens that Shang-ti is still worshipped officially by the Emperors of China, and Heaven is invoked by the mass of the people, whilst the spirits are solicited to exert their influence on behalf of their petitioners. The theological concept has thus survived the philosophical, and, by a strange inconsistency, the materialism of Confucing and Chucius, as represented by the modern Chinese literate, is exhibited in a country which, above all others, is remarkable for its active and almost frenzied addiction to the propitiation of spirits and demons.

W. GILBERT WALSHE.

COSMOGONY AND COSMOLOGY (Christian).—I. Early.—The early Christians were not seriously perplexed by questions of cosmogony. They had come into a heritage, whereby they had grown up into the current Palestinian-Jewish nad grown up into the current Fatestinan-Jewish ideas of the origin and constitution of the world. Moreover, they looked out upon the world and the whole realm of Nature from the purely religious standpoint. 'In the beginning God' (Gn 1¹) was the primary article of their faith. It was Jahweh, the God of Israel, who had 'measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance. . . . It is he that sitteth upon the circle of the earth . . . that stretcheth out the heavens as a curtain, and spreadeth them out as a tent to dwell in. . . . I am Jahweh, and there is none else. . . . I form the light, and create darkness: I make peace, and create evil. I, Jahweh, do all these things' (Is  $40^{12-22}$   $45^{5-7}$ ). Psalms 8 and 104 express the same idea of the sole, beneficent creatorship of God, and in Psalms 33 and 148 creation by the spoken word is confidently expressed. The Book of Job is likewise pervaded by this belief, and the same is true of Pr 8<sup>22-31</sup>. These seem to have been the primary sources from which the early Christians drew their conception of the material cosmos and God's relation to it. This simple religious view found free expression in their prayers: 'O Lord, thou that didst make the heaven and the earth and the sea, and all that in them is' (Ac 424). And Jesus had and all that in them is' (Ac 4<sup>24</sup>). And Jesus had expressed His faith in the same direct and simple way. To Him God was 'Lord of heaven and earth' (Mt 11<sup>25</sup>), who 'maketh his sun to rise on the evil and the good, and sendeth rain on the just and the unjust' (Mt 5<sup>35</sup>). His heavenly Father also feeds the birds of the heavens, and dothes the grass of the fields (Mt 6<sup>26</sup>). The disciples, like their Master, were absorbed in the thought of the loving care of God, and His gracious provision for all His operatures. 'In him,' says St. Paul, 'we oreation ove, and have our being' (Ac 17<sup>28</sup>), emphasize refound and enduring impression which

dreation ove, and have our being' (Ac 1728), emphasize refound and enduring impression which whole real, but at His followers soon constrained writings at the Biblit was He who had brought explain G Like Albe. God. But Lordship in the two be ex was a mirand did ultimately involve Some it was not poshe activity. This idea was mater men to make the Father, of whom are all the Crial universe a mata; and one Lord, Jesus colour.

Jack Gort in

He taught that it was an article of faith to believe

that the world was created in time.

Contemporary with the Schoolmen were the various heretical sects, differing in some respects from the orthodox in their views of the creation and government of the world. The most divergent and government of the world. The most divergent from the commonly accepted views were the dualistic sects, which at the same time claimed to be Christian. They went by various names, such as Cathari, Albigenses, and so on. They seem to have gained their heretical views from contact with the religions of the East, where dualism was accommon at the time. In coneral they held very common at the time. In general they held that there were two principles, or spirits, or creators, which had to do with the making of the universe visible and invisible. These two were the good and the evil, and both were from eternity, though some held that the evil spirit was originally though some neid that the evil spirit was originally good and had fallen from his first estate. The evil spirit was the author of the OT, and the maker of all visible Nature. He had created man as a physical being, and was the cause of all natural phenomena and all disorders in Nature. The good spirit was the author of the NT. He may also the creator of the human coul which had

The good spirit was the author of the NT. He was also the creator of the human soul, which had been captured and imprisoned by the evil spirit.

In the later Middle Ages there arose various schools of Mystics. Some of these were heretical and frankly pantheistic. Others, like Master Eckhart, considered themselves orthodox Christians, but were unable to escape the suspicion of pantheism. Eckhart was in agreement with Aquinas in his belief that there existed from attentive a world of ideas distinct from the world eternity a world of ideas distinct from the world of creatures. He explained what seemed to his contemporaries to be partheism, by saying that creatures are made in time and out of nothing, and that they existed from eternity in God in the same sense that a work of art exists in the mind of the artist before it takes material form. The existence of the creation from all time was in the Divine reason. God exists in created visible objects as their essence. The external world is but

the reflexion of the innermost essence of God.

The modern Roman Catholic Church holds to the teaching of Aquinas, but allows a difference of opinion on unimportant points. What a Roman Ontholic must believe to-day in regard to cosmology and cosmogony is defined by the Vatican Decrees. The Council declared against the statement that matter alone exists, and in opposition to the view that the substance and essence of God and of all things are one and the same; also in opposition to the view that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence by the manifestation and evolution of itself became all things, or that God is universal or indefinite Being, which, by determining itself, constitutes the universality of things. The positive statement by the Council was that God from the very beginning of time produced out of nothing the world and all things both spiritual and corporeal.

The Protestant position, as given in the earlier creeds, is merely a paraphrase of the cosmology found in Genesis. The Westminster Confession found in Genesis. The Westminster Confession states: 'It pleased God in the beginning to make or create out of nothing the world and all things therein in the space of six days' (iv. 1). The Belgic Confession is more explicit: 'We believe that the Father by the Word created of nothing the heavens, the earth, and all creatures, as it seemed good unto Him, giving unto every creature its bains shape, forms, and several offices to serve its being, shape, forms, and several offices to serve its creator.' We believe that He doth also uphold and govern them by His infinite power for the service of mankind to the end that man may serve His God' (Art. xii.),

There is, of course, no authoritative statement for Protestantism relating to Christian cosmology and cosmogony. With the freedom of investigation which characterizes modern Protestantism, there are many divergent views. Some still hold to the statements of the older creeds, and believe that the conclusions of science have nothing to do with religion. The extreme holders of this position maintain that the world was made in six days of twenty-four hours each, but this view has a decreasing number of adherents. Others believe that the account of Creation given in Genesis is strictly scientific, and that the statements there found correspond in a minute degree to the facts of geology. Others consider that the account in Genesis agrees with the facts only in a general way. Others regard the account as a myth or legend corresponding to the Creation stories in Assyrian and Babylonian literature. The only points upon which modern Protestants agree are that God is the source of the relationship. that God is the source of the universe; that it came into being as a result of the free exercise of His will; and that it is continually under His care and control.

COSMOGONY AND COSMOLOGY (Egyptian).—We shall here divide this subject into three stages: (1) earth-myths, (2) sun-myths, (3) theology.

I. Earth-myths.—The attention of primitive man was naturally first directed to explaining tangible Nature—the earth, the sea, and the mists which lay on the land. The most elementary distinction between racial views is the sex of the earth and of the abyss or sea, which from its blueness was naturally thought to be of the same nature as the blue sky—the heavenly ocean. In Egypt the sky (Nut) was feminine, the land (To) was masculine. Exceptionally in the 13th cent. B.C., when Semitic influence was strongest, the sexes were reversed, as in Hebrew shāmayīm ('heavens') is masculine, and 'ādāmāh ('earth') is feminine. Similarly in Babylonia, Ea (the deep) and Anu (the sky) are masculine, while Damkina (the land) is feminine. 'e same attribution is adopted by Greek, La and in the New Zealand mytho nd German, Egypt was,

therefore, exceptional in the sex l and sky. These elements of land and wa re thought to have been evolved in the pri aos of the universal ocean (Nu or Nun), w t yet was the heaven, not yet the earth, in yet born were the gods, not (Pyramid of Pepy 1., 1. 663). not, not st death? sexes as in

This idea passed to Hesiod, along with

This idea passed to Hesiod, along with Egypt:

From chaos were generated Erabos Night (fem.),
And from Night again were generated Whom she brought forth, having combrace of Erabos.'

He probably derived it through the Sidonia asserts, 'before all things place Chrono Omichies. And by a connexion between Pas the two principles, are generated for the seems to have prevailed in the eastern The lifting of the watery in

The lifting of the watery miles seen rising each morning iron the ing of them from the earth and them to the sky, was a work various

to Ra (the sun) or Shu (the atmosphere). heaven (Nut) was forced apart from the earth (Keb or Seb); and usually Shu is represented upholding Nut over his head.

Similarly in New Zealand, the earth and heaven clave together in the darkness, and had produced gods and men. The gods try to part them, but cannot until the god and father of forests, birds, and insects strives; 'his head is now firmly vlanted on his mother the earth, his feet he raises up and rests "ainst his father the skies, he strains his back and limbs with "ty effort. Now are rent apart Rangi and Papa, and with "groans of woe they shriek aloud. . . . It was the fierce of Tane which tore the heaven from the earth, so that rent apart, and darkness was made manifest, and so ght" (G. Grey, Polynes. Mythol., Lond. 1855 [reprint,

pt it was similarly assumed that Seb and Nut roduced Ra or Shu before they were separated.
Sun-myths.—The genesis of the sun (Ra) is variously attributed to Seb and to Nut. According to one view, Ra was 'the egg of the great cackler,' Seb being, by a play on words, equated with the goose. In another view, Ra was born as a calf of the celestial cow, or child of the skygoddess; and this may be the motive for regarding the sky as feminine. Another, and a more general, view, when the theologic frame of creation came forward, was to posit the formation of Ra direct from the chaos Nun, and so make him an ancestor of Seb and Nut. Probably this view was that of the Heliopolitan Ra-worshippers, as distinct from the older Seb- and Nut-worshippers in the Nile valley. Ra came into being 'while as yet there was no heaven, . . . and there was nothing that was with him in that place where he was . . . resting in the waters of Nun, and he found no place where he could stand '(Erman, Religion, p. 26). Ra then united with his own shadow, and from his seed created Shu and Tefnut, in the midst of the chaos. Shu certainly represents space or air, symbolized by an ostrich feather; Tefnut represents moisture. From Shu and Tefnut were born Seb and Nut; and from them, in turn, the Osiride family, and mankind.

The heaven was regarded as an ocean parallel with that on earth. It was on the heavenly ocean that the sun, the moon, and the stars sailed in ships each day and night. To explain the sun's re-appearing in the morning, they supposed a nocturnal ocean beneath the world, on which the sun sailed as by day. The dead were, on this view, considered as joining the boat of Ra, and sailing, under his protection, through the hours of the night as well as of the day.

3. Theology.—The gods associated with creation are many. *Khnumu*, 'the Shaper,' who shapes living things on his potter's wheel, 'created all that is, he formed all that exists, he is the father of fathers, the mother of mothers . . . he fashioned men, he made the gods, he was father from the beginning . . . he is the creator of the heaven, the earth, the under world, the water, the mountains . . he formed a male and a female of all birds, fishes, wild beasts, cattle, and of all worms' (Wiedemann, *HDB*, vol. v. p. 179b). He is figured always with the ram's head, to signify his creative power, and was worshipped at the source of the Nile—the cataract. Ptah, 'the Great Artificer,' the Domiurge, shapes the sun- and moon-eggs on his potter's wheel; he is the god of law and order who created all things by Maat, truth or exactness. Osiris 'formed with his hand the earth, its water, its air, its plants, all its cattle, all its birds, all its winged fowl, all its reptiles, all its quadrupeds. This is the development of the primitive idea of Osiris as a god of vegetation. Amon-Ra also, on the growth of his worship when Thebes was the capital, became the father of the gods, the fashioner of men, and all other things (see Wiedemann, loc. cit.).

VOL. IV .-- 10

Thoth, according to Hermopolite legend, when in the chaos of Nun, created Seb and Nut by his word; and they were parted asunder at Hermopolis. This creation by the word was the highly spiritualized idea of later times, and is seen in the Korē Kosmou (500 B.C.), where Thoth-Hermes is first of the gods.

Other sky-gods are Anher, 'He who goes above,' god of Theni or Girgeh; and Horus as the sky supported by four pillars who are the four sons of Horus. The mixtures of ideas in later times are so complex, and so combined with the theology, that we cannot touch on them here. Our object has been to show the primitive ideas, and the various nuclei of thought which were combined.

W. M. FLINDERS PETRIE.
COSMOGONY AND COSMOLOGY (Greek).
Since the word 'cosmogony' describes the origin of the universe by the figure of birth, it suggests to us in the first instance accounts of a mainly poetic and mythological kind. Yet science also has its fairy tales, and one who sought for information about Greek cosmogonies might not unreasonably look for some account of that, for example, which is contained in the *Timeeus*. If this be introduced, so should those of one or two other philosophical systems. We propose, there-fore, to deal first with what may be called the poetic cosmogonies, and afterwards with the philo-sophical. We shall devote rather more space to the former, as being probably less familiar to most readers. In the case of the latter, we shall take three typical examples, describe them briefly, and try to show the place of each in the history of Greek thought as to the relation between God and the world.

I. POETICAL COSMOGONIES.—I. Homer.—We find in Homer not a complete cosmogony, but ideas of a cosmogonical kind, or, rather, of a geogonical, as all he is concerned about is the world in which we live. In H. xiv. 246, Oceanus is the father ( $\gamma \epsilon \nu \epsilon \sigma \iota s$ ) of all the gods, and in xiv. 201 he is the father, and Tethys the mother. The latter name is usually derived (F. Lukas, Kosmogonien, p. 154 n.) from  $\theta \hat{\eta} \sigma \theta a_i$ , 'to suck '  $(\tau \dot{\eta} \theta \eta =$  'nurse'). Tethys will then symbolize the suckling mother, Earth. But behind these Nature-powers stands a third still more august, the goddess Night. In II. xiv. 244, Zeus is referred to as younger, indeed, but more potent, than Oceanus; Night, on the other hand, even Zeus fears to offend (ib. 259 ff.). Lukas, therefore, follows Damascius (6th cent. A.D.), our chief authority on the first principles of the Greek cosmogonies, in supposing that, for Homer, Night was the supreme geogonical conception (Damasc. περὶ πρώτων ἀρχῶν, c. 124, ed. Κορρ,

1826, p. 382).

2. Oldest Orphic cosmogony.—To this head Lukas refers those fundamental conceptions which in various fragmentary notices are directly as-cribed to Orpheus. Not the least evidence of their antiquity is their practical identity with what we have found in Homer. Endemus the Peripatetic declared, according to Damascius (*l.c.*), that Orpheus made his beginning with Night. John Lydus (6th cent. A.D.) stated that Orpheus' three first principles were: Night, Earth, Heaven (Lobeck, Aglaoph. 1829, i. 494). Plato, again, quotes a couplet as from Orpheus, describing Oceanus and Tethys as the first wedded pair (Crat. 402 B), while he informs us in the Timeus (41 A) that Oceanus and Tethys were the offspring of Earth and Heaven, As the former statement is expressly referred to Orpheus, we may be sure that he had the same He taught that it was an article of faith to believe that the world was created in time.

Contemporary with the Schoolmen were the various heretical sects, differing in some respects from the orthodox in their views of the creation and government of the world. The most divergent from the commonly accepted views were the dualistic sects, which at the same time claimed to be Christian. They went by various names, such as Cathari, Albigenses, and so on. They seem to have gained their heretical views from contact with the religions of the East, where dualism was very common at the time. In general they held that there were two principles, or spirits, or creators, which had to do with the making of the universe visible and invisible. These two were the good and the evil, and both were from eternity, though some held that the evil spirit was originally good and had fallen from his first estate. The evil spirit was the author of the OT, and the maker of all visible Nature. He had created man as a physical being, and was the cause of all natural phenomena and all disorders in Nature. The good spirit was the author of the NT. He was also the creator of the human soul, which had been captured and imprisoned by the evil spirit.

In the later Middle Ages there arose various schools of Mystics. Some of these were heretical and frankly pantheistic. Others, like Master Eckhart, considered themselves orthodox Christians, but were unable to escape the suspicion of pantheism. Eckhart was in agreement with Aquinas in his belief that there existed from eternity a world of ideas distinct from the world of creatures. He explained what seemed to his contemporaries to be pantheism, by saying that creatures are made in time and out of nothing, and that they existed from eternity in God in the same sense that a work of art exists in the mind of the artist before it takes material form. The existence of the creation from all time was in the Divine reason. God exists in created visible objects as their essence. The external world is but

the reflexion of the innermost essence of God.

The modern Roman Catholic Church holds to the teaching of Aquinas, but allows a difference of opinion on unimportant points. What a Roman Catholic must believe to-day in regard to cosmology and cosmogony is defined by the Vatican Decrees. The Council declared against the statement that matter alone exists, and in opposition to the view that the substance and essence of God and of all things are one and the same; also in opposition to the view that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence by the manifestation and evolution of itself became all things, or that God is universal or indefinite Being, which, by determining itself, constitutes the universality of things. The positive statement by the Council was that God from the very begin-ning of time produced out of nothing the world and all things both spiritual and corporeal.

The Protestant position, as given in the earlier

creeds, is merely a paraphrase of the cosmology found in Genesis. The Westminster Confession states: 'It pleased God in the beginning to make or create out of nothing the world and all things therein in the space of six days' (iv. 1). The Belgic Confession is more explicit: 'We believe that the Father by the Word created of nothing the heavens, the earth, and all creatures, as it seemed good unto Him, giving unto every creature its being, shape, forms, and several offices to serve its creator. We believe that He doth also uphold and govern them by His infinite power for the service of mankind to the end that man may serve His God' (Art. xii.),

There is, of course, no authoritative statement for Protestantism relating to Christian cosmology and cosmogony. With the freedom of investigation which characterizes modern Protestantism, there are many divergent views. Some still hold to the statements of the older creeds, and believe that the conclusions of science have nothing to do with religion. The extreme holders of this position maintain that the world was made in six days of twenty-four hours each, but this view has a decreasing number of adherents. Others believe that the account of Creation given in Genesis is strictly scientific, and that the statements there found correspond in a minute degree to the facts of geology. Others consider that the account in Genesis agrees with the facts only in a general way. Others regard the account as a myth or legend corresponding to the Creation stories in Assyrian and Babylonian literature. The only points upon which modern Protestants agree are that God is the source of the universe; that it came into being as a result of the free exercise of His will; and that it is continually under His care and control.

COSMOGONY AND COSMOLOGY (Egyptian).—We shall here divide this subject into three stages: (1) earth-myths, (2) sun-myths, (3)

r. Earth-myths.—The attention of primitive man was naturally first directed to explaining tangible Nature—the earth, the sea, and the mists which lay on the land. The most elementary distinction between racial views is the sex of the earth and of the abyss or sea, which from its blueness was naturally thought to be of the same nature as the blue sky-the heavenly ocean. In Egypt the sky (Nut) was feminine, the land (To) was masculine. Exceptionally in the 13th cent. B.C., when Semitic influence was strongest, the sexes were reversed, as in Hebrew shāmayīm ('heavens') is masculine, and 'ādāmāh ('earth') is feminine. Similarly in Babylonia, Ea (the deep) and Anu (the sky) are masculine, while Damkina (the land) is feminine. The same attribution is adopted by Greek, Latin, and German, and in the New Zealand mythology. Egypt was, therefore, exceptional in the sex of land and sky.

These elements of land and water were thought to have been evolved in the primal chaos of the universal ocean (Nu or Nun), when 'not yet was the heaven, not yet the earth, men were not, not yet born were the gods, not yet was death' (Pyramid of Pepy I., 1. 663).

This idea passed to Hesiod, along with the same sexes as in Egypt: From chaos were generated Erebos (masc.) and black

From chaos were generated Energy Might (fem.),
And from Night again were generated Ether and Day,
Whom she brought forth, having conceived from the embrace of Erebos.'
He probably derived it through the Sidonians, who, Damascius
asserts, 'before all things place Chronos, and Pothos, and
Omichles. And by a connexion between Pothos and Omichles,
as the two principles, are generated Aer and Aura.' This view
then seems to have prevailed in the eastern Mediterranean.

The lifting of the watery mists, which are

The lifting of the watery mists, which are seen rising each morning from the Nile, the parting of them from the earth and the raising of them to the sky, was a work variously attributed

to Ra (the sun) or Shu (the atmosphere). heaven (Nut) was forced apart from the earth (Keb or Seb); and usually Shu is represented upholding Nut over his head.

Similarly in New Zealand, the earth and heaven clave together in the darkness, and had produced gods and men. The gods try to part them, but cannot until the god and father of forests, birds, and insects strives; 'his head is now firmly planted on his mother the earth, his feet he raises up and rests against his father the skies, he strains his back and limbs with mighty effort. Now are rent apart Rangi and Papa, and with cries and groans of woe they shriek aloud. . . . It was the fierce thrusting of Tane which tore the heaven from the earth, so that they were rent apart, and darkness was made manifest, and so was the light' (G. Grey, Polynes. Mythol., Lond. 1855 [reprint, p. 3]). p. 3]).

In Egypt it was similarly assumed that Seb and Nut had produced Ra or Shu before they were separated.

2. Sun-myths.—The genesis of the sun (Ra) is variously attributed to Seb and to Nut. According to one view, Ra was 'the egg of the great cackler,' Seb being, by a play on words, equated with the goose. In another view, Ra was born as cold of the selection of the selection of the selection of the selection. a calf of the celestial cow, or child of the skygoddess; and this may be the motive for regarding the sky as feminine. Another, and a more general, view, when the theologic frame of creation came forward, was to posit the formation of Ra direct from the chaos Nun, and so make him an ancestor of Seb and Nut. Probably this view was that of the Heliopolitan Ra-worshippers, as distinct from the older Seb- and Nut-worshippers in the Nile valley. Ra came into being 'while as yet there was no heaven, . . . and there was nothing that was with him in that place where he was . . . resting in the waters of Nun, and he found no place where he could stand '(Erman, Religion, p. 26). Rathen united with his own shadow, and from his seed created Shu and Tefnut, in the midst of the chaos. Shu certainly represents space or air, symbolized by an ostrich feather; Tefnut represents moisture. From Shu and Tefnut were born Seb and Nut; and from them, in turn, the Osiride family, and mankind.

The heaven was regarded as an ocean parallel with that on earth. It was on the heavenly ocean that the sun, the moon, and the stars sailed in ships each day and night. To explain the sun's re-appearing in the morning, they supposed a nocturnal ocean beneath the world, on which the sun sailed as by day. The dead were, on this view, considered as joining the boat of Ra, and sailing, under his protection, through the hours of the night as well as of the day.

3. Theology.—The gods associated with creation are many. Khnunu, 'the Shaper,' who shapes living things on his potter's wheel, 'created all that is, he formed all that exists, he is the father of fathers, the mother of mothers . . . he fashioned men, he made the gods, he was father from the beginning . . . he is the creator of the heaven, the earth, the under world, the water, the mountains . . he formed a male and a female of all birds, fishes, wild beasts, cattle, and of all worms' (Wiedemann, *HDB*, vol. v. p. 179<sup>b</sup>). He is figured always with the ram's head, to signify his creative power, and was worshipped at the source of the Nile—the cataract. *Ptah*, 'the Great Artificer,' the Demiurge, shapes the sun- and moon-eggs on his potter's wheel; he is the god of law and order who created all things by Maat, truth or exactness. Osiris 'formed with his hand the earth, its water, its air, its plants, all its cattle, all its birds, all its winged fowl, all its reptiles, all its quadrupeds.' This is the development of the primitive idea of Osiris as a god of vegetation. Amon-Ra also, on the growth of his worship when Thebes was the capital, became 'the father of the gods, the fashioner of men,' and all other things (see Wiedemann, loc. cit.).

Thoth, according to Hermopolite legend, when in the chaos of Nun, created Seb and Nut by his word; and they were parted asunder at Hermopolis. This creation by the word was the highly spiritualized idea of later times, and is seen in the Korē Kosmou (500 B.C.), where Thoth-Hermosi is first of the rade. Hermes is first of the gods.

Other sky-gods are Anher, 'He who goes above,' god of Theni or Girgeh; and Horus as the sky, supported by four pillars who are the four sons of Horus. The mixtures of ideas in later times are so complex, and so combined with the theology, that we cannot touch on them here. Our object has been to show the primitive ideas, and the various nuclei of thought which were combined.

W. M. FLINDERS PETRIE.
COSMOGONY AND COSMOLOGY (Greek).
Since the word 'cosmogony' describes the origin of the universe by the figure of birth, it suggests to us in the first instance accounts of a mainly poetic and mythological kind. Yet science also has its fairy tales, and one who sought for information that Carolina who was the second of mation about Greek cosmogonies might not unreasonably look for some account of that, for example, which is contained in the *Timæus*. If this be introduced, so should those of one or two other philosophical systems. We propose, therefore, to deal first with what may be called the poetic cosmogonies, and afterwards with the philosophical. We shall devote rather more space to the former, as being probably less familiar to most readers. In the case of the latter, we shall take three typical examples, describe them briefly, and try to show the place of each in the history of Greek thought as to the relation between God and the world.

I. POETICAL COSMOGONIES.-I. Homer.-We ind in Homer not a complete cosmogony, but ideas of a cosmogonical kind, or, rather, of a geogonical, as all he is concerned about is the world in which we live. In *II*. xiv. 246, Oceanus is the father (γένεσις) of all the gods, and in xiv. 201 he is the father, and Tethys the mother. The latter name is usually derived (F. Lukas, Kosmogonien, p. 154 n.) from  $\theta \hat{\eta} \sigma \theta u$ , 'to suck '  $(\tau \hat{\eta} \theta \eta =$  'nurse'). Tethys will then symbolize the suckling 'nurse'). Tethys will then symbolize the sucking mother, Earth. But behind these Nature powers stands a third still more august, the goddess Night. In 17. xiv. 244, Zeus is referred to as younger, indeed, but more potent, than Oceanus; Night, on the other hand, even Zeus fears to offend (ib. 259 ff.). Lukas, therefore, follows Damascius (6th cent. A.D.), our chief authority on the first principles of the Greek cosmogonies, in supposing that, for Homer, Night was the supreme geogonical conception (Damasc. περὶ πρώτων ἀρχῶν, c. 124, ed. Κορρ,

1826, p. 382).
2. Oldest Orphic cosmogony.—To this head Lukas refers those fundamental conceptions which in various fragmentary notices are directly as-cribed to Orpheus. Not the least evidence of their antiquity is their practical identity with what we have found in Homer. Eudemus the Peripatetic declared, according to Damascius (*l.c.*), that Orpheus made his beginning with Night. John Lydus (6th cent. A.D.) stated that Orpheus' three first principles were: Night, Earth, Heaven (Lobeck, Aglaoph. 1829, i. 494). Plato, again, quotes a couplet as from Orpheus, describing Oceanus and Tethys as the first wedded pair (Crat. 402 B), while he informs us in the Timeus (41 A) that Oceanus and Tethys were the offspring of Earth and Heaven. As the former statement is expressly referred to Orpheus, we may be sure that he had the same

real or fancied authority for the latter. In this Orphic cosmogony, it will be seen, Oceanus and Tethys are a degree less venerable than in Homer; Earth and Heaven are the older pair. Yet the difference is insignificant, and here, as in Homer, Night is the supreme conception. According to Gruppe (Griech. Culte, etc., 1887, i. 613 f.), the cosmogony of Il. xiv. was borrowed from the Orphic. But the question of their relation is an extremely difficult one, which cannot be discussed here.

3. Hesiod.—In the introduction to his Theogony, Hesiod actually names Earth, Heaven, and Night —the reputed Orphic trinity—as the sources of the gods (verses 106-107); and one feels that, whatever its origin, he is using a familiar and probably already ancient formula. But, at the outset of the poem proper, he proceeds to give us what in fact, though not in name, is a cosmogony of his own tyerses 116-136). Its outline is as follows: In the beginning was Chaos, after whom, on the one hand, came Gaia and Eros, and, on the other, Erebus and Night. Erebus and Night were the parents of Ether (or Light) and Day. Gaia of herself produced, first Uranus (Heaven), that he might be a cover to her round about, and that she might be a secure dwelling-place for the gods; and after him the mountains and seas. Lastly, mating with Uranus, she became mother of all the gods, except the few who sprang from Erebus and Night.

At the top, then, of Hesiod's cosmogony stands Chaos. Its meaning has been variously interpreted by ancient no less than by modern commentators. It has been taken for Water, Air, Fire, and Space (cf. for ref. Lukas, op. cit. p. 157 f.). Etymology has been appealed to in each case. But no derivation seems more probable than that from  $\chi a$  or  $\chi a \nu$ (the root of χαίνω, 'to gape,' χαῦνος, χάσμα, Lat. hisco, hiatus, etc.). Thus we get the meaning of Space, and this further accords with the manner in which Hesiod seems to have arrived at his first principle, viz. by abstraction. In pondering the origin of the universe, he thinks away one by one its various contents, until he reaches Space as the final presupposition of all things. As Time comes first in the Phænician cosmogony given by Eudemus, and, as we shall see, in some Greek cosmogonies, so does Space in this of Hesiod. Zeller (*Pre-Socr. Phil.* i. 88 f.) agrees with Lukas that Space was Hesiod's first principle, and that he reached it by abstraction, but thinks that Hesiod pictured it 'as an immeasurable, waste, and form-less mass,' while Lukas understands by it the mere unlimited void.

On the next cosmogonical stage we have two pairs, of which the first is Gaia and Eros. Gaia is Earth, not however as an element, but as a vaguely conceived mass. There is, at first sight, something detached about the appearance of Eros. He enters the stage with the others, but seems to perform no role. But the reason is that he is a potency rather than a person. He is the soul of all the unions here recorded. He is the Eros, not of art, but of early local cult like that at Thespize (Paus. ix. 27. 1), who was life and love in one, and was taken over by the Orphics (cf. Gomperz, Gr. Thinkers, i. 89, and, for the connexton of Eros with the Orphics, J. Harrison, Proleg. to Gr. Relig. ch. xii.). We are not told how Gaia and Eros came into being. They may symbolize matter and spirit, but they are not derived from Chaos as a higher principle. The ruling principle of the cosmogony is not that of cause and effect, but that of sequence in time. We only hear that Gaia and Eros came afterwards ( $\ell\pi\epsilon\nu\sigma\alpha$ ). And the same is doubtless true of the second pair, Erebus and Night. They are said to have come ex Xácos, but the ex may be

Night occupy together the second cosmogonical

stage.

A step further removed from Chaos are Æther and Day, who are children of Erebus and Night. So the unrelieved darkness gives place to the succession of night and day. Earth also at this stage gives birth to Heaven, that he may shield her with his vault, to the mountains also and the seas; and then, when all is ready for their reception, Earth and Heaven become the parents of the gods.

In Hesiod's cosmogony there is no real attempt to explain the causes of things. But it has, according to Lukas, two elements of speculative worth—the conception of purpose in creation (the provision of across home for the gods) and the for vision of a safe home for the gods), and the far-reaching abstraction by which the poet goes back to Space, and then step by step reconstructs the

Passing by Acusilaus, a prose chronicler of the 6th cent., and, like Hesiod, a native of Bœotia, whose cosmogony, contained in Damascius, resembles Hesiod's, and has also a marked Orphic colouring

(Lukas, op. cit. pp. 162-163), we come next to—
4. Pherecydes.—He was a native of Syros, but lived at Athens at the court of Pisistratus (6th cent. P.C.). cent. B.C.). At Athens 'he founded an Orphic community, though how far he was the disciple and prophet of the Orphic doctrines we are hardly able to say' (Gomperz, op. cit. i. 86). His own work has been lost, but numerous notices, which have come down to us from ancient times, and which relate to various parts of his cosmogony, enable us to form, though with reserve on some disputed points, a tolerably full as well as reliable estimate of his system. According to both Damascius (c. 124, ed. Kopp, p. 384) and Diog. Laert. (i. 119), Pherecydes derived the universe from three first rherecycles derived the universe from three first principles—Zas (=Zeus), Chronos, and Chthonia (or Chthon). At the summit of the cosmogony, then, stands Zeus. He is probably best regarded as a purely spiritual principle (so, e.g., Arist. Met. xiv. 4, 1091a, and many moderns, but cf. e.g. Zeller, op. cit. i. 91), so far as mind was consciously distinguished from matter at that early date. The tinguished from matter at that early date. spiritual interpretation is confirmed by the statement of Proclus (5th cent. A.D.) - which at the same time presents a new and interesting phase of the cosmogony-that the Zeus of Pherecydes changed himself into Eros when he meant to create the world (*Tim.* 155). Zeus as such, therefore, stands outside the world; he is the principle of supreme might. Chronos, the second member of the trinity, naturally denotes the Time, in which everything happens, and occupies an analogous position to Space in Hesiod's cosmogony. Lastly, Chthonia must be taken to mean either primary matter (Lukas, op. cit. p. 170) or the Earth-spirit (Gomperz,

op. cil. i. 88).

Some of the ancients asserted that water was Pherecydes' first principle; but this conflicts not only with Diog. Laert. but with the more detailed account of the cosmogony given in Damascius. A full discussion of this obscure and difficult question will be found in Lukas, op. cit. pp. 168-170, or Zeller, op. cit. i. 93-94 n. As regards the relation of the three principles to one another, Damascius implies that Zeus was in some sense first; but his exposition is purely Neo-Platonic. It is safer, therefore, to trust the more

Platonic. It is safer, therefore, to trust the more objective Diogenes, according to whom the three first principles of Pherecydes were alike eternal

The cosmogony begins when Chronos produces from his seed Fire, Air, and Water, who then in turn beget the five families of the gods. Thus gods and elements alike are the offspring of Time. And now Zeus-Eros plans to create the world. But at this stage, according to Max. Tyrius (Dissert. xxix. p. 304, ed. Davis; cl. also Celsus ap. Origen c. Cels. merely local (Space being referred to), or temporal, vi. 42, et al.), a fearful conflict intervenes betwixt or both. Accordingly Gaia, Eros, Erebus, and Crones (not to be confused with Chrones) and the

dragon Ophioneus for the lordship of Nature. Only when Cronos wins and the dragon is east into the sea can Zeus set about his creative task. The episode is not quite of a piece with the cosmogony, since Zeus is from eternity,—there is no Cronos before him. But there is no reason to doubt that Pherecydes employed the myth. Perhaps, as Philo of Byblus states (ap. Eus. Prap. Ev. i. 10, 33), he borrowed it from the Phanicians. In any case the meaning is clear: before the ordered world, the κόσμος, can be established, a victory must be won over the forces of disorder.

over the forces of disorder.

The final stage is related by Clem. Alex. (Strom. vi. 621 A): 'Pherecydes the Syrian says: Zas makes a mantle, large and fair, and broiders on it earth and ocean and ocean's dwellings.' Again he speaks (ib. 642 A) of 'the winged oak and the embroidered mantle that rests upon it.' The 'winged oak' is no doubt 'the earth floating freely in space'—a conception lately introduced by Anaximander (Gomperz, op. cit. i. 89). The rest of the imagery explains itself.

explains itself.

Points of likeness between the cosmogonies of Points of likeness between the cosmogonies of Pherecydes and Hesiod will readily occur to the reader. Here we only note points in which Pherecydes marks an advance. In the first place, Zeus, according to the interpretation here followed, and even on the lower, is a more spiritual conception than Chaos (Space). In the second, there is a certain suggestion of science in the cosmogony. The four elements are named before the formation of the world. So far, indeed, as our accounts go, Pherecydes does not work the suggestion out. On the other hand, he clearly treated Eros (Love) as a cosmical principle, and one cannot but suspect that, if his whole work had reached us, we should have found that Zeus-Eros used the elements as materials for his creative task.

Damascius (c. 124, ed. Kopp, p. 385) gives a frag-ment of a cosmogony by the Cretan Epimenides (c. 600 B.C.). In this cosmogony we meet for the first time among the Greeks the doctrine of the World-Egg. But it is little more than mentioned, and so we shall pass at once to give some account of the later Orphic cosmogonies, in which it plays

a prominent part.
5. Later Orphic cosmogonies.—In a former 5. Later Orphic cosmogonies.—In a former section we dealt with certain thoughts about the origin of the world which were ascribed to Orpheus, but here we are dealing with entire systems. They are highly mystical and pantheistic, and, though fanciful and grotesque, are most naturally referred to a period of religious and philosophical syncretism. Hence some critics like Zeller (op. cit. i. 100 ft.) refuse to regard any of them as earlier than the 1st or 2nd cent. B.C. Others, however, assign a much earlier date to the one which Damascius tells us was contained in the current 'Rhapsodies,' and which he describes as the usual Orphic theology. Thus O. Gruppe (in Roscher, s.v. 'Orpheus') argues strongly, but cautiously, in favour of the view that it was formed in the 6th cent. B.C. on the basis of a still earlier Orphic myth. To this system we now turn our attention. attention.

(1) Rhapsodist cosmogony.—This includes what the Orphics taught both about the Divine nature and about its relation to the world. The fullest account of the former is contained in Damascius (c. 123, ed. Kopp, p. 380). He must, indeed, be used with caution, owing to his Neo-Platonic bias. Lukas points this out, but thinks he may be trusted for the number sequence, and names of his first for the number, sequence, and names of his first principles. In this he seems to go too far, but, if we combine all that is essential in Damascius with what we learn from other sources, especially Orphic fragments (for which of. Gruppe, 7.c. p. 1139), we reach the following result, which will be

found in essential agreement with what, for example, is contained in Zeller (op. cit. i. 104) or in Gruppe (in Roscher, s.v. 'Phanes'). At the summit of the system stands Chronos (Time). Next come Ether (bright, fiery substance, cf. 'Stoic cosmogony' below) and Chaos (Space). Lukas observes that, though Time is named before Space, it is not viewed as producing it, but merely as the active principle, while Space receives that which arises in Time (but of. Zeller, L.c.). After Æther and Chaos comes the Egg, which is viewed sometimes as the offspring of Chronos and Æther (fr. 53), sometimes as that of Æther and Chaos (Proclus, Tim. i. 138). as that of Æther and Chaos (Proclus, Tim. i. 188). In either case it springs from Æther, and is thus, as Lukas calls it, an Egg of Light. Damascius elsewhere describes it as ἀργύφεω, 'silver-white.' And it deserves the name, not only because it was formed from the light of heaven, but because from it, as we shall see, Phanes, the light of the world, proceeded. Finally, there issues from the Egg the first Orphic god. Damascius, who favours trinities, calls him Phanes-Ericapæus-Metis, which is generally interpreted 'Light, Life-giver, Counsel.' But, above all, he is Phanes, 'Light,' who becomes at will the light of reason, the light of life, and—for he is also Ēros—the light of love. As first-born of the gods he is Protogonos. There is something sublime in these conceptions. But Phanes was also 'polymorphic, a beast-mystery god,' a creature also 'polymorphic, a beast-mystery god,' a creature monstrous and grotesque, as in the fragment quoted by Proclus (*Tim.* ii. 130):

'Heads had he many,
Head of a ram, a bull, a snake, and a bright-eyed lion '
(J. Harrison, op. cit. p. 651).

Such was the Orphic doctrine of the Divine nature. It had one feature which, according to Lukas, gave speculative value to the Rhapsodist cosmogony. This is the effort to explain the origin cosmogony. This is the effort to explain the origin of life. While many cosmogonies begin with a Divine being, the Orphic sees in his God the last stage in the evolution of life out of the life-

We have next to consider Phanes' relation to we have next to consider Phanes relation to the world. He had in him all the forces, or  $\sigma\pi\epsilon\rho\mu\alpha\sigma\alpha$ , out of which it sprang. Hence, though he was sometimes called its creator, he was generally thought of as having given it birth. The idea took the form of a theogony, in which the successive stages in the evolution of the world. In this process we are to the sed because the world. In this process, part of the god became the world's life; with the other he withdrew as sun into the heavens, where only Night could look on him, while his splendour amazed the other gods. But when Zeus attained to sovereignty he devoured Phanes. Thus the old order was dissolved, but thus also Zeus became the sum of all things. He thus also Zeus became the sum of all things. He became Phanes (see next section), and from him a new race of gods, a new world, sprang. In his son, Dionysos, the god of the mysteries, Phanes was born again. Like Phanes, Zeus became the world—Zevs κεφαλή, Zevs μέσσα, Διδς δ' έκ πάντα τέτνκται (fr. 123),—but, like Phanes also, he dwelt apart, for his mind was the ether (Gruppe, in Roscher, s.v. 'Orpheus' and 'Phanes'; Pauly-Wissowa, s.v. 'Orpheus' zeller, op. cit. p. 104 f.; J. Adam, Relig. Teachers of Greece, p. 95 f.; Lobeck, Aglaoph. 518 ff.; fr. 120 ff.).

The story of the swallowing of Phanes has usually been explained as a device to recover for Zeus his ancient dignity as source of life—for had he not long ago devoured Metis and borne Athene? This could be done by showing that he swallowed Phanes who was also Metis. But Gruppe sees in the story a different motive. It was to depict

the story a different notice. It was to depict the periodical renewal of the universe, which he regards as the ground thought of the Rhapsodist cosmogony. This was a feature of Stoic cosmo

gony (see below) to which the Orphic doctrine has other points of resemblance—especially its panother points of resemblance—especially us pantheistic materialism, and its view of Æther as the principle of Divine life. On the whole, it is difficult not to believe that there was a close connexion between the two cosmogonies, on which-

ever side the borrowing lies.
(2) The cosmogony of Hieronymus and Hellanicus.
—From the Rhapsodist theogony, Damascius passes to one which he describes as ἡ κατὰ τὸν Ἱερώνυμον φερομένη και Έλλάνικον. It is uncertain, and cannot be here discussed, whether it was known to Hellanicus of Lesbos in the 5th cent. B.C., or was published under his name by Hieronymus in one of the later pre-Christian centuries. It was generally Orphic in character, but differed, as Damascius indicates, from the current Orphic theology. We cannot, indeed, be sure as to its precise form. This is due chiefly to the fact that we find in Athenagoras (2nd cent. A.D.) what is evidently a different version of the same original doctrine. differences will be afterwards mentioned. Meantime we shall notice briefly the main points in Damascius' version.

At the head of this cosmogony we find, not Chronos, as in the last, but—Water and Slime. Out of these springs Chronos. This does not mean that Time is not viewed as an active first principle, but only that it is more concrete. Here Time is viewed as force—force which presupposes matter to work on. The Orphic imagination runs riot in depicting this force. Chronos is a winged dragon with the heads of a bull and a lion, and betwixt them the face of a god. He is Chronos-Herakles
-Ananke-Adrasteia. Herakles betokens his
might, Ananke his necessity, Adrasteia his inevit ability. Next, Chronos produces Æther, Chaos, and Erebus. We met Æther and Chaos in the Rhapsodist cosmogony, but here they follow after primary matter, and so Æther is more grossly conceived as humid (νότερος). In the same way Erebus is misty (ὁμιχλωθες). Lastly, in the midst Erebus is misty (όμιχλωδες). Lastly, in the midst of the vaporous space, with its mingled light and gloom, Chronos produced an Egg (ψὸν ἐγεννησεν). This naturally implies that it partook of the substance with which space was filled. It was, therefore, formed out of grosser elements than the Egg of the Rhapsodist cosmogony. Thus also we are told that it had within it the seed of male and female, and likewise of all manner of things withremale, and likewise of all manner of things without life. For this very reason it better deserves to be called a World-Egg. But it is not an Egg of Light. And, lastly, we have the same contrast in the Divine Being, the Maker and Ruler of the world, who issues from the Egg. In his monstrous and grotesque form he resembles the first-born and grotesque f God of the other cosmogony. But he has lost his title of Phanes, the god of light, and appears as

Protogonos-Zeus-Pan.
As compared with the current Orphic doctrine, that just examined is marked by a certain coarse realism. Both in form and spirit it is less distinctively Greek. In some points, indeed, it closely resembles the Phoenician cosmogony, and Zeller maintains that its author borrowed directly from that source (op. cit. i. 102-3 n.; but, on the other side, cf. Gruppe, in Roscher, s.v. 'Orphens,'

p. 1141).

In describing the Orphic doctrine, Athenagoras, who was a Christian, no doubt sciected the cosmogony of Hellanicus and Hieronymus because he saw most in it to condemn. But what specially concerns us is the form in which he presented it. The series begins with Water and Sime, and out of these Chronos-Herakles is evolved. But here the resemblance to Damascius casses. No mention is made of Ether, Chaos, and Erebus. Chronos-Herakles produces a gigantic egg, which breaks into halves, of which the upper forms the heaven, and the lower the earth. In this naive conception there is clearly no element of speculative value. The egg has no special significance youd its shape. On the other hand, in the cosmogonies

described by Damaselus, the World-Egg is an expression of the profound thought that the universe is an organism, gradually formed from an original germ, in obedience to the same law which governs every living thing.

(3) Before leaving the Orphic cosmogonies proper, we may briefly notice three others of minor im-

we may briefly notice three others of minor importance. (a) The first and the best known is that of Apollonius Rhodius (3rd cent. B.C.), who in the Argonautica (i. 494 ff.) puts into the mouth of Orpheus some verses describing the origin of the world. Here the separation of the four elements is ascribed to the action of Discord—an idea avidantly harrowed from Empedagles. The legand evidently borrowed from Empedocles. The legend of Ophioneus and Chronos, which was used by Pherecydes (see above), is introduced in a somewhat different and, judging by internal evidence, less authentic form (cf. Gomperz, op. cit. i. 91). (b) Alexander of Aphrodisias (3rd cent. A.D.) gives us the following series: Chaos, Oceanus, Night, Uranus, Zeus. This, it will be seen, resembles the older rather than the later form of Orphic cosmogonies. (c) Lastly, the author of the Clementine Recognitions (x. xvii.) gives a brief summary of Orphic doctrine. Some of the first principles, notably the Egg and Phanetas, remind us of the Rhapsodist cosmogony, but the account as a whole is less coherent, and strikes one as probably less accurate, than that of Damascius.

6. Aristophanes.—In one famous passage (Av. 693 ff.) Aristophanes depicts the origin of the universe. In the beginning were Chaos, Night, universe. In the beginning were Chaos, Night, Erebus, and Tartarus. Into the bosom of Erebus, Night laid a wind-born egg (ὑπηνέμων ψόν) from which, as the seasons rolled, Eros sprang, gleaming with golden wings. Eros blended all things together, and from their union Heaven, Ocean, Earth, and the race of the gods were born. J. Harrison (op. cit. p. 626) calls the passage about the birth of Love 'pure Orphism.' And, indeed, Gruppe (in Roscher, s.v. 'Orpheus,' p. 1121) maintains that the gold-winged Eros springing from the egg was part of the oldest Orphic doctrine. But egg was part of the oldest Orphic doctrine. But some details in the passage remind us of other cosmogonies, especially that of Hesiod (cf. Lukas,

op. cit. p. 196).

The 'theologians,' as Aristotle calls those whose doctrines we have been considering, represent a perfectly distinct phase of Greek thought. 'Their mind was less scientific than that of the "physio-logists." They made a far keener demand for a rogists. They made a far keener demand for a vivid representation of the origin and development of the world (Gomperz, op. cit. i. 85). Nor were they satisfied with the current mythology. Its tales were perhaps too immoral. Certainly its cosmogony was too vague. And so they sought to fill up its gaps partly from local legend, partly from the traditions of foreign peoples.

Comperz has striven to show (op. cit. i. 92-97) that various features in the Greek cosmogonies—the World-Egg, the two-fold nature of the Orphic godhead, in which the male and female attributes were united, and the important position occupied by Chronos as the Time-principle—were ultimately derived from Babylon, although the two former had probably their direct source in Egypt, but a discussion of this question would carry us beyond our present limits.

II. PHILOSOPHICAL COSMOGONIES. - The cosmogonies we have examined, though not without lements of speculative value, are essentially hypothetical in character; those to which we now turn thetical in character; those to which we now turn represent the effort to explain the world on philosophical principles, and in each case from a distinct philosophical point of view. For this very reason, however, they cannot be properly understood or appreciated apart from the general movement of Greek thought. This, therefore, we must also try very briefly to indicate.

1. Early Ionian philosophers.—The earliest Greek philosophers were natives of Ionia in Asia Minor. Beginning with Thales, who flourished at Miletus about 600 B.C., they each sought to explain

the universe from a single, and that a material first principle. They discussed more or less fully the nature of the changes which the primary matter underwent, but the ultimate cause of the movement, by which the world in all its parts was formed out of material elements, was a subject on which Thales and his immediate successors had little or nothing to say. The reason was that they regarded the cause as inherent in the nature of regarded the cause as inherent in the nature of matter itself (Gomperz, op. cit. i. 56). This was also true of Heraclitus of Ephesus (c. 500 B.C.): to him also matter was 'organically alive' (ib. p. 66). But a great step in the history of Greek speculation is marked by his doctrine of the Logos, by which he gave expression to the thought that the world-forming process must be guided by Intelligence. He taught, indeed, that all reality is material, and that the primary element is Fire: but as he and that the primary element is Fire; but, as he assigned to the latter the attribute of reason, he called it also the Logos. In other words, the Logos viewed on its corporeal side was Fire, and Fire viewed on its spiritual side was the Logos (J. Adam, op. cit. p. 224). Here, then, a first principle was postulated, which was at once material and rational, and it was on this basis that the Stoic cosmogony (see below) was afterwards reared. But before that time the great thinkers of Greece had sought to show that the world was framed by God as at once a rational and non-material Being, and Heraclitus at least paved the way for that conception when he endowed his First Cause with the attribute of reason.

2. The first Greek philosopher who traced the world to a non-material agency was Empedocles (c. 450 B.C.). He did this in his doctrine of the four elements, whose movements were determined by the twofold agency of Love and Discord (J. Adam, op. cit. p. 245). But a far more important step in the direction of idealism was taken by Anaxagoras, who, though born rather earlier than Empedocles, who, though form rather earlier than Emperovaes, probably had the work of the latter before him when he wrote (ib. p. 254). According to Aristotle, it was Anaxagoras who first pointed to the real cause of the movement by which the world was formed. This cause he named Nous, or Reason, to which also he seems to have attributed a mainly, if

which also he seems to have attributed a mainly, it not exclusively, transcendent existence (ib. p. 371).

3. Plato.—Though Anaxagoras did not make much use of his great conception, it led to farreaching results. Especially it brought into clear view the opposition between matter and spirit. The opposition may not be absolute, but it was naturally the distinction between the two which first occupied the attention of philosophers. It was the chief problem of Plato's Dialectic. But it is with its cosmological spacet that we are here conis with its cosmological aspect that we are here concerned. If the First Cause was purely immaterial, how could He act on matter at all so as to create the world? In this question and the answer to it lies the chief significance of the cosmogony which Plato has set before us in the Timœus:

Even apart from much that does not strictly belong to it, the cosmogony of the *Timæus* is intricate, but here it will be enough to consider its main ideas. For a fuller exposition and discussion the reader may be referred to Jowett's *Plato*, vol. iii., or to Adam, op. cit. p. 860 ff.

God formed the world out of a material so in-

tractable that it could not be completely moulded to His will. But He introduced into the primary substance 'as many proportions as it was possible for it to receive' (Tim. 69 B). The stubborn power, which thus resists the Creator, Plato calls 'Necessity.' It is the root of evil in the world, 'Necessity.' It is the root of evil in the world, and, as it will not wholly yield to God, 'the Creator in Plato is still subject to a remnant of Necessity which he cannot wholly overcome' (Jowett, Plato, iii. 391).

In forming the world, God gave it a Body and also a Soul. (1) The body. On certain portions of

primary matter, which was formless and chaotic, God imprinted various mathematical 'forms' and 'numbers' (*Tim.* 53 B). Thus arose the four elements of which the body of the universe was composed. The idea of a Divine mathematician, in which Pythagorean influence is plainly visible, runs through the whole account of creation. According to Plutarch, Plato said that God is always playing the mathematician ( $\theta \epsilon \delta s$   $\delta \epsilon l$ )  $\gamma \epsilon \omega \mu \epsilon \tau \rho \epsilon l$ ). (2) The soul. Plato describes the elements of which the World-Soul was composed, but his account is highly metaphysical, and need not detain us here. It is enough to examine its attributes. Of these the first is Motion. It is manifested in the movements of the planets manifested in the movements of the planets (Tim. 36 D), but it has other aspects, not directly referred to in the Timœus, which are important in estimating the nature of the World-Soul. According to the Laws (x. 896 A), the essential quality of soul is self-movement. Further, the Soul is the cause of movement in other things, and by movement (kingus) Plato understood every kind of change (ib., Phædrus, 245 C). The World-Soul, therefore, is the cause, not only of locomotion, but also of 'separation and combination, growth, decay, and dissolution' (J. Adam, op. cit. p. 368). The second attribute is Intelligence. It is here to be taken in the widest sense, for we are given to understand that the World-Soul apprehends not only ideas, but sensible realifor we are given to understand that the World-Soul apprehends not only ideas, but sensible realities, and such as lie between the two (bb. p. 369 f.). On the other hand, 'the World-Soul, as described in the *Timœus*, has nothing analogous to the principles of anger and desire . . which, according to Plato, constitute so large and turbulent a portion of the human soul' (bb. p. 370). Plato speaks of the World-Soul as created. In what sense he used the term he nowhere precisely except the term he nowhere the nowhere the north term that the term he nowhere the north term that the north term the nowhere the north term that the n sense he used the term he nowhere precisely explains, but there can be little doubt that he thought of an emanational process. Such is the view of the writer just quoted, who thus sums up the cosmogonical process: 'At the beginning of Time, God created the Universe. A spirit or soul went forth from him, and inhabited the body which he

forth from him, and inhabited the body which he redeemed from chaos by imprinting mathematical forms on primordial matter? (ib. p. 373).

The universe, thus formed of body and soul, is described as εἰκὼν τοῦ ποιητοῦ, μονογενής, 'image of its Creator, only-begotten.' Thus it is related to Him as son to father. Further, it is itself a god, a θεὸς αἰσθητός, or 'perceivable god' (Tim. 92 C). On the other hand, the Creator is a Being mysteriously remote, 'hard to discover' (ib. 28 C), who, when He had made the world, 'abode in his own nature' (ib. 42 E).

(ib. 42 E).

We may now see how the Platonic cosmogony was an attempt to explain the world on dualistic principles. Since God as pure thought could have no contact with matter, Plato was obliged to assume for the work of creation some formative principle separate from God Himself. Hence the separate existence of the mathematical forms imprinted on matter, and especially of the World-Soul incorporated within it. It is from this point of view that Caird describes the World-Soul as 'a kind of bridge to connect two terms which it is impossible really to unite' (Evolution of Theology in the Gr. Phil. ii. 266).

4. Although Aristotle (y.v.) effectually criticized the theory of 'Ideas,' which Plato held to exist apart from matter, yet his own doctrine was fundamentally dualistic, as appears from his view of the mentally dualistic, as appears from his view of the Divine life as an energy of self-contemplation. But after his time Greek thought swung round to the opposite pole. Abandoning the dualism by which mind and matter, subject and object, were opposed to each other as mutually exclusive realities, it sought to explain the world by means of

a single principle. This men sought where they felt surest of linding it, in their own subjective experience. Thus they hoped for a certainty which they could never have about an object with whose appearances only they were acquainted. It may be added that the subjective trend in philosophy was part of a general movement affecting the last epoch of Greek national life, from Alexander the Great onwards (Schwegler, Hist. of Phil. pp. 120-122). Now, the subjective life itself has two sides, the one universal and spiritual, the other individual and material. It was on the latter view of man's nature that the Epicureans based both their ethical and their physical theories. The Stoics, on the other hand, appealed in their Ethics to man's rational nature, while in their Physics they derived the world from a material principle (for the reason of this apparent inconsistency, see Schwegler, op. cit. p. 125). It will be seen that in their use of a single principle the Stoics and Epicureans returned to the point from which philosophy had diverged after the time of Heraclitus, but, as R. D. Hicks remarks (art. 'Stoics,' in  $EBr^{11}$ ), 'until dualism had been thought out, as in the Peripatetic school, it was impossible that monism (or at any rate materialistic monism) should be definitely and consciously maintained.' Both the Epicureans and the Stoics had what may be called a materialistic cosmogony, but that of the Stoics is in several ways the more important, and to it therefore we now

5. Stoic cosmogony.—The Stoic first principle was akin to the Fire of Heraclitus, but of a subtler nature—a fiery breath  $(\pi\nu\epsilon0\mu\alpha)$  or ether  $(a\ell\theta\eta\rho)$ . But in a more important respect it differed from Heraclitus' first principle. For the Stoic primary substance was matter regarded in its distinctively active aspect as force. Viewed in relation to the actual world, it is thus described by R. D. Hicks  $(loc.\ eit.)$ :

'Before there was heaven or earth, there was primitive substance or Pneuma, the everlasting presupposition of particular things. This is the totality of all existence; out of it the whole visible universe proceeds, hereafter to be again resolved into it. Not the less is it the creative force, or delty, which develops and shapes this universal order or cosmos.'

So far the Stoic theory reminds us of much that we have already met with in other systems. But the mode of the creative activity, as conceived by the Stoics, was altogether new. The Stoic primary substance, be it remembered, is matter and force in one (cf. Zeller, *Stoics*, etc., p. 148: 'the forming force . . . is in itself something material,' etc.). Its force is that of tension, the expansive and dispersive pressure due to heat, and the extremity of the tension is seen in the fact that all distinction of particular things, due to relative density, is lost within it. It cannot long withstand the intensity of this inward pressure. It sways to and fro, and this movement cools a little the glowing ether. Condensation begins, and with it the first dis-tinction within the primal substance—the separation of force from matter. Matter is now the relatively passive; but, as first formed, it differs but little from the pure activity of the substance from which it sprang. It is the element of fire. But again, as condensation proceeds, fire produces air, and this in turn the grossor elements of water and earth. Throughout the process, however, the more active substance never quite surrenders its own nature. Thus only a portion of air becomes water or earth, and something of the pure Pneuma itself remains in the ether which stretches above and around the world. As already seen, the dis-tinction of active and passive in the case of the four elements is only relative; and this appears still further in the blending of the elements with one another, and the formation of all particular things. In the universe thus formed the finer substances are

those in which the tension of the primary substance is greatest, and the solid are those in which it is most relaxed, and in which matter appears most inert and passive. And, finally, all the shapes and other attributes of things are referred to the ethereal force. Here the need of a guiding Intelligence is most felt. And in fact the force moving in the world was to the Stoic the Soul of the World. Although material, it was, like the Fire of Heraclitus, also intelligent, even as the  $\lambda \delta \gamma \omega \sigma \epsilon \rho \mu \mu \alpha \tau \omega c \delta$  before the dawn of creation slumbered within it.

The Stoic cosmogony was the chief attempt made by the Greeks not merely to derive but to explain the origin of the world from a purely material first principle. It was ingenious, and its account of the manner in which force works in the material world contained elements of permanent value. But it went too far in treating force as a genetic first principle. For material energy is always relative to matter as passive and inert. Nor does it, indeed, appear that the Stoics conceived of force as anything else than the formative aspect of matter (cf. Zeller, l.c.). Nevertheless, by regarding it as a primary substance out of which the world was evolved, they ipso facto ascribed to it an independent reality. Hence the Stoic first principle was an abstraction which could explain nothing.

6. Neo-Platonic cosmogony.—Before leaving the Greek cosmogonies, we must notice briefly a second and very different attempt to explain the origin of the world from a monistic standpoint. We refer to the system of the Neo-Platonists, who belonged to the last period of Greek thought, when Stoicism and Epicureanism had run their course. The Neo-Platonists taught that the ultimate source of being was neither matter nor spirit, but a real unity transcending both. In this they might seem to quit the subjective standpoint of the later philosophical systems. Yet in reality theirs was the most subjective of all. They found the key to the Divine nature solely in the subjective side of human experience, in the unity given to outward impressions by the thinking subject. They taught also that the material is less real and perfect than the ideal world, that intellectual cognition is the pathway to truth and goodness, and that actual contact with these realities is attained only by means of an 'ecstasy,' in which the distinction between subject and object disappears.

The Neo-Platonists claimed that their doctrine

The Neo-Platonists claimed that their doctrine was the direct outcome of Plato's teaching, but in this they did less than justice to the objective element in the latter. No doubt there were features in Plato, especially the terms in which he described the transcendence of God, which gave some support to this claim. But Neo-Platonism owed far more to Oriental influence, the causes of which we cannot stop to inquire (cf. Ueberweg, Hist. of Philos. i. 222 f.). It is, in fact, a blend of Greek and Oriental elements. It may be added that 'the religious philosophy of the Alexandrian Jews and the Gnosis of early Christianity are products of the same elements, but under an Oriental form' (ib. p. 223).

Plotinus (A.D. 204-269) is the most representative teacher of this school. Of his doctrine, contained in the six *Enneads*, which were published by his pupil Porphyry, a very brief summary must suffice:—The first principle, from which Plotinus derives the universe, is called by him the One, or the Good. This supreme essence is absolutely transcendent, and incognizable. It cannot be described as either Being or Intelligence, for either epithet would imply a limitation of its absolute unity. It is *ènékeura* the ovolus and also *ènékeura* 

νοήσεως. It is not however, irrational, but only supra-rational (ὑπερβεβηκὸς τὴν νοῦ φύσων). Its title of 'the Good' immediately reminds us of the Supreme Being in Plato. But, in spite of the abstract manner in which 'the Good' or 'the Idea of the Good' is described in the Republic, it is clear that Plato ascribed to it both being and intelligence. (For the meaning of 'the Good' in Plato, and for a comparison with Plotinus, see J. Adam, op. cit. p. 446 f., and Ueberweg, op. cit. i. 122,

As the source of all things, the One produces first of all the highest kind of actual being, which is Mind (voîs), i.e. the Divine Mind (Ueberweg, op. cit. i. 248). In this Mind the Ideas (vonta) are immanent. They are not, however, mere thoughts, but parts of the Mind's essence, and for this reason, on which Plotinus lays great stress, they are absolutely true objects of thought. Thus the Nous is at once the Subject and the Object of knowledge; in the first aspect Plotinus regards it as at rest, in the second as active. But how did the Nous originate from the One? Plotinus regards this as a problem so difficult that it must be approached with prayer (Enn. v. 1, 6). He finds an analogy in the idea of radiation (περίλαμψις). The Nous arises from the One like brightness from the sun (ib.). The great difficulty, of course, was to explain how actual Being could arise from a source to which the attribute of Being was denied. But he finds a solution in the transcending power of the One, which latter, as the superior, can send forth from the superabundance of its perfection the inferior, without having contained the latter, as such, in itself' (Ueberweg, op. cit. i. 247-71; Enn.

As the One produces Mind, so does Mind produce Soul (ψυχην γεννά νοῦς, Enn. v. 1, 7). And, as Ideas appear along with Mind, so does Body along with Soul. As Plotinus expresses it, Soul, as it issues from Nous, extends itself into the corporeal, as the point extended becomes a line (ib. iv. 1). Plotinus says that the Soul has a divisible element, yet he also says that it is immaterial. He tries to reconcile the two statements as follows: 'The soul is per se indivisible, being divided only as related to the bodies into which it enters, since these could not receive it if it remained undivided' (ib. iv. 21; Ueberweg, op. cit. i. 249). The Soul in its entirety is present throughout the body, yet in all its faculties—reason, memory, perception, and even life-force—is absolutely separable from it. There is a plurality of souls. The highest of also a separate existence of their own (Enn. iv. 3, 7, iv. 9).

Lastly, what is the Neo-Platonist view about the nature and origin of matter? In Plato, matter and mind remain as two ultimate facts. Plotinus, on the other hand, declares that the soul, in virtue of its mobility, begets matter (ib. iii. 7, 10, iv. 3, 9; Ueberweg, loc. cit. i. 249). Now, so far as the material is known to us, i.e. so far as it possesses form, it partakes of an ideal nature. But Plotinus recognizes that beneath that form there is a substratum (unce(uevo)), a something which is different from the form and which might take other forms. This substratum he calls the  $\beta d\theta os$ , or 'depth,' of each thing, and he says that it has no real existence; it is  $\mu h \delta v$ . He explains its nature partly by reference to the Ideas which are the objects of Nous. In its most general sense the term  $i\lambda \eta$  ('matter') is also applied to these. And just because they are objects of thought, they also possess this quality of  $\beta d\theta os$ , or 'depth.' But they are nevertheless wholly real, like the Mind which knows them. And Plotinus says that the substratum of sensible things is only a shadow ( $\epsilon t\delta \omega \lambda ov$ )

of the substratum, as their form is but a shadow of the form pertaining to the Ideas.

The theory whose essential features we have thus tried to give represents the last important attempt made by Greek thought to explain the origin of the world. It fails mainly through the abstractness of its first principle—a Unity of which not even Being can be predicated.

not even Being can be predicated.

In its mysticism the Neo-Platonic theory of the world reminds us not a little of the Orphic cosmogonies. It resembles them, indeed, both in form and in spirit, as might be inferred from the fact that the notices of the latter given by Damascius are interwoven with Neo-Platonic conceptions.

interwoven with Neo-Platonic conceptions.

Interature.—The following, though only a selection from an immense number of books dealing with various parts of the subject, will, together with their references, supply all needed help to those who wish to study it further: F. Lukas, Die Grundbag, in den Kosmog, der atten Volker, Leipz., 1863, to whom the writer has been specially indebted in the first part of the subject; O. Gruppe, Griechische Culte und Mythen, i., Leipzig, 1887, and artt. 'Orpheus' and 'Phanes,' in Roscher; E. Abel, Orphea, Leipz., 1885; T. Gomperz, Gr. Thinkers, Eng. tr., vol. i., London, 1901; B. Zeller, Stoics, etc., new and rev. ed., do. 1892, Pre-Soer. Phil., vol. i. do. 1881, Outlines of Hist. of Gr. Phil.<sup>2</sup>, do. 1892, Plato and the Older Acad., do. 1876; J. E. Harrison, Proleg, to Study of Gr. Relig.<sup>2</sup>, Camb., 1908; J. Adam, The Relig. Teachers of Greece, Relig.<sup>3</sup>, Camb., 1908; J. Adam, The Relig. Teachers of Greece, Edinh., 1908; B. Jowett, Dialogues of Plato3, vol. iii., Oxford, 1892; R. D. Hicks, art. 'Stoics,' in EBri, also Stoic and Epicur., London, 1910; T. Whittaker, The Neo-Platonists, Camb. 1901; C. Bigg, Neoplatonism, Lond. 1896; E. Caird, The Evol. of Theol. in the Gr. Philosophers, Glasgow, 1904; J. Horowitz, Philos. u. Platons Lehre v. d. Weltschopfung, Marburg, 1900; R. Ueberweg, Hist. of Philos., vol. i., London, 1872; J. E. Brdmann, Hist. of Philos., vol. 1808; A. Harnack. Marty Lapua, Eng. tr., do. 1202.

COSMOGONY AND COSMOLOGY (Hebrew).—There are generally recognized in the Hebrew Scriptures two formal cosmogonies, the earlier of which is contained in Gn 2, beginning with v.\*, or rather v.\*.

1. Cosmogony of J.—This story, as we have it, belongs to the pre-exilic, historical, Prophetic narrative of the Judæan kingdom (J), which was in course of composition from about the time of Solomon until the middle of the 8th cent. B.C. The cosmogony, as much as we have of it in Gn 2, assumes the world as already existing, and deals only with its preparation for the use of man. With it is connected the story of the Garden of Eden, the Temptation, and the Fall and its consequences. The object is not so much to answer the question, How did the world come into existence? as the questions, Where did man come from? Why does man differ from the beasts? especially, Why does man have a sex consciousness and a sex shame, which the beasts do not have? and, Why must man, who is the crown of creation, toil and labour to get his bread, and to reproduce his kind, by the sweat of his brow and the agony of his body? So far as the nature of man is concerned, this cosmogony, while naively primitive, is full of a childlike wisdom and sweet spirituality, which has commended it to all succeeding ages, and which was doubtless the cause of this part of the J narrative being preserved at a time when the Pentateuch was cast into the present form and prefaced by the great cosmogony of the Priestly

In the cosmogony of Gn 2, the earth is assumed as already in existence, a barren place on which there were no shrubs and no herbs, because Jahweh Elohm had not yet caused rnin to fall on it, and because—a charming burche touch, characteristic of the anthropomorphism of the whole narrative—there were no men to till the ground. But a fountain went up out of the

Code (Gn 1-24).

1 TN, practically a  $\tilde{a}\pi$ . Asy. (the only other occurrence is Job 3627), rendered in EV 'mist.' LXX has  $\pi\eta\eta$ , which, practically, funkel follows. This accords with the following narrative, the reference being apparently to the great source out of which came all the rivers of the world. In this narrative the waters

Among the Ceramese the covenant of peace between two villages is entered upon by the people of one village making a feast to which those of the other are invited. The chiefs drop some of their blood into a dish of food, and weapons are also dipped into it. The food is then eaten alternately. A similar feast is also held at the other village, and the covenant is complete. Here there is a combination (found elsewhere also) of the bloodcovenant with the covenant-meal (Riedel, De sluik- en kroesharige rassen, The Hague, 1886, p. 128; cf., for a similar instance among the Nilotic Negroes, Johnston, Uganda Protectorate, London, 1902, ii. 795).

Drinking together is another common form of covenant ceremony, the draught being frequently accompanied by an oath, while, as many examples show, the liquid partaken of is regarded as the oath itself, which will harm the breaker of it. But there is also such a simple form of friendship covenant as that of the aborigines of Formosa, who put their arms round each other's necks and drink simultaneously a cup of wine (L'Anthropologie, v. [Paris, 1894] 352). Survivals of such a ceremony as this are well known. Nor is it improbable that drinking each other's blood at the making of a covenant was an extension of such a practice, while it is a common custom to mingle some blood with the liquid which is drunk.

As the basis of a covenant of friendship, the exchange of names is very frequent among savage tribes, the name being regarded as part of the personality, while the sacred nature of the act is seen in the fact that the name is usually not revealed, lest any one should do its owner harm by making use of it. In such a case the calliance is indissoluble, and forms one of the most sacred of bonds. Other exchanges of personal belongings —garments or weapons—form the basis of covenants of friendship, and will make lasting friends of men who have been enemics. A temporary exchange of wives is occasionally found as a means of sealing a compact, especially among Australian tribes, with whom also, on the occasion of making peace between tribes or certain other alliances, a general exchange of wives takes place for the time being. By this means the identity or union of the two parties is assured (cf. ADULTERY, vol. i. p. 125 (b); JAI xxiv. 169, 173). Saliva is occasionally the vehicle of the covenant

state. Thus, among the Orango in the Bissagos Archipelago the ceremony for scaling a friendship is to spit in each other's hands. The Masai spat at a man with whom they swore eternal friend-ship (Hinde, Last of the Masai, London, 1901, p. 47); and among the Somalis a stranger becomes a member of his host's family by the host spitting in his right hand and rubbing it on the stranger's forehead (Paulitschke, Ethnogr. Nordost-Afrikas, Berlin, 1893–1896, p. 246).

Gerlin, 1893–1896, p. 246).

Opposite theories of the meaning of this rite are found. Mutual spitting is regarded as an interchange of life, since by many peoples saliva is held to contain the element of life (Crombie, Trans. Inter. FL Cong., 1891, p. 249 ft.). Westermarck, on the other hand, is of the opinion that saliva is the vehicle of a conditional curse, since the Masai spit copiously when oursing (op. cit. ii. 209). Spitting among the Masai is also reported to be a sign of the greatest goodwill and a compliment (Johnston, op. cit. ii. 833).

Coverants of peace between in these which have

Covenants of peace between tribes which have been at war are frequently sealed by a common meal (see above). In some cases the material of the covenant-meal is the flesh of a human victim. Thus, the people of Vate kill one or more of their number and send the flesh for consumption to the hostile tribe with whom they desire peace (Erskine, Journal of a Cruise among the Islands of the W. Pacific, London, 1853, p. 334). In other alliances the cannibal meal is found. Chiefs among the Bambala

(a Bantu tribe), in making a covenant against future bloodshed, partake with their followers of the flesh of a slave fattened for the occasion. Any chief who kills a slave after such a covenant must pay a fine to every village which took part in the bond (JAI xxxv. 404, 409). This is equivalent to that form of the blood-covenant in which the blood of a slaughtered victim is drunk by all the parties to the compact (cf. Herod. iii. 11; and the case of Catiline and his fellow-conspirators, who drank the blood of a slave in wine).

A pleasanter practice, and one ultimately based on the fact that sensuous satisfaction tends to goodwill, is that of smoking the calumet among American Indian tribes which had been at war. It was also done at the ratification of treaties and as a symbol of hospitality, and was regarded as so sacred that to break the covenant thus made would have been followed automatically by fatal

consequences.

Other ceremonies are used elsewhere, with the purpose of making a covenant of peace binding. In Tahiti a wreath was made of green boughs, to which each party contributed. Two young dogs were exchanged, and a band of cloth was made together. The wreath and the cloth were then offered to the gods, and imprecations were uttered on those who should break the covenant (Ellis, Polynes. Rescarches, London, 1829, i. 318; see other instances in Farrer, Military Manners and Customs, London, 1885, p. 162 ff.).

Where the bodies of the parties to a covenant

are cut to obtain blood, the marks of the wounds serve as tokens of the covenant. Similarly the garments or weapons exchanged will be constant reminders of it. At other times a cairn is set up as a witness of the covenant state (cf. Gn\_3148; Frazer, in Anthrop. Essays presented to E. B. Tylor, Oxford, 1907, p. 131 ft.).

In later times, and in more advanced civilizations, the covenant becomes simply a bond or oath for mutual support, or for amity between men more or less animated by a common purpose. Here there is little or no idea of kinship or identity, though some of the older ritual acts may survive, and the parties to such bonds recognize a brotherly feeling existing between themselves as a result of their bond and of their common purpose. In fact, the covenant at all times is intended to produce solidarity among those who are parties to it, though in these later covenants brotherhood is not actually and automatically produced. And, though the breaker of the covenant risks great dangers, these are not supposed to result automatically from the oath which he has taken, as in many instances from savage life.

3. Covenants between men and gods, etc.—The ceremonies and symbolism of covenants are even more important than the words of contract used, and, in fact, they constitute the covenant. Hence, in great measure, all religious ceremonial and worship is the expression of a covenant relation-ship between men and gods. For the worship paid, men expect the god to perform duties towards them, and this worship also tends to confirm that relationship. But there are certain ceremonies, especially those of a sacramental or sacrificial nature, in which the covenant relationship appears more emphatically. In all sacrifices in which the victim is, or represents, the god, and in which a sacramental meal is made of his flesh, the meal is the expression of a close union or a covenant between the god and the group of worshippers. This is seen in the fact that all the worshippers partake, while there are instances, as in Hawaii, where a refusal to eat would be followed by death (Bastian, Der Mensch, Leipzig, 1860, iii. 152). But, even where the slain animal is not the god,

the sacrifice or the meal which follows it marks a desire for union with the god, and is an expression of a covenant alliance with him. In this case, as in covenants between men, there is a common meal of which the two parties to the covenant partake—the god and the group of worshippers. In the OT, God is often represented as making a covenant with individuals and their descendants or with with individuals and their descendants, or with Israel (Gn 99 1518, Nu 2518, Ex 64 24417, Dt 52, Jer 3418), and the probability is that sacrifice was the basis of all covenant rites between God and the basis of all covenant rites between God and the individual or the people of Israel (cf. Ps 50<sup>5</sup>, Jer 34<sup>18</sup>). This is particularly noticeable in the case of the covenant with Abraham (Gn 15<sup>8π</sup>) and with Israel at Sinai (Ex 24<sup>4π</sup>). In the first case there is no mention of a sacrificial meal, and in the second the blood of the sacrifice is sprinkled on the altar and the people, thus uniting the covenanting parties, since the altar is the token of God's presence. This rite of sprinkling image of God's presence. This rite of sprinkling image or altar and worshippers, or the analogous custom of the worshipper shedding his blood or sprinkling it on the sacra (cf. 1 K 18<sup>28</sup>), is widely spread, and constitutes a simple method of union with the god —in other words, of effecting or strengthening the covenant relation with him, or of reminding him overant relation with him, or or reminding him of it. In other cases the covenant ritual consists in placing and leaving the worshipper's hair, clothing, etc., on the altar, but frequently in the OT the sacrificial meal may be regarded as the basis of the covenant—the god or his worshippers eating together and renewing their union with each other. Hence, according to one theory, the meal itself units and man in a next of some meal itself unites god and men in an act of communion (W. R. Smith, p. 271); or, according to another view, the food is here again the vehicle of conditional curses mutually transferred to god and worshipper (Westermarck, op. cit. ii. 623 ff.). Both purposes may, however, be served by the sacrificial purposes may, however, be served by the sacrificial meal. It is certainly the case that, in the view of the OT writers, breaking of the covenant by the individual or the nation was followed by punishment (Dt 17<sup>2f.</sup>, Jos 7<sup>11f.</sup> 23<sup>16</sup>, Jg 2<sup>20</sup>, 2 K 18<sup>9-12</sup>), while blessing followed its being observed (Ps 132<sup>12</sup>). In any case, what holds true of these OT sacrifices is true of similar sacrifices elsewhere. Indeed, in some aspects the mere offering of sacrifine to a god, thus propitiating him, is the token of an alliance with him; hence the worshipper asks and expects help from the god to whom he, for his part, is faithful. The same is true of the vows made to a god by a worshipper, in which he promises certain things, usually a sacrifice, for some specified help given him by the god.

In the OT other things are found as signs of a

Divine and human covenant, e.g. the rainbow in the case of Noah and his posterity (Gn 918), though here a covenant sacrifice appears also (82017.); cir-cumcision is the token of the covenant with Israel (Gn 17<sup>101.</sup>), though it is to some extent a sacrificial rite; and in Ex 31<sup>16</sup> the Sabbath is to be kept for a perpetual covenant. For marks or cuttings on the body as signs of a covenant, see BADGES.

Totemism, as 'an intimate relation which is supposed to exist between a group of kindred people on the one side and a species of natural or artificial objects on the other side, which objects are called the totems of the human group' (Frazer, x-otemism and Exogamy, London, 1910, iv. 1), is essentially a covenant relationship, since both essentially a covenant relationship, since both parties have entered explicitly or implicitly into an alliance for mutual help and protection. This covenant state is generally furthered by various ritual acts, by which men assimilate themselves to their totem, these being analogous to the covenant rites between human beings. The group of men is, in effect, identified with the animal species which is their totem; the relation is one of VOL. IV .-- 14

identity. Similarly, in the rites used at puberty for obtaining an individual animal guardian or manitou, and in the relative positions in which the individual and his manitou stand to each other, there is the suggestion that this relation is essentially a covenant one. Blood-letting is the most significant of these rites. Thus, the Mosquito Indians are said to have sealed their compact with the manitou by drawing blood from different parts of their holds NR is 1840. of their body (NR i. 740). Among the Indians of Honduras each youth formed a contract with his nagual, by offering some of his blood to it,

nagual, by offering some of his blood to it, 'whereupon such friendship was contracted between them that, when one of them died, the other did not survive' (Herrera, General Hist. of . . . America, 1740, iv. 188).

The American Indian youth generally killed the animal which was to be his manitou, and used its skin as a 'medicine-bag.' There was thus some kind of blood-covenant between the youth and his guardian, and, as in Omaha Indian belief there was a hond between them so close that the man was a bond between them so close that the man acquired the properties of the animal, so generally it was held that the youth would not survive the death of his nagual; and there was a common idea of the identity of the two, or perhaps of an interchange of life between them.

The meal eaten by survivors at a death, and repeated on anniversary occasions, and of which repeated on anniversary occasions, and or which the ghost is supposed to partake, has the intention of uniting the ghostly and human eaters, and of preserving the goodwill of the ghost by showing that he is not forgotten. It is thus a species of covenant with the dead. This is still more closely marked in cases where the mourners eat the dead man himself—perhaps the origin of the funeral feast. Other methods of this implicit covenant with the dead may be looked for in such rites as that of the mourners cutting themselves, letting

the blood drop on the grave, making offerings of their hair, or anointing themselves with the fat or decomposed matter of the corpse. These are or decomposed matter of the corpse. These are analogous to the similar rites in connexion with the cult of gods (see Hartland, op. cit. ii. 277 ff.; Jevons, op. cit. 41 ff.).

Various customs in human covenants—in which, a the parties held on animal which is accrifed.

e.g., the parties hold an animal which is sacrificed, its blood being sometimes sprinkled on a sacred object, or are sprinkled with sacrificial blood or that of an animal not apparently sacrificial—are probably connected with that type of covenant sacrifice in which the parties are a god and a group of men. Here, perhaps, the sacred nature of the sacrifice makes it an important basis of the human covenant, while sacrifices are frequently the vehicles of a curse; or, again, the god to whom the sacrifice or the blood is offered is regarded as a third party or the broot is offered is regarded as a white party to the covenant (for examples, see Brotherhood [artificial], vol. ii. pp. 859°, 870°; Wellhausen, Reste arab. Heid.², Berlin, 1897, p. 128; Lewin, Wild Races of S.E. India, London, 1870, p. 228). In many human covenants a god is expressly called upon as witness to the contract, as in the similar appeal in the case of an oath. The god is then expected to visit with his wrath the breaker of the

expected to visit with his wrath the breaker of the covenant (cf. Herod. iii. 8; Tylor, Prim. Cult.\*, London, 1903, ii. 342; Wilson, Western Africa, 1856, pp. 210, 392).

J. A. MACCULLOCH.

COVENANT (American), -The substitution of an artificial for a natural basis of subsistence had the effect in America, as elsewhere, of establishing the gods as the principal members of the agricultural community. On their co-operation the maintenance of such a community depended. To some extent the obligation was mutual; for, while men reaped much benefit from the encouragement, advice, and practical assistance of the gods, they were beholden to men for the sustenance tendered through sacrifice. A definite and tacit, if un-written, covenant thus came into being between gods and men, any human breach of which was visited with Divine punishment. The arrangement visited with Divine punishment. The arrangement was purely one of self-interest on both sides. Man felt the necessity of placating the only beings from whom he could obtain foreknowledge of seasonal and other changes, and, deeply sensible of the value of supernatural assistance, he rewarded it as handsomely as he could—by gifts of such food, drink, and clothing as in his sight appeared most desirable.

appeared most desirable.

Commencing this practice by an 'understanding' with the earlier tribal deities, he later extended it to the 'great gods' of the heavens and earth, whom from time to time he admitted into his pantheon. He felt that the wealth accruing from this co-operation with Divine beings should be fairly divided. This applied to the fruits of the earth produced under supernatural guidance, and to such live stock as had been raised under the to such live stock as had been raised under the same auspices. A step further, and we perceive that the logical outcome of such a policy was to set apart such fields and flocks as would satisfy set apart such fields and flocks as would satisfy the god, for his own special use—these to be worked and tended by (in all probability) the most skilful labourers. Thus, according to Gumilla (Orinoco Illustrado, Madrid, 1745, vol. if. p. 278), a tribe of the Guayanos, in consternation at an eclipse of the moon, at once commenced work upon a plantation for the moon-spirit, considering the eclipse to be a sign of his displeasure at their the eclipse to be a sign of his displeasure at their failure to supply him with a separate field of maize. The gods of Peru had their own herds of llamas and pacos, the flesh of which was largely consumed on their altars, while the wool, woven into each the was branch to available the particle to the control of the particle the wool. cloth, was burned to provide them with 'astral' clothing, or used in the provision of raiment for their images and attendants.

When mere animal sacrifice fails, either, as in Mexico, owing to the lack of large animals, or, perhaps, because of a more sanguinary popular temperament, the blood of human victims is supplied to the gods as nutriment. Thus the Mexican god Huitzilopochtli lived wholly upon human sacri-fice, countless thousands of victims, for the most fice, countless thousands of victims, for the most part members of hostile tribes, being slain annually upon his altar. The hunter, too, as well as the cultivator and herdsman, paid his debt to the gods, who assisted him to track his game in dreams. Thus the Nicaraguan tendered to his deer- and rabbit-gods clotted blood wrapped in a cloth, and the Otomi offered blood to the great Cloud-serpent, Mixcoatl. Dwellings, too, were supplied to the Divine beings.

The natural conclusion of the savage in these circumstances is that a breach of his covenant with the gods brings upon him calamities of every

with the gods brings upon him calamities of every description. There is much temptation on the part of the cultivator to withhold a portion of the firstfruits or other sacrifice; and, should this temptation overcome him, he becomes an easy prey to the malevolence of the slighted deity. The Peruvians believed that in such a case the offended Peruvians believed that in such a case the ollended god sent an evil spirit to haunt the wrongdoer, and that it lay in wait for him in his habitual resorts. His crops failed, his health gave way under some terrible disease, his stock perished. Such were thought to be the consequences of hucha, or sin, in Peru; and, in the event of a national calamity, every member of the com-

munity was rigorously examined, until, the guilty one being discovered, restitution was forced from him. Throughout the two Americas the idea of the covenant with the gods was quite as current as elsewhere; and its inevitable workings have been observed in the economy of nearly every

LEWIS SPENCE.

COVENANTERS.—The subscribers of the National Covenant and the Solemn League and Covenant rejected the theory of the Divine right of kings, and vigorously opposed the absolutism which crushed the liberties of the people. In the days of James VI., before the Covenants, the conflict was begun. George Buchanan in 1579 published his De Jure Regni apud Scotos, in which he taught that kings are chosen and continued in office by that kings are chosen and continued in office by the people, and, in particular, that the Scots had always claimed and exercised the right to call wicked rulers to account. Two Scotsmen had already dealt with the old question of the right of kings. As early as 1521, John Major asserted in his *History* that the people first made kings, and could dethrone them; while Hector Boece in his *History*, published in 1527, assumed that the royal authority is derived from the people. In 1584. authority is derived from the people. In 1584, Buchanan's book was condemned by Act of Parliament, and in the same year were passed the 'Black Acts,' which declared, contrary to the teaching of Knox, that the king was head of the Church as of the State, that assemblies should not meet without his sanction, that there should be bishops who should be appointed by him, and that ministers should not discuss public affairs under pain of treason. When these statutes were framed, James's adviser was James Stuart, Earl of Arran, who had succeeded Esmé Stuart, Lord of Aubigny. Leaving the court of Henry III. of France, in which the doctrine of royal absolutism was cherished, D'Aubigny had proceeded to Scotland, on the mission of the Guises for the restoration of Mary Stuart and the Catholic religion, and there had taught the young king to be an autocrat. The Scots, however, feared a popish plot; and honestly or dishonestly he approved the drawing up of the Negative Confession, assailing Romanism, which in 1581 was signed by James and his courtiers. While D'Aubigny was directing the king, Andrew Melvill was leading the Church and inveighing against 'the bloodie guillie of absolute authority.' treason. When these statutes were framed, James's against 'the bloodie guillie of absolute authority. By his influence the Assembly of 1580 condemned Episcopacy; and in 1681 pre-byteries were estab-lished with the king's consent, and the Assembly approved the Second Book of Discipline. The Raid approved the Second Book of Discipline. The Raid of Ruthven, which was devised for the liberation of James from the hands of D'Aubigny, was successful; but it could not make the king forget the reason; but to could not make the king lorget the Frenchman's lessons in absolutism; and, when Arran was the chief counsellor, the Black Acts, with their assertion of the royal supremacy, were passed. Though Arran's rule terminated in 1585, James was able, two years later, to persuade the Parliament to declare that all ecclesiastical property belonged to the group. perty belonged to the crown.

For a time, however, James did nothing for the bishops, and before and after his marriage seemed to favour Presbyterianism. In 1590 the Assembly ordained 'the subscription of the hand of main-teaning religion and confession de novo,' and, in 1592, Presbyterianism received from Parliament its 'Magna Charta,' whereby the ecclesiastical courts were legalized, and the liberty of the Church was ratified by the abrogation of the Black Acts, so far as they interfered with its authority in matters

of religion. The royal favour to Presbyterianism was of short duration, and in 1596 Andrew Melvill told James that he was 'but God's sillie vassall, and said:

'Sir, as diverse tymes before, so now again I must tell you, there are two kings and two kingdomes in Scotland; there is Christ Jesus and His kingdome the Kirk, whose subject King James the Sixth is, and of whose kingdome not a king, nor a head, nor a Lord, but a member.'

The words did not convince, and James, casting aside tradition, called by his own authority Assemblies, which yielded to his pressure. At last in 1610 an Assembly restored Episcopacy, and in 1612 the Estates ratified the new order of ecclesiastical government. In justification of his authority, James published, in 1598, The True Law of Free Monarchics, and set forth the Divine origin of the

royal power.

royal power.

'Monarchy,'he wrote, 'as resembling the Divinity, approacheth nearest to perfection, as all the learned and wise men from the beginning have agreed upon.' He declared that 'kings are called Gods by the prophetical King David, because they sit upon God his throne upon earth, and have the count of their ministration to give unto him.' Scripture texts were used to show that the people should pay obedience to the king 'as to God's leutenant on earth, obeying his commandments in all things, except directly against God, as the commands of God's minister, acknowledging him a judge set by God over them, having power to judge them, but to be judged only by God, to whom only he must give account of his judgment.'

In the Basilikon Doron, published shortly after The True Law of Free Monarchies, James instructed his son to know and love God, who had made him 'a little God to sit on his throne, and rule over other men.'

True to his exalted notion of his office, James used his authority to change the government of the Church, and then turned to the customs and forms of worship. In the Assembly of 1616, called by him, and the first which met after 1610, a new Confession of Faith, Catechism, Liturgy, and Book of Canons were projected; and in an Assembly at Perth in 1618 royal coercion secured the passing of the famous Five Articles, which were startling innovations in the Scottish ritual. When the innovations in the Scottish ritual. When the government of the Church had been changed and the ritual modified, the king was satisfied with the exercise and recognition of his supremacy; but, while by his actions and writings he showed his attachment to the theory of the Divine right of kings, he ruled in the Church through Assemblies, and the rule through these were covered the preserved the and, though these were coerced, he preserved the recognized forms of legislation.

Charles I, succeeded to his father's belief in his Divine right, and continued, but without tact or discretion, the assertion of royal absolutism. In May 1635 he signed the warrant for a Book of Canons, which is the following account. Canons, which in the following year was imposed upon the Scottish Church, without the sanction of either an Assembly or a Parliament. Reference was made in the Book itself to a Liturgy, afterwas made in the Book itself to a Liturgy, atterwards known as Laud's Liturgy, which was ratified in 1636, and in 1637, on the sole authority of the king, was sent to Scotland. The Canons, as they made no outward change in the Church, did not stir the people, though they saw in them a violent exercise of royal power; but the Liturgy, also devised by the king as an autocrat, roused a popular clamour, and set the nation against him. The Liturgy met with instant opposition, and the rlot which occurred in the church of St. Giles, riot which occurred in the church of St. Giles, Edinburgh, when it was first read, inaugurated a revolution which spread through the greater part of Scotland. The Scots, ever fond of legal bonds of association, prepared a document which is known as the 'National Covenant,' and multitudes

The document was prepared by Johnston of Warriston, one of the ablest of the lawyers, and the Rev. Alexander Handerson, minister of Leuchars, who was the ecclesiastical leader of the

Presbyterians; and with them most probably was associated Hope, the king's advocate. It included associated Hope, the king's advocate. It includes the Negative Confession of 1581, which James vi. had signed; a list of the Acts of Parliament confirming the Confession; and the Covenant proper, by which the subscribers bound themselves to defend their religion and their king as guardian of The signing of the Covenant was begun on 28th feb. 1638, in the Greyfriars churchyard, which contained the burial-place of George Buchanan, whose De Jure helped to drive James towards absolutism. If the first Covenanters, drawn from all classes and representing the greater part of the country, were rebels against the king's tyranny, their document infringed no law of the land. Yet their document infringed no law of the land. it was the bond of a nation against the sovereign, and, with troubles in England, Charles was forced to yield. He appointed the Marquis of Hamilton as his commissioner, who tried to divide the Covenanters by means of a new Covenant, the King's Covenant, which included but did not enforce the Confession of 1581; and, when the project failed, Hamilton in his master's name promised a free Assembly, a Parliament, and the abolition of the Courts of High Commission which, with bishops among the judges, tried ecclesiastical cases. The Presbyterians did not admit that the royal assent was necessary for an Assembly, and accordingly they called one, which met on 21st November in Glasgow. The Marquis of Hamilton appeared as the king's representative, and the members chose Henderson as moderator and Johnston of Warriston as clerk.

Henderson and his associates had summoned the bishops, but these refused to recognize the authority of the Assembly; and, when their cases were considered, the commissioner declared the proceedings illegal, and dissolved the Assembly. The Presbyillegal, and dissolved the Assembly. The Presby-terians, however, were undaunted, and the business was continued, without and in spite of the king's representative. The bishops were deposed, and some of them excommunicated; the Book of Canons, the Liturgy, and the Five Articles of Perth were condemned, and the Courts of Commission abolished. Thus did the Covenanters in the Glasgow Assembly answer the king with his absolutism. The Earl of Argyle accepted the Covenant in Glasgow, and it had been signed by the Earl of Montrose in Edin-

burgh. War was inevitable, and Charles devised schemes War was inevitable, and Charles devised schemes for which he had no money. He attempted, however, to irritate the English by representing that the Scots were preparing an invasion; and the Scots, in defence of their honesty, published 'An Information for all good Christians within the Kingdome of England.' Another document appeared, the 'Large Declaration,' which Dr. Balcanguhal wrote and Charles authorized. It was the king's version of his troubles with the Scots, and was not a contribution to truth. Something more than a distribution of pamphlets was required to settle the quarrel between the people and their king, and Charles mustered an army of 21,000 men at Berwick. The Scottish forces, numbering 20,000 men, were entrusted to Alexander Leslie, 20,000 men, were entrusted to Alexander Leslie, who had followed the profession of arms on the Continent. Marching southwards, he fixed his quarters at Dunse Law, twelve miles from Berwick. The First Bishops' War was a demonstration and not a battle, and on 18th June 1639 commissioners arranged the Pacification of Berwick, which secured their demands for the Covenanters.

By the Treaty an Assembly and a Parliament were to meet; and on 12th August the Assembly sanctioned the Acts of the Glasgow Assembly, that they might have undisputed legal validity. The members requested the Privy Council to require every one in the nation to sign the Covenant, and, so doing, violated the rules of toleration. The Earl of Traquair, the king's commissioner, ratified the proceedings of the Assembly, though Charles indicated to Archbishop Spottiswoode that what had been done could be undone. Parliament approved the action of the Assembly in overthrowing Episcopacy; and, in spite of his action as commissioner to the Assembly, Traquair refused assent in the king's name, and against precedent dissolved the Parliament. War was once more inevitable, since the nation's demands, in spite of the Treaty of Berwick, had been refused. Charles summoned an English Parliament, known as the Short Parliament, and dismissed it when supplies for a war with Scotland were refused. He succeeded, however, in collecting a force at York on 22nd August 1640; and on the 20th of the same month Leslie entered England with an army of 20,000, and marched to Newcastle. The Second Bishops' War was no more romantic than the First; and commissioners were appointed to meet at Ripon, and to arrange terms of peace on the basis of the abolition of Episcopacy and the recognition of the Covenant. The troubles in England forced Charles again to yield to the Scots, though not till 10th August 1641 was an arrangement made with the Long Parliament, which had taken the business out of the hands of the king.

Hoping to create a party in his favour, Charles in 1641 visited Scotland, and remedied further abuses, especially in the Privy Council and Court of Session, which by his own act were filled with his partisans. He expected to strengthen the opponents of the Covenant, already represented by the Incendiaries and the Plotters or Banders. The Earl of Traquair and Sir Rob. co Spottiswoode, the archbishop's son, were the chief men among the Incendiaries, who had been the advisers of Charles from the time of the Covenant; while the Plotters were led by Montrose, who had passed to the side of the king, perhaps through jealousy of Argyle's prominence among the Covenanters. The affair known as 'The Incident,' whether it was a fact or merely a story, told against the king, and, when he departed from Scotland in October, he had neither weakened his enemies nor strengthened his own

narty.

In August 1642, Charles raised his standard at Nottingham, and the Civil War in England was begun. The king and the Parliament each sought the aid of the Scots, who, though themselves divided, were in great numbers favourable to the Parliamentary cause. The Parliament informed them that an Assembly at Westminster had been appointed to consider 'a reformation in church discipline and ceremonies'; and on 2nd Aug. 1643 the General Assembly, associated with the Convention of the Scottish Estates, put forward the Solemn League and Covenant, drafted by Alexander Henderson, as the condition of an alliance. The subscribers to the Covenant were to bind themselves to preserve the Reformed religion in Scotland, to secure in England and Ireland a reform in doctrine, worship, discipline, and government, according to the Word of God and the example of the best Reformed Churches; to seek the extirpation of Popery, prelacy, superstition, heresy, and schism; and to defend the privileges of the Parliament, and also the person and authority of the king. The English Parliament accepted the Covenant on 25th September, and in Jan. 1644. Leslic, who had been created Earl of Leven, led an army into England, which helped to secure the victory of Marston Moor. In his difficulties, Charles granted a commission to Montrose, and, after an arrangement with the Marquis of Antrim, sent him a wild horde of Irish and Scoto-Celts.

Victory after victory in Scotland was gained by

Montrose, though at the expense of horrible cruelties perpetrated by the savages of his army; and he did not know defeat till September 1645, when he met David Leslie, Leven's nephew, at Philiphaugh. The triumph of the Covenanters was secured, and was cruelly celebrated in the execution of Sir Robert Spottiswoode and other Malignants, as the Royalists were called.

In England, the Parliamentary party, after their victory at Naseby, had no further need of the Scots; and they, on the other hand, being opposed by the Independents, despaired of the success of the Solemn League and Covenant. Charles understood the situation, and in May 1646 threw himself into the hands of the Scots. Yet he would not accept their Covenants, and they would not support him. Had he agreed to their terms, they would have defended him; but they handed him over to the English Parliament, on condition that his life should be spared, and the money due to them be paid.

One last effort to save their king was to be made by some of the Scottish nobles. The Earls of Loudon, Lanark, and Lauderdale visited him at Carisbrooke Castle, and made a compact, known as 'The Engagement,' according to which they were to find an army for him, and he was to establish Presbyterianism in England for three years. In the Scottish Parliament, the nobles, barons, and commissioners from the large towns showed by a decided majority that they trusted the king, though the clergy, on the other hand, would not believe that he was sincere. Hamilton, however, raised an army of 10,000 men, who when they reached England were met by Cromwell and defeated.

Charles was executed one of John Jan. 1649, and Covenanters and Royalists alike were horrified. Charles was the victim of his cherished principle of the Divine right of kings, which, bequeathed to him by his father, destroyed the peace of Scotland, turning a loyal people into rebels whom history has justified. James was a despot who knew the value of discretion; but Charles, with an erroneous doctrine of his personality and an archaic theory of his power, was destitute of tact, and the Scots strenuously opposed him in the defence of their liberties. Yet, though he was a tyrant in their eyes, they would have remembered that he was their king and would not have taken his life.

or his power, was destitute of tact, and the Scots strenuously opposed him in the defence of their liberties. Yet, though he was a tyrant in their eyes, they would have remembered that he was their king and would not have taken his life.

Six days after the execution at Whitehall, Charles II. was proclaimed king by the Scottish Estates, though he was to be acknowledged only on condition that he accepted the Covenants. The zeal of the Covenanters was not diminishing, and just before the death of the king they secured the Act of Classes, which excluded from civil and military posts all who were hostile to the Covenants. Montrose cared nothing for the Estates, and still dreamed that the country might be subdued. He failed, however, to gather the Royalist army of his visions, and yet would not cease from romantic expeditions and attacks. At last he was taken, and was beheaded on 21st May 1650 at the Market Cross of Edinburgh. Charles II. landed in Scotland in June, and, according to an agreement already made, accepted the Covenants. His presence was a monace to England, and on 22nd July, Cromwell crossed the Border. David Leslie was in command of the Scottish army, which in the rush of events was now gathered for the defence of the king, though many of the Covenanters, led by Johnston of Warriston and James Guthrie, minister of Stirling, did not put their trust in Charles. In their fanaticism they succeeded in banishing all Malignants from the army, and so interfered with Leslie that Cromwell secured a decisive victory at Dunbar. Immediately after the battlethey prepared a Remonstrance against the government of Argyle

and his friends, and presented it to the Committee of Estates, with the declaration that they rejected Charles till he proved 'the reality of his profession. Argyle was forced to choose an alliance with the Remonstrants or with the Malignants, and he gave his support to the friends of Charles. The Committee of the Estates accordingly passed a Resolution in condemnation of the Remonstrance, and the Estates abolished the Act of Classes. 1st Jan. 1651, Charles was crowned at Scone, and Malignants and Resolutioners alike were satisfied. Cromwell followed and resolutioners after were statistic.

Cromwell, however, was still in the country, and once more David Leslie was placed in command of an army. In hope of a rising in favour of Charles, the Scots marched into England, but Cromwell followed and utterly defeated them at Worcester. Scotland was subjected to English rule; and, though toleration was enforced, Resolutioners and Remonstrants continued their quarrel till in 1653 the General Assembly was closed and its meetings forbidden. Enthusiasm for the Covenants was no longer national but sectarian. The National Covenant had been the protest of a realm against the absolutism of the king, and the Solemn League and Covenant had been framed for the reformation of religion by those who believed that the true Church should be Presbyterian. In the events which followed the National Covenant, Charles had been compelled to submit to the Scots, and after his death the Covenanters, true to the Solemn League and Covenant, became the guardians of Presbyterianism. Fanaticism divided them, but the factions were none the less devoted to the Church which James and Charles I. had had been saved from the hands of the destroyers.

Scotland hailed the Restoration with joy, as the

English rule was ended and the king was to reign who had been crowned at Scone. The Remonwho had been crowned at Scone. strants or Protesters alone, in their anxiety for the Church, did not share in the joy, and soon it was seen that they were not foolish in their alarm. Charles nominated a Privy Council, without waiting for a Parliament to advise in the selection; and, while the members of the Council were with him in London, he entrusted the government to the Committee of the Estates, which had not acted after 1651. Remembering injuries and destitute of gratitude, he committed Argyle to the Tower, and then sent him to Scotland for trial, and at the same time issued an order for the seizure of Johnston of Warriston, who, however, escaped to France. The Committee of Estates, recognizing the attitude of the king to the Covenanters, broke up a meeting of Protesters, and seized among others James Guthrie, the minister of Stirling. In their eagerness to please they issued a proclamation against 'all unlawful and unwarrantable meetings against 'all unlawful and unwarrantance meetings and conventicles'; and, in decreeing that there should be no meetings 'without his Majesty's special authority,' showed how the men in the king's service no longer opposed the absolutism and supremacy which had been fatal to his father. seemed at first that Charles, though ruthless towards the Remonstrants, would uphold the Church for the sake of the Resolutioners; and James Sharp, minister of Crail and professor in St. Andrews, whom the Resolutioners had sent to London, returned on the last day of August with a communication to the Presbytery of Edinburgh. 'We do resolve,' Charles wrote, 'to protect and preserve the government of the Church of Scotland as it is settled by law'; but, while he referred to the government as it existed, he soon afterwards the government as it existed, he soon afterwards put a strange interpretation on his words. On lat Jan. 1661, a Parliament with carefully selected members met, and in its sessions passed a multitude of Acts. In an oath of allegiance, Charles was

declared 'supreme Governor of this kingdom over all persons and in all causes'; and a Rescissory Act, which revoked the legislation of every Parliament after 1633, destroyed what the nation had built up in the struggle against royal absolutism. The Church 'settled by law,' to which Charles referred in his letter to the Edinburgh Presbytery, was no longer Presbyterian, and in a communication to the Privy Council he wrote: 'We have, after mature deliberation, declared to those of your Council here our firm resolution to interpose our royal authority our firm resolution to interpose our royal authority for restoring of that Church to its right government by bishops, as it was by law before the late troubles, during the reigns of our royal father and grandfather of blessed memory, and as it now stands settled by law.' The Church was Episcopal, but only one of the bishops was alive; and four men, of whom were James Sharp and Robert Leighton, set out for London to receive episcopal

consecration.

The second session of the 'Drunken Parliament, as it was called, began on 8th May 1662, and, after an Act for 'the restitution and re-establishment of the ancient government of the Church by archbishops and bishops, the prelates were admitted to the dignity of an Estate. Thereafter the Covenants were declared to be treasonable, and holders of offices of trust were required to abjure them. Another Act was tragic in its consequences. Patronage had been abolished in 1649, and the election of ministers had been entrusted to the kirk-sessions. The Parliament now decreed that every minister who had been ordained after 1649 should receive a presentation from the patron, and institution from the bishop. In the west and south nearly three hundred men refused to comply; and churches were closed till 'curates' were found for them. In the third session of the Parliament the Earl of Rothes took the place of the Earl of Middleton as the king's representative, though the Earl of Lauderdale was the real director of the Ecclesiastical affairs were in hopeless business. The churches from which the ministers disorder. The churches from which the mmisters had been excluded were almost empty, and the people flocked to private houses in which these men preached. The Parliament sought a remedy in an Act which required the 'outed' ministers to abstain from preaching, and the people to attend the churches. Fines were to be imposed on those who would not obey, and the Privy Council were to receive reports from the curates regarding offenders. Before the close of the Parliament, Johnston of Warriston, who had been apprehended Johnston of Warriston, who had been apprehended in France, was sent to execution. Argyle and James Guthrie, and also a man named Govan, had been condemned; and Warriston followed them to the scaffold and to martyrdom for the Covenants. The victims of the king's wrath were few, and Argyle and Guthrie, conspicuous champions of Argyle and Guthrie, conspicuous champions of the people's rights, might have satisfied his vengeance; but Warriston was pursued till his death was accomplished. Samuel Rutherfurd, the Principal of St. Mary's College, St. Andrews, was summoned to appear at Edinburgh, and died before he could answer. In his Lew Rew he had set forth the democratic principles which George Buchanan taught in the De Jure; and, when he could not be brought to sentence, his book was publicly burned

by order of the Government.
Without consent of the Church, Charles II. changed its constitution, and the men who would not obey his orders were driven from their livings. James VI. had forced or corrupted Assemblies and

elected, and the Church itself was not consulted. The 300 evicted ministers could urge the Presbyterian claim of free assembly. Their theory of the Divine origin of the Presbyterian polity might be denied, but they could point to Knox and Melvill as the upholders of the Church's freedom, and to the struggles and successes of the first Covenanters. the struggles and successes of the first Covenanters. Many of the ministers quietly accepted the Episcopacy ordained by the 'Drunken Parliament,' but the men who were ejected, and not the men who conformed, were obedient to the Presbyterian tradition, and as heirs of the Covenanters were entitled to their name. Opponents of the royal absolutism and advocates of ecclesiastical freedom, the second rea of the Covenanters were destined the second race of the Covenanters were destined

the second race of the Covenanters were destined to bear testimony through suffering to their devotion to the lost liberties of their Church. Fines were imposed by the Privy Council on those who neglected the ministrations of the curates, and soldiers were quartered on offenders till these were paid. At Archbishop Sharp's suggestion the Court of High Commission was re-instituted to deal with breakers of the law, and the troubles increased when Covenanters, to whom an Act of Indemnity had not extended, were ordered by the Court to pay their fines. In the disaffected districts the people were galled by the tyranny of the Council the people were galled by the tyranny of the Council in imposing fines, quartering soldiers, and breaking up conventicles (q.v.) for worship. Passive obedience was not a favourite custom of the Scots, and a rising of the oppressed was to be expected. Sir James Turner, the most zealous of the soldiers of the Government, was in Dumfries, and on 15th-Nov. 1666 was attacked and taken prisoner by a company of men from Galloway, who had been stirred by a shameful tale of cruelty. From Dumfries they marched, 3000 in number but antrained, across the country to Lanark, where they renewed their adherence to the Covenant. Intending to pass to Edinburgh, they turned on their way to the city, as Sir Thomas Dalziel, a fanatic Royalist who had served in Muscovy, was on their track, and they reached Rullion Green, on the southern slopes of the Pentlands. Dalziel with his disciplined force routed them. Some were with a green fled and at least fifty were taken Whiled, many fled, and at least fifty were taken, Two of the leaders, John Neilson of Corsack and Hugh M'Kail, who was a preacher, were tortured with the boot in presence of the Council, that they might reveal a supposed league with the Dutch, and were afterwards sent to the scaffold. Ten men, and then five, were hanged in Edinburgh, and the work of execution was continued in Glasgow and the work of execution was continued in Glasgow and Ayr. Many of those who had been engaged in the rising were fined and their lands and goods confiscated. To Dalziel was given the task of quieting the disturbed places, and with his ruthless severities he terrorized the people. In 1667, however, a respite was offered when Lauderdele, who had overthrown Rothes and Sharp in the Council, intimated an indemnity, under conditions, for the Pentland rising. While many accepted the terms, the sternest of the Presbyterians refused obedience to a Government which required conformity to an Episcopal Church and ignored the conformity to an Episcopal Church and ignored the

Covenant.

After the indemnity no further step towards conciliation was taken till 1669, when an Indulgence was offered. It was ordained that vacant parishes might be given to ministers who were willing to accept collation from the bishops; and those who would not take collation might have the manse and glebe, without the stipend, if they agreed, among other conditions, to administer the sacraments to their parishioners alone. Forty-two ministers, professing their adherence to Presby-terianism; were admitted; but the most zealous of the Comparishioners. the Covenanters inveighed against them, and William C

extreme Episcopalians objected to the Indulgence as an Act of Erastianism. Lauderdale, though responsible for the Indulgence with any elemency involved in it, was an avowed supporter of the royal absolutism; and under him the Parliament of 1669 declared in the Assertory Act 'that his Majesty hath the supreme authority and supremacy over all persons, and in all causes ecclesiastical within this kingdom; and that, by virtue thereof, the ordering and disposal of the external government and policy of the Church doth properly belong to his Majesty and his successors, as an inherent right of the crown.'

Burnet, the Archbishop of Glasgow, was deposed for his opposition to the king's authority in the issue of the Indulgence, and Leighton, who succeeded him, proposed an 'accommodation' for peace between Presbyterians and Episcopalians. The scheme was futile, as compromise pleased no one, and Leighton, resigning the archbishopric, departed to England. The Indulgence did not remove the emperition of The Indulgence did not remove the opposition of The Indulgence did not remove the opposition the Covenanters, and they flocked to the con-Government, on the other hand, showed no leniency. In 1670 an Act was passed which required any one on oath to give information regarding conventicles and the men who attended them; and another Act made death and confiscation of goods the penalty for preaching at conventicles. Not content with these severities, the Parliament decreed that punishment, even to exile, should be inflicted on those who had their children baptized by the non-conforming ministers, and also on those who for three successive Sundays absented themselves from the parish church. The conventicles, in spite of the Government, did not cease, and the Bass Rock was turned into a prison. In 1672 the Parliament declared the ordination of ministers by the Covenanters a crime, and decreed that parents should be punished who left their children unbaptized by the curates for more than thirty days. For some reason a second Indulgence was published. It was offered to eighty of the clergy, and some of them accepted it, but the Covenanters were not quieted. The Government in their straits decreed that magistrates for the burghs and landowners in respect of their estates were to be made responsible for conventicles, and householders were to answer for their families and servants. Another step was taken in 1675, when letters of inter-communing were issued against 100 persons, including men and women of social position, who were not to be harboured or fed or clothed by any one. Though landowners in 1674 had been made responsible for their tenants and servants, they were required in 1677 to take a bond for all persons on their lands. Many of these men in the disturbed counties, though friendly to the Government, would not sign such a bond; and in February 1678 a host of 6000 Highlanders with 3000 Lowlanders was sent to Ayrshire and let loose for plunder. The Duke of Hamilton and also the Earls of Atholl and Perth appeared with expostulations before the king, and, though Charles approved Lauderdale's actions, the Highlanders were withdrawn. The disorder increased, however, in space of indulgences and coercive Acts; and the year 1679 witnessed among other tragedies the murder of Archbishop Sharp. From the day of his few of Archbishop Sharp. From the day of his acceptance of the archbishopric there were few who even respected him, and the Covenanters hated him as their fiercest oppressor. Travelling to St. Andrews he was murdered at Magus Muir, three niles from the city, by a band of men who had been outlawed for attending conventicles. These men were not taken, though a proclamation was issued for their arrest; and another tragic event was to increase the troubles. On 27th May

are a fair or arry of the Restoration -- a company of eighty men gathered in Rutherglen, and, after extinguishing the bonfires, affixed to the market-cross a paper denouncing the Acts of Parliament against Presbyterianism. The same company, increased in numbers, held a conventicle on the Sunday which followed; and Graham of Claverhouse with a troop of soldiers was sent to disperse it and to seize the men who had appeared at Rutherglen. At Drumclog, two miles from Loudon Hill, where the conventicle had assembled, an engagement took place, and Claverhouse was defeated. The victors determined to form a camp, and many flocked to it. The Government, on the other hand, made ready an army, and the king sent the Duke of Monnouth to command it. The battle of Bothwell Bridge was fought on 22nd June with disastrous results to the Covenanters. They had enthusiasm; but, divided over the Indulgences, they quarrelled when they should have been drilling themselves for action, and there was no capable and trusted leader. While the number of the dead was not great, more than 1000 prisoners were taken and conveyed to Edinburgh. For months many of the wretched men were confined in the Greyfriars churchyard. Two of the ministers were hanged, and five men, who had not been involved in the death of the Archbishop, were sent for execution to Magus Muir, that the murder might be avenged. Many were allowed to leave their prison, after taking a bond not again to bear arms; and others, to the number of 250, were packed into a ship sailing to Barbados, that they might be sold into slavery. The ship, however, was wrecked on one of the Orkney Islands, and 200 of the unfortunate men, who were kept under the hatches, were

Thanks to Monmouth, an Act of Indemnity was passed for those who had been at Bothwell Bridge, and a third Indulgence for ministers was published. Conditions, however, were attached, and there were few who did not reject them. Clemency was accordingly thrown aside, and diligent search was made for those who had been at Bothwell. The thumbkins and lighted matches to the fingers were used by the savage soldiers of the Government to force unwilling informers to reveal their secrets. Oppression again had its natural consequences, and wild men were made wilder. The Presbyterians who still remained staunch to the Covenants separated from communion with those who had accepted the Indulgences, and deliberately threw off allegiance to the king. Two ministers, Richard Cameron and Donald Cargill, were the leaders, and they and their followers called themselves 'Society People,' and were known as Cameronians, Wanderers, Hillmen, or Whigs. On 22nd June 1680, Cameron and Cargill with some of their men, twenty-one in all, entered Sanquhar and affixed to the market-cross a declaration that they disowned Charles Stuart as king for 'his perjury and breach of covenant to God and His Kirk.' These men did at Sanquhar, in the time of Charles Stuart, what England and Scotland afterwards did when James Stuart was king. Cameron and Cargill were marked by the Government, and at Aird's Moss, on 20th July, Cameron was killed, when he and Hackston of Rathillet, with some of the Hillmen, were attacked by a company of dragoons. Hackston was executed at Edinburgh with a display of abominable cruelty, and Cargill, who was not at Aird's Moss, became the leader of the Covenanters. He appeared in October at Torwood, and in a great assemblage excommunicated the king, the Duke of York, the Duke of Lauderdale, and others; and, though the sentence was futile and the action altogether fanatical, the devotion to a cause consecrated in the tradition of the

country made Cargill a hero in the eyes of the persecuted Whigs. He, too, was to die for the Covenant, and in 1681 was executed in Edinburgh.

In 1681 the Duke of York appeared in Scotland, and, in place of Lauderdale, acted as Royal-Commissioner. After the Act for securing the Protestant religion, the Parliament, at his direction and to suit his purposes as a Catholic, passed an Act which declared that the kings of the realm derived their power from God, succeeding to it by lineal descent, and that the succession could not be changed. This declaration, in favour of the Divine right of the king, was followed by the Test Act, which required every holder of office to swear that he owned the Protestant religion as set forth in the Confession of 1567, acknowledged the supremacy of the king in all causes, would not consult about any State matter without royal licence or command, and would never endeavour to alter anything in the Government of the country. Never before had the Scottish Parliament displayed such abject subservience. Eighty of the ministers refused to take the test, and left their parishes; and in January 1682, fifty of the Covenanters published at Lanark a fresh declaration, and burned the Succession and Test Acts. The 'Society People' were counted rebels, as they were, and were treated with savage cruelty; Dalziel and Claverhouse, merciless leaders of the rudest soldiers, earned infamous reputations; and, when the troubles were at an end, men continued to talk of the 'Bloody Clavers,' while they spoke, too, of the 'Bloody Mackenzie,' the Lord Advocate, who was pitless in his prosecutions. Their victims was planess in his prosecutions, Their victims were fined or sent to slavery, and some were shot and some were langed. In November 1684 the 'Society People' published their 'Apologetical Declaration,' drawn up by James Renwick, a young minister, which contained a warning to their persecutors that they counted them, and would punish them, as the enemies of God and His covenanted work; and they did not shrink from covenanted work; and they did not shrink from killing their foes. An oath of abjuration of the Apologetical Declaration was at once prepared by the Government, and he who did not take it might be shot without pretence of trial. John Brown of Priesthill, in whose house were found bullets and treasonable papers, refused to take the oath. 'Whereupon,' wrote Claverhouse, 'I caused shoot him dead, which he suffered very unconcernedly.' A few days later, though Claverhouse was not the perpetrator of the deed, an old woman and a girl were drowned at Wigton, as they would not abjure the Apologetical Declaration.

James II. ascended the throne in 1685, and the Estates expressed their gratitude for the blessings which they owed 'to the sacred race of their most glorious kings, and to the solid, absolute authority wherewith they were invested by the first and fundamental laws of the monarchy.' Acts were passed against the Covenanters, and in one it was declared that any person who preached at or attended a conventicle was to be punished with death and confiscation of goods. The accession of James marked no change of policy in the treatment of the Covenanters, and the first year was known as 'the black year, the killing time.' Argyle, in the plot with Monmouth for the removal of James from the throne, landed in Scotland in 1685; but he received no help from the Covenanters, whose cause, at an earlier time, he had forsaken. The plot ended in failure, and Argyle was taken and carried to Edinburgh, where he was beheaded. Before he arrived in the city, the Government resolved to make sure that their prisoners, who might be in sympathy with him, were securely warded. About 200 of the Covenanters were accordingly removed to Dunnottar Castle. Men

and women were thrown together into a vault, with but one window for air, and the space hardly gave them room to sit down. Days passed before any of them were removed, and then forty men were sent to another vault, where a break in the wall gave the only current of air. After two months those who were alive were taken to Leith;

and, while a few promised allegiance, the majority were sent as slaves to the Plantations.

James was a Roman Catholic, and, whatever his schemes were for the return to Rome of the nations over which he was king, he determined to repeal the penal laws against the Roman Catholics. The Scottish Parliament, which again and again had admitted the royal absolutism, would not consent to more than a serious consideration of his communication regarding the repeal, and was dissolved. Thereafter the Privy Council received an intimation from him that his prerogative enabled him to dispense with all laws, and he charged the Council to rescind the penal laws. Even the most subservient Government could not ignore the fact that Scotland dreaded a return of Popery. James accordingly extended to the Presbyterians the toleration he desired for the Catholics, and they were allowed to meet in private houses or chapels, if no disloyal doctrines were preached. The 'Society People,' however, were excluded from the new Indulgences, as they had thrown off allegiance to the king, and they continued in their opposition and frequented their conventicles. Their leader was James Renwick, and in February 1688, having refused to acknow-ledge the Government, he was put to death, the last martyr for the Covenants. The year which witnessed the execution of the Covenanter in Edinburgh witnessed also the arrival in London of

William of Orange and the flight of James.

In the period between the imposition of the Liturgy and the death of Charles I., and, again, in the period between the Restoration and the Revolution, the Covenanters were the guardians of freedom. After the Restoration the nobles and barons, as if there had been no Covenants, admitted with extraordinary servility the despotism of the kings; and even the Covenanters themselves were not united, since those who profited by the Indulgences submitted to the king, who was an ecclesiastical antocrat. The 'Society People' alone were faithful to the Covenants.

were lathful to the Covenants.

Recognizing Presbyterianism as Divinely instituted, and declaring, therefore, the rights of their Church to be those of the Redeemer, they fought for Christ and the Covenant; and at last threw off allegiance to the king as the enemy of their Lord. In Scotland throughout the 17th cent. the royal absolutism was displayed almost entirely in affairs of the Church, and there was no clear issue without appeals to religion between despotissue, without appeals to religion, between despot-ism and liberty. Yet in the sphere of the Church, where tyranny pressed, and where a contest alone was possible, the Covenanters asserted the rights of the people.

of the people.

COVENANT THEOLOGY.—1. Preliminary definition.—By this term is designated a type of theological thought which expresses the relations between God and man in the formula of a covenant or legal agreement, formally entered into by two contracting parties. It was specially common among the English Puritans, from whom it passed to their descendants in America. On the Continent it is first found among the German Reformed theologians in the second half of the 16th century. Its best known Continental representative is Cocceius (John Koch, 1603-69), who is often wrongly said to be its author. Through him and his successors (Burmann, Witsius, and others) it received its most elaborate literary expression, and ever since has constituted one of the recognized types of Calvinistic or Reformed theology. It is the purpose of this article to explain the nature of this type, and to give some account of its origin and history.

2. Nature of the covenant theology.—(1) The covenant idea and the covenant theology distinguished.—At the outset it is necessary to distinguish between the covenant idea and the covenant The covenant idea is common Christian theology. theology. The covenant idea is common Christian property. It is an inheritance of Christianity from the OT, which frequently describes the relation between Jahweh and His people in terms of a covenant, entered into either with individual Israelites (e.g., Noah, Abraham, Phinehas, David), or with the nation as a whole. The covenant theology describes a special type of Christian thought which gives this idea a central importance not elsewhere assumed to it, and uses it as the not elsewhere assigned to it, and uses it as the organizing principle of the entire theological system. According to this scheme, God at the Creation entered into an agreement with Adam as the federal head of the race, promising to him and to his descendants eternal life on condition of his obedience to the Divine command that he should not eat of the fruit of the tree of the knowledge of good and evil, and threatening him with eternal death for himself and his descendants in case of his disobedience. Adam having failed to stand the test, God entered into a second agreement with Christ as the second Adam, on behalf of the elect, promising them forgiveness and eternal life in consideration of Christ's perfect obedience and satisfaction imputed to them by faith, as well as all the gifts and graces which are necessary to the realization of this supreme blessing in experience. The covenant theology in its developed form is a scheme of doctrine in which the entire system of divinity is expressed in the terms of these two covenants, and man's assurance of salvation based upon the fact that he is included within the latter. In order to understand its origin and significance, it is necessary to consider the problem which it was designed to solve.

(2) The covenant as a ground of assurance.—This problem was, in a word, the reconciliation of the problem was, in a word, the reconculation of the sovereignty of God with man's assurance of salvation. The federal theologians, as they are called, were Calvinists. Their major premiss was the absolute sovereignty of God. Man, in their view, had no independent right as against his Maker. Unquestioning submission to the Divine command was his duty. Perfect obedience, were such possible, carried with it no merit, and could guarantee no reward. If then, man was to be admitted to the reward. If, then, man was to be admitted to the Divine fellowship or assured of the Divine favour, it could be only by some voluntary condescension on God's part, establishing by arbitrary enactment 1 So by Strong (Systematic Theology, Philad, 1907, p. 612 f.).

relations which had no necessary foundation in nature. The importance of the covenant for these theologians consisted in its assurance that such condescension had, as a matter of fact, taken place. By the covenant God not only bound Himself to a certain definite line of conduct, so far as man was concerned, and in so far restricted the freedom of His own choice, but He made known in detail to His creature the nature and conditions of His gracious purpose, and so removed the uncertainty to which he would otherwise have been

exposed.

'God,' says Thomas Shephard, in his preface to Bulkeley's Gospel Coverant, 2' might have done good to man before his fall, as also since his fall, without binding himselfe in the bond of Covenant... but the Lord's heart is so full of love (especially to his owne) that it cannot be contained so long within the bounds of secrecie, ... but it must beforehand overflow and breake out into the many streames of a blessed Covenant.

Arminian theologians also made use of the covenant idea.3 But for them it had less importance, because their view of the relation between nan and his Maker was founded on natural right. Thus, Arminius, while recognizing that God dealt with our first parents by way of covenant, distinguished between the law of nature, which God wrote on the heart of man, and the symbolical law, or law of precept, which deals with matters in themselves indifferent apart from the Divine command. While it is man's duty to obey in either case, the latter obedience is 'far inferior,' and 'is rot so much obedience itself as the external profession of willingly yielding obedience '(Works, Eng. tr. ii. 370). To the Calvinistic theologians, on the other hand, the highest virtue consisted in submission to the will of God simply because it was God's will, and the covenants gained their great importance because they defined the great for the submission to the will of God simply because it was God's will, and the covenants gained their great importance because they defined the specific form which, from age to age, that will assumed for man. This precision of statement explains the promin-

ence of the covenant idea in Puritanism. Puritanism, as is well known, is a type of thought which makes much of uniformity. The Puritan believed that God had not only revealed a way of salvation, but had established certain institutions and laid down certain laws, by means of which this salva-tion was to be mediated to those whom God had chosen to enjoy its blessings. He was a churchman as well as an individualist, and valued the covenant not only as the ground of personal assurance to the individual Christian, but as the charter which established the existence and defined the

laws of the Christian society.

From this fact two further consequences follow which are necessary to the complete definition of the covenant theology: (a) the covenant furnished the framework for the treatment of Christian ethics; and (b) it gave the key to the Christian

interpretation of history.

(3) The covenant as the standard of Christian duty.—The use of the covenant as a standard of duty, important as it later became, is derivative, not primary. The earlier theologians knew of but one covenant between God and man, namely, the covenant of grace. In this the Father, in consideration of Christ's promise of obedience even unto death, agreed to accept His satisfaction as an

unto death, agreed to accept His satisfaction as an 1 Cf. John Preston (The New Covenant, or the Saint's Portion, London, 1629): 'These words contain a further and a greater favour expressed to Abraham than the former words do. . that is, I will not only tell thee what I am able to doe, I will not only express to thee in generall that I will deale well with thee, etc. . . but I am willing to enter into covenant with thee, that is, I will bind myself, I will ingage myself, I will enter into bond, as it were, I will not be at liberty any more, but I am willing to make a covenant, a compact and agreement with thee, etc. (p. 70).

2 The Gospel Covenant, or the Covenant of Grace opened, etc. . preached in Concord in New England, by Peter Bulkeley, London, 1846.

3 Cf. Arminius, Works, Eng. tr. by Nichols, London, 1825 ff., ii. 369 ff., 389 ff.; Limborch, Complett System, Eng. tr. by Jones, London, 1702, bk. iii. ch. i. § 7, p. 211 ff.

equivalent for the punishment due by guilty man, and to accept the persons of the elect as righteous for His sake. God's dealings with Adam in Paradise were not brought under the covenant idea except in so far as the promise to Eve that her seed should bruise the serpent's head (Gn 315) was regarded as an anticipation of the later covenant of grace. In the course of time, however, the idea was extended to include all God's dealings with man, before as well as after the Fall. Two covenants were distinguished—the covenant of works made in Paradise with Adam as the federal head of the race, and the covenant of grace made with Christ, the second Adam, or with the elect in Him as their representative. In the former, God reveals the substance of the moral law as the condition which He prescribes for the attainment of salvation. In the latter, He acquaints men with the machinery which He devised for the repair of Adam's fault. But the substitution of the second for the first covenant does not render the moral law obsolete; it only alters man's relation to that law. After as well as before the Fall perfect holiness is essential to salvation, and not the least of the blessings of the covenant of grace is its clear repetition of the substance of the law originally promulgated in Paradise. The covenant of grace differs from the covenant of works in the fact that it adds to the law the promise, i.e. the disclosure of the means through which Adam's original fault is to be repaired and the blessings of salvation won by Christ to be mediated to the elect. Accordingly, the covenant of grace includes, with the substance of the moral law, institutions of worship (i.e. sacraments and ceremonies) which, varying from age to age, typify Christ, and seal to believers the grace which He has merited for them.

The literature of the covenant, therefore, is full of discussion as to the nature of the Church and of the sacraments. Since the sacraments are signs and seals of the covenant of grace, it is essential that they should be rightly administered, and that those only should be admitted to partake of them who are really entitled to the privilege. Here we find differences of opinion among those who were agreed as to the general significance of the covenant and were at one in their opposition to Arminianism. and were at one in their opposition to Arminianism. Some held that the regenerate only had any right to the privilege of the sacraments; others were willing to take a Christian profession (i.e. a dogmatical, as distinct from a justifying, faith) as prima facie evidence of right of admission to the sacraments. The controversy as to the half-way covenant, which agitated New England in the latter part of the 17th and in the 18th cent., is an

echo of these earlier disputes.

There was also difference of opinion as to the extent to which the conditional language properly applicable to the covenant of works could be rightly employed of the covenant of grace. In the case of the covenant of works we have to do with a real condition. The whole significance of the agreement into which Adam entered with his Maker turned upon his possession of the freedom of contingency. But, in the case of Adam's descendants, such freedom is lacking. The contracting party in the second covenant is Christ, the second Adam; and one of the most important considerations in the compact into which He entered with the Father was that the Holy Spirit should

with the Father was that the Holy Spirit should

1 The later Covenant theologians, interested in showing the
uniformity of God's method with man, carry back the idea of
the sacrament to Paradise, and associate it with the law as well
as with the Gospel (cf. Thomas Blake, The Covenant Scaled, or
a Treatise of the Sacraments of both Covenants. London,
1655, p. 9 ff.),

2 e.g. Richard Baxter, Plain Scripture Proof of Infants'
Church-Membership and Baptism' (London, 1656), p. 327,
quoted by Blake, op. cit. p. 114,

2 Thomas Elake, op. cit. p. 114,

be granted to the elect to make possible a faith of which they are incapable by nature. It would seem, then, an abuse of language to speak of any condition to be fulfilled on the part of the elect as distinct from Christ, and this was the position taken by some of the more rigorous Puritans. Christ, they held, was the sole party to the covenant of grace. Others, however, distinguished two covenants: the covenant of redemption entered into between the Father and the Son, and the covenant of grace made with the elect through Him. The covenant of grace, no less than that of works, they regarded as conditional, the difference being that in the former case the sole condition was faith in Christ, which faith was itself made possible through the gift of the Spirit.

But, whatever difference of opinion there may have been as to the conditionality of the covenant of grace, all agreed that no one could be saved whose life did not conform to the standard which it revealed. Of all heresies Antinomianism (q.v.) was most abhorrent to the Puritan, and many controversial tracts reveal the eagerness of the advocates of the covenant theology to clear their skirts from any imputation of sympathy with so abominable and dangerous an opinion. The assurance in which the Puritans rejoiced was indeed an assurance of salvation, but it was a salvation which included

ultimate conformity to the Divine law.3

(4) The covenant as a key to the Christian inter-pretation of history.—Thus far we have considered the covenant theology primarily on its practical side, but it had an important theoretical significance as well, since it furnished the formula for the Christian interpretation of history. The Biblical writers speak of a number of different covenants The Biblical entered into by God with different individuals at different times, and it was natural that the problem of the relation of these covenants one to another should engage the attention of Christian theologians. Protestants were agreed that God followed a uniform method in His treatment of men, and hence could not admit any essential difference in principle between the covenants; but they could not shut their eyes to the contrast between the covenant with Moses at Sinai and the new covenant foretold by Jeremiah and the prophets, which the Apostle Paul identifies with the Christian gospel; nor could they overlook the contrast drawn by Paul himself between the promise to Abraham and the law given by Moses. Thus, the relation between these different covenants constituted a problem, the solution of which furnished the nearest approach to a philosophy of history which the theology of the time possessed.

In general, it may be said that it was the disposi-

tion of the earlier Protestant theologians to minimize the difference between the Christian gospel and its preparation in the religion of Israel. All the Reformers recognize the contrast between the OT and the NT, and devote a section of their theology to a discussion of their differences. But they are agreed that these differences are superficial, and that, in substance, the two Testaments are the same. What the old dispensation shadows forth in types, the new fulfils in reality, but both alike, the OT and the NT, the law of Moses and the gospel of Christ, are to be regarded as different forms of the one covenant of grace (cf. the West-

forms of the one covenant of grace (cf. the Westminster formula, one covenant under different administrations, Westm. Con. vii. 5, 6).

1 So John Saltmarsh, Free Grace, or the Flowings of Christ's Ribod freely to Sinners's London, 1846, p. 125; Tolias Crisp (1000-1042), Christ Alone Beadled, 1843-6.

2 e.g. Daniel Williams, Gospel Truth Stated and Vindicated, etc., London, 1692, a reply to Crisp.

3 This coneciousness of strict moral responsibility found expression in the National Covenants, to which reference will presently be made, as well as in the large space given to the exposition of the moral law in the Catechisms of Puritanism.

With the recognition of the twofold covenant a further distinction is introduced. We have now the contrast between the covenant of works entered into between God and Adam, the substance of whose requirement is repeated in the law given on Sinai, and the covenant of grace under its twofold administration, the OT and the NT. Another distinction meets us in William Ames (Amesius), 1 and was further developed by Cocceius and his successors in the early part of the 17th century. These theologians, while making use of the general formula already described, distinguished within the administration of the old dispensation various historic stages marked by characteristics of their own.<sup>2</sup> Thus, there are the periods (1) from Adam to Noah, (2) from Noah to Abraham, (3) from Abraham to Moses, (4) from Moses to David, (5) from David to Christ, each of which has its own institutions and sacraments. In like manner, the NT has its own divisions, e.g. (1) from the Advent to the Resurrection, (2) from the Resurrection to the Second Coming, and (3) the Final Consummation in the world to come. Such a treatment made it possible for those theologians to do more justice to the facts of Biblical history than was possible under the more rigorous scheme of their predecessors. Robertson Smith, speaking of the federal theology of Cocceius, says with justice that, 'with all its defects,' it 'is the most important attempt, in the older Protestant theology, to do justice to the historical development of revelation' (Prophets of *Israel*, Edin. 1882, p. 375).

Thus the covenant theology has a threefold significance. In the first place, it is a theory of salvation; in the second place, it is a programme for conduct; in the third place, it is a philosophy of history. The section that follows will attempt to show how the different interests cross and re-cross

in the course of the history.

3. History of the covenant theology.—(1) The antecedents.—The Biblical basis for the covenant theology is found partly in the account given in the OT of various covenants made by Jahweh with Israel<sup>3</sup> or with representative Israelites,<sup>4</sup> partly in the Pauline identification of the Christian gospel with the new or spiritual covenant prophesied by Jeremiah and other prophets.

The Heb. word n'ne, tr. 'covenant' in our versions, denotes the rest word 17 [2], it. Covenant' in our versions, canotes either a treaty or alliance entered into between equals (e.g. between Abraham and the Amorites, Gn 1:13, AV and RV 'confederate'; Hiram and Solomon, 1 K 5<sup>12</sup>, AV and RV 'league'), or a constitution or ordinance establishing the relation between a monarch and his subjects (e.g. David and the Isrnelites, 2 S 5<sup>2</sup>; Ecdekiah and his people, Jet 34<sup>2</sup>-19. This difference of meaning is not without its bearing on the later history. history.

If we analyze the transactions described in the OT by the term 'covenant' (n'\gamma\), we find that they fall into two classes—those in which Jahweh reveals to His servants a purpose which He has conceived independently of man, and whose execution is dependent upon no one but Himself, and those in which the conduct of the people with whom the covenant is made is a determining factor. Of the former class are the covenants with Noah and Abraham; to the latter belong the covenants that in the later covenants with Jehoiada (2K 117), Hezekiah (2 Ch 2910), and Josiah (2 K 233). The promise to Noah that day and night shall no more fail (Gn 822), or to If we analyze the transactions described in the OT by the

Glaubenslehre, i. 103 fl.) and Schneckenburger (Vergleichende Darstellung, clo., ii. 146), regards this disposition to apply the covenant form to the different stages in the history of religion as characteristic of the Reformed theology from the first, and finds its beginnings in Bullinger and Leo Jud.
3 e.g. at Sinai (Ex 195 247. [E] 3410. 27. 28 [J] 3116, Lv 218 [P] 429 206m., 1bt 473; in the plain of Moab (Dt 291. 21).
4 e.g. Noah (Gn 99-17 [P], Is 5410, Jer 3290. 295; Abraham, Isaac, and Jacob (Gn 15<sup>18</sup> [J] 172-21. Ex 224 647. In 2642 [P], 2 K 1323, 1 (th 16154, Ps 1058-10, Noh 98, Jer 34<sup>18</sup>); Phinehas, (Nu 25<sup>12x</sup>, [P]); Joshua and Israel (Jos 24<sup>25</sup> [E]); David (Fs 893. 23. 24. 29 13212, Jer 3321, cf. 2 S 7, 1 Ch 17; Jehoiada and the people (2 K 117, 2 Ch 23<sup>15</sup>); Hozekiah (2 Ch 29<sup>10</sup>); Josiah (2 K 23<sup>3</sup>); and Ezra (Ezr 10<sup>3</sup>).

Abraham that in his seed all nations shall be blessed (Gn 123

Abraham that in his seed all nations shall be blessed (Gn 123 etc.), is obviously not in the same class with the promises which accompanied the giving of the Law to Israel, which were, in the nature of the case, conditional upon the future conduct of the Israelites. Yet both allike are described by the same word. Besides these covenants there is also frequent reference in the prophets to a new covenant which Jahweh is to establish with redeemed Israel in the future (Jer 3131-33, cf. Is 426 498 553 5921 618, Jer 3240 505, Ezk 1630.62 2037 3425 3728, Hos 218-20). Unlike the old covenant, this is to be inward and spiritual, a law written on the hearts of the people (Jer 3133), and will be of everlasting validity.

This new covenant the NT identifies with the Christian gospel, which is contrasted with the Mosalc law as the former or old covenant (Gal 424, He 915, 18, cf. 89, 2 Co 35). Like the latter, it was scaled with sacrifice—even the blood of Christ, who by His voluntary obedience and submission unto death has rendered the older sacrificial system superfluous and become the mediator of a new and better covenant (He 722 86-9 1221), since it is an everlashing one (1320). This new covenant is symbolized in the cup which Jesus gave to His disciples at the Last Supper (Mf 2629, Mk 1124, Ik 2229, I Co 1129). It has its anticipation in the covenant of promise made by Jahweh with Abraham (Gal 317, cf. Eph 212, Ac 325), which, being prior to the Law, could not be superseded by it.

We find thus in the NT the same double usage which we found in the OT, the word διαθήκη being used now to denote a free

We find thus in the NT the same double usage which we found in the OT, the word διαθήκη being used now to denote a free promise of God, as to Abraham and his seed, and later to Christian believers in the gospel, now of a series of precepts and orders given through Moses and his successors, and conditional in their effects upon the obedience of the people.

In He 9<sup>10</sup> the idea of the covenant is interchanged with that of the testament, or will—a substitution which explains the uniform rendering of διαθήκη in the Vulgate by the Lat. testamentum, and its frequent translation in AV by the word 'testament' (e.g. Mt 26<sup>28</sup>, Mk 14<sup>24</sup>, Lk 22<sup>20</sup>, 1 Co 11<sup>25</sup>, 2 Co 3<sup>5.14</sup>, He 7<sup>22</sup> 915°C).

In view of the emphasis laid by the Biblical writers upon the covenant idea, and their use of the conception to describe the different steps in the Divine training of mankind, it is surprising that it should so early and so completely have fallen into the background. Irenæus is the only early Christian writer who makes much use of it. He distinguishes several different covenants (διαθήκη, testamentum) into which God has entered with man, and regards the study of their nature and relations as a legitimate subject for Christian investigation. His interest in the subject is, doubtless, due to the fact that, like St. Paul, he was chiefly concerned with the question of the nature of the difference between Judaism and Christianity—a difference which naturally expressed itself in the contrast between the old covenant and the new. When this question fell into the background, as it soon did, the covenant phraseology went out of use. Augustine makes no use of the idea in his City of God, and it plays no important part in the theology of Roman Cathol-

1 While in one passage (III. xi. 8) Irenaus distinguishes four distinct covenants (namely, those with Noah [so the Greek text; the Latin reads 'Adam,' and substitutes Noah for Abraham, omitting the latter], Abraham, Moses, and Christ), in general he recognizes only two, namely, the old covenant, or law, given through Moses, and the new, or gospel, given through Christ (III. xii. 11; vv. ix. 1, xxxii. 2). According to this division, God's dealing with man in the pre-Mosaic period is not to be conceived under the covenant relation, the reason being that law is not needed by those who are just (IV. xvi. 2). The Law, by which Irenaus means the Jewish ceremonial law, was added later because of sin, and was destined in time to be replaced by the Christian gospel, or new law of liberty (lew worlfoatriz, IV. xxxiv. 4), as the means through which alone full righteousness and salvation are made possible.

We have thus in Irenaus three distinct stages in the process of the Divine training of man—the pre-Mosaic period, typifled by Abraham, in which man works out his own salvation through obedience to the natural law written on the heart; the period from Moses to Christ, in which his salvation is conditioned upon fidelity to the Jewish ceremonial law; and the period of the gospel, in which the ceremonial law is abrogated, and salvation chepends upon man's free fulfilment of the moral law, which Christ has reaffirmed and reinforced with new sanctions. While, in general, the covenant idea is applied to the two later of these periods only, in principle the three belong together, and, in one passage, the covenant idea is extended backwards to include the pre-Mosaic period. In this, as we shall see, Irenaus is typical of the development of the later covenant theology.

On the theology of Irenaus, cf. Werner, 'Der Paulinismus des Irenaus,' in TU, Leipzig, 1889, pp. 170-202. On the significance of Irenaus, in TU, Leipzig, 1889, pp. 170-202. On the significance of Irenaus in early Christian theology, of. W. A. Brown, 1 While in one passage (III. xi. 8) Irenæus distinguishes four

icism. It was only when the rise of a new religious type, historically derived from Catholicism, but independent of it, brought the question of the dis-tinctive nature of Christianity again into the foreground, that the subjects which engaged Irenaus' thought became again of general interest. This condition emerged at the Reformation, and one of its consequences was the revival of the covenant

But, though Catholicism contributed little directly to the preparation for this type of theology, its indirect contribution was great. The conception of God as lawgiver and judge, the expression of Christ's work in terms of satisfaction and equivalence, the conception of the Christian Church as the inheritor of the rights and privileges of the Jewish Church, and the loss of St. Paul's sense of the novelty of Christianity as a historic religion, all helped to prepare the way for the use by Protestant theologians of OT legalistic phraseology to describe a type of religious experience whose characteristic feature was the denial of the possi-

bility of salvation by works.

(2) The beginnings of the covenant theology.—
In tracing the history of the covenant theology in Protestantism, we have to recall the distinction already made between the covenant idea and the covenant theology. The idea of the covenant or testament is used by all the Reformers to express God's gracious revelation to His people, both before and after Christ. Two such revelations were dis-tinguished, the OT and the NT, agreeing in substance, but differing in administration, and the nature at once of the agreement and of the difference forms the subject of a special locus in the early Protestant dogmatics (e.g. on the Law and the Gospel; on the difference between the OT and the NT). But the conception was not given the structural importance in the system which it later acquired, and which warrants us in speaking of a covenant theology as distinct from the covenant idea

We may take Calvin as typical of all the Re-

We may take Calvin as typical of all the Reformers. He distinguishes the Gospel not merely from the Law, but from earlier gracious revelations of God within the OT, yet he hastens to add that we must not imagine that the Gospel has 'succeeded the whole Law in such a sense as to introduce a different method of salvation. It rather confirms the Law, and proves that everything which it promised is fulfilled. What was shadow, it has made substance. When Christ easy that the Law and the Prophets were until John, he does not consign the fathers to the curse, which, as the slaves of the Law, they could not escape. He intimates that they were only imbued with the rudiments, and remained far beneath the height of the Gospel doctrine. Hence we infer that, when the whole Law is spoken of, the Gospel differs from it only in respect of clearness of manifestation' (Institutes, II. ix. 4).3

of manifestation' (Institutes, II. ix. 4).2

1 Thus Calvin finds the agreement (1) in the common hope of immortality; (2) in the fact that both were established by the mercy of God; (3) in that 'they both had and knew Christ, the Mediator, by whom they were united to God and made capable of receiving his promises.' The difference consisted (1) in that in the old covenant the heavenly inheritance was exhibited under the form of temporal blessings, which was not the case in the new; (2) in that the OT typified Christ under ceremonies which exhibited 'only the image of truth, the shadow, not the substance,' whereas the NTgives us 'both the full truth and the entire body'; (3) in that the OT is literal, and the NT spiritual; (4) in that the OT is one of bondage, the NT one of liberty; and, fnally, (6) in that the OT is one of Orderstainity, p. 103f.

2 It is instructive to compare Calvin's view with that of Irenaus. He follows Irenaus in conceiving of two covenants or testaments, the Old and the New. He agrees with him turther in that he does not apply the term 'covenant' to God's primitive revelation to Adam in Paradise. He differs from Irenaeus in that he brings both covenants under the conception of grace rather than of law. Trenaeus, like the early theologians in general, conceived salvation primarily in terms of the fulfilment of law. To Calvin, as to all the Reformers, salvation is a means of repairing the damage wrought by man's transgression of a single principle. But, whereas Irenaeus carries forward the idea of free grace into the Law, and interprets the latter by the idea of free grace into the Law, and interprets the latter by the idea of free grace into the Law, and interprets the latter by the idea of free grace into the Law, and interprets the latter by the

In thus emphasizing the essential unity of God's dealings with His people, Calvin is representative of all the Reformers. Luther 1 and Melanchthon 2 recognize no difference in principle between God's dealings with His people under the old dispensation and under the new. The first specific treatise on the covenant which the present writer has been able to discover is that of the Swiss reformer, Henry Bullinger, which bears date 1534, and has for its title De Testamento sive fædere Dei unico et æterno. Bullinger, like his predecessors, recognizes only one covenant, namely, the covenant of grace.

The beginnings of the covenant theology in a technical sense are to be found on German soil, and precede the more famous school of Cocceius by and precede the intertainous school of coccess by more than half a century. Its representatives were Reformed theologians who, under the influence of a warm and vital piety, had developed a theology which differed in several respects from the stricter predestinarianism of Switzerland and France. This theology had three main characteristics. In the first place, it used the conception of the Divine covenant, with its synonyms, the Church or the Kingdom, as a comprehensive theological idea to express the purpose at once of creation and of redemption, and to give unity to the rest of the system. In the second place, it associated this conception with the idea of the believer's mystic union with Christ; and, in the third place, it deduced from the combination of these two conceptions, rather than from the doctrine of predestination, its doctrine of the perseverance of the saints.<sup>4</sup> The two best known representatives of this theology were Caspar Olevianus and Zacharias Ursinus, the authors of the Heidelberg Catechism.5

Olevianus' most important dogmatic monograph, published anonymously in 1585, is entitled De substantia fæderis gratuiti inter Deum et electos, itemque de mediis, etc. This work, as the title indicates, discusses the nature of the free covenant between God and the elect, and the means through which its substance is communicated to us. The substance of the covenant consists in God's promise and oath that He will never be angry with His

former. We may say, indeed, that the characteristic feature of the Reformed theology is the attempt to use legal phraseology to express a gospel which is essentially anti-legal; and the reason why the covenant idea finds such favour with its representatives is the fact that the covenant expresses an obligation voluntarily assumed on either side, and hence not properly to be brought under the sphere of necessity.

1 Cf. the references in Köstlin, Luthers Theologie in threr geschichtlichen Entwicklung und ihrem inneren Zusammenhange<sup>2</sup>, Stuttgart, 1883, 2 vols., esp. ii. 876 ff., Eng. tr. ii. 859 ff.

1 Cf. the references in Kosuin, Launers Lawronges we were geschichtlichen Enviolellung und interm inneren Zusummenhange 2, Stuttgart, 1883, 2 vols., esp. ii. 376 ff., Eng. tr. ii. 350 ff.

2 Cf. his Loci Communes, ed. Kolde, 2nd ed., Leipzig, 1890, esp. p. 211 ff.

3 The design of Bullinger's treatise is to show that the gospel is older than Judaism, Muhammadanism, and Catholicism; indeed, that it goes back to 'Noah, Enoch, Seth, Abel, Adam, who without circumcision pleased God through faith.' He holds that there is no Christian virtue commended in the NT which was not equally exemplified in the words and deeds of Abraham. Cf. the citations given by Rockwell, Die Doppelene des Landgagen Philipp von Hessen, Marhung, 1904, p. 223, note 2.

450 Heppe, Dogmatik des deutschen Protestantismus im 16ten Jahrhundert, Gotha, 1857, i. 143 ff. Heppe is the best authority on the German Reformed theology, and this work gives much information concerning works otherwise inaccessible to English readers. Cf. esp. pp. 130 ff., 188 ff.

5 Besides Olevianus and Ursinus, Heppe mentions, as representatives of the covenant theology, Andrew Hyperius, Professor of Theology at Marburg from 1541 to 1564 (Methodi theologics size preceptual and the Statement of Theology at Marburg trom 1541 to 1569, Peter Boquinus, Professor of Theology at Heidelberg, 1561); Josachim Curams (Eugests perspicua efferme integra controversia de sacra cena, 1574, ed. Scheffer, Marburg, 1853); Sohnius (\*Methodus theologia, Opp. ed. 8, i. 244 ff.); Raphael Eglin, Professor of Theology in Marburg (Diezodus theologica de magno illo institunte nostrae in Christum Marburg, 1613), and esp. the theologians of Bremen, Matthius Christienne dostrines eummune capita, 1603), and Ludwig Crocins (De perseverantia sanctorum libri septem dogmatics et apologetici, Bremen, 1616).

elect, but will receive them as sons of God and heirs of eternal life in Jesus Christ. This promise consists in the offering through the gospel of the Son of God, with the double benefit which He brings, namely, the remission of sins and renewal after the Divine image through the life-giving Spirit. These gifts are made known to us outwardly, by the word and by visible signs, as a wardly, by the word and by visible signs, as a testimony of agreement between God and ourselves, and are confirmed with inner efficacy by the free gift of faith through the infinite mercy of God to the elect. The work is introduced by a discussion of the following questions: (1) Who is God, the author of the covenant? (2) Who is man, with the covenant of the covenant? with whom God establishes His covenant? (3) What is the nature of the covenant itself?

Even more striking in its historic significance is an earlier treatise of Olevianus, the Expositio Symboli, in which the Apostles' Creed is interpreted under the form of an exposition of the covenant of grace, the articles of the Creed being regarded as a brief statement of the terms of the covenant. It is to be noted that the first book of the De substantia faderis also takes the form of an exposition of the Apostles' Creed, the second book being given to the proofs of the covenant. Under this head Olevianus discusses the function of the Church, and more specifically the word and the sacraments. Here we see the covenant idea given structural significance and made a comprehensive conception under which the whole content of Christian faith and practice may be brought.<sup>2</sup>

Olevianus recognized in principle but a single covenant, namely, the covenant of grace. It was reserved for his successors (e.g. Raphael Eglin, and Matthias Martinius) to extend the covenant idea to the relation of man before the Fall and to distinguish two covenants—that of works and that of grace. With this distinction the scheme of the covenant theology in its later form is complete.

(3) The covenant theology in Puritanism.—
Parallel with the movement already described, we find another developing on the other side of the channel. In English Puritanism, as we have already seen, the covenant idea found congenial soil, and the later treatises of Cocceius and his school owe quite as much to the impulse gained from English writers 4 as to the German theo-logians already referred to.

logians already referred to.

1 Expositio Symboli Apostolici, sive articulorum fidei, in qua summa gratuiti federis aterni inter Deum et fideles breviler et perspicue tractatur, Frankfort, 1576.

2 While agreeing in substance with Olevianus, Ursinus does not give the covenant so important a place in the structure of his system. His views are set forth most fully in his Sum of the Christian Religion of 1598 (Corpus doctrina christiana ecclesiatrum a papatu reformatarum, continens explicationes extecheticae D. Zachariae Ursini . . . . studio Duvidis Pares attecheticae D. Zachariae Ursini . . . studio Duvidis Pares outceheticae D. Zachariae Ursini . . . studio Duvidis Pares work was a revision and amplification based upon his own notes, and included much matter for which Ursinus was not responsible. This matter the later edition of 1598 emits, and it may be regarded as the most authoritative statement of Ursinus views. It was often reprinted, and was translated into English under the title, The Summe of Christian Religion, by Dr. Henry Parry, London, 1645.

The discussion of the covenant is introduced by Ursinus between Questions 18 and 19, which deal with the mediatorship of Christ, and the gospel, and includes the following sub-heads (1) What a covenant is; (2) Whether it can be made without a mediator; (3) Whether there be but one and the same covenant, or more; (4) In what the old and the new covenant agree, and in what they differ.

3 Cf. Heppe, op. cit. p. 197. It is an interesting question when the idea of the covenant of God with Adam first makes its appearance. We find no trace of it in our canonical Scriptures. Schmidt (art. 'Covenant' in EBs) finds the first appearance of the idea in Sir 1713, but the reference is not altogether clear, and other commentators refer the passage to Sinai.

4 Among Occesies' teachers, besides Martinius and Crocius, was the English Puritan, William Ames.

The covenant idea makes its earliest appearance in English history in practical rather than theoretical form, in the National Covenants entered into by the Scottish people and their rulers.

These were solemn engagements, in which the nation as a whole pledged itself to be true to the revealed will of God as set forth in the Scripture was a set for the set of th tures, and interpreted with the stern literalism of the Puritan conscience. Such a national covenant is the so-called Second Scottish Confession, a practical appendix to the early Confession of Knox (1560), to which the people publicly subscribed in the year 1581. It was frequently renewed in the course of the later history, and played a momentous part in the struggles of the Stuarts with their re-bellious fellow-countrymen. It is not strange that an idea familiarized to the Scottish people in so dramatic a way should have received early literary expression. See art. COVENANTERS.

One of the earliest Scottish monographs on the covenant bears date 1596, and is by Robert Rollock (1555-1598), a distinguished Principal of the University of Edinburgh (Questiones et Responsiones aliquot de fædere Dei deque sacramento quod fæderis Dei sigillum est). Here already there is emphasized the close connexion between the covenant and the sacrament which is characteristic of

the later history.1

English monographs were frequent during the first half of the 17th century. An anonymous treatise, bearing date 1616, is dedicated to the mayor and magistrates of the town of Feversham in Kent.2 Like Olevianus, its author uses the covenant idea as a framework for the exposition of the Creed. His practical interest is apparent in his emphasis upon the importance of renewing one's covenant made in baptism through 'a continual repeating' of it, which takes place in catechizing the children of the faithful (p. 63). Other treatises by John Preston (The New Covenant, or the Saints' Portion, London, 1629), and George Downame (The Covenant of Grace, or an Exposi-tion upon Lk 175. 74. 75, Dublin, 1631), are likewise practical in nature.

The theological significance of the idea is apparent in the place given to it in systematic treatises. William Ames (1576–1633) in his Medulla S.S. Theologiæ (Eng. tr. Marrow of Sacred Divinity, 1642) distinguishes two covenants—the law or covenant of works given to Adam in Paradise, having as its symbols the two trees of the Garden (I. x. 33), and the covenant of grace made with the redeemed through Christ. Ames traces the various steps in the administration of the covenant of grace, disthe unishing not only the periods before and after Christ (the OT and NT), but also, under the first, the periods from Adam to Abraham, from Abraham to Moses, from Moses to Christ; and, under the second, the period from Christ to the end of the

second, the period from Christ to the end of the world and the eternal reign of the saints in heaven (I. xxxviii. xxxix.). In this he anticipates the later teaching of his pupil Cocceius.

Even more detailed is the description of the covenant given by Ussher in his Body of Divinity.<sup>4</sup> Here the nature of the compact made by God with Adam is described in great detail, and man in the reverse of our first prepart is desired to have more

person of our first parent is declared to have pro-1 Milchell (Westminster Assembly, London, 1883, p. 377) cites Howie as another early Scottish representative of the covenant theology, but the present writer has not been able to verify the

mised by that power which he had received to keep the whole law, binding himself over to punishment in case he did not obey' (p. 126). On the other hand, the covenant of grace was made by 'God alone,' who, immediately after man's fall in Paradise, declared to Adam His gracious purpose to save the elect through Christ (p. 158).<sup>1</sup>
Through Ussher the covenant idea received its

first confessional expression in Puritanism. appears in the 21st article of the Irish Articles, of which he was the author, and from them passed to the Westminster Confession of Faith, in which it forms the subject of a special chapter (vii.).2

The covenant was frequently discussed in the latter half of the 17th century. It appears not only in the works of the great Puritan theologians, Richard Baxter § (1615–1691), and John Owen 4 (1616–1683), but in many monographs by men less known to fame, e.g. John Saltmarsh, Thomas Blake, William Allen, Edward Leigh, and Daniel Williams. It filled an important rôle in the controversies that divided the different in the controversies that divided the different parties in the Church, and a correct understanding of its nature and scope was regarded as one of the prime requisites of a sound orthodoxy.

rime requisites of a sound orthodoxy.

Thus, as we have already seen, the stricter and the looser predestinarians were divided as to the conditionality of the covenant of grace. The stricter predestinarians denied that it was conditional at all. Like Ussher, they held that God alone was its author, or, at most, God and Christ. Representatives of this view were Saltmarsh and Crisp. Others, like Owen and Baxter himself, held to a true conditionality. They distinguished be. to a true conditionality. They distinguished between the covenant of redemption, made between the Father and the Son, and the covenant of grace, made by the Father with the elect in Christ; 10 and, while they held that the redeemed were enabled to fulfil their part only through the grace which Christ had merited for them, yet they believed in preaching as though all depended upon

which Christ had merited for them, yet they believed in preaching as though all depended upon 1 Cf. also The Marrow of Modern Divinity, in two parts, 1645, 1649, by E. F., edited with Introduction, Notes, and an Appendix, Biographical and Bibliographical, by C. G. M'Orie, 1902. The sub-title of this 'epoch-marking, if not epoch-making,' work, as M'Orie calls it, reads: 'Touching both the Covenant of Works, and the Covenant of Grace: with their use and end, both in the time of the Old Testament and in the time of the New' (Confessions of the Church of Scotland, Edinburgh, 1907, p. 69).

2 Even more prominent is the use made of the covenant idea in the Sum of Sawing Knowledge, a brief compendium of doctrine which appeared in Scotland in 1650, and is bound up with the Confession and Catechisms in many of the later Scotlish editions. Here the language of bargain and sale appears in its baldest form (e.g. Head II.: 'By virtue of the toresaid bargain, made before the world began, He, i.e. Christ, is, in all ages, since the fall of Adam, still upon the work of applying actually the purchased benefits unto the elect: and that He doth by way of entertaining a covenant of free grace and reconciliation with them through faith in Himself, by which covenant He makes over to every believer, a right and interest in Himself, and In all His blessings.'

3 Cf. his Plain Scripture Proof of Infants' Church-Membership and Baptism' London, 1656 (pp. 100ff., 112ff., 223 ff., 236 ff.), as well as his Preface to Allen's Discourse on the Nature, Ends, and Difference of the Two Covenants, London, 1673.

4 Cf. his Doctrine of Justification by Faith, chs. viii, xiii. Treatise on the Doctrine of Perseverance (Works, ed. Goold, xi. 205), Edin. 1851-55, Salus Electorum Sanguis Jesu, or the Death of Death in the Death of Christ (Goold's ed., x. 168 ff.).

7 A

the action of the human will. The tract of Williams, already referred to, gives an interesting picture of the questions in controversy, and the extent to which the stricter party were willing to carry their

logic.

That these controversies were not confined to Old England, but speedily found their way across the water, finds interesting confirmation in a treatise of Peter Bulkeley, which appeared in London in 1646, and is entitled The Gospel Covenant, or the Covenant of Grace opened. It gives the substance of sermons preached by its author in his parish in Concord, in New England. He speaks of great divisions which had arisen about the covenant, and some busybodies who called the preachers 'legall preachers,' and said that they were 'wholly ignorpreachers, and said that they were 'wholly ignorant of the covenant of grace, and . . . shut up under a covenant of workes.' The reference is evidently to the rising Antinomianism which is associated with the name of Anne Hutchinson, 'that wretched Jezabell,' as Bulkeley calls her (p. 293). Bulkeley, who himself seems to have been a man of moderate views, gives a list of the questions in dispute, e.g. (1) whether the covenant of grace was made between God and man, or only of grace was made between God and man, or only between God the Father and Christ; (2) what is the meaning of the reference to Abraham's seed in Gal 3<sup>16</sup>; (3) what the covenant of Sinai was, whether of works or of grace; (4) whether justification may be evidenced by sanctification; (5) whether the commandment commanding faith be a commandment of the law; (6) whether faith be a condition antecedent to justification or only consequent; and (7) whether the conditional promises be promises of free grace or no (Preface, p. 3).

quent; and (7) whether the conditional promises be promises of free grace or no (Preface, p. 3).

The theoretical difference had its practical effect in the doctrine of the Church. The question here turned on how far it was possible to preserve the purity of the Church in the administration of the sacraments and ecclesiastical discipline. All but the Baptists agreed that the covenant of grace, like the Abrahamic covenant or the OT, included the children of believers, and therefore defended the practice of mfant baptism. But this position raised perplexing questions as to the administration of the other sacraments. Since baptism could rightfully be administered to some who were not regenerate, why should the Lord's Supper be confined any more strictly? Why not recognize that the covenant conferred upon the children of believers certain ecclesiastical rights which extended beyond the circle of the elect, and he willing to accept a dogmatical, as distinct from a justifying, faith as the sufficient ground for admission to the Supper? This was the position taken by Blake in his interesting treatise entitled The Covenant Scaled—a position which brought him into a controverse with Baxter, in which it must be contessed that he puts that sturdy defender of the larger liberty to sore straits to defend his more exclusive position on this point.¹ These practical controversies also had their echoes in America. The question as to those who could rightly be admitted to the Lord's Supper was one which agitated the New England churches for many years, and in the so-called half-way covenant the laxer practice advocated by Blake was long prevalent.³

A typical example of the Puritan treatment of the covenant is William Strong's posthumous Discourse of the Two Covenants (London, 1678), a voluminous treatise of 447 large quarto pages, the substance of which was originally delivered in the

voluminous treatise of 447 large quarto pages, the substance of which was originally delivered in the form of sermons. Comparing it with similar treatises by Continental writers, we notice its practical interest, which appears (1) in the constant application of the points made to the different classes of people living in Strong's own day; (2) in the emphasis laid upon the obligations created by the covenant as distinct from its benefits; and (3) in its full discussion of the covenant relation of the children of believers. On the last point he leans to the views of Blake rather than to the stricter views of Baxter. He claims federal holiness for the children of the righteous as distinct from the personal holiness of regeneration; but he does

1 Of. pp. 114, 189. Blake's argument with Baxter turns upon the question whether faith that is short of justifying entitles to baptism, but the principles involved apply with even greater force to the more radical position taken by Blake with reference to the Lord's Supper.

2 Cl. E. H. Foster, A Genetic History of the New England Theology, Chicago, 1907, p. 31ff.

not specifically apply the principle involved to the question of the Lord's Supper.

(4) Cocceius and his school.—The most eminent representative of the covenant theology is undoubtedly John Koch, or, as he is better known by his Latin name, Cocceius. He was born in Bremen in 1603, studied Hebrew under Matthias Martinius, and theology under Ames and Crocius. He was Professor of Theology successively at Bremen, 1630–1636; at Francker, 1636–1650, where he succeeded Ames; and at Leyden, 1650–1669, where he died. He became the leading opponent and re-former of the scholasticism of his day, and by his more historical treatment of theology prepared the way for the later discipline of Biblical Theology. In this attempt he found a fruitful clue in the covenant idea, which he used as the organizing principle of his system.

Cocceius' leading monograph is entitled Summa doctrinæ de fædere et testamento Dei, and was published at Leyden in 1648. After a discussion on the meaning of the word feedus, or 'covenant,' he defines the covenant of God as nothing else 'than the Divine declaration of the method (ratio) of perceiving the love of God and of obtaining union and communion with him '(Opera, Amsterdam, 1673, i. 10). It differs from human covenants in the absence of the mutual feature. God alone initiates it, yet it becomes complete only when man by God's grace binds himself to accept its

provisions.2

Cocceius, like earlier theologians, distinguishes two covenants, that of works and that of grace. The sum of the former is the law, both natural and written. It is made with Adam for himself and for all his descendants, except Christ. It was abrogated in a fivefold way: (1) so far as the possibility of its fulfilment is concerned, by sin; (2) so far as its condemnation is concerned, by Christ, as set forth in the promises and apprehended by faith; (3) so far as its terror is concerned, by the promulgation of the new covenant; (4) so far as the struggle with sin is concerned, by the death of the body; and (5) so far as all its effects are concerned, by the resurrection from the dead.

The new covenant is the agreement between the Father and Christ as the second Adam, wherein Goddeclares His purpose, in consideration of Christ's atoning sacrifice, to save certain individuals by working in them faith through the word of promise and the gift of the Spirit, and to confirm the same by the institution of the Church, with its sacraments. This covenant is set forth in various ways, both before and after the coming of Christ. It was made known to Adam in Paradise through the institution of sacrifice, and renewed to Abel, Enoch, Noah, Abraham, and to all the people of Israel through Moses. But its most glorious promulgation was through the coming of Christ Himself in the flesh, and the full revelation of God's loving purpose which He made. In this connexion, Cocceius is led to treat at length of the difference between the economies of the OT and of the NT, and to indicate wherein the superior excellence of the NT consists.

The novelty of Cocceius' treatment consists not so much in the special ideas which he enunciates as in the dotail in which they are carried out, and, above all, in the free use which he makes of the Biblical material. The idea of the twofold covenant,

<sup>1</sup> Later enlarged edd. 1654, 1660. The covenant is also treated at length in Cocceius' Summa Theologiæ ex Sacris Scripturis repetita (Leyden, 1662, Amsterdam and Geneva, 1665), of which the covenant of works forms the subject of the eighth locus, and the covenant of grace of the fourteenth and following loci.

<sup>2</sup> Cocceius distinguishes between that form of covenant in which no condition is required on man's part(e.g. the promise to Noah that day and night shall never fail) and the more usual form, which includes the stipulation of acceptance and obedience by man.

as we have seen, goes back to Cocceius' teacher, Matthias Martinius; the distinction of different periods within the OT dispensation is recognized by Ames, but there is a breath of freedom and of originality about Cocceius' treatment which gives it a distinction of its own. It broke away from the prevailing tradition of the contemporary scholasticism, and it called forth, as such innovations always do, bitter opposition on the part of those who sat in the seat of authority. Cocceius, temperate and devout as he was, soon found himself the centre of a bitter controversy, and, what was probably the last thing in the world which he intended, the founder of a school.

Among the representatives of the school of Goccius may be mentioned Wilhelm Momma,<sup>2</sup> Francis Burmann,<sup>3</sup> Johann Braun,<sup>4</sup> Johann van der Wayen,<sup>5</sup> and Hermann Witsins.<sup>6</sup> The treatise of Witsius on the economy of the covenants was early translated into English, and had many readers both in England and in America. It is one of the best sources for the knowledge of the covenant theology in its later and more developed form.<sup>7</sup>

After an initial discussion of the covenant in general, Witsius begins by describing the covenant of works. He takes up successively the contracting parties, the law or the condition, the promises by which it was accompanied, the penal sanction which was attached to it, and the sacraments by which it was sealed. He speaks of its violation by man's sin, and its consequent abrogation by Godin favour of the new covenant of grace. Like Cocceius, Witsius distinguishes between the covenant of rewitsus distinguishes between the covenant of redemption, made by the Father with the Son, and the covenant of grace, made by God with the elect. The substance of this is set forth under the familiar theological heads of 'election,' 'effectual calling,' 'regeneration,' 'faith,' etc.; and then its different economies or dispensations in the OT and NT, with their several sacraments and ceremonies, are discussed at length.

With this treatment, the covenant theology reaches its final development. Those who come after add nothing in principle to that which has

gone before.

(5) The later history.—It is not necessary to follow the later history in detail. Treatises on the covenant continued to be written both in England and on the Continent. Ezekiel Hopkins, Bishop of Londonderry, left the manuscript of a series of sermons on the doctrine of the two covenants, posthumously published in 1712, in which he declares that of all the mysterious depths in Christian religion, there is none more necessary for our information or more influential upon our practice than a right apprehension and a distinct knowledge of the doctrine of the covenants (p. 2). Thomas Boston, a Scottish Presbyterian (1676-1732), wrote a treatise on the covenant of grace, which was often republished both in England and in America, and

7 Others who were influenced by Cocceius were Abraham Heidanus (1697-1678; Corpus theologiæ christianæ in æv. locos digastum, 1686) and van Til (Theologiæ utriusque compendium cum naturalis cum revelatæ, Leyden, 1704), though in the case of both these writers the Cartesian influence is also apparent (cf. Gass, op. cit. il. 300 ff. 321, note).

8 A View of the Cocenant of Grace, from the Sacred Records, posthumously published by his son, Thomas Boston. Boston also left among his papers a sivilar treatise on the covenant of works, which was published in 1798, with a preface by Michael Boston.

had the rare compliment paid it of being embodied, with scarcely the change of a word, in a work written nearly a hundred years later (J. Colquhoun, Treatise on the Covenant of Grace) 1—not, indeed, without handsome acknowledgment on the part of the borrower. On the Continent, Turretin 2 gave the covenant idea a large place in his theology, and with his system it passed to America, to reappear in the federalism of the Princeton theologians, Charles and A. A. Hodge.<sup>3</sup> It has continued down to our day to form one of the prominent tenets of

evangelical Calvinism.4

On the other hand, Jonathan Edwards makes little use of the covenant idea. While the covenant is occasionally mentioned in his history of redemption, the reference is only incidental, and the idea exercises no formative influence upon the structure of the work. This is the more striking because of the extent to which Edwards holds fast to the main tenets of the older Calvinism. The reason is not far to seek. Edwards' primary interest was in the eternal law of things. Not will, but nature, was fundamental in his thought of God. To such the dear the average of the a theology the covenant idea, born as it was of the effort to limit the Divine arbitrariness, was foreign. With the stricter predestinarians, like Crisp and Saltmarsh, the covenant idea had long been simply a form into which the wine of a very different gospel had been poured. Edwards, before all things the original thinker, was not interested in preserving a form to which there was no content to correspond. To the federal theologians, on the other hand, the covenant idea answered a real need. Their conception of freedom involved power to the contrary, both in the case of man and of God. In the former case, it was the foundation of human responsibility, and the covenant of works was conceived as a real transaction between different individuals.<sup>6</sup> In the latter case, it gave free scope to the electing grace of God; and the covenant of grace, as we have already seen, had its significance as determining the channel within which God, in the exercise of His Divine segments. the exercise of His Divine sovereignty, had determined to confine the river of His grace. God might have acted otherwise, if He had chosen, so the argument ran, but He was pleased to do thus and so, and this sovereign pleasure He has made known to us through the gracious covenant into which He has entered with man through

It is, no doubt, the weakening of this conception of freedom in our day which explains the falling into the background of the covenant theology. Arbitrariness, whether on man's part or on God's, is no longer the prevailing danger against which theologians are concerned to guard, and, in a world of law, other terms than those of private agreement seem better fitted to express the profoundest and most abiding relationships between God and man. It would, however, be a mistake to minimize the services rendered by the covenant theology to Christian progress. Artificial in its account of the relation between God and man, it was in reality

relation between God and man, it was in reality 1 Edinburgh, 1818. Among others to whom the author expresses his indebtedness are the following, not hitherto mentioned in this art.: Cloppenburg, Moor, Erskine, Brown, Hervey, Gib, Muirhead, and Gill.

5 Heppe (op. cit. i. 113 ff.) calls attention to the difference of interest which separated like early covenant theologians from the stricter prodestinarians, with whose teaching their system had so much else in common.

6 This interest appears with special clearness in the American

6 This interest appears with special clearness in the American federalists. Of. A. A. Hodge, op. cit. p. 8101., Questions 5, 9.

designed as a protest against arbitrariness. Untrustworthy in its view of the development of the Biblical religion, it helped to prepare the way for a more scientific treatment of the Biblical history. To its more earnest advocates the covenant theology, as distinct from the type of thought which it opposed, expressed the difference between a God whose purpose was known and whose character could be trusted, and a God whose nature was mysterious and whose actions were unpredictable. Few terms were richer in experimental significance to those who had been trained to understand it than that which gives its title to this article, for none more fully revealed the heart of God. Writnone more fully revealed the heart of God. Writing to his son-in-law, Fleetwood, Cromwell sends the following message to his daughter: 'Bid her be cheerful, and rejoice in the Lord, once and again; if she knows the covenant, she cannot but do so.' The covenant, says Edward Leigh, in the title to his *Treatise of the Divine Promises*, Lond. 1633, 'is itself the bundle and body of all the promises.' promises.

promises.—The more important works on the covenant have been cited in the article. On the Biblical usage, see A. B. Davidson, Theol. of OT, Edin. 1904, p. 239 if., and his art. 'Oovenant, in Ebi; R. Kraetzschmar, Die Bundesverstellung im AT, Marburg, 1896; Valeton, in ZATW xii. (1892) 1-22, 224-260, xiii. (1893) 245-279; A. nants, etc.).
A good monograph on the history of the covenant theology is.
still a desideratum.
W. ADAMS BROWN.

COVETOUSNESS.—Covetousness in its most general meaning expresses an eager desire to gain some possession on which the heart is set. At first the desire, though strong, may be innocent and even commendable. Thus Caxton says (Geoffroy de la Tour-Landry, I. ii.): 'She ever coveyted the pees and love of her lord,' and Shakespeare represents the King in *Henry V*. (Act iv. Sc. 3) as

Saying:
1 Letter 198, Carlyle's edition, quoted by Lindsny, in Brit. and
For. Evangel. Rev., July 1879, p. 521 ff.

'By Jove, I am not covetous for gold,
Nor care I who doth feed upon my cost;
It yearns me not if men my garments wear;
Such ontward things dwell not in my desires:
But if it be a sin to covet honour,
I am the most offending soul alive.'

In the AV of the Bible the word 'covet' is commonly of evil significance, but it is also used to translate words of good import. Thus in 1 Co 1231 we have St. Paul's exhortation, 'Covet [RV "Desire"] earnestly the best gifts.' Keen desire, "Desire"] earnestly the best gifts." however, was usually associated with unworthy objects, and Hobbes (Levinthan, I. vi. 26) went so far as to declare; 'Desire of Riches [is called] Covetousnesse: a name used alwayes in signification of blame.

In distinction from a variety (q.v.), covetousness emphasizes the desire for things not possessed; avarice, the undue retention of actual possessions. Thus, in covetousness the very desire may constitute an evil, and possibly St. Paul, in his declaration of the way in which sin came home to him (Ro 77h.), dwells upon the part played by the Tenth Commandment in the process, because inordinate desires are there condemned. The possessions sought may not be an evil in themselves, but the heart's desire may be unduly set upon them. An all-absorbing passion for material possessions may be restrained by the experience of their inability to constitute real happiness in life, and by the know-ledge that, sconer or later, all material things must be left behind at death; but this passion is effectively curbed only when a still more passionate desire for the nobler possessions of mind and spirit and life lays hold of the heart.

The evil in covetousness may be due, however, not merely to the strength of the desire, but to the fact that the object of desire is the possession of some one else. It may be noble to seek to possess the spiritual insight or the Christian grace of the spiritual insight or the Christian grace of another, for the imparting of such a gift ennobles and enriches both giver and receiver; but to desire a neighbour's land or goods is to seek his impoverishment. When Ahab coveted Naboth's vineyard (1 K 21), and David coveted Uriah's wife (2 S 11), they fell into deadly sin, and similar desires bring shame and guilt on those who cherish them. When these desires are expressed in acts, they are condenned by the law as crimes. they are condemned by the law as crimes. True restraint is exercised only when the rights of others are recognized and honoured.

The very spring of covetonsness is found in the common experience that what is not possessed seems always most desirable. The virtues and defects of actual possessions are known by the owners, but the blessings that are beyond reach are painted by the imagination in glowing colours, and incite the heart to ardent desire. This tendency has led to some noble achievements, but it is also the source of amusing comedies, and of many of the deepest tragedies of life. The very opposite state of mind is happily represented in the reply that James Smetham gave to a friend when he was asked to go to Rome and Venice:

asked to go to Rome and Venice:

'I suppose I ought to wish to go with you to Rome and Venice. . . Nothing but a sense of duty will ever drive me to Rome and Venice. My difficulty is to appreciate our little backgarden, our copper beech, our weeping ash, our little nailed-up rose tree, and twisting yellow creepors' (Letters of James Smetham, London, 1892, p. 861.).

D. MACRAE TOD.

COW (Hindu).1-The belief in the sanctity of the cow, which is a very prominent feature of Hinduism, seems to have been inherited by the Indians from pre-historic times, before they and

1 For the place of the cow in other religions, see art. Annuals in vol. i. p. 506 ft.

the Iranians had separated. In the Avesta<sup>1</sup> we meet with a Divine being called *geus urran* (or Goshurun), lit. 'the soul of the cow,' who is regarded as the personification and guardian of living beings. Similarly, in the Rigveda the mystical relation between the cow and the universe is several times alluded to.<sup>2</sup> It is further developed in the Athenyayada one hymn of which developed in the Atharvaveda, one hymn of which (x. 10) is addressed to Vasa, the prototype of cows, and a kind of generating principle of the universe; and another (iv. 11) to Anadvan, the primeval ox, to when the initial factor is the context. to whom a similar function is attributed. In Vedic times the word go, 'cow,' was used to express some other ideas, not merely in an allegorical way, but rather in a mystical sense so as to suggest a mysterious connexion between them and the cow. Thus in the Naighantuka (the ancient list of Vedic synonyms, on which Yāska commented in the synonyms, on which raska commented in the *Nirukta*) the word go, which originally and usually denotes 'cow,' is given as a synonym of (1) earth, (2) heaven, (3) rays of light, (4) speech, and (5) singer.<sup>3</sup> The Earth especially was conceived under the figure of a cow, and is so represented in later mythology. This idea goes back to the Vedic mythology. This idea goes back to the Vedic Samhitās. In a hymn, or rather a prose piece, of the Atharvaveda (viii. 10), Virāj, who 'verily was this universe in the beginning,' is extolled, and she is said to have come to various classes of beings; in paragraphs 22-29 she comes to Divine beings and men, who milk from her things characteristic of their functions—the milker, the calf,4 and the milking-vessel being stated in each case. Paragraph 24 runs thus:

'She ascended; she came to men; men called to her: "O rich in cheer, come!"; of her Manu son of Vivasvant was young [lit. "calf"]; earth was vessel; her Pṛthī son of Vena milked; from her he milked both cultivation and grain.' 5

This passage contains the germ of a myth which has been talled avalenced in the Evasance.

This passage contains the germ of a myth which has been fully developed in the Purānas. Of Prthu, son of Vena, having been constituted universal monarch, desired to recover for his subjects edible plants, which, during the preceding period of anarchy, had all perished. He therefore assailed the Earth, which, assuming the form of a cow, fled from him and traversed all the heavenly regions. At last she yielded to him, and promised to fecundate the soil with her milk. Thereupon Prthu flattened the surface of the earth with his bow, uprooting and thrusting away hundreds and thousands of mountains. Having made Sväyanibhuva Manu, the calt, he milked the Earth, and received the milk into his own hand, for the benefit of mankind. Thence proceeded all kinds of corn and vegetables upon which people subsist now and always. By granting life to the Earth, Prthu was as her father; and she thence derived the patronymic appellation Prthion ("daughter of Prthu"). Then the gods, the sages, the demons, the Räksasas, the Gandharvas, Yakasa, Prtrs, serpents, mountains, and trees took a milking vessel suited to their kind, and milked the Earth of appropriate milk. And the milker and the calf were both peculiar to their own species.'

This story is most frequently alluded to in classi-

This story is most frequently alluded to in classical Sanskrit literature. In legends and popular stories the Earth is occasionally said to assume the figure of a cow, especially in times of distress, and to implore the gods for help, or to give advice to a king or queen, to whom she appears in a dream. Again, the mythical identification of the Earth with a cow furnishes the basis of many poetical conceits, e.g. that a king should milk the Earth tenderly in order to get plentiful revenue, etc. (see

tenderly in order to get plentiful revenue, etc. (see 1 e.g. Yasna, xxviii. 1, xxix. 5.9 (for a complete list of references, see Bartholomae, Altiran. Wörterb. 1540 (Strassburg, 1901); cf. also the Pahlavi texts translated in SBE v. 20f., 163, 402, xvii. 830, xxxvii. 237 ff.
2 e.g. i. 158. 3, viii. 90. 15, x. 11. 1. On the cow in the period of the Rigyeda, see Macdonell, Vedic Mythol. (= GIAP iii. 1a), Strassburg, 1897, Index, s.vv. 'Cow,' 'Cows'; and Zimmer, Altind. Leben, Berlin, 1878, p. 221 ff.
3 Natah. 1. i. 4, 5, 1i. iii. 16. Classical lexicographers attribute still further meanings to the word go; e.g. Hemachandra in the Anekarthasumpraha (i. 6) enumerates the following meanings: sun, water, eye, heaven, heavenly quarter, kine, ray of light, thunderbolt, earth, arrow, and speech.
4 The Hindus suppose that a cow yields milk only in the presence of her calf.
5 The account in the text is from the Visnu Purāṇa (Wilson's tr., London, 1864-70, i. ch. xiii.). More details given in other Purāṇas are mentioned in Wilson, i. 188 ft.
VOL. IV.—I5

Bohtlingk-Roth, Sanskrit-Worterb., St. Petersburg, 1855-75, s.v. 'Go,' 12).

1855-75, s.v. 'Go,' 12). The identification of cow and speech has not given rise to popular myths, but, as speech is regarded as something Divine in origin and holy in character, it added to the sanctity of the cow, though this identification was perhaps due not so much to a popular association of ideas as to a chance similarity of sound between the two words go, 'cow,' and  $g\bar{a}$ , 'to sing,' or perhaps  $g\bar{v}r$  'speech'

speech.'
The sanctity of the cow, which has been shown to underlie certain ancient mythical conceptions, has a practical bearing on religion. It was considered a heinous sin to kill a cow or to eat her flesh. A well-known verse says: 'All that kill, eat, and permit the slaughter of, cows, rot in hell for as many years as there are hairs on the body of the cow so slain.' The same feeling is already present, but not yet so strongly developed, in Vedic times. The Satapatha Brāhmana, when prohibiting the eating of the flesh of the cow (iii. 1, 2, 21), adds the interesting statement: 'Yājñavalkya said: "I, for one, eat it, provided that it is tender." And the Grhya Sūtras permit the slaughter of a cow on the arrival of a guest, especially at a wedding or a sacrifice. But this ancient practice was given up in later times, when substitutes for the flesh of a cow became the rule in the entertainment of guests.2

In the Great Epic the sacredness of the cow is a firmly established fact. Chapters 69-82 of the Anusasana parvan of the Muhābhārata, which chiefly treat of the giving of cows and the merit acquired by it, contain much curious information about the religious ideas regarding the cow, which became deeply engrained in the Hindu mind through the superstitious veneration of the cow. The reason alleged for its sacredness is that cows are the essential requisites for sacrifice, and that with their milk and with the Havis manufactured therefrom they uphold all creatures of the universe' (81.2); they are themselves sacred and capable of cleansing others. Not only are the cows themselves sacred, but the five products of the cow (panchagavya)—milk, curds, ghi, dung, and urine—are means of purifying man, and are used in many ways for that purpose, some of which are rather disgusting. But the pious are told 'never to feel any repugnance for the urine and the dung of the cow' (ib. 78. 17). A curious myth relating to the latter item is told in the Mahābhārata (xiii. 82):

Sri, the goddess of Fortune, who had left the demons for the gods, came to the cows, desiring to reside in them. They would, however, have nothing to do with that fickle deity, but in the end they were moved by her entreaties and consented to honour her: 'Do thou live in our urine and dung; both these are sacred, O auspicious goddess!'

Cows are the daughters of the heavenly Surabhi ('the fragrant one,' so called from the peculiar smell of cows), who was created by Prajāpati from his breath (Satapatha Brāhmana, vii. 5. 2, 6). This notion gives rise to the following myth: 4

'Daksa the creator, for the sake of the beings he had created, drank a quantity of nectar. He became gratified with the nectar he had quaffed, and thereupon an eructation came out, diffusing an excellent perfume all round. As the result of that cructation, Daksa saw that it gave birth to a cow which he called Surabhi. This Surabhi was thus a daughter of his, which had sprung from his mouth. The cow called Surabhi brought forth a munber of cows, which came to be regarded as the mothers of the world.'

<sup>1</sup> Mahabhārata, xiii. 74. d.
2 The ancient practice was noticed by a writer of the 7th cent., Bhavabhūti, in his dramatical play Utturarāmacharita, 4th Act; but, as the scene is laid in the remote past, we cannot draw any conclusion from it with regard to the usage at the time of the author.

3 We quote from Pratāpa Chandra Ray's translation (Calcutta, 1992)

<sup>1893).</sup> 4 Mahabharata, xiii. 77. To be about

There is also a cow-heaven, Goloka, the residence of Surabhi. Once the mother of cows practised austerities, and so pleased Brahmā by her freedom from cupidity that he granted her immortality and assigned her as residence a region above the three worlds, the famous Goloka, while her daughters live among men. In another account,1 however, Surabhi is said to dwell in Rasatala, the lowest region in the nether world, and to have for daughters the Dikpālīs, or goddesses presiding over the heavenly quarters. The cow-heaven, Goloka, is frequently mentioned in the epics and the Purāṇas. It is described as a kind of paradise, a most beautiful place of the greatest splendour and happiness, which can be attained only by the most pious and virtuous, especially by givers of cows and by their worshippers. For the cow became the centre of a peculiar worship, with proper mantras (Mahābhārata, xiii. 80. 1-3, 78. 24 f.) and rites.<sup>2</sup> The devotees had to recite the names of the cows, and to bow their heads in reverence to them (ib. 78. 16), and they were enjoined to subsist on the five products of the cow, to bathe, using cow dung at the time, etc. For some religious purposes the devotee has to live and to sleep among cows in a cow-pen, or to follow a cow everywhere, as did Dilipa in the story told in the second book of the Raghuvamsa.

Lastly, attention may be called to the story according to which Kṛṣṇa, one of the most popular gods of India, passed his youth among cowherds and became the lover of the gopīs, their daughters, especially of the lovely Rādhā. This fact illustrates the birth partition of the story. trates the high reputation which resulted from the connexion with cows, since even herdsmen were thought the fit guardians and companions of the

highest god.

Reverence for the cow has not diminished in modern times.<sup>3</sup> It is well known that the Hindus of the present day are filled with horror at the slaughter of the cow, which is therefore prohibited in native States under treaties with the English. n native States under treatures was article.

Literature.—The literature is given in the article.

H. JACOBI.

COYOTEROS.—The Coyoteros are a tribal division of the Apaches (q.v.), said by Drake (Indian Tribes of the United States, Philadelphia, 1884, i. 424) to have been the largest and fiercest of all the Apache tribes, although, owing to the indiscriminate method in which tribal names have been applied, it is difficult to make certain that other tribes are not included in the estimate of its size. The original home of the Coyoteros was on the head-waters of the Gila, between that river and San Carlos; but they were of nomadic habits, and ranged through Arizona and western New Mexico. Geographically, they are divided into two groups—Pinal Coyoteros and White Mountain Coyoteros. The greater number of them are now located on the San Carlos reservation, with other tribes of the Apaches. They took a prominent part in the rebellion caused by the discontent which followed when the Apaches were moved from their tribal grounds to a reservation.

The Spanish name Coyotero is said to have been given them on account of the fact that they subsisted partly on the flesh of coyotes, or prairie wolves (Hardy, Travels in the Interior of Mexico, London, 1829, p. 430, quoted by Bancroft, NR i. 474). Ruxton (Journ. Ethnol. Soc. Lond., 1st ser., ii. 95 [1850]) calls them coyoteros, or 'wolf-eaters.' It is suggested, however, that the name may have been derived from their roving and unsettled habits (Hodge, Handbook, p. 356). Among the

See the very full discussion of this subject in PR ii. 226 ff.

Tonto Apaches they are known as *Paláwi* or *Pawilkna* (Gatschet, *Yuma-Spr.* i. [1883] 371, 411; ZE xv. 123), while the Navalio name for them was Silka, 'on the mountain' (ten Kate, Synonymic,

Amsterdam, 1884, p. 6).
In culture they did not differ materially from the other Apaches. Among the Apache tribes themselves, distinctions were recognized in the character of the weapons, the distinguishing mark of the Coyoteros being the method of winging the arrows. These bore three feathers on the shaft, which was of reed, finished with hard wood and tipped with iron or flint (Cremony, Life among the Apaches<sup>2</sup>, San Francisco, 1877, p. 103). Like other members of the Athapascan linguistic stock, they readily assimilated the culture of neighbouring tribes; and, just as the Lipan followed the Co-manche, the Pinal Coyoteros showed traces of Their nomadic habits, as well Pueblo customs. Pueblo customs. Their nomadic habits, as well as the character of the country, were unfavourable to any great advance in civilization, while their habitat in Sierra Blanca was peculiarly adapted to the raids by which, like other Apaches, they acquired food and wealth. Their captives were held as slaves until ransomed or sold. The Pinaleños earned an unenviable notoriety by their success in this tribal pursuit (see Bartlett, Personal Narrative of Travels in New Mexico, New York, 1854). Apaches are divided into clans, but these are not totemic. Their names are taken, not from animals, but from natural features of their locality. Affiliation of the clans in different tribes is recogrized. Among the Coyoteros, class have been recorded, counterparts of which have been found among other Apache divisions and also among the Navahos; while Bourke (JAFL iii. [1890] 112) re-

Mountain Apaches and the Pinal Coyoteros. Mountain Apaches and the Pinal Coyoteros.

The Apaches displayed little care in the disposal of their dead. The method followed by the Coyoteros is described by H. C. Yarrow ('A Further Contribution to the Study of the Mortuary Customs of the North American Indians,' 1 RBEW, 1881, p. 111f.), who says they take the least possible trouble. A hole in the ground made by a tree stump or a stone is found, and into this they cram the body partially wrapped up. The stone or the body, partially wrapped up. The stone or stump is then rolled back. They mourn for thirty The stone or days, uttering loud lamentations at intervals; but, he adds, unless they are reminded of it, this is

cords a number of identifications between the White

frequently forgotten.

LITERATURE.—References to the Coyoteros are scattered through the literature dealing with the Apaches (see above, and at end of art. Arachess, in vol. i.); cf. also especially footnotes, passim, in Bancroft, NR; and F. W. Hodge, Handbook of American Indians (= Bull. 50 BE, Washington, 1907), pt. 1, under 'Apache' and 'Coyotero.'

CREATION .- I. The conception in primitive heathenism.—The principle of causality is a necessary category of thought. The desire for knowledge of the nature and origin of things is inborn. It stimulates the eager wonder and prompts the clamorous questions of every child and savage. Primitive man is philosophical in so far as he does not take things as a matter of course, as he makes the phenomena around him objects of reflexion, as he is keen to understand how everything came about. He is mentally a child, with a child's vague fears of the unknown, a child's love of a thrilling tale, and a child's readiness to be satisfied with any explanation, however grotesque and absurd, of the things which arouse his interest. Curiosity and credulity are the characteristics of the primitive mind, and the roots of all mythology, which has not inaptly been called 'primitive meta-physics.' At the same time it has to be remembered that the childhood of the race included the maturity of the individual, and in not a few creation-myths

there are features which reflect the vices and passions of grown men as well as the simplicity of children. The theories of the savage are of necessity like their inventor, matching his barbaric manners and customs, his crude emotions and rude conduct. Primitive man stands helpless in the midst of a universe of which he knows not the laws, but he is of imagination all compact, and therefore never at a loss for an answer to the questions which are the subject-matter of science and philosophy. He can explain the phenomena of Nature, the making of the universe, the descent of man. The background of all myths is the experience of primitive man interpreted by himself. The tales he spins, the theories he invents, may be grave or gay, prosaic or poetical, attractive or repulsive, clever or absurd; enough if they satisfy He does not know how defective is his logic, how riotous his fancy. He is experimenting in thought as best he can, and 'the science of the modern savant has been evolved out of the errors

of the simple savage' (Jevons, Introd. p. 9). But the problem of origins has to be solved by religion as well as by philosophy, though it is approached from a different side and in a different spirit. Man has not only a speculative, but a religious instinct. Religion is one of his native vital forces, without which he would have what Schelling termed 'an original atheism of consciousness.' No one can manufacture his religion, which is a native personal datum; all that he requires is the due exercise and cultivation of Nature's supreme It is this element in the common consciousll generations which makes the search for a Crea 'a continuous pursuit. The question whether 'he savage state . . . represents an early condition of mankind' (Tylor, *Prim. Cutt.*<sup>3</sup> i. 32), or whether we might 'as well judge the wine by the dregs as primitive man by the savage' (Gwatkin, Knowledge of God, 1908, i. 253), may be left open. For in the genuine products of the religious sense, uncontaminated by the fancies of the mathematical statement of the mathematical statement. the mythopeic faculty, there seems to be no contrast of high and low. Increasing research into the mental habits of the least advanced races of mankind now living tends to demonstrate that, side by side with the most foolish, tedious, and often repulsive myths, there is almost invariably a high, if vague, conception of a good Being who is the Maker of all things, the undying Guardian of the moral life of men. The evidence is presented with adequate thoroughness and with literary charm in the writings of Andrew Lang and F. B. Jevons.

Jevons.

A. Lang stands in wonder before 'the high gods of low races' (Making of Religion2, p. 173 ft). He must needs smile at the opinion expressed by Flint in the earlier days of Comparative Religion (in Fatths of the World, Edin. 1882, p. 413), that 'at the bottom of the religious scale . . . it is always easy to see how wretchedly the divine is conceived of . . . how little conscious of his own true wants . . . is the poor worshipper' (bb. p. 253). He is convinced that the animistic theory of Spencer and Tylor does not fit the facts. 'The high gods of savages are not ghosts' (p. 250). 'It is a positive fact that among some of the lowest savages there exists, not a doctrinal and abstract Monotheism, but a belief in a moral, powerful, kindly creative Being, while this belief is found in juxtaposition with ghosts, totems, tetishes, and so on' (p. 254 f.). Lang presents 'an array of moral and august savage supreme Beings'; and he believes that 'an old, nay, an obsolete theory—that of degeneration in religion—has facts at its basis, which its very supporters have ignored, which orthodoxy has overlocked '(p. 252).

He finds that 'the belief in relatively pure creative beings, whether they are morally adored, without sacrifice, or merely neglected, is so widely diffused that Anthropology must ignore them, or account for them as "loan-gods," or—give up her theory' (3b. p. 229). He observes that the idea of a Good Maker, once reached, becomes 'the germ of thure theism,' and he seeks the highest confirmation of his theory in the religion of Israol, which is 'probably a revival and purification of the old conception of a moral, beneficent creator, whose creed had been involved in sacrifice and anthropomorphic myth' (Lang, Myth, Rit. and Rel. i. 329).

Unfortunately this involution of religion in

Unfortunately this involution of religion in

mythology is all but universal. When primitive man tries to explain how the world was made, his speculative faculty lands him in all kinds of error and confusion; his theories are incredibly childish and whimsical.

"Savages begin . . . by mythically regarding various animals, spiders, grasshoppers, ravens, eagles, cockatoos, as the creators or recoverers of the world. As civilization advances, those animals still perform their beneficent functions, but are looked on as gods in disguise' (ib. i. 241 f.).

Bunjil, the South Australian maker of men and

things, is identified with the eagle-hawk; Cagn, the Bushman Creator, with the mantis-insect; and even Brahmā or Viṣṇu, with a boar, a fish, or a tortoise. Among the native tribes of America the hawk, the coyote, or the musk-rat is the demiurge; among others the crow, the raven, or the hare plays the chief rôle in the task of creation. If the Creator does not partake of the character of a totem or worshipful beast, he is identified with a wizard or medicine-man. Every race has had its legendary account of the origin of things, and, while oreation-myths can never be far in advance of the ideas and sentiments of a people, they may, and often do, lag far behind. Religious conservatism makes adult nations slow to put away the childish things that faith has once consecrated. If a creation-legend has found its vates sacer, and been incorporated with the ritual of the altar, scarcely anything short of a miracle is strong enough to charm it from the popular mind.

2. The conception in civilized paganism.—All

the early ideas of creation are, of course, geocentric. The 'earth' of which mythology offers an account may be but a circle of hills and valleys known to some wandering tribe. But the great phenomena of Nature—sun, moon, and stars, day and night, storm-wind and thunder-cloud, birds and beasts and men-are much the same every where, and they form the warp and woof of all cosmogonies. In spite of immense diversities of detail, there is a family likeness in the creationmyths of the world. Nothing is more striking than the parallelism between Hesiod's savage stories and those of the Maoris and Mangaians of to-day. The primitive mind, working on the same materials, seems everywhere to evolve the same crude and infantine speculations regarding the origin of things. Cf. the artt. on COSMOGONY AND COSMOLOGY.

(1) Egypt.—The religious history of Egypt, extending over many thousands of years, is the history of a theism almost choked by an animism which deified beasts and birds and trees. The priests of the temples, who were the advanced thinkers of the nation, endeavoured to be true to the high theistic tradition, and therefore chose to regard the innumerable popular gods as only various manifestations of the one Divine creative energy. Even the priests were henotheists rather than monotheists, worshipping one god as if there were no other, ascribing to him all the highest attributes of deity, but without any idea of logically denying the reality of other gods. Ptah, the chief god of Memphis, whom the Greeks identified with Hephæstus, was called by his priests the 'masterartisan,' i.e. the Creator. At Elephantine, in the clay district beside the cataracts, Khnum was the deniurge, who moulded his creatures like a potter. At Hermopolis it was Thoth who made the world, speaking it into existence. That which flows from his mouth, happens, and that which he

from his mouth, happens, and that which he speaks, comes into being.

The following hymns date from at least 2000 R.c. (1) To Amon-Ra: 'Hail to thee, maker of all things, lord of law, father of the gods; maker of men, creator of beasts. . . The one without a second . . king alone, single among the gods.'

(2) To Ptak: 'To him is due the work of the hands, the walking of the feet, the sight of the eyes, the hearing of the ears, the breathing of the acstrils, the courage of the heart, the vigour of the hand, activity in body and in the mouth of all the gods

and men, and of all living animals: intelligence and speech, whatever is in the heart and whatever is on the tongue' (Renout, Orig. and Growth of Rel. of Anc. Egypt, p. 220).

In a papyrus at Turin, the following words are put into the mouth of 'the almighty God, the self-existing': 'I am the maker of heaven and of the earth, I raise its mountains and the creatures which are upon it: I make the waters. . I am the maker of heaven, and of the mysteries of the twofold horizon. It is I who have given to all the gods the soul which is within them. When I open my eyes, there is light; when I close them, there is darkness. I make the hours, and the hours come into existence. I am Chepera in the morning, Ra at ucon, Thu in the evening' (ib. p. 2211.) And the following is an extract from a hymn preserved in the museum at Bulak: 'I Hail to thee, Amon-Ra. . lord of all existences, the support of things, the from a hymn preserved in the museum at Bulak? 'Hail to thee, Amon-Ri... lord of all existences, the support of things, the support of all things. The One in his works, single among the gods... Lord of truth, father of the gods: maker of men, creator of beasts... Most glorious one, chief maker of the earth after his image, how great are his thoughts above every God! Atmu, maker of men... giving them life... listening to the poor who is in distress, gentle of heart when one cries unto him' (tb. 225).

In Egypt, however, as everywhere, the mythical mingled with the religious, the irrational with the rational. See COSMOGONY AND COSMOLOGY (Ecyptian).

(Egyptian).

(2) India.—The problem of the origin of things naturally fascinated 'the brooding mind of India. For ages the East was 'plunged in thought,' and brought up a few pearls, with many empty shells, from the depths. Some of the hymns of the Rigveda are, if not monotheistic, at least henotheistic in their pure and lofty idea of creation. is praised as the maker of all things: Varuna

is praised as the maker of all things:

'Truly admirable for grandeur are the works of Him who has separated the two works and fixed their vast extent: of Him who has set in motion the high and sublime firmament, who has spread out the heavens above and the earth beneath...

This Asura [Lord], who is acquainted with all things, has propped up these heavens, he has fixed the boundaries of the earth. He is enthroned above all the worlds, universal king; all the laws of the world are the laws of Varuna... Between this earth and the sublime heaven above, all things, O Varuna, are of thy creation' (Darmesteter, Sel. Essays, p. 224).

But in India, too, we see the inevitable conflict between religion and mythology with religion

between religion and mythology, with religion often defeated and defiled. The gods of the Vedas are, on the whole, of the usual polytheistic type, and side by side with the majestic lymns of creation we find a crowd of fanciful, humorous, often obscene, myths of the making of the world, all in flagrant contradiction with every pure reli-See Cosmogony and Cosgious conception. Mology (Indian).

The advanced thinkers of the Vedanta accepted a philosophy of idealism, and carried it so far as to affirm that the world of phenomena had no real existence; to the enlightened it was all illusion; only to the soul which was entangled in the decoption of the senses did it still appear real. Instead of explaining the universe, they explained

answer the question, 'Who created maya?'
(3) Persia.—The Avesta, the sacred book of the Persians, begins with the words, 'I proclaim and worship Ahura Mazda, the Creator.' The religious poetry of Persia does not stop short of monotheism, while its mythology and theology teach a dualism

willie its mythology and theology teach a dualism of the most pronounced type.

'It is through me,' says Ahura to his prophet, Zoroaster, 'that the firmament, with its distant boundaries... subsists without pillars to rest upon; it is shrough me that the earth, through me that the sun, the moon, and the stars take their radiant course through the atmosphere: it was I who formed the seeds in such a manner that, when sown in the earth, they should grow,' etc. (Darmesteler, 'pr. etc. 'p. 288).

Much were positive I's the following piege, which

Much more poetical is the following piece, which in its eager questioning singularly resembles Job

Reveal to me the truth, O Ahura! What was the beginning of the good creation?
Who is the father, who, at the beginning of time, begat

Order? Who has traced for the sun and the stars the paths that

they must follow?
Who makes the moon increase and decrease?

Who has fixed the earth and the immovable stars to establish them firmly, so that they might not fall? Who has fixed the waters and the trees?

Who has directed the rapid course of the wind and of the clouds? What skilful artist has made the light and the darkness?...
Those are the things that I wish to ask Thee, O Mazia, O beneficent Spirit, O Creator of all things! (ib. p. 290f.).
The theology of Persia teaches that from the beginning the kingdoms of Ornuzd (Ahura Mazda, the Leuf Wickers) and Ahrivan (Angra Majara). 'the Lord Wisdom') and Ahriman (Angra Mainyu, 'destructive spirit') were independent of each other. Ormuzd created this material world as a kind of rampart between the two invisible realms. Heaven and its lights were first made by his word; then, in succession, the waters, the solid land, the plants, the animals, and, lastly, man. But his rival tried to undo all the work, to spoil the fair creation. He confronted light with darkness, he pitted demons against angels, and to life, love, virtue, and truth he opposed error, vice, hatred, and death. Since then, the history of the world has been the history of the conflict between the two kingdons of good and evil, wherein this earth is the broad field of battle. See, further, Cos-MOGONY AND COSMOLOGY (Iranian).

MOGONY AND COSMOLOGY (Iranian).

Lagarde and other scholars have strongly maintained that the Hebrew cosmogony in 6n 1 is in some respects dependent on the Persian creation-story, particularly as regards the order of events; but it is more probable that the Persian influence on Israel did not begin till after the time of the writing of the Priestly Document to which 6n 1 belongs. Be that as it may, the Persian dualism, with its eternally opposed principles of light and darkness, good and evil, had its obvious parallels in Greek thought, and was revived in Manichaism, while even shrewd thinkers like J. S. Mill have thought that the defects of the universe can be best explained by supposing the Creator hampered through the insufficiency and intractableness of the materials with which He had to work (J. S. Mill, Three Essays on Religion, Lond. ed. 1904, pp. 178, 186).

(5) Greece.—See COSMOGONY AND COSMOLOGY

(5) Greece.—See Cosmogony and Cosmology

(Greek). 3. The Biblical conception.—The OT has three types of ideas regarding the Creation, embedded in three strata of its literature. (1) The first is found in Gn 2<sup>4b-25</sup>. The narrative has all the fresh charm of the ancient writing (J) to which it belongs. It is full of naive anthropomorphisms, representing is full of naive anthropomorphisms, representing God as moulding, breathing, planting, walking, and it undoubtedly has a background of popular mythology. But the writer adorns whatever he touches, transfusing old legends with a new spirit, so that 'in depth of moral and religious insight the passage is unsurpassed in the OT' (Skinner, Genesis, 52). There is no attempt here to represent the creation of 'heaven and earth'; these are taken for granted; speculation is not yet advanced enough to grapple with such magnitudes. The whole interest centres in the making first of man. whole interest centres in the making first of man, and then of a pleasant and fruitful place for his abode. See, further, Cosmogony and Cosmology (Heb.).

(2) Another type of creation doctrine is found in the Deutero-Isaiah. It was the mission of this prophet to comfort Israel in her exile, and he fulfils it by giving her a lofty conception of God the Creator. He teaches that Jahweh is not merely the God of Israel, but the only God, who brought all things into being by a free act of creation. 'Who hath measured the waters in the ballow of his hard? hollow of his hand? . . . Lift up your eyes on high, and see who hath created these' (Is 4012, 28). Jahweli is greater than the infinite sen and sky. It was this prophet who made the creatorship of Jahweh a fundamental Jewish belief, and it is to be noted that in his doctrine there is not the faintest echo of the old creation-legends, not the remotest suggestion of a primeval chaos, or of a conflict between light and darkness, to say nothing of a slaying of 'dragons of the prime.' As if to lay the ghosts of all such superstitions, he makes the God of creation say: 'I am Jahweh, and there is none else. I form the light, and create darkness; I make peace, and create evil: I am Jahweh, that doeth all these things' (Is 455.7).

Pure religion has gained an absolute victory over

mythology.

(3) The third type of cosmogony is found in Gn 1. This majestic prologue to the Bible belongs to those Priestly Writings (P) of the post-exilic period which form the greater part of the Hexateuch. Our interpretation of the opening sentences is affected by our solution of a difficult and delicate problem of syntax. Most scholars now read the passage thus:

'When God began to create the heaven and the earth—the earth being without form and void, and darkness being upon the face of the deep, and the spirit of God brooding upon the face of the waters—God said, Let there be light, and there was light.

If this exeges is correct, the writer teaches a dualism. He thinks of a dark watery chaos existing before the creation began, and gives it the mythical name  $T\tilde{e}h\tilde{o}m$  (the Deep'), which is evidently the Heb. equivalent of the Bab. Tiamāt. This is the first of many parallels between the two famous Epics of creation. See, further, Cosmo-

GONY AND COSMOLOGY (Heb.).

The doctrine of a creation out of nothing-The doctrine of a creation out of nothing—ex nihilo—is nowhere expressly taught in Holy Scripture. The first near approach to it occurs in the words of the mother of the Maccabees: ἐξ οὐκ ἄντων ἐποίησεν αὐτὰ ὁ θεόs (2 Mac 7<sup>28</sup>), which are too definitely rendered by the Vulgate: ex nihilo fecitilla Deus. The Wisdom of Solomon, on the other hand distingtly reproduces the Platonia dectrine. mand, distinctly reproduces the Platonic doctrine of the creation of the world 'out of formless matter,' έξ ἀμόρφου ΰλης (11<sup>17</sup>). In the NT the Divine creation of the world is presupposed in many sayings of our Lord and His Apostles, as in many sayings of our Lord and His Apostles, as in those which mention the foundation of the world (Mt 25<sup>34</sup>, Lk 11<sup>50</sup>, Jn 17<sup>24</sup>, Eph 1<sup>4</sup>, He 4<sup>3</sup>, 1 P 1<sup>20</sup>), the creation of man and woman (Mt 19<sup>1-6</sup>, Ac 17<sup>24-26</sup>, 1 Ti 2<sup>13</sup>); and those which represent Him as the Maker of heaven and earth (Mt 11<sup>26</sup>, Lk 10<sup>21</sup>, Ac 17<sup>24</sup>), the Source of all things (Ro 11<sup>36</sup>, I Co 8<sup>6</sup>, Eph 4<sup>6</sup>), the Father who through the Son made the world (Jn 1<sup>3</sup>, Col 1<sup>15-18</sup>, He 1<sup>2</sup>). Faith grasps the fact 'that the worlds have been framed by the word (μήματι) of God; so that what is seen hath not been made out of things which do appear' (μή ἐκ φαυομένων, He 11<sup>3</sup>). (μὴ ἐκ φαινομένων, He 11²).
4. The Greek conception.—While 'he old cos-

mogonic myths were fading in the liv religion of Israel, the wise men turning upon them the light of great decisive step which the I took once for all consisted, a have shown, in the substitute causes acting according to la causes acting arbitrarily.

exist,' and he repeats a story of Augustine's about 'a good old man, who, when some one pertly asked
... what God did before the world was created, answered: He made a hell for the inquisitive' (Instit. I. xiv. 1). But the doctrine of creatio ex nihilo cannot be deduced from Gn 11-3, which rather, as we have seen, teaches a dualism. This was, indeed, the explicit doctrine of some of the early Fathers, who remained in closer touch with the Jews, and therefore correctly interpreted the passage in question. Justin Martyr, quoting Gn 1<sup>1-3</sup>, says that Plato (whom he accuses of atticizing Moses) and his followers 'and we ourselves' have thence learned that 'through the Word of God the whole world came into existence out of things subjacent and before declared by Moses' (Apol. i. 59). Clement of Alexandria also maintained that Plato took from Moses his doctrine of a formless matter, expressly referring for the latter to Gn 12

But Christian thought could not rest in a dualism, whether Mosaic or Platonic or Gnostic. The doctrine of an eternal matter was seen to be The doctrine of an eternal matter was seen to be a dangerous rival to the doctrine of the eternal Logos, and almost with one accord the theologians of the East and West alike set themselves to demolish the pagan conception of an uncreated  $v \lambda \eta$ . With the LXX or the Vulgate instead of the Hebrew text before them, they honestly counted Moses as a monist. But, though revelation thus commed to be on their side, they still behitvally seemed to be on their side, they still habitually based their doctrine upon reason. They were Christian philosophers meeting other philosophers on common ground. Their arguments have been restated in C. M. Walsh's recent book, *The Doctrine of Creation* (1910). 'God alone is without beginning' was the thesis they defended. If matter were uncreated, it would be equal with God—a second God. If there were two first principles they would be incompanied with the world be incompanied to the principles. God—a second God. It there were two arst principles, they would be incommunicable without a third, which would be the ultimate principle. Plainly the one must come from the other, and, yet more plainly, matter from God rather than the reverse. To be Lord of all, God must have created matter. If it were uncreated, the world could not be reconstructed out of it for it could not be reconstructed. be constructed out of it, for it could not be receptive of the qualities which God wished to impose upon it, unless God Himself had made it such as He wished it to be. That which is capable of being made into an artistic world must itself have had a wise and skilful Maker.

These arguments are certainly sufficient to prove the dependence of all things upon God, and the derivation of all things from God. But the affirmation of a time—or rather an eternity—in which God was not a Creator, in which the universe was non-existent, is another matter. Some of the greatest minds found it impossible to conceive such acosmism. Origen held that before the creation of our world God had created others, as He will create others after ours, without beginning or end; that matter, or the substance underlying all the successive worlds, is eternally created (de Princip. III. v. 3-4). Augustine had the deep and pregnant thought that the preservation of the world is a continuous creation (de Civ. Dei, xii. 25). Scotus Erigena, the profoundest thinker in the Middle Ages, taught that God's working is equally eternal with His being; that creation is involved in His essence; that He necessarily manifests Himself in the world; that He procedes it not into the his but only the world; that He precedes it not in time but only in the idea, as its cause (de Divisione Natures, iii. 25). Thomas Aquinas confessed that reason could only be satisfied with the assumption that the world had no beginning; that, God being the sufficients causa mundi, the cause must apparently always have its effect; and that the doctrine of a beginning, or the non-eternity of the world, is to be received sola fide, by an act of pure faith, in deference to authority: 'Mundum incoepisse est credibile, non autem demonstrabile vel scibile' (c. Gent. ii. 38; Summa, i. 46, 104). The Theologia Germanica has this profound passage: 'It belongeth unto the Will, and is its property, that it should will something. What else is it for? For it were pain unloss it had some work to do, and this it vain, unless it had some work to do, and this it cannot have without the creature (or creation). Therefore there must be creatures, and God will have them, to the end that the Will may be put in exercise by their means, and work' (ch. 51). Jacob Boehme likewise saw that a hidden will, which did not become present to itself in the object of its creation, would not attain to manifestation for itself, and so would remain unconscious.

6. The philosophical conception. — Philosophy entered upon a new era when it first ventured to ignore and then to repudiate the orthodox doctrine of creation. For a time it claimed its independence very modestly and tentatively. It seemed still content to bend the knee to authority. Bacon still content to bend the knee to authority. Bacon made a distinction between 'one who philosophizes according to the sense alone,' and 'Sacred Writ'—the former representing matter as 'self-existing,' the latter as 'from God.' That 'matter was created from nothing, we know by faith,' as it is 'one to which those philosophies could not rise' (Works, ed. Spedding, v. 491). Descartes introduces his revolutionary ideas in the humblest tone. 'It his revolutionary ideas in the humblest tone. 'It may be believed, without discredit to the miracle of creation, that the nature of things purely or creation, that the nature of things purely material is much more easily conceived when they are beheld coming . . . gradually into existence, than when they are only considered as produced at once in a finished and perfect state' (On Method, v.). Locke did not feel justified in rejecting the doctrine of creatio ex nihilo. He maintained that the impossibility of conceiving the making of content are represented by the content of the con something of which no part existed before cannot be regarded as a reasonable criterion to set a limit to the operations of an infinite Mind. To him the existence of an extra-mundane Creator was capable of demonstration. Its evidence, if he was not mistaken, was equal to mathematical certainty (Hum. Understanding, iv. 10). Such demonstrations were numerous during the age of Natural Religion, and Coleridge, not without reason, complained that men had come to regard the relation of the Creator to the universe in the same light as that of a mason to his work. Such mechanical deism easily gave place to pure materialism. It was Spinoza who led philosophy into more fruitful fields. As opposed to those mechanical conceptions, 'the developed idea of God as the omnipresent Life of the world, constantly operating in and through natural laws is common to educated and through natural laws, is common to educated theism with pantheism, and is what modern theism owes to pantheistic exaggeration' (Fraser, Phil. of Theism', p. 83). Spinoza regarded the traditional theory of creation as making the nature of God arbitrary and the existence of the world a matter of chance. He therefore entirely rejected it. For, though his Natura naturans, or Nature active, may in a manner be called the Creator of his Matura naturata, or Nature passive, these are consubstantial and co-eternal, neither before nor after the other. There is no beginning in the universe; there can be no end. The existing order of things is the only one possible, and in its involuntary evolution it flows from its cause, the one infinite reality, with the same mathematical necession. infinite reality, with the same mathematical necessity with which the angles of a triangle are derived from the triangle. Fichte follows Spinoza in emphatically repudiating the doctrine of creation, calling it 'the root error of all false metaphysics and dognatics,' which perverts the idea of God from the outset, investing it with caprice,

and changing thought into a dreaming play of fancy ('ein träumendes Phantasiren,' Werke, 1845, v. 479). Hegel accepts the category of creation, but fills it with a new content. 'God,' he says, 'is the Creator of the world; it belongs to His being, His essence, to be Creator; in so far as He is not this, He is imperfectly conceived. Creation is not an act undertaken once upon a time. What belongs to the Idea belongs to it as an eternal moment or determination' (Werke, 1832, xii. 157 f.). 'God does not create the world once; He is the eternal Creator. This eternal self-revela-tion, this actus, is His notion, His definition' (ib. p. 181). 'Ohne Welt ist Gott nicht Gott' (xi. 122). Schleiermacher felt that the idea of a beginning of God's creative activity places Him as a temporal being in the domain of change. He regarded the work of God as Creator as one with His work as Preserver, and the two together as identical with the totality of causation in Nature (Der christl. Glaube, 1889, i. 294–297).

All the English Idealists agree in identifying the Creation with God's self-manifestation, which

the creation with God's seir-manifestation, which they regard as an eternally necessary moral act. 'It is of the very essence of mind or spirit,' says John Caird, 'that it contains in it the necessity of self-manifestation in objective form, and therefore that which we speak of as "the creation of the world" must be conceived as the expression not of relitively will but of the year nature and heing of arbitrary will, but of the very nature and being of God' (Fund. Ideas of Christianity, i. 84 f.). Green expressed the same profound thought more daringly by saying that the world is as necessary to God as God is to the world. The words of two leading German thinkers will show how the later philosophy and theology have welcomed the new con-

sophy and theology have welcomed the new conception:

'The will to create,' says Lotze, 'is an absolutely eternal predicate of God, and ought not to be used to designate a deed of His, so much as the absolute dependence of the world upon His will, in contradistinction to its voluntary emanation from His nature' (Out. of Phil. of Rel. 74). 'It is a sensious representation,' says Lipsius, 'to trace creation back to a single act now lying in the past, or to speak of a first beginning of creation; rather is the whole world-development, so soon as it is viewed religiously, to be brought under the idea of creation, consequently to be regarded as without beginning or end' (Dogmatik, 293).

We cannot do better than close this section with the calm pronouncement of the Nestor of Scottish philosophy:

philosophy:

'I do not find,' says A. C. Fraser, 'that the presence of order and design within the cosmos means that the cosmos must have had a beginning. That the universe should exist without either a beginning or an end of its orderly metamorphoses, does not seem less consistent with the ideas of theism and providence, than the hypothesis of its sudden creation in time—whatever that may mean. . . We seem to be born into an unbeginning and unending divinely natural evolution' (Theism<sup>2</sup>, pp. 125, 133).

'7. The scientific conception. Science has

7. The scientific conception. — Science has widened man's cosmic view and increased his cosmic emotion. His doctrine of creation is transfigured in the light of astronomy and geology, biology and paleontology. His vision of the making of this world at a certain recent time, and of the rest of the universe with it, is replaced by a grander vision of the slow and progressive for-mation, by the action of physical forces, of a universe in which countless new worlds are being formed to-day just as this one—this satellite of the sun-was formed hundreds of millions of years ago. His idea of a primeval chaos, which found expression in all his antique cosmogonies (as in Gn 12), is discarded for the conviction that, when he goes back as far as the wings of imagination can carry him, this universe, however changed in aspect, is still a cosmos. And his old belief that 'there are just as many species of plants and animals as there were different forms originally created by the Infinite Being; and that these different forms, according to the laws of reproduction imposed

upon them, produced others, but always forms like themselves? (Linneus), has yielded to 'a view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and, that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being evolved '(Darwin, Origin of Species, p. 403).

'The progress of science,' as Driver frankly admits, 'has brought the Cosmogony of Genesis into themselves (Linnæus), has yielded to 'a view of

mits, 'has brought the Cosmogony of Genesis into sharp and undisguised antagonism with the Cosmogony of science, . . . and to expect to find in it supernatural information on points of scientific fact, is to mistake its entire purpose' (Genesis, p. 33). There is nothing, however, in the cosmogony of science that is in conflict with that conception of 'a great and good Maker of the world' which is found at the heart of so many primitive and savage religions; or with Isaiah's idea of a Creator who 'hath measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance'; or with the Platonic faith expressed in the *Timews*: 'Let me tell you, then, why the Creator created and made the universe. He was good, and desired that all things should be as like Himself as possible' (Jowett,

The scientific conception of creation has important bearings upon religion. It has at once made God greater and brought Him nearer. It has not only immeasurably expanded the heavens which declare His glory, but it has substituted the action of an immanent for the action of a transcendent Creator. 'The general effect of the intellectual movement of modern times,' says J. Fiske, 'has been to discredit more than ever before the Latin idea of God as a power outside of nature and occasionally interfering with it' (Through Nature to God, 147). The 'Great Original' can no longer be conceived as a Demiurge or Master-builder, putting forth His power once and then staying His hand; His creative action is spread all along the line of gradual development, revealing itself in ever higher potencies. And in place of a God beyond the stars, who created the world once upon a time and then was content with 'seeing it go,' we have a Spirit who is 'closer than breathing, and nearer than hands and feet.

Further research into the ultimate nature of

Further research into the ultimate nature of matter seems destined to upset many hypotheses.

'There is nothing,' said Lord Kelvin, 'between absolute scientific belief in a Creative power, and the acceptance of the theory of a fortuitous concourse of atoms. . . If you think strongly enough, you will be forced by science to the belief in God which is the foundation of all religion' (Nineteenth Cent., June 1903). And now, even the atomic theory of the origin of things, after a vogue of more than 2000 years, is at length being set aside, for it is found, as Sir O. Lodge says, that the 'atoms of matter,' instead of being ultimate, 'are liable . . to break up or explode, and so resolve themselves into simpler forms,' called electrons, which again are described as 'knots or twists or vortices, or some sort of either static or kinetic modification, of the ether of space' (Life and Matter, 28, 32). Ether 'is probably the fundamental substratum of the whole material world, underlying every kind of activity, and constituting the very atoms of which our own bodies are composed '(The Substance of Faith, 74). 'If any one thinks that ether, with all its massiveness and energy, has probably no psychical significance, I find myself unable to agree with him' (The Ether of Space, 1909, p. 114).

The scientific idea of creation as involution and evolution has thus brought us nearer than ever to

evolution has thus brought us nearer than ever to

The scientific idea of creation as involution and evolution has thus brought us nearer than ever to the Mind which, like our own, must underlie the material fabric, the Nous of Anaxagoras. 'The process of evolution can be regarded as the gradual unfolding of the Divine Thought, or Loyos, throughout the universe, by the action of Spirit upon matter' (Substance of Fatth, 59). There are some who 'recognise in this extraordinary development a contact between this material frame of things and a universe higher and other than anything known to our senses: . . a universe capable of infinite development . . long after this planet . . . shall have fulfilled its present spire of destiny, and retired cold and lifeless upon its endless way' (Life and Matter, 1991.).

## CREEDS AND ARTICLES.

Bab.-Assyr. (T. G. PINCHES), p. 231. Buddhist (J. H. BATESON), p. 232. Christian (A. E. BURN), p. 237. Egyptian (J. BAIKIE), p. 242.

CREED (Bab.-Assyr.).—Though the religion of Babylonia and Assyria was practically homogeneous, there were probably nearly as many different beliefs as there were States or provinces; and the creed of the people became modified from the state of the people and the creed of the people became modified from time to time, either through the progress of thought or on account of political exigencies. These changes in the beliefs of the people, which sometimes bore upon the nature of the gods whom they worshipped, were in some cases such as to form either important variations in the original creeds, or transformations such as might have made a fresh statement of their position needful.

Notwithstanding that this was the case, it is not certain that in any of the centres of religious teaching the priests ever thought of putting forward anything in the nature of a creed, as we understand the word to-day; indeed, no document in which Hebrew.—See 'Jewish.' Jewish (H. Hirschfeld), p. 244. Muhammadan (S. Lane-Poole), p. 246. Parsi (N. SÖDERBLOM), p. 247.

they have formulated the articles of their belief has yet come down to us, except the well-known legends of their gods (which, however, are more of the nature of sacred books), and certain introduc-tions to incantations. That they should have formulated a statement of their religious beliefs, however, would not by any means have been either an impossible thing or against their ideas of religious an impossible thing or against their ideas of rengious propriety. Often enough, and seemingly at all periods, they declared their creeds in the names they bore. Thus, in the time of Lugal-anda and Urn-ka-gina (c. 4000 B.C.), we meet with names similar to the following: (S)ur-Bau, 'man of Bau'; Ura-Dumuzi, 'servant of Tammuz'; Envin-Surupak'-zida, 'the word of Surupak is true,' or the

1 Or Sukurra. This was the god of Surippak, or Suruppak, now Fara, which was the city of Ut-napistim, the Babylonian Nosh.

like; Amar-Asnan, 'the corn-god's steer,' etc.; and names of the same character continued to be used all through the succeeding periods. During the early Semitic period (2000 B.C.) there occur names like Šumna-ilu-lū-ilia, 'if God were not my god'; Šumna-ilu-lū-sanas, 'if my god were not the sun-god'; Šin-lū-sanan, 'Sin (the moon-god) has no equal'; Zēr-panitum-ummi, 'Zērpanitum is my mother'; Yaum-ilu, 'Jah is God'; Nabium-ilu, 'Nebo is god,' etc. In Assyrian literature we likawise find such payase as 4 the tallal.' I trust likewise find such names as Assur-taklak, 'I trust in Assur'; Tukulti-Ninip, 'my trust is Ninip,' with its synonym Tukulti-Apil-Esurva (Tiglath-pileser), 'my trust is the son of É-šarra'; Usur-Amat-Éa, 'keep the word (or command) of Ea'; Sin-Sadúa, 'Sin is our mountain (of defence),' etc. Sin-sadûa, 'Sin is our mountain (of defence),' etc. Some names express belief as to the identity of divinities—possibly in opposition to those whose creed was different: for instance, Nabū-yū'u, 'Nebo is Jah'; Yā-Dagunu, 'Jah is Dagon'; and such names as Yā-ābini, 'Jah is our father,' form an interesting series. The Babylonians, like all the Semites, were intensely religious, and seldom objected to asserting their creed; indeed, some of the above names show that the Western Semites in general announced it boldly, and that what men called themselves became, as it were, a challenge to such as they regarded as heterodox. to such as they regarded as heterodox.

Naturally, these are very short professions of faith, and it is doubtful whether longer ones are likely to be found. Sometimes, however, it seems to have been considered necessary to make some kind of a statement before beginning the utterance of an incantation. This took the form of a recital of some religious or mythological event, which justified the mystic words and the ceremonies which were to follow. Among these are the stories of the various evil spirits, the poetical description of the vine of Eridu, and the primitive account of the Creation prefixed to, and forming part of, the incantation to toothache. The composition most like a creed, however, is that known as the bilingual story of the Creation, which is prefixed

to an ineantation for purification:

Incantation.—The holy house, the house of the gods, in a holy place had not been made;
A plant had not been brought forth, a tree had not been

A plant had not been prought forth, a tree had not been created;
A brick had not been laid, a beam had not been shaped;
A louse had not been built, a city had not been constructed;
A city had not been made, the inhabitants had not been installed (?);
Niffer had not been built, f-kura 1 had not been constructed;
Erech had not been built, f-anna 2 had not been constructed;
The Abyes had not been made, Eridu had not been constructed; structed;
The holy house, the house of the gods—its seat had not been

made; the house of the gods—its seat had not been made;
The whole of the lands were sea.
When within the sea there was a stream,
In that day Eridu was made, it sagila was constructed—
E-sagila, which the god Lugal-du-azaga had founded within the Abyss.

Babylon was built, É-sagila was completed; He made the gods and the Anumaki altogether.

He made the gods and the Anunnaki altogether,
The holy city, the seat of their hearts' joy, as supreme he
proclaimed.
Marduk bound together a reed-bank before the waters,
He made earth, and poured it out against the bank,
To settle the gods in a seat of joy of heart.
He made mankind—
Aruru made the seed of mankind with him.
He made the beasts of the field and the living creatures in the
desert.

He made the beasts of the field and the living creatures in the desert;
He made the Tigris and the Euphrates, and set (them) there.
Well's proclaimed he their name.
Herb, the marsh-plant, the reed, and the thicket, he made;
He made the verdure of the plain;
The lands (and) the marshes were the reedy bank.
The cow, her young, the steer; the sheep, her young, the lamb of the fold;
Plantations and forests also.
The goat and the wild goat were dear (?) to him.
Lord Marduk made a bank on the sca-shore,
. . . [which at first he made not,

Hore the obverse breaks off, and, where the text becomes legible again, on the reverse, it is an incantation for purification, similar to many others in Assyro-Babylonian literature. It seems probable that the other centres of Divine worship in Babylonia had similar statements of the creed held in the place, and this presupposes theological schools and colleges for the priests. At present we do not know much, if anything, about them; but the temple-libraries may ultimately yield information upon the point, together with statements of their beliefs similar to that translated above.

CREED (Ruddhist) Neonly six companying be.

CREED (Buddhist).-Nearly six centuries before the birth of Christ, at a time when religious speculation in India was rife, Siddhārtha Gautama, the son of a Sakya chieftain, went forth from his home to 'seek after what was right.' Reverence and affection for the founder of one of the world's greatest religions have led his disciples, during many centuries, and in different Eastern countries, to embellish, in apocryphal literature, the story of Gautama's life and teaching. But it is beyond doubt that the scheme of life, religious faith, and moral standards attributed to the founder of Buddhism represents his actual teaching. In regard to this the greatest authorities on Buddhism are

dhism represents his actual teaching. In regard this the greatest authorities on Buddhism are agreed.

'When it is recollected,' says Rhys Davids, 'that Gautama Buddha did not leave behind him a number of deeply simple sayings, from which his followers subsequently built up a system or systems of their own, but had himself thoroughly elaborated his doctrine, partly as to details, after, but in its fundamental points even before, his mission began; that, during his long career as teacher, he had ample thine to repeat the principles and details of the system over and over again to his disciples, and to test their knowledge of it; and finally, that his leading disciples were, like himself, accustomed to the subtlest metaphysical distinctions, and trained to that wonderful command of memory which Indian ascelies then possessed; when these facts are recalled to mind, it will be seen that much more reliance may reasonably be placed upon the doctrinal parts of the Buddhist Scriptures than upon correspondingly late records of other religions (Buddhism, p. 861.).

Oldenberg (Buddha, p. 2061, Eng. tr.) speaks to the same general effect: 'On the whole we shall be authorized to refer to Buddha limself the most essential trains of thought which we find recorded in the sacred texts, and in many places it is probably not too much to believe that the very words in which the ascetic of the Sakya house couched his gospel of deliverance have come down to us as they fell from his lips. We find that, throughout the vast complex of ancient Buddhist literature which has been collected, certain mottoes and formulas, the expression of Buddhist convictions upon some of the weightiest problems of religious thought, are expressed over and over again in a standard form adopted once for all. Why may not these be words which have received their currency from the founder of Buddhism, which had been spoken by him hundreds and thousands of times throughout his long life, devoted to teaching?'

In the valley of the Ganges, the birthplace of

In the valley of the Ganges, the birthplace of Buddhism, there was, at the time when the new religion came into being, a maze of interacting ideas, which Rhys Davids (Eurly Buddhism, p. 23) has classified as follows: (1) The very wide and varied group of ideas about souls supposed to dwell within the bodies of men and animals, and to animate moving objects in Nature (trees and plants, rivers, planets, etc.). These may be summed under the convenient modern term of Animism. (2) We have later and more advanced

<sup>1</sup> The temple at Niffer. 8 Or, 'as (being) good.'

<sup>&</sup>lt;sup>2</sup> The temple at Erech.

ideas about the souls supposed to animate the greater phenomena of Nature. These may be summed under the convenient modern term of Polytheism. (3) We have the still later idea of a unity lying behind all these phenomena, both of the first and of the second class—the hypothesis of a one First Cause on which the whole universe in its varied forms depends, in which it lives and moves, and which is the only reality. This may be summed under the convenient modern term of *Monism*. (4) We have the opposite view. In this the First Cause has either not been reached in thought, or it has been considered and deliberately rejected; but otherwise the whole soul-theory has been retained and amplified, and the hypothesis of the eternity of matter is held at the same time. This may be summed under the convenient modern term of *Dualism*.

term of Dualism.

'These modern Western terms, though useful for classification, never exactly fit the ancient Eastern thought. And we must never forget that the clear-out distinctions we now use were then perceptible to only quite a few of the clearest thinkers. Most of the people held a strange jumble of many of the notions current around them. The enumeration here made is merely intended to show that, when Buddhism arose, the country was seething, very much as the Western world was at the same period, with a multitude of . . theories on all sorts of questions—ethical, philosophical, and religious. There was much superstition, no doubt, and no little sophistry. But, owing parely to the easy economic conditions of those times, partly also to the mutual courtesy and intellectual alertaess of the people, there was a very large proportion of them who were earnestly occupied in more or less successful attempts to solve the highest problems of thought and conduct '(ib. p. 24).

Traces of the influence of all these ideas upon his mind can be found in the teaching of Gautama.

his mind can be found in the teaching of Gautama, but the current beliefs satisfied neither his nature nor his aspirations. In two authoritative texts he reveals the reasons why prevailing beliefs were impotent to satisfy him, and why he set himself to endeavour to get to the fountain-head of truth. The first is as follows:

An ordinary unscholared man, though himself subject to old age, not escaped beyond its power, when he beholds another man old, is hurt, ashamed, disgusted, overlooking the while his own condition. Thinking that that would be unsuitable to me, the infatuation of a youth in his youth departed utterly from me'(Anguttara, i. 146).

me' (Anguttara, i. 146).
The other text says:

'Before the days of my enlightenment, when I was still only a
Bodhisat, though myself subject to re-birth, old age, disease,
and death, to sorrow and to evil, I sought after things subject
also to them. Then methought: Why should I act thus? Let
me, when subject to these things, seeing the danger therein,
seek rather after that which is not subject thereto, even the
supreme bliss and security of Nirvana' (Majjhima, i. 163).

After having followed to no nurpose, the paths of

After having followed, to no purpose, the paths of metaphysical speculation, of mental discipline, and of ascetic rigour, Gautama reaped on one memorable night the fruit of his prolonged spiritual effort, the truth of things being of a sudden so clearly revealed to him that thenceforth he never swerved for a moment from devotion to his creed and to the mission that it imposed upon him.

The enlightenment which Gautama received, and which was regarded by himself and his followers as a victory over all the powers of darkness, is

uniformly described as

uniformly described as

'a mental state of exaltation, bliss, insight, altruism. The different Suttas emphasize different phases, different facets, as it were, of this condition. But they regard it as one and the same upheaval of the whole mental and moral nature,—will, emotion, and intellect being equally concerned. Thus one Sutta (the Mahâ-saccaka) lays stress on the four Raptures, and the three forms of Knowledge; another (the Dvedhâ-vitakka) on the certainty, the absence of doubt; another (the Baya-therava) on the conquest over fear and agitation; another (the Ariva-pariyesanâ) on the bliss and security of the Nirvana to which he then attained.

In the first of these Suttas the recital ends:

'When this knowledge, this insight, had arisen within me, my heart was set free from the intoxication of lusts, set free from the intoxication of becomings, set free from the intoxication of ignorance. In me, thus emancipated, there arose the certainty of that emancipation. And I came to know: "Re-birth is at an end. The higher life has been fulfilled. What had to be done has been accomplished. After this present life there will be no beyond." This last insight did I attain to in the last watch of the night. Ignorance was beaten down, insight arose,

darkness was destroyed, the light came, inasmuch as I was there strenuous, aglow, master of myself' (Rhys Davids, Early Buddhism, p. 35 f.).

Having received enlightenment, Buddha proceeded to Benares. There he met some of his

former disciples, the five ascetics, and explained to them the fundamental truths of his religion—an exposition preserved in the *Dhammachakka-ppavattana Sutta*, the Sutta of the Foundation of the Kingdom of Righteousness.

the Kingdom of Righteousness.

'This expression is usually translated "Turning the wheel of the Law," which, while retaining the Buddhist figure of speech, fails to represent the idea the figure was meant to convey; the rendering in the text gives up the figure in order to retain the underlying meaning. The "cakra" (Pali cakka) is no ordinary wheel; it is the sign of dominion; and a "cakravarti" is "he wino makes the wheels of his charlots roll unopposed over all the world"—a universal monarch. Dharma (Pali Dhamma) is not law, but that which underlies and includes the law,—a word often most difficult to translate, and best rendered here by truth or righteousness; whereas the word "law" suggests ceremonial observances, outward rules, which it was precisely the object of Gautama's teaching to do away with. Pravartana (Pali ppavattana) is "setting in motion onwards," the commencement of an action which is to continue. The whole phrase means, therefore, "To set rolling the royal chariot-wheel of a universal empire of truth and righteousness" (Rhys Davids, Buddhism, p. 45).

The full text of the Sutta is as follows:

"There are two extremes which he who has gone forth ought

The full text of the Sutta is as follows:

'There are two extremes which he who has gone forth ought not to follow—habitual devotion, on the one hand, to the passions, to the pleasures of sensual things, a low and pagan way (of seeking satisfaction), ignoble, unprofitable, fit only for the worldly-mindéd; and habitual devotion, on the other hand, to self-mortification, which is painful, ignoble, unprofitable. There is a Middle Path discovered by the Tathâgata—a path which opens the eyes, and bestows understanding, which leads to peace, to insight, to the higher wisdom, to Nirvana. Verily! it is this Aryan Eight-fold Path; that is to say, Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livellhood, Right Effort, Right Mindfulness, and Right Rapture.

of Livelihood, Right Effort, Right Mindfulness, and Right Rapture.

Now this is the Noble Truth as to suffering. Birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant; and any craving unsatisfied, that, too, is painful. In briet, the five aggregates of clinging (that is, the conditions of individuality) are painful.

Now this is the Noble Truth as to the origin of suffering. Verily! it is the craving thirst that causes the renewal of becomings, that is accompanied by sensual delights, and seeks satisfaction, now here, now there,—that is to say, the craving for the gratification of the senses, or the craving for a future life, or the craving for prosperity.

Now this is the Noble Truth as to the passing away of pain. Verily! it is the passing away so that no passion remains, the giving up, the getting rid of, the emancipation from, the harbouring no longer of, this craving thirst.

Now this is the Noble Truth as to the way that leads to the passing away of pain. Verily! it is this Aryan Eight-fold Path, that is to say, Right Views, Right Aspirations, Right Speech, Conduct, and Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture' (Rhys Davids, Early Buddhism, p. 51f.).

This concise statement contains all the essential elements of the Buddhist creed. The great deliver-

elements of the Buddhist creed. The great deliverance, of which Gautama himself was conscious, and the means whereby he had attained it, formed the basis of all his subsequent teaching. It was this gospel of deliverance which won his earliest disciples, and which they in turn were commissioned by the Buddha to preach to suffering men. Sixty monks were soon enrolled as converts of the new faith, and they were sent forth as its first apostles. In sending them forth, Gautama thus addressed them:

addressed them:

'I am delivered from all fetters, human and divine. You, too, O monks, are freed from the same fetters. Go forth and wander everywhere, out of compassion for the world, and for the welfare of gods and men. Go forth, one by one, in different directions. Preach the doctrine, salutary in its beginning, middle, and end, in its spirit, and in its letter. Proclaim a life of perfect restraint, chastity, and ceilbacy. . . . I will go also to preach this doctrine' (Mahānagga, i. 11. 1).

When the band of believers was increased to a thousand, Gautama preached his 'burning' fire-

sermon, on a hill Gayasīsa, near Gaya:

sermon, on a hill Gayasisa, near Gaya:

'Everything, O monks, is burning... The eye is burning;
visible things are burning. The sensation produced by contact
with visible things is burning—burning with the fire of lust
(desire), emnity, and delusion, with birth, decay, death, grief,
lamentation, pain, dejection, and despair. The ear is burning,
sounds are burning; the nose is burning, odours are burning;
the tongue is burning, tastes are burning; the body is burning,

, '

objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body, weary of the mind. Becoming weary, he frees himself from passions and lusts. When free, he realizes that his object is accomplished, that he has lived a life of restraint and chastity, that re-birth is ended' (Mahāvangu, i. 21. 2ff.).

Shortly before his death the same teaching was again committed to the faithful Ananda:

again committed to the faithful Ahanda;

O Ananda, I am now grown old, and full of years, and my journey is drawing to its close; I have reached eighty years—my sum of days—and, just as a worn-out cart can only with much care be made to move along, so my body can only be kept going with difficulty. It is only when I become plunged in meditation that my body is at ease. In future be ye to your-selves up your own light, your own refuge; seek no other refuge. Hold fast to the truth as your refuge; look not to any one but yourselves as a refuge (Alaha-parinibbana-sutta, ii. 32, 33).

Gauta ma afterwards delivered a support of the

Gautama afterwards delivered a summary of the duties of the monks who were to be the mission-

aries of his faith to the world:

aries of his faith to the world:

'Which then, O monks, are the truths (the seven jewels) it behoves you to spread abroad, out of pity for the world, for the good of gods and men? They are: (1) the four earnest reflexions (smrttt, satipatthāna; on the impurities of the body, on the impermanence of the sensations, of the thoughts, of the conditions of existence); (2) the four right exertions (sammappadhāna; viz. to prevent demerit from arising, get rid of it when arisen, produce merit, increase it); (3) the four paths to supernatural power (iddhi-pūda; viz. will, effort, thought, intense thought); (4) the five forces (pantā-būla; viz. faith, energy, recollection, self-concentration, reason); (5) the proper use of the five organs of sense; (6) the seven "linbs" of knowledge (būdhy-anga; viz. recollection, investigation, energy, joy, serenity, concentration of mind, equanimity); (7) the noble eight-fold path' (ldahā-parimbbāna, iii. 65). In order to form an accurate judgment regarding

In order to form an accurate judgment regarding the meaning of the teaching of Buddha as set forth in the Dhammachakka-ppavattana Sutta, it is necessary not only to explain the terms used in the Sutta, but also to understand the doctrines which it involves. In subsequent Suttas each word, each clause, and each idea in the Discourse is fully commented and enlarged upon. It is possible, in the light of these explanations, to arrive at a true conception of the meaning which the Discourses conveyed to early Buddhists. From the same sources a general idea of the underlying

beliefs may be gained.

1. The Buddhist scheme of life.—In Buddhist thought man is not regarded as a soul residing in a physical body, or as possessing a soul which may be separated from the body and continue to exist. A belief in self or soul is regarded so distinctly as a heresy that two well-known words in Buddhist terminology have been coined on purpose to stig-matize it. The first of these is sakkāya-ditţhi, 'the matize it. The first of these is sakkāya-ditţhi, 'the heresy of individuality,' the name given to this belief as one of the three primary delusions (the others being doubt, and belief in the efficacy of rites and ceremonies) which must be abandoned at the very first stage of the Buddhist path of holiness. The other is attavāda, 'the doctrine of soul or self,' which is a name given to it as a part of the chair of causes which lead to the origin of evil. chain of causes which lead to the origin of evil. It is there classed—with sensuality, heresy (as to eternity and annihilation), and belief in the efficacy of rites and ceremonies—as one of the four upa-danas, which are the immediate cause of birth, decay, death, sorrow, lamentation, pain, grief, and

despair.

What then is man? He is an aggregate of different properties or qualities—called skandhas, or aggregates. These skandhas are as follows:
(1) the material properties or attributes (rilpa);
(2) the abstract ideas (2) the sensations (vedanā); (3) the abstract ideas (sannā): (4) the tendencies or potentialities (lit. confections, sankhārā); and (5) thought, reason

(viññāna). It is distinctly laid down that none of these skandhas separately, nor the skandhas as a whole,

is the soul.

'Therefore, O monks, whatever in the way of material form, sensations, perceptions, etc., respectively, has ever been, will be, or is, either in our case or in the outer world, or strong or weak, or low or high, or far or near, it is not self; this must he in truth perceive, who possesses real knowledge. Whosoever regards things in this light, O monks, being a wise and noble hearer of the word, turns himself from sensation and perception, from conformation and consciousness. When he turns therefrom, he becomes free from desire: by the cessation of desire he obtains deliverance; in the delivered there arises a consciousness of his deliverance: re-birth is extinct, holiness is completed, duty is accomplished; there is no more a return to this world, he knows' (Mahāvagga, i. G. 41ff.).

Gautama refused not only to give a definite answer to questions concerning the relation of the body to the soul, but even to discuss the matter.

body to the soul, but even to discuss the matter. The question 'whether the soul is the same as the body, or different from it,' was one of the Indeter-

minates, prohibited questions.
It is the union of the skandhas which makes the

individual:

individual:

'Every person, or thing, or god is therefore a putting together, a compound. And in each individual, without any exception, the relation of its component parts is ever changing, is never the same for two consecutive moments. It follows that no sooner has separateness, individuality, begun, than dissolution, disintegration, also begins. There can be no individuality without a putting together: there can be no putting together without a becoming; there can be no becoming different is and there can be no becoming different without a dissolution, a passing away, which sooner or later will inevitably be complete' (Rhys Davids, Early Buddhism, p. 57).

The great fact of life is the 'Wheel of Life,' called Patica-Sammuppāda (i.c. origination through dependence): (1) on account of Ignorance, the sankhāras; (2) on account of the sankhāras, Consciousness; (3) on account of Consciousness, Name and Form; (4) on account of Name and Form, the six Provinces (of the six senses); (5) on account of the six Provinces, Contact; (6) on account of Contact, Sensation; (7) on account of Sensation, Craving; (8) on account of Contact (Contact). Craving, Attachment; (9) on account of Attachment, Becoming; (10) on account of Becoming, Birth; (11) (12) on account of Birth, old age, and death, grief, lamentation, suffering, dejection, and despair.

Buddhism teaches that everything in life has a cause, and that the Wheel of Life must revolve, one cause leading to another, according to an irresistible law. But there is no attempt to explain the ultimate cause of all things. This Doctrine is embodied in the familiar stanza, which is engraved upon many an image of the Buddha, and impressed upon the moulded ashes of the

dead:

'Of all the phenomena sprung from a cause
The Buddha the cause hath told,
And he tells, too, how each shall come to its end,
Such alone is the word of the Sage' (Vinaya, i. 40).
Death does not cause the Wheel of Life to cease

to turn; it is only a link in the ceaseless chain of existence. At the moment of death a new life comes into being. The skandhas re-combine, under conditions determined by the amount of merit or demerit which their previous combination has accumulated. The man is the same as his prede-cessor in the chain of re-birth. And yet he is not the same; he is on a higher or a lower scale of existence, according as his previous life has been good or bad. This is karma (q.v.), the doctrine on which the whole of Buddhism turns.

Existence is conjoined with pain—pain to which there is no ending. The conditions which make an individual are the conditions that give rise to pain. Birth, death, disease, unions, separations, unsatisfied cravings, in fact all that goes to make individuality, are painful; existence, from beginning to end, is painful.

But why this pain of life, this life of pain? The

second truth answers the question. Rhys Davids says that the last words in this Noble Truth might be rendered 'the lust of the flesh, the lust of life,

and the love of this present world' (Early Buddhism, p. 55). The author of The Creed of Buddha says (p. 80), with reference to this craving, or thirst, which Gautama affirmed to be the origin of

suffering:

suffering:

'Desire for the pleasures, or rather for the joys, that minister to the real self is wholly good. It is desire for the pleasures that minister to the lower self; it is the desire to the fleasures that minister to the lower self; it is the desire to affirm the lower self, to live in it, to ding to it, to rest in it; it is the desire to identify oneself with the individual self and the impermanent world which centres in it, instead of with the Universal Self and the eternal world of which it is at once the centre and the circumference:—it is this desire, taking a thousand forms, which is evil, and which proves itself to be evil by causing ceaseless suffering to mankind. If the self is to be delivered from suffering, desire for what is impermanent, changeable, and unreal must be extinguished; and the gradual extinction of unworthy desire must therefore be the central purpose of one's life.'

The question that Gautama set himself to solve

The question that Gautama set himself to solve was the cessation of the pain consequent upon and inherent in existence itself, and the answer to his search was the attainment of Nirvana, by way of

the Noble Eight-fold Path.

2. The Eight-fold Path.—The divisions of the path are, as already stated: Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, Right Rapture. The four stages of the path are: (1) The 'entering upon the stream, Conversion; which follows on (a) companionship with the good (b) heaving of the law (c) enjoybetoned with the good, (b) hearing of the law, (c) enlightened reflexion, or (d) the practice of virtue. The unconverted man is unwise, under the influence of sin, enmity, and impurity; but if, by one or more of the means just mentioned, he has arrived at a perception of the 'four Noble Truths,' he has become converted, and has entered the first path. While in this path, he becomes free successively from the delusion of self, from doubt as to the Buddha and his doctrines, and from the belief in the efficacy of rites and ceremonies. Better than the efficacy of rites and ceremonies. universal empire in this world, better than going to heaven, better than lordship over all worlds is (this three-fold) fruit of the first path' (Dhammapāda, verse 178). (2) The path of those who will only once return to this world. The converted man, free from doubt and the delusions of self and ritualism, succeeds in this path in reducing to a minimum lust, hatred, and delusion. (3) The path of those who will never return to this world; in which, the last remnants of sensuality and malewhich, the last remnants of sensuality and male-volence being destroyed, not the least low desire for oneself, or wrong feeling towards others, can arise in the heart. (4) The path of the holy ones; more exactly, worthy ones, arahats; in which the saint becomes free from desire for material, or immaterial, existence; from pride and self-right-cousness, and ignorance (Rhys Davids, Bud-dhism, p. 108 f.). Several words are used in this description of the Eight-fold Path which require explanation.

Eight-fold Path which require explanation.
i. Right Views.—Right Views refer principally to the four truths, enunciated in the Dhamma to the four truths, enunciated in the Dhamma chakka-ppavattana Sutta, and the 'three signs, which include (a) the first of the four bruths, (b) impermanence, and (c) non-soul, i.e. the absence of Impermanence and non-soul are both a soul. declared to be the 'signs' of every individual, whether god, man, or animal.

ii. Right Aspirations.—The Buddhist faith does

not teach the suppression of all desire, but the suppression of evil desires, low ideals, useless cravings, idle excitements, by the cultivation of the opposite—right desires and lofty aspirations. In the Majjima (ii. 25) examples are given of right desire, e.g. the desire for emancipation from sensuality, aspirations after the attainment of love for others, the wish not to injure any living thing, the desire for the eradication of wrong, and for the promotion of right dispositions in the heart.

iii. Right Speech .- To shun the company of the witless; to hold communion with the wise; to

witless; to hold communion with the wise; to give honour where honour is due: this is a great blessing (Mahā-parinibbāna Sutta, i. 31).

iv. Right Conduct.—The two most important features of this quality are love and joy. Love, in the Pāli, is mettā, and the Mettā Sutta (Sutta Nipāta, viii. 7-9) says:

'As a mother, even at the risk of her own life, protects her son, her only son, so let him cultivate love without measure towards all beings. Let him cultivate towards the whole world—above, below, around—a heart of love unstinted, unmixed with the sense of differing or opposing interests. Let a man maintain this mindfulness all the while he is awake, whether he be standing, walking, sitting, or lyng down. This state of heart is the best in the world.' Again, the Majjimma (i. 129):

'Our mind shall not waver. No evil speech will we utter. Tender and compassionate will we abide, loving in heart, void of malice within. And we will be ever suffusing such an one with the rays of our loving thought. And with that feeling as a basis we will ever be suffusing the whole world with the thought of love, far-reaching, grown great, beyond measure, void of anger or ill-will.'

And the Means that can be used as bases for doing right are not worth the sixteenth part of the emancipation of heart

void of anger or ill-will.'

And the Itivuttaka (xxvi.):

'All the means that can be used as bases for doing right are not worth the sixteenth part of the emancipation of heart through Love. That takes all those up into itself, outshining them in radiance and glory, just as whatsoever stars there be, their radiance avails not the sixteenth part of the radiance of the moon. That takes all those up into itself, outshining them in radiance and glory—just as in the last month of the rains, at harvest time, the sun, mounting up on high into the clear and cloudless sky, overwhelms all darkness in the realms of space, and shines forth in radiance and glory—just as in the night, when the dawn is breaking, the Morning Star shines out in radiance and glory—just so all the means that can be used as helps towards doing right avail not the sixteenth part of the emancipation of the heart through Love.'

The joy of the faith is referred to in the 'Dialogues of the Buddha':

'When these five Hindrances have been put away within him, he looks upon himself as freed from debt, rid of disease, out of jail, a free man, and secure. And gladness springs up within him on his realizing that, and joy arises to him thus gladdened, and so rejoicing all his frame becomes at ease, and being thus at ease he is pervaded with a sense of peace, and in that peace his heart is stayed' (Rhys Davids, Dialogues of the Buddha, i. 34).

V. Right Mode of Livelihood.—' Whoso hurts and

v. Right Mode of Livelihood .- 'Whose hurts and

v. Right Mode of Livelihood.—'Whose hurts and harms living creatures, destitute of sympathy for any living thing, let him be known as an outcaste' (Vasala Sutta, Sutta Nipāta, vii. 2).

vi. Right Effort.—This signifies 'a constant intellectual alertness.' The three cardinal sins of Buddhism are: sensuality (dosa), ill-will (moha), and stupidity or dullness (rāga); the last mentioned being regarded as the worst.

The 'Four Great Efforts' (sammappadhānā) are the effort or exertion (a) to prevent sindlness arising, (b) to put away sinful states which have arisen, (c) to produce goodness not previously ex-

arisen, (c) to produce goodness not previously existing, and (d) to increase goodness where it does exist (Mahā-parinibbāna-sutta, SBE xi. 63 n.).
'The Four Roads to Saintship' (iddhipādā) are

four means by which saintship is obtained, viz.

(a) the will to acquire it, (b) the necessary exertion, (c) the necessary preparation of the heart, and (d) investigation (SBE xi. 63).

vii. Right Mindfulness.—This is closely connected with Right Effort. Dialognes in the Digha (ii. 290-315) and Majjhima (i. 55 f.) are devoted to the subject:

The subject:

'The disciple, whatsoever he does, whether going forth or coming back, standing or walking, speaking or silent, eating or drinking, is to keep clearly in his mind all that it means, the temporary character of the act, its ethical significance, and that, above all, behind the act there is no actor (goer, seer, eater, speaker) that is an eternally persistent unity.

viii. Right Rapture.—In the Dhammapāda (verses 197-200) this Right Rapture is thus de-

scribed:

word :

'It is in very bliss we dwell, we who hate not those who

hate us;
Among men full of hate, we continue void of hate.
It is in very bliss we dwell; we in health among the ailing;
Among men weary and sick, we continue well.
It is in very bliss we dwell, free from care among the care-

Among men full of worries, we continue calm. It is in very bliss we dwell, we who have no hindrances; We will become feeders on joy, like the gods in their shining splendour!

In conformity with the Pali text, all the divisions of the Eight-fold Path are described by a single word—'right.' This is, perhaps, the best translation of the original sammā. The word significs tion of the original sammā. The word signifies 'going with'; used as an adjective, it is rendered 'general,' 'common,' or 'corresponding,' 'mutual'; as an adverb, 'commonly,' 'usually,' 'normally,' or 'fittingly,' 'properly,' 'correctly.' It is used, in a secondary sense, to mean round, fit and perfect, normal and complete. 'Right,' therefore, in the sense of 'correct' has to be understood, i.e. in agreement with the teaching of Gautama. The word is not used with a moral significance. The eightfold description of the perfect life is of such vital importance for the correct understanding of the importance for the correct understanding of the Buddhist creed that it may be convenient to summarize the meaning of each division of the path:

1. Right views; free from superstition or delu-

sion.

2. Right aspirations; high and worthy of the intelligent man.

3. Right speech; kindly, open, truthful.
4. Right conduct; peaceful, honest, pure.
5. Right livelihood; bringing hurt or danger to no living thing. Right effort; in self-training and self-control.

Right mindfulness; the active, watchful

mind.

8. Right rapture; carnest thought on the deep mysteries of life.

Gogerly (Journ. Ceylon As. Soc., 1865) gives a slightly different rendering:
1. Correct views (of Correct doctrines.

truth).

2. Correct thoughts. A clear perception (of

their nature). 3. Correct words. Inflexible veracity. Correct conduct. Purity of conduct.

Correct (mode of obtaininga) livelihood.

6. Correct efforts. medita-Correct tion.

Perseverance in duty. Holy meditation.

A sinless occupation.

Correct tranquil-Mental tranquillity. lity.

The hindrances in the way. - The hindrances in the way of treading the Eight-fold Path, and thus securing deliverance, are very clearly detailed. They are described under different headings—'the Five Hindrances,' 'the Ten Fetters,' and 'the Four Intoxications.'

Four Intoxications.'

(a) The Five Hindrances (nivaranā) are sensuality, ill-will, torpor of mind or body, worry, and wavering. These affect a man like debt, disease, imprisonment, slavery, and anxiety.—(b) The Ten Fetters (sangyojanas) are: (1) delusions about the soul (sakkāya-diṭṭht), (2) doubt (vicikicchā), (3) reliance on ceremonies (sīlabbata-parāmāsa), (4) sensuality (kāma), (5) ill-will (paṭṭha), (6) desire for re-birth in heaven (arūpa-rāga), (3) pride (māno), (9) self-righteousness(udāhacca),(10) ignorance(avijjā).—(c) The Four Intoxications consist in the mental infatuation arising from sensual pleasures, from the

infatuation arising from sensual pleasures, from the pride of life, from ignorance, and from speculation.

4. The ultimate aim—Nirvāṇa.—When the traveller has resolutely trodden the Eight-fold Path, overcome the Hindrances, broken the Fetters, and resisted the Intoxications, he has reached the goal of all Buddhist ambition and effort-

Nirvana.

'To him who has finished the Path, and passed beyond sorrow, who has freed himself on all sides, and thrown away every fetter, there is no more fever of griet.' 'Him whose senses have become tranquil, like a horse well broken-in by the driver; who

is free from pride and the lust of the flesh, and the lust of existence, and the defilement of ignorance—him even the gods envy. Such a one whose conduct is right, remains like the broad earth, unvexed; like the pillar of the city gate, unmoved; like a pellucid lake, unrufiled. For such there are no more births. Tranquil is the mind, tranquil the words and deeds of him who is thus tranquillized, and made free by wisdom' (Dhammapāda, verses 90, 94-90).

'They who, by steadfast mind, have become exempt from evil desire, and well-trained in the teachings of Gautama; they having obtained the fruit of the Fourth Path, and immersed themselves in that ambrosia, have received without price, and are in the enjoyment of, Nirvāņa. Their old karna is exhausted, no new karna is being produced; their hearts are free from the longing after future life; the cause of their existence being destroyed, and no new yearnings springing up within them, they, the wise, are extinguished like this lamp' (Ratma Sutta, 7.14). 'That mendicant conducts himself well who has conquered (sin) by means of holiness, from whose eyes the veil of error has been removed, who is well-trained in religion, and who, free from yearning, and skilled in the knowledge, has attained unto Nirvāṇa' (Sammaparibbājanīya Sutta, 14).

The word Nibbāna (Pāli for Nirvāṇa) occurs only infrequently in the Piţakas. A few illustrations of its use in the Dhammapāda are given:

'These wise people [speaking of Arahata], meditative, persevering, ver full of streneth, attain to Nirvāṇa, the hiehest

trations of its use in the Dhammapāda are given:

'These wise people (speaking of Arahats), meditative, persering, ever full of strength, attain to Nirvāna, the highest bliss' (verse 23). 'The mendicant who delights in diligence, and looks with terror on sloth, cannot fall away,—he is in the very presence of Nirvāna' (verse 32). 'If thou keepest thyself as silent as a broken gong, thou hast attained Nirvāna; no angry clamour is found in thee' (verse 134). 'If he preceding verse condemns harsh speaking.] 'The Buddhas declare the best self-mortification to be patience, long-suffering; the best (bling of all) to be Nirvāna; for he is no (true) monk who strikes, no (true) mendicant who insults others' (verse 184) 'There is no fine like hust, there is no sin like hate, there is no misery like the skandhas, there is no happiness like peace. Hunger is the worst disease, the sankāras the worst suffering; knowing this as it really is, is Nirvāna, the highest bliss' (verse 202 1). 'Those who are ever on the watch, who study day and nicht, whose heart is set on Nirvāna, their sinfulness dies away' [lit. 'their Asavas go to an end'] (verse 226).

In the light of these passages, what is Nirvāna? In the original it means 'going out,' 'extinction.' It cannot mean the extinction of the soul.

It cannot mean the extinction of the soul.

'It is the extinction of that sinful, grasping condition of mind

It cannot mean the extinction of the soul.

'It is the extinction of that sinful, grasping condition of mind and heart, which would otherwise, according to the great mystery of Karma, be the cause of renewed individual existence. That extinction is to be brought about by, and runs parallel with, the growth of the opposite condition of mind and heart; and it is complete when that opposite condition is reached. Nirvāṇa is therefore the same thing as a sinless, calm state of mind; and, if translated at all, may best, perhaps, be rendered "holiness"—holiness, that is, in the Buddhist sense, perfect peace, goodness, and wisdom' (Rhys Davids, Buddhism, p. 111 f.). See, further, art. Nirvāṇa, Rhys Davids, Buddhism, p. 111 f.). See, further, art. Nirvāṇa, Rhys Davids says (Early Buddhism, p. 72 f.):

'One might fill columns with the praises, many of them among the most beautiful passages in Pall poetry and prose, lavished on this condition of mind, the state of the man made perfect according to the Buddhist faith. Many are the pet names, the poetic epithets, bestowed upon it, each of themfor they are not synonyms—emphasizing one or other phase of this many-sided conception—the harbour of retings, the cool cave, the island amidst the floods, the place of bliss, emancipation, liberation, safety, the supreme, the transcendental, the uncreated, the tranquil, the home of ease, the calm, the end of suffering, the nedicine for all evil, the unshaken, the ambrosia, the immaterial, the imperishable, the abiding, the further shore, the unending, the bliss of effort, the supreme joy, the ineffable, the detachment, the holy city, and many others. Perhaps the most frequent in the Buddhist texts is Arahatship, "the state of him who is worthy"; and the one exclusively used in Europe is Nirvana, the "dying out," that is, the dying out in the heart of the fell fire of the three cardinal sins—sensuality, ill-will, and stupidity "(Sanhyutta, iv. 251, 261).

Such, then, according to the authoritative Buddhist seriators, is the gread of Bu

Such, then, according to the authoritative Buddhist scriptures, is the creed of Buddhism. But is it the whole of the creed which Gautama preached to the world? Was this the faith by which Buddha won the 'deepest heart of the East'? The new religion was materialistic, i.e. Buddha denied the soul, or ego; atheistic, i.e. there was no place for God in his system of thought; pessimistic, i.e. he regarded all existence as intrinsically evil; egoistic, i.e. in his scheme of life he taught men to think of themselves and their personal welfare; nihilistic, i.e. he regarded Nothing as the supreme reality. Oldenberg says of the philosophy of Buddha: "We have a fragment of a circle, to complete which, and to find the centre of which, is forbidden, for

it would involve an inquiry after things which do not contribute to deliverance and happiness' (op. cit. p. 208). Some writers have accepted this view, and have sought to complete the circle from its segment, and to find its centre, arguing that a creed involving materialism, atheism, pessimism, egoism, and nihilism could never have achieved the triumph which attended the propaganda of Buddhism; and therefore only a part, and not the whole, of Buddha's teaching has been handed down. It is claimed, for instance, that the central truth of Buddhism was 'the conception that the Universal Self is the true self of each one of us, and that to realize the true self is the destiny and the duty of man.' The early triumph of the faith may be difficult to understand, but there is no ground for assuming that the Buddhist scriptures contain an incomplete statement of the great, central, and essential truths preached by Gautama. Details of the teaching may be lacking, but we are in possession of its essence.

here can be no doubt that Gautama's scheme of life and religious teaching lost its charm over the minds of men in the course of a few centuries -among other reasons, on account of its negations, and the absence of an effective dynamic. Hence the rise of the Mahāyāna school of Buddhism, and the rise of the Mahāyāna school of Buddhism, and its new doctrine, namely, (1) help from God to save oneself and others from suffering; (2) communion with God, which gave the highest eestatic rest to the soul; and (3) the possibility of participation in the nature of God, so that mortals might become Divine and immortal. One result quickly followed. The old Buddhists of the Hīnayāna school were unwilling that their teacher, Sākyamuni, should occupy a second place in the new creed, and so they deified him, and worshipped him exactly as the Mahāyāna school worshipped God. actly as the Maliāyāna school worshipped God. From the time of the deification of Buddha, Budthism took a new lease of life, and became one of the world's greatest religions. Modern Buddhism presents to the world to-day a curious combination of the earliest teaching and its later developments.

Monier-Williams thus summarizes the achievements of the Buddhist faith in its earliest years in

Monier-Williams thus summarizes the achievements of the Buddhist faith in its earliest years in the land of its birth:

'What the Buddha then did was this: first he stretched out the hand of brotherhood to all mankind by inviting all, without exception, to join his fraternity of celibate monks, which he wished to be co-extensive with the world itself. Then he abolished the Brahminical "ways of salvation," i.e. Yajna "sacrifices," and Bhakti "devotion to personal gods," and substituted for these meditation and moral conduct as the only road to true knowledge and emancipation. And then, lastly, he threw open this highest way of true knowledge to all who wished to enter it, of whatever rank, or caste, or mental calibre they might be, not excepting the most degraded. Without doubt, the distinguishing feature in the Buddhis's gospel was, that no living being, not even the lowest, was to be shut out from true enlightenment' (Buddhism, p. 96 f.).

CREEDS (Ecumenical).— I. The Apostles' Creed.—Within two centeralions from the Apostles' Creed.—Within two centeralions from the Apostles' Creed.—Within two centeralions from the Apostles

CREEDS (Ecumenical). - r. The Apostles' Creed.—Within two generations from the Apostes acatechist at Itome produced the famous form which lies at the root probably of all similar forms, certainly in the West, and reflects without question the recent teaching of the great Apostles Peter 1 Hence, also, the evolution of the thought of a Divine Saviour in the person of Avalokitesvara (q.v.), which was a purely metaphysical invention, and of Maitreya, the future Buddha.

and Paul. Kattenbusch traces the Old Roman Creed back to the year + 100 A.D., and finds in it the archetype of all other forms in both East and West. Other writers, notably Zahn and Sanday, conjecture an Eastern type, a sister form, which they trace back to Antioch, regarding the later legend of Apostolic authorship, taught, e.g., by Rufinus (c. A.D. 400), as enshrining this modicum of truth -that the Apostles had agreed on such a form, which in the East and West passed through many modifications. It will be convenient to quote this Old Roman Creed:

OLD ROMAN CREED.

OLD ROMAN CREED.

I. 1. I believe in God, (the)! Father Almighty;
II. 2. And in Christ Jesus, His only Son, our Lord,
3. Who was born of the Holy Ghost and the Virgin Mary,
4. crucified under Pontius Pilate and buried,
5. the third day He rose from the dead,
6. He ascended into heaven,
7. sitteth at the right hand of the Father,
8. thence He shall come to judge living and dead.
III. 9. And in the Holy Ghost,
10. (the) Holy Church,
11. (the) resurrection of the flesh.
At first we can trace only bare allusions, as in a passage of Marcion's revised New Testament where he speaks of the 'covenant which begets us in the passage of Marcion's revised New Testament where he speaks of the 'covenant which begets us in the Holy Church,' and implies that the words 'Holy Church' were contained in the Baptismal Creed which had been taught him in Rome before his breach with the Church in A.D. 145. So, again, in two passages of Tertullian:

de Virg. Vel.: 'The rule of faith, indeed, is one altogether... of believing in one God Almighty, Maker of the world, and in His Son Jesus Christ, born of Mary the Virgin, crucified under Pontius Pilate; the third day raised from the dead, received in the heavens, sitting now at the right hand of the Father, about to come to judge quick and dead, through the resurrection also of the flesh.'

de Præser. xiii.: 'What the (Roman) Church has made a

of the flesh.'

de Prwser. xiii.: 'What the (Roman) Church has made a common token with the African Churches: has recognized one God, Creator of the universe, and Ohrist Jesus, of the Virgin Mary, Son of God, the Creator, and the resurrection of the flesh.'

With scanty references in Dionysius and Novatian, we pass on to the 4th cent., when Creeds come out we pass on to the 4th cent., when Creeds come out to the light of day, and, greatly to our advantage, Marcellus, Bishop of Ancyra, who had been kindly received as an exile by Bishop Julius of Rome (c. A.D. 337), left on record his acceptance of the faith of the Roman Church. The accuracy of his quotation, recorded by Epiphanius, is confirmed by the testimony of Rufinus, priest of Aquileia, who (c. A.D. 400) wrote a commentary on this form who (c. A.D. 400) wrote a commentary on this form, and compared with it the slightly different form of Aquileia. It is quite possible that Kattenbusch has minimized the evidence for the existence of similar Eastern forms of the 3rd century. He thinks that the Creeds of Cæsarea and Jerusalem, recovered from the pages of Athanasius and Cyril were derived from the Roman Creed after the date when Paul of Samosata was deposed (c. A.D. 272); and that the Roman Creed was altered to meet the needs of the East, and became the parent of Creeds in Asia Minor and Egypt as well as in Palestine.

At present the theory of Kattenbusch still holds the field, and is supported by Harnack; but his critics are closing him in on every side. Kunze, working on the same lines as Zahn, reconstructs an Antiochene Creed of the 3rd cent., which he claims as an independent sister form:

CREED OF ANTIOCH.

CREED OF ANTIOCH.

I. 1. I believe in one and an only true God, Father Almighty,
Maker of all things, visible and invisible.

II. 2. And in one Lord Jesus Christ, His Son, the only-begotten
and firstborn of all creation, begotien of Him before
all the ages, through whom also the ages were established, and all things came into existence.

3. Who, for our sakes, came down and was born of Mary
the Yirgin,
4. And crucified under Pontius Pilate, and buried,
5. And the third day rose according to the Scriptures,

<sup>1</sup> The definite article is enclosed in brackets when it is not found in the Greek text of Marcellus.

6. And ascended into heaven.

8. And is coming again to judge quick and dead.

III. 9. [The beginning of the third article has not been recorded.]

11. Remission of sins.
12. Resurrection of the dead, life everlasting.

The Creed which Zahn has reconstructed from he Didascalia, a book written in the 3rd cent. not ar from Antioch, affords an instructive contrast.

CREED OF THE DIDASCALIA.

I. 1. I believe in God Almighty.
II. 2. And in our Lord Jesus Christ (His Son?), who for us came and

came and
was born of (Mary the?) a virgin,
and was crucified under Pontius Pilate and died,
the third day rose from (the?) dead,
and ascended into the heavens,
and sitteth on the right hand of God the Almighty,
and sitteth on the right hand of God the Almighty, and is coming with power and glory to judge dead and

living.

III. 9. And in the Holy Ghost . . .

10. (a Holy Church?) . . .

12. resurrection of the dead.<sup>2</sup>

The uncertainties attending such reconstructions tand in marked contrast with the comparative ertainty with which we can trace back the Old toman Creed, the only really doubtful point about which is the question whether originally it did not ead: 'I believe in one God, the Father Almighty,' rhich is suggested by the testimony of Tertullian. 'ertullian, in his criticism of Praxeas, the first iodalist Monarchian (that is to say, a theologian the confused the distinctions between the Divine 'ersons), says (udv. Praxean, i.): 'He routed the 'araclete, and crucified the Father.' Under these ircumstances we can commend the prudence of he leaders of the Roman Church if they dropped he word 'one' as liable to misunderstanding. alm quotes a passage from Eusebius in which eretics are said to have accused the Roman Church f re-coining the truth like forgers, and makes the cute suggestion that the reference was to some hange in the Baptismal Creed. We cannot supose that the immutability of the Roman Creed

raised by Rufinus would necessarily extend trough all the past centuries.

Again, Loofs, comparing 4th cent. Eastern reeds, endeavours to prove the existence of an astern type which would include the word one' Article I. with a reference to the Creator: erucified under Pontius Pilate'; and in the third ivision the words 'catholic' and 'eternal life.' ut the resultant form would be on the same plane I development as the Roman, as compared with ne theological Creeds of the 4th century. There always the possibility that such a Creed may ave been brought to the East from Rome in the 2nd entury. Justin Martyr has close coincidences of inguage, which, in Kattenbusch's 4 opinion, prove is acquaintance with the Roman Creed, though ahn thinks that he is quoting his own Creed of phesus. The same may be said of Ireneus, whose ritings must be searched in the light of these pposing theories before we can decide whether he rought his creed from Rome:

rought his creed from Rome:
c. Hær. I. x. 1: The Church, though dispersed throughout
te whole world, even to the ends of the earth, has received
om the apostles and their disciples this faith: [She believes] in
e God, the Father Almighty, Maker of heaven and earth, and
e sea and all things that are in them; and in one Christ Josus
e Son of God, who became incarnate for our salvation; and in
e Holy Spirit, who proclaimed through the prophets the disnsations of God and the advents, and the birth from a virgin,
d the passion, and the resurrection from the dead, and the
sension into heaven in the flesh of the beloved Christ Jesus,
r Lord, and His fluturel manifestation from heaven in the
xy of the Father "to gather all things in one," and to raise up
ew all flesh of the whole human race, in order that to Christ
sus our Lord and God and Saviour and King, according to the

will of the invisible Father, "every knee should bow, of things in heaven, and things in earth, and things under the earth, and that every tongue should contess to Him," and that He should execute just judgment towards all."

While Irenieus has some phrases which remind us of the Roman Creed, the lack of any mention of the Holy Ghost at the end of this rule of faith makes it doubtful whether his personal creed was any more than a short Christological confession, the longer form quoted above representing a summary of his ordinary teaching on the lines laid down by tradition. Here is a problem which demands further investigation, and we must say the same of the very interesting researches of Connolly in the writings of Aphraates, from which he deduces the existence of an early Syriac Creed.1 This includes mention of the Creation in Art. I.; confession of our Lord Jesus Christ as God, Son of God, Light from Light, who came and put on a body from Mary the Virgin of the seed of the house of David, from the Holy Spirit, and suffered (or was crucified), went down to the place of the dead, rose, ascended, sat on the right hand of the Father, is judge of the dead and of the living; confession of the Holy Spirit, followed by '[And I believe] in the coming to life of the dead; [and] in the mystery of Baptism (of the remission of sins).

After all, it does not matter which way the question as to the form is answered ultimately, since the facts taught were the same in the East as

in Rome.

The later history of the Creed is still at some points obscure. We know that it was used by the Abbot Pirminius, who founded monastories at Reichenau and Hornbach. It is quoted in the Codex Einsidlensis 199 of the 8th cent., and the Dicta Abbatis Pirminii, which was written about A.D. 730. Probably it was brought into its present shape at Luxeuil or Bobbio. All the later additions, such as 'descended into hell' and 'communion of saints,' were in use in the Gallican Creeds of the 5th cent., with the exception of 'maker of heaven and earth.' This latest addition may have come in some way through the travels of Columban, who in Burgundy and Rhætia came across relics of the Old Latin Church of the Danube, and the stream of influence which had flowed from the East in earlier times.2 Nicetas of Remesiana had both 'maker of heaven and earth' and 'communion of saints' in his Creed; and the Faith of St. Jerome, recently discovered by Morin, which is another connecting link between East and West, probably includes phrases which St. Jerome had learned in his native Pannonian Creed. Any way, we can make sure that it was from Rome that the Received Text was finally spread, since there are indications that Pirminius was quoting from a Roman source, and there would be every reason for the decision in favour of a revision of the Old Roman Creed in the light of experience which had found each of the added phrases useful. The desire of Charles the Great for uniformity, and his careful inquiries about the different uses in Gaul and in Rome, led to the triumph of this Revision throughout the Western Church, as the Creed of daily use, although the Baptismal Creed of the Church of England still retains certain Gallican peculiarities, 'only-begotten' (=unigenitus, not unicus), 'shall come again at the end of the world,' and 'everlasting life after death.'

2. The Nicene Creed.—The history of the Nicene Creed begins with the Council of Nicea, when the Creed presented by Eusebius of Cosarea was deliberately revised to guard against the doctrines of Arianism. Whether he had composed it for the occasion, or had simply quoted verbatim

<sup>1</sup> ZNTW, 1906, p. 202. <sup>2</sup> T. Barns, 'Some Creed Problems,' in JThSt, 1906, p. 501. <sup>3</sup> Cf. A. E. Burn, The Apostles' Creed, London, 1906, p. 8 f.

the Creed of his Church, is uncertain. So far as it goes, it no doubt follows the lines of the Creed of Cæsarea, as his opening words imply; but he adds a free warning against Sabellianism, and a Baptismal Creed is not likely to have ended abruptly with mention of the Holy Ghost. But the Council was not satisfied. Prompted by Hosius, Bishop of Cordova, the Emperor Constantine himself proposed the insertion of the term homoousios, which guarded against all evasions of Scripture teaching. Other changes may be noted by comparing the two forms.

CREED OF EUSEBIUS. We believe

- I. 1. in one God, the Fathe
- I. 1. in one God, the Fathe Almighty, the maker of all things visible and invisible.

  II. 2. And in one Lord Jesus Christ, the Word of God, God of God, Light of Life, Son Only-begotten, first born of every creature, before all the ages, begotten from the Father, by whom also all things were made;
  - 3. Who for our salvation was made flesh, and lived as a citizen among men,
  - And suffered
  - 5. And rose again the third day,
    6. And ascended to the Father.
- 8. And will come again in glory to judge the quick and the dead.

  III. 9. And we believe also in

III. 9. And we believe also in one Holy Ghost;
Believing each of these to be and to exist, the Father truly Father, and the Son truly Son, and the Holy Ghost truly Holy Ghost, as also our Lord, sending forth His disciples for the preaching, said, 'Go teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost.' Concerning whom we confidently affirm that so we hold, and so we think, and so we have held aforetime, and we maintain this faith unto the death, anathematizing every death, anathematizing every godless heresy.

As Gwatkin has shown so clearly, the victory of Nicrea was a surprise rather than a solid conquest—a revolution which a minority had forced through by slieer strength of clearer Christian thought. Therefore a reaction was inevitable and a long controversy followed. It was not till A.D. 362 that all the scheming and creed-making on Arian lines came to an end, when the most influential of the semi-Arian leaders, who had consistently opposed the introduction of un-Scriptural words, such as homocusios, into Creeds, were won over to the orthodox side because they found that only thus could they guard the sense of Scripture.

About this time many local Creeds were revised by the insertion of Nicene terms. By far the most important was the revised Jerusalem Creed, which is found in a treatise of Epiphanius, Bishop of Salamis, called *The Anchored One*, written about A.D. 374. A French scholar of the 17th cent. Denys Petan, pointed out that this was the chard of the property of the control of Creed afterwards ascribed to the Council of Constantinople. But it was Hort who first pointed

CREED OF NICENE COUNCIL.

We believe in one God, the Father Almighty, maker of all things visible and invisible.

- II 2. And in one Lord Jesus Christ, the Son of God, begotten of the God, begotten of the Father, only-begot-ten, that is of the sub-stance of the Father, God of God, Light, God of God, Light, not made, of one substance with the Father, by whom all things were made, both those in heaven and those on earth
  - 3. Who for us men and for our salvation came down and was made flesh, and lived as Man among men,
  - 4. Suffered, 5. And rose the third day.
  - 6. Ascended into heaven.
  - Is coming to judge the quick and dead.
- III. 9. And in the Holy Ghost.

But those who say 'Once He was not,' and 'Before He was begotten He was not,' and 'He came into existence out of what was not,' or 'That the Son of God was of a different essence (hypostasis) or being (ausia),' or 'That He was made,' or 'is changeable or mutable,' those the Catholic Church anathematizes.

out the importance of the argument which may be built up on the fact, and his theory connecting it with Cyril of Jerusalem has been accepted by most critics. He compared it with the form which Cyril taught his catechumens in his Catechetical Lectures (c. 347).1

CREED OF JERUSALEM.

I. 1. We believe in one God, the Father Almighty, maker of heaven and

maker of heaven and earth, and of all things visible and invisible.

II. 2. And in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father, very God, before all worlds, by whom all things were made. made,

- 3. and was incarnate and was made man,
- 4. was crucified and was buried.
- 5. and rose again the third day,
- 6. and ascended into
- 6. and ascended into heaven,
  7. and sat at the right hand of the Father,
  8. and is coming in glory to judge the quick and the dead, whose kingdom shall have no end.
- III. 9. And in one Holy Ghost, the Paraclete, who spake in the prophets,
  - and in one baptism of repentance for the remission of sins,
     and in one Holy Catho-
  - lic Church,
  - and in the resurrection of the flesh, and in the life eternal.

CREED OF EPIPHANIUS.

I. 1. We believe in one God. the Father Almighty, maker of heaven and earth, and of all things both visible

and invisible.

II. 2. And in one Lord Jesus and in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father before all worlds—that is of the substance of the Father,—Light of Light, very God of very God, begotten, not made, being of one substance with the Father, by whom all things were made, all things were made, both that are in heaven and that are in earth; who for us men and for our sale vation came down

vation came down from heaven,
3. and was incarnate of the Holy Ghost and the Virgin Mary, and was made man,
4. and was crucified for us under Pontius Pilate, and suffered and was buried,
5. and rose again the third day, according to the Scriptures.
6. and ascended into heaven,

heaven,
7. and sitteth at the right

hand of the Father,
s. and is coming again
with glory to judge
the quick and the
dead; whose kingdom shall have no

dom shall have no end.

III. 0. And in the Holy Ghost, the Lord and Giver of life, who proceedeth from the Father, who with the Father and the Son together is worshipped and glorified, who spake by the prophets:

10. in one Holy Catholic and Apostolic Church.

We acknowledge one baptism for the remission of sins.
 We look for the resurrection of the dead, and the life of the world to come.

Three important changes must be noted, which tend to prove that Cyril was the author of this revision, since they agree with the teaching in his lectures; (i.) Art. 7 from sat to siteth; (ii.) Art. 8 from in glory to with glory; (iii.) Art. 12 from resurrection of the flesh to resurrection of the dead. To these we add the skilful insertion of some of the Conciliar language, including the term homocusios, which marked the return to full communion with Athanasius and his allies. What could be more natural than that Cyril, after his return from exile in A.D. 362-364, should so revise his Creed? Epiphanius had connexions with Jerusalem and had lived in Palestine, so his acquaintance with the Creed is easily explained. The theory has been questioned by Lebedeff, who maintains that Epiphanius wrote down the original Nicene Creed

and that the revised Creed has been interpolated

1 Cat. vi.-xviii.

2 Ib. xi. 17, xiv. 17-30.

2 Ib. xviii. 1-21. 1 Cat. vi.-xviii. 3 Ib. xv. 8. 

by a copyist. He also maintains that the Jerusalem Creed reconstructed from the pages of Cyril is the invention of scholars. Gibson also calls attention to the new material in the second division of the Creed 'new both to the Creed of Nicæa and to the Creed of Jerusalem, so that even if the Creed of Jerusalem lies at the basis of the Enlarged Creed, it has been revised by the help of other Creeds, as those of the *Apostolic Constitutions* and the Church of Antioch.' This dependence had not escaped of Antioch." This dependence had not escaped the notice of Hort, and the sources may be regarded as one, since the Seventh Book of the Apostolic Constitutions comes from Antioch, and was put together c. A.D. 375. Cyril's friendship with Melecius, Bishop of Antioch, is quite enough to explain why he should also make use of the Creed of Antioch.

We may regard the case for the opposition as 'not proven,' but it is clear that Hort's theory must be tested again in the light of all new evimust be tested again in the light of all new evidence. He supposed that the subsequent connexion of the revised Creed with the Council of Constantinople in A.D. 381 could be explained by the suggestion that Cyril brought it to prove his orthodoxy. But, since Cyril's leader, Meletius, became first President of that Council, there could be no question about Cyril. A more probable theory has been suggested by Kunze. After the death of Meletius, and the resignation of Gregory of Nazianzus who succeeded him, the new Bishop of Constantinople was Nectarius. Prætor Bishop of Constantinople was Nectarius, Prætor of the city, who at the time of his election was unbaptized. His name seems to have been suggested to the Emperor by Diodore of Tarsus. At the end of the Council of Chalcedon (A.D. 451) all the Bishops signed the decrees with little notes. One of them, Callinicus, Bishop of Apamea (=Myrlea) in Bithynia, referred to the Council of Constructionals as havings bein held at the craling Constantinople as having been held at the ordination of the most pious Nectarius the Bishop, and Kunze suggests that there was some connexion in Runze suggests that there was some connexion in his mind between the Creed and the consecration of Nectarius. Probably the revised Creed was professed at his baptism, and became from that date the Baptismal Creed of the city. It would naturally be quoted in the Acts of the Council, now lost, from which it was cited at the Council of Chalcedon as the Creed of the 150 Fathers, the original Nicene Creed being accurately distinguished from it as the Creed of the 318 Fathers.

It is not easy to decide on the true form of the text cited at Constantinople, since the form quoted at the second Session varied from the form quoted at the second Session varied from the form quoted at the sixth Session, and both from the form in Epiphanius. Copyists were continually at work assimilating the forms, and to them may be attributed the slight variations found in the pages of Epiphanius which are printed in italics. It is Epiphanius which are printed in italics. It is possible that the variations in the texts used at Chalcedon represent the already divergent texts used at Constantinople and Rome.<sup>3</sup>

and the man

The later history of the Creed is coming out into clear light. It is probable that the words 'and the Son' in the clause about the Procession of the the Son' in the clause about the Procession of the Spirit were added not by the Council of Toledo in A.D. 589, when King Recared accepted the Nicene Creed and abjured Arianism, but by later copyists. The Creed thus interpolated spread into Gaul. In A.D. 802, Charles the Great sent a deputation to consult Pope Leo on the text, controversy having already arisen in Palestine between representatives of the Eastern and Western Churches on the point. Leo freely admitted that it was quite orthodox to teach that the Spirit proceeded from the Father and the Son, but depreproceeded from the Father and the Son, but depre1 Theological Messauger, 1902 (a summary of his argument
was published in TThSt, Jan. 1903, p. 285 ff.).
2 The Three Greeds, p. 171.
3 Of. A. E. Burn, Facsimiles of Greed Texts, Camb. 1908, p. 18.

cated the insertion of the words in the Creed, the Roman Church agreeing with the Eastern theologians as to its form. He even advised the Emperor to give up singing it in his chapel, thus emphasizing the interpolation. But the use continued, and in A.D. 1014 the Emperor Henry II. prevailed on Benedict VIII. 'to chant the Symbol at the Holy Mysteries'; and thus came in the use

of the interpolated Creed.

The Western theologians start from the point of view of the immanent Trinity, from meditation on the coinherence of the Divine Persons, while their Eastern brethren are willing to accept the phrase from the Father through the Son, as guarding the truth that there is only one Fount of Deity. It is one of the saddest facts of history that a merely verbal difference should keep Churches apart, since frank explanation on both sides could clear up the theological as well as the historical question.

3. The 'Athanasian' Creed.—The history of the so-called Athanasian Creed—more correctly designated, after the analogy of the To Deum, by its first words, Quicunque vult—is still at some points obscure. But we are no longer in doubt as to the dates of the important MSS. With the help of photographs, palmographers are enabled to decide that some MSS belong to the 8th cent; one, in the famous Ambrosian Library at Milan, may even be of the end of the 7th (Cod. Ambrosianus, O. 212 sup.).

The famous two-portion theory, put forward by Swainson and Lumby, has been shown to rest on precarious foundations, and may be dismissed without further notice. We have not yet reached ultimate certainty about small details in the text, the order of certain words, the use of the conjunction et, or the claim of the form surrexit against the reading resurrexit, but any polishing which the Creed had received in the course of its long history is of small account, now that we can say that it reaches us substantially as it was written. It belongs to the class of individual, private confessions of faith, and is, properly speaking, an instruction rather than a Creed, which may be offered as a substitute for the Apostles' Creed, or a canticle parallel to the Te Deum, with which it found its way into an appendix to the Psalter from the end of the 8th century.

There is little doubt that it can be identified with 'the Faith of the holy prelate Athanasius' commended by a Synod of Autun, which was presided over by Bishop Leodgar (c. A.D. 670), to be learnt by heart by all clergy.

Some forty years earlier, in A.D. 633, it had been quoted by the Fourth Council of Toledo together with the so-called Creed of Damasus. The clauses quoted were 4, 20, 21, 22, 28, 29, 31, 33, 35, 36, 37, (39), 40, so that it is evident that the Spanish theologians had the whole text before them.

logians had the whole text before them.

We can also trace quotations with great probability in the sermons of Cæsarius of Arles, the great preacher of the 6th cent. (†543), as has been proved beyond question by Morin.<sup>2</sup>
Any doubts which may be felt about the author-

the of the pseudo-Augustinian sermon 244 do not affect the general argument. Morin pointed out that the Creed reproduces both the qualities and the literary defects of Casarius. In his recent lectures at Oxford he was disposed to put the date later.8

The proof is not yet forthcoming that the Quicunque belongs to the time of Casarius, if it is not from his pen. The argument of Waterland,

1 Cf. A. E. Burn, The Nicene Creed, London, 1909, p. 40 ff.
2 \*Le Symbole de S. Athanase et son premier témoin: Saint Césaire d'Arles,' in Revue bénédictine, xviii. (1909) 337 ff.
3 JThSt, Jan. 1911, p. 161. His criticism of all current theories, including his own, is too sweeping, but deserves most careful study.

that it belongs to Apollinarian times, still carries much weight. The fact remains that the illustration from the constitution of man's nature in clause 35, though it had been used freely by St. Augustine, as before him by St. Ambrose, was misused by the Eutychians, who pleaded for one nature in Christ, as soul and body make one nature in man. After the rise of their heresy, Catholic writers shrank from using it, but there is no hint that the author of the Quicunque feared such doctrine, since he could easily have inserted teaching that Christ is consubstantial with us in the one nature as He is consubstantial with the Father in the other. Such phrases had been used in Gaul by Cassian before the rise of Eutychianism, and so were ready to hand.

Waterland points out that the Unity of Christ's Person is taught, but not as if it were endangered by Nestorian error. 'There is not a word of the Mother of God, or of one Son only, in opposition to two Sons, or of God's being born, suffering, dying—the kind of expressions of which the Creeds are full after Nestorius's times, and after the Council of Ephesus. 1 Indeed, the parallels to clauses 32-35 in Vincentius and Faustus are, as it were, sharpened by subtle turns of phrase, just as we find Alcuin and Paulinus of Aquileia sharpening by slight changes their quotations from the Quicunque, against the revived Nestorianism of the

Adoptianists of the 8th century.

Moreover, there is a new line of argument which was not open to Waterland. In the recently discovered writings of Priscillian we have trustworthy evidence of a heresy which spread from Spain to Gaul in the beginning of the 5th cent., and which called for close vigilance and reasoned arguments from Church teachers to counteract it. The de Fide of Bacchiarius is the apology of a monk who came from Spain into Gaul at that time, and was closely examined by the Gallican bishops as to his faith, and it is a significant fact that it has been preserved only in the Ambrosian MS of the Quicunque. The heresy of Priscillian was both Sabellian and Apollinarian. He confused the Persons of the Trinity, and denied that the Lord had a human soul, as the following passages may suffice to prove. In his Blessing over the Faithful he writes:

"For thou art God who . . . art believed as one God, invisible in the Father, visible in the Son, and art found as Holy Spirit united in the work of both'; <sup>2</sup> and 'Finally our God assuming flesh, assigning to Himself the form of God and Man, that is, of Divine soul and human flesh' . . . <sup>3</sup>

When language so inaccurate was vehemently put forward as Catholic teaching, there was need of a summary of Catholic belief on the Trinity and the Incarnation, which should lay due stress on the responsibility of the intellect in matters of faith, and at the same time do justice to the moral aspect of these problems, and prove that faith worketh by love, that only they that have done good shall go into life eternal. The Quicunque exactly meets these requirements. have been written for the purpose?4 May it not

This suggestion of the present writer has been warmly accepted by Künstle, who has made a special study of Spanish canons and treatises against Priscillianism, though he vitiates the argument by assuming that all such writings against Priscillian must have a Spanish origin—for which

there is no proof.

From the time of Antelmi the parallels in the Commonitorium of Vincentius of Lérins have been held to prove his acquaintance with the Quicunque, if not his authorship, which seemed probable to

Ommanney (1897) as to Antelmi (1693). Perhaps it is rash to attempt to discover the author. tainly Waterland's quotation from the funeral sermon which Hilary of Arles preached after the death of Honoratus, his predecessor both in the See of Arles and in the Abbey of Lérins, if it suggests acquaintance with the Quicunque, suggests also that Honoratus, rather than Hilary, was the author:

'A daily witness wast thou, moreover, in thy most sincere discourses of the confession of Father, Son, and Holy Spirit: nor surely has any one treated so emphatically, so clearly, of the Trinity of the Godhead, since thou didst distinguish the Persons therein and yet didst associate them in eternity and majesty of glory' (Vita Honorati, 38).

With this we may compare a quotation from a sermon on the same lines by Faustus, who, like Hilary, had been a loyal disciple of Honoratus:

'Therefore, beloved, that we may gain that which he has obtained, let us first follow that which he taught: and, first of all, let us hold the right faith: let us believe Father and Son and Holy Ghost (to be) one God. For, where there is unity, there cannot be inequality: and, since the Son, because He is God, is perfect, complete, and full, that fullness certainly cannot be described as "less" (in Depositions S. Honorati).

Whatever may be thought about the praise here given to Honoratus as a teacher on the very lines of the Quicunque, there can be no question as to the ability and earnestness of the community which he had gathered round him during the years A.D. 420-430. In their happy island-home was focused all that the Gallican Church could show of learning and piety. Their age contrasts favourably with the following century, when Casarius represents the last hope of the ancient culture, and when the rising tide of barbarism was about to sweep away all its landmarks—a century in which the composition of the Quicunque would seem to be incredible.

The arguments of Brewer, that the Quicunque is a work of St. Ambrose, have not received any measure of support, and do not seem to be based on any fresh evidence; but they certainly strengthen the argument for a 5th cent. date, by proving, tar more conclusively than any one has hitherto discovered, that St. Ambrose, no less than St. Augustine, came close to the very language of the Creed.

The early history of the Creed is, however, less importance than the history of its use. The revived interest in Church music, which was fostered in the schools of Charles the Great, led to its use as a Canticle. Abbot Angilbert of St. Riquier (c. 814) records that it was sung in procession on Rogation Days, and before long it was so sung in the Office of Prime. But such was not the only use made of it, or, indeed, the most primitive, since the extremely interesting preface to the (so-called) Oratorian Commentary, possibly from the pen of Theodulf of Orleans, speaks of its use by elergy as a manual of Christian teaching, which reminds us of the Canon of Autun as well as of the use made of it by Cæsarius. Addressing a Synod, the writer says that he has carried out their instructions 'to provide an exposition of this work on the Faith, which is up and down recited in our churches and continually made the subject of meditation by our priests.' Similar use is directed in the 9th cent. by many prominent teachers—Hayto of Basel, Anskar of Bremen, and Hinemar of Rheims.

In the Middle Ages the use at Prime spread everywhere, and recent researches have proved that the whole service of Matins, including Lauds, Prime, and Terce, was most popular in England as a preparation for the Mass. William Langland, in 'Piers the Plowman,' at the end of the 14th cent., writes of the duty of all classes to cease from work on Sundays, 'God's service to hear, Both Matins and Mass.' But the fact remains that comparatively few of the people understood Latin, although the devout layman of the upper classes who could afford to possess a breviary would, of course, be able to read and follow it in the Office. There are several early translations into the vernacular, at one time Norman French, at another Old English; but there is no evidence of any wide-spread acquaintance with it in such translations. In the First Prayer Book of Edward VI. the English Reformers directed that the Athanasian Creed should be 'sung or said' after the Benedictus, at the greater Feasts. In the Second Prayer Book the number of Feasts was increased at which the use of it was obligatory, and only in 1662 was it substituted for the Apostles' Creed, which had hitherto followed it.

In the controversy of the present day no amended translation is likely to bring peace, such as the translation put forward by the Archbishop of Canterbury's Committee. The real crux lies in the difficulty which is felt about using the warning clauses in a mixed congregation on days when it is impossible to preach an explanatory sermon. A relaxation of the rule, such as permission to use it at the first evensong of the Festivals of Christmas, Easter, and Whitsunday (when the clergy, and presumably the instructed faithful, could well make it, as the author of the Oratorian Commentary suggests, 'a subject of meditation'), would meet the difficulties of wounded consciences on both sides. The Roman Catholic Church uses it still in Prime, chiefly in Advent and Lent. The Eastern Church has only put it in an Appendix to the Hour Offices, without any directions for use.

Conclusion.—Looking back over the history of the three great Creeds, one is amazed at the comparative simplicity of the great truths thus singled out by the common sense of the Church, through the continuous as of primary importance. We are the centuries, as of primary importance. not concerned with the credibility of miracles as such, only with the evidence that the first witnesses believed that Christ rose from the dead and sent down His Spirit. The earliest forms of Creed present an Historic Faith which summed up their gratitude for the mystery at last revealed through the Spirit to the Church, with the assurance of forgiveness of sins and resurrection to a better life. The theological terms of the Nicene and Athanasian Creeds do not bring in metaphysics of set purpose, or condemn the Church to wander in a barren wilderness of controversy. Athanasius himself did not invent or suggest the use of the phrase of one substance. He was moulded by it. He found in it a bulwark of the ancient belief that the Son was one with the Father (Jn 1030) and to be worshipped with Him. He had no word for 'Person.' It was reserved for the genius of Augustine to make that term current coin, even though he shrank from the boldness of his thought. Let us note that it was on psychological rather than metaphysical lines that he approached the problem, led on by deep musing on the mystery of his own personality to speculation on the deeper mystery of Divine Personality. And in the first part of the Quieunque, whether the author owed little or much to Augustine, it is by the measure of such musings that it must be valued. The very of such musings that it must be valued. The very bravery of the antitheses ranging through the great series of Divine attributes—uncreated, infinite, eternal, almighty—shadows forth the truth of the equal glory and co-eternal majesty, and excludes every rationalistic explanation—Sabellian, Arian, or Priscillianist. But this is definitely the Create of the Chyrib treater face to be found in the content of the the Creed of the Church teacher, face to face with errors which are common to the human mind in every age and everywhere. In the hour of death the words of the ancient Baptismal Creed suffice as 'an anchor of the soul . . . entering into that which is within the veil' (He 6<sup>19</sup>).

CREED (Egyptian).—In seeking to arrive at a conception of the Egyptian creed, we are met by the fact that, generally speaking, the Egyptian never attempted to formulate or define a body of doctrine with regard to the multitude of gods worshipped in his land. This absence of any systematic theology is due mainly to the prevalence of the idea of the local god. The Egyptian State rose out of a number of small independent tribes, and, even after the unification of the king-dom at the beginning of the Dynastic period, the original subdivisions still existed in the shape of the 'nomes' or provinces, roughly 42 in number, into which the land was divided. Each original tribe possessed its own local god, supreme in his own district; and these gods continued to be worshipped as separate divinities, though they were, in many cases, mere duplicates of those existing in other localities. The Egyptian never attempted to bring any unity out of this confused mass of deities, to reduce to order the conceptions held with regard to them, or to discard their inconsistencies and contradictions. If, as frequently happened, one local god came to be acknowledged in another locality, his new worshippers simply took over his old titles and myths, regard-less of the fact that thus they sometimes duplicated the legends of their own local god, and sometimes introduced contradictions to them. The extraordinary confusion of ideas thus produced is apparent everywhere, and can perhaps be seen most clearly in the different strata of beliefs with regard to the life after death which lay side by side in the Egyptian mind, apparently without its ever being perceived that they were inconsistent with one another, or at least without any attempt being made to remove their contradictions and to

arrive at a coherent system of belief.

This statement has to be qualified to some extent by the fact that, at certain periods of Egyptian history, particular gods did rise to much more than merely local supremacy, and attained a more or less general acknowledgment. Thus from the time of the Vth dynasty the solar god Ra, who was looked upon as the founder of the reigning house, rose into prominence, and from that time onwards secured fairly general acknowledgment, the local gods being frequently identified with him. In the XVIIIth dynasty, again, Amen, the local god of Thebes, rose, with the rise of the Theban princes, to a position of supremacy which was not lost till far on in the decline of the Empire. And the worship of Osiris, the god of the dead and of the resurrection—probably one of the very oldest of Egyptian cults—was always more or less general, though he, too, had his local supremacy. In spite, however, of these exceptions, the local gods still continued to be worshipped side by side with the deity whose cult was for the time prevalent, and their myths were still accepted, regardless of the fact that they might be either identical with, or contradictory to, those of their brother god. It is evident, therefore, that we cannot expect to find any single and definite summary of doctrine which can be called the Egyptian 'creed.' All that can be done is to summarize the beliefs most generally accepted on certain aspects of religion.

1. Beliefs with regard to the Creation and the cosmic gods.—Various attempts were made to arrive at something like a systematic idea of the

cosmic gods and their relationship to the Creation. The most complete and popular of these was due to the priestly college of An, or Heliopolis (the Biblical On). The priests of the sun-god at this town—from the most ancient times the most noted theological centre of Egypt—elaborated at a very early period a scheme of the relationship of the various members of the cycle of cosmic gods to one another and to the universe, and their doctrine of the great Heliopolitan ennead gives us what was perhaps the prevailing belief in the land, though it was held with various modifications in different localities. In their scheme there existed in the beginning a primordial liquid element, the Nun or Nu, from which there emerged the sun-god Ra-Tum. Ra-Tum begat of himself, and produced the male and female divinities Shu and Tefnut, who may be regarded as representing air (or the firmament) and moisture. From Shu and Tefnut, or perhaps by a fresh procession from Ra, came Seb and Nut, the earth and the starry heaven, and from Seb and Nut came the two further pairs of gods, Osiris and Isis (the Nile and the fruitful ground [?]), and Set and Nephthys (the barren desert land and its animal life [?]). The Creation reached its present form by the interposition of Shu, the air-god, who came between Seb and Nut, the earth and the heavens, as they were locked in embrace, and lifted up Nut, who since his interposition stands arched over Seb, her hands and feet touching the earth at the cardinal points, and her body adorned with the stars.

The Heliopolitan ennead must have been formuthe Henopointan emean must have been formulated at a very early period of Egyptian history, for in the Pyramid texts the list of the nine gods is given as above. The popularity of this scheme gave rise to various imitations of it, and other towns and districts formed enneads of their own, sometimes displacing one of the nine gods of Heliopolis the light of the size of the siz polis to make room for their own local god, sometimes adding him to the nine, careless of the fact that thus their ennead contained ten divinities. Even as thus modified to suit local preferences, however, the Heliopolitan scheme did not meet with universal acceptance, and side by side with its doctrine of creation there existed other beliefs quite inconsistent with it. At Memphis the fabrication of the world was attributed to Ptah, who carred the earth like a statue; at Elephantinē to Khnum, who fashioned the world-egg like a potter working with his wheel; and at Sais to Neith, who wove the universe as a weaver weaves a piece of cloth. In the Creation-story preserved in the famous legend of the destruction of mankind, the heavens are represented, not by the woman-goddess Nut, but by the celestial cow, across whose body the sun-god journeys in his barque. It is probable that this attempt at a scientific grouping of the gods and explanation of the Creation was not so much a popular doctrine as a cherished possession of

much a popular doctrine as a cherished possession of the various priestly colleges, who elaborated it and modified it to suit their local tastes and rivalries. See COSMOGONY AND COSMOLOGY (Egyp.). 2. Beliefs with regard to immortality and the life after death.—In dealing with these, we come into touch with what probably makes the nearest approach to a universally accepted body of doctrine to which the Egyptians ever attained. The idea of immortality has been nowhere more tensacionaly of immortality has been nowhere more tenaciously held than in ancient Egypt, and the documents relating to it have an overwhelming preponderance in the religious literature of the nation. The most accepted form of belief is that associated with the cycle of Osiris legends. Osiris appears in the Heliopolitan ennead, though in a comparatively

source of immortal life to the blessed dead. The details of his myth do not concern us; but, briefly, the doctrine of the Egyptian religion taught that Osiris, a beneficent god and king, after being slain by the treachery of Set his malevolent antithesis, was restored to life again, justified before the gods against the accusations of Set, and made god and judge in the under world. Already by the time of the Vth dynasty the idea had been conceived that the story of Osiris was repeated in the case of each Pharaoh, and the conception gradually filtered down, until it was held that every man who was possessed of the necessary provided a might after doth here were the conception of the provided and the story of the necessary provided an aright after doth here were a Coirie by knowledge might after death become an Osiris, be restored to life, be justified before the gods, and enter into everlasting blessedness. Practically the Egyptian believed, from the earliest historical period, that, because Osiris died and rose again, and after being justified entered into everlasting life, therefore those who believed in him would share the same destiny. Ch. cliv. of the Book of the Dead makes the definite assertion of parallelism

between the god and his worshipper:
'Homage to thee, O my divine father Osiris! Thou hast thy body with thy members. Thou didst not decay... thou didst not become corruption. I shall not decay... and I shall not see corruption... I shall have my being, I shall live, I shall germinate, I shall wake up in peace.'

It is impossible to say whether or not the Egyptian believed that Osiris suffered death on his behalf; certainly he believed that there was an essential connexion between the death and resur-rection of Osiris and his own immortality. This belief is held, with no essential variations, throughout the whole historic period.

Definiteness ceases at once, however, when we pass from the fact of immortal life to the manner in which it is to be spent. Nowhere is the jumble of inconsistencies, which seemingly never worried the Egyptian mind, more hopeless than here. The prominent beliefs regarding the state and the abode of the blessed dead are at least four in number, each quite distinct from, and quite inconsistent with, all the others. The oldest and most wide-spread belief was that after death the deceased leads a second life under much the same conditions as those which ruled the first, dependent upon constant supplies of food and drink, and partaking in his new existence of joys similar to those of his former state. In this state the centre of the life after death is the tomb. Another very ancient idea places the abode of the dead in heaven, where they shine as stars in the firmament, and are privileged to take a place in the barque of the sun-god and to accompany him on his voyage through the heavens. A third conception assigns to the blessed dead a life of blissful labour and pleasure in the Egyptian Elysian Fields. The dead man flies up to heaven like a bird, or ascends a gigantic ladder, and, after passing through many difficulties, arrives at the Schhet-Aaru, or 'Field of Bulrushes,' where he spends his time in the same agricultural pursuits and field-sports which had occupied him on earth.

Finally, another belief was that the souls of the departed dwell in the under world through which the sun passes during the hours of the night—a land that in the daytime is one of darkness and desolation. Only at night, as the sun in his barque passes through the twelve domains of the darkness, do the deceased experience something of joy and activity in the hour when he traverses the particular activity in the hour when he traverses the particular domain in which their lot is cast. Later the belief arose that the illuminated soul, if instructed in the proper formulæ, might share the voyage of the god through the *Duat*, or under world, instead of merely being gladdened by a passing glimpse of him. These various views co-existed with the subordinate position; but as early as the period of the Pyramid texts he figures in a much more important rôle as the god of the dead and the Osirian doctrine; though they are essentially quite

independent of it, and, indeed, can be accommodated to it only with difficulty. The popularity of the last of thein-the belief in the abode in the Duat, and the voyage of the sun-god there—was mainly confined to the period of the XIXth and

XXth dynasties.

3. Beliefs with regard to the nature and attributes of the gods. -Discarding all that is of merely local significance in regard to the various divinities, it is possible to arrive at a fairly clear idea of what the Egyptian believed concerning the nature of the gods. The material is mainly to be found in the various hymns extant, and especially in those addressed to Ra, to Amen-Ra, to Osiris, and to the Aten, the god whom Amenhotep IV. (Akhenaten) attempted to make sole god of Egypt. In most of these hymns we are met by a great and almost meaningless accumulation of epithets which are applied indifferently to various gods in the most bewildering fashion. Setting these aside as mere formalities, we generally find a residuum of evi-

dence as to the nature of the god who is being addressed. Thus, from a fine hymn to Amen at Cairo, we have the following:

'Sole form, producing all things, the one, the sole one, who creates all beings. All human beings have come from his eye, and the gods from the word of his mouth. He it is who makes pastures for the herds and fruit-trees for men; who creates that whereby fish live in the river and use birds under the heavens.
'Amen is thus the creator and sustainer of heing. Further whereby fish live in the river and the birds under the heavens.

Amen is thus the creator and sustainer of being. Further, he is a god of mercy and justice, 'listening to the poor who is in distress, gentle of heart when one cries unto him; deliverer of the timid man from the violent, judging the poor and the oppressed.

Lord of mercy most loving, at whose coming men live.

Maker of beings, Creator of existences, Sovereign of life, health, and strength, chief of the gods. We worship thy spirit, who alone hast made us, ... we give thee praise on account of thy mercy to us.'

account of thy mercy to us.'

Again, from a hymn to Ra in the papyrus of Hu-nefer, we have a remarkably clear statement of the unity, the eternity, and the inscrutable

nature of the god:

nature of the god:

'Thou art unknown, and no tongue is worthy to declare thy likeness; only thou thyself. Thou art One. . . . Millions of years have gone over the world; I cannot tell the number of those through which thou hast passed. Thou dost travel through unknown spaces requiring millions and hundreds of thousands of years. . . . This thou doest in one little moment of time.' Strangely enough, it is in the hymns to Osiris, otherwise 'the most human of all the gods,' that we find on the whole the most endless multiplicate.

we find, on the whole, the most endless multiplication of ceremonial epithets, and the greatest dearth of statement as to his nature and attributes. There are, of course, in the hymns and other portions of the Book of the Dead frequent references to his functions as the bestower of immortality, and prayers that the deceased might share in everlasting life; beyond that there is little that distinguishes him from such gods as Amen and Ra. One of the best known of his hymns has the following:

The circle of the solar disk is under his orders; winds, rivers, inundation, fruit-trees, as well as all the annual plants.

Every being invokes him, every man adores his beauties. Delightful for us is his love; his grace environs the heart.

There is nothing here which might not be said

of Ra, Amen, or any other of the great gods.

By far the most remarkable statement of belief in Egyptian religious literature is to be found in the lrymns addressed to the Aten, or vital power of the solar disk, the god of the heretic king Akhenaten (XVIIIth dynasty). These hymns, the composition of which has been ascribed to the king himself, express the elements of that belief in a sole god, invisible, spiritual, and universal, which Akhenaten endeavoured to make the national religion. The longer of the hymns has been frequently translated, and its teaching may be summarized as follows:

summarized as follows:

To Aten is ascribed rule over the times of the day and the activities of men and animals. The strength in which men go forth to their labours comes from him, and all the blessings with which the creatures, even to the fishes in the river and the depths of the sea, are endowed are his girls. He is confessed as the source of life, alike in man and in the smallest of created existences. 'Thou createst conception in women, making the

issue of mankind . . . the small bird in the egg, chirping within the shell, thou givest it its breath within the egg.' Aten is omnupresent, and is the universal god of all mankind, appointing to men their different abodes, and their diversity of appearance and speech. 'In the hills from Syria to Kush, and in the plain of Egypt, thou givest to every one his place, thou framest their lives, to every one his belongings, reckoning his length of days. . . As a divider thou dividest the strange peoples' (cf. Ac 1724-29). Further, Aten is the source of all ferbility in the world, the maker of that Nile in heaven which brings rain for the outlandish folk, and of the Nile from the nether world which fertilizes Egypt. 'Thou placest a Nile in heaven, that it may rain upon them. . . O, Lord of Eternity, the Nile in heaven is for the strange people . . the Nile that cometh from below the earth is for the land of Egypt, that it may noursh every field.' Finally, he is the creator of the seasons and the maker of the far-off heaven for his own abode. The hymn closes with a notable declaration of personal relationship to God: 'Thou art in my heart, there is none other that knoweth thee, save thy son Alchenaten. Thou hast made him wise in thy designs and thy might. . . Thou hast raised them up for thy son, who came for the vands, Nefer-kheperu-ra-ua-en-ra.'

On the whole, while the hymn to Aten is im-

On the whole, while the hymn to Aten is immeasurably finer as a poetical composition than the hymns to the other gods, it can scarcely be said to present any very original thoughts, two points being excepted. All the statements about the creative and sustaining power of the Aten could be fairly matched in substance by phrases from hymns to Ra and Amen. The real distinctions of the poem are its acknowledgment of a god who is universal, whose providence and rule are not for Egypt alone, but for all lands; and its profession of a personal relationship of faith and inspiration between the royal psalmist and his divinity.

Summing up, we find that, in his best presenta-tions of his faith, the Egyptian professed belief in a self-existent God who was the Creator and Preserver of all things, merciful and gentle, specially careful of the most helpless of His children, invisible and inscrutable, one alone, eternal, omniscient, and omnipresent; while the development of thought under Akhenaten gives the further conceptions of His spirituality, His universality, and His personal relationship to His adorer. All this was overlaid and confused by the chaos of

this was overlaid and confused by the chaos of merely local aspects of divinity which forms the surface of Egyptian religion; but still this was the nature of the God behind the gods of Egypt.

JAMES BAIKIE.

CREED (Jewish) .- Articles of creed in the modern sense were unknown in the earlier period of the post-Biblical Judaism. No necessity had been felt to express man's relation to God in other forms than those found in Dt 6<sup>4-5</sup> 10<sup>12</sup> and similar passages of the OT. The belief in God being passages of the OT. The belief in God being based on the Biblical report of revelation to the patriarchs, and assuming the character of a postulate, obedience to His law was considered a mere logical consequence. The simplicity of this system contrasts strangely with the elaborate array of articles of faith adopted in later centuries. It is therefore desirable to examine the factors that bridged the gulf.

It was inevitable that Judaism should absorb a certain amount of the metaphysical speculations of the various Greek schools. The first outcome of this was Philo's theology. In the concluding chapter of his treatise on the 'Creation of the

result of his investigations in the form of the following five 'lessons' taught by Moses:
(1) God has real existence; (2) God is one; (3) the world is created; (4) the world is one; (5) God's providence embraces the world. World' (de Opificio Mundi, ch. lxi.) he gives the

The early Jewish Rabbis, however, being con-cerned with the practice of the Law rather than with speculations, sought to check their propaga-

'The work of creation,' the Mishnä teaches, 'should not be studied by a company of two, and the Chariot not even in solitude, unless the student be sagacious and capable of drawing the right conclusions' (Hagigā, ii. 1).

'The terms 'work of creation' and 'Chariot' stand

for metaphysics in general. In an additional note the Mishnä says explicitly that for him who in-

what is above and below, what was heretofore and will be hereafter, or deals lightly with the glory of his Maker, it would be better for him never to have been born. Moreover, Ben Sira (Sir 3<sup>211</sup>) utters a solemn

warning against the study of metaphysics, and several authorities of the Talmud (of the 4th cent. A.D.), commenting on the words both of the Mishnä and of Ben Sira, make no other concession than that of allowing the communication of the headings of the chapters' to scholars of ripened wisdom (Hagīgā, fol. 13). We find, however, in the Mishnā an attempt to formulate, in a negative

way, something like a creed.

'The following,' we read (Sanh. x. 1), 'have no part in the future happiness: he who asserts that the resurrection of the dead is not intimated in the Töräh; that the Töräh is not of Divine origin; and the heretic.'

The passage thus enjoins, by way of climax, the belief in retribution after death, revelation, and the existence of God; and we shall see, later on, that the same passage was made the basis of real articles of creed. The authorities of the Talmud, however, proceeded in a different way. Instead of formally demanding theoretical belief, they selected from the moral code three of the most important prohibitions, viz. idolatry, incest, and murder, and laid down that death was to be chosen rather than transgression even under compulsion (Sanh. fol. 74). An enlarged list of laws was imposed upon mankind in general under the name of the 'Seven Noachian Laws,' forming the nucleus of a religious system. They comprised the command of jurisdiction, and the prohibitions of blasphemy, idolatry, murder, incest, robbery, and the eating of flesh from a living animal (Sanh. fol. 56). A kind of creed in epigrammatic form is Hillel's famous recommendation to the heathen who desired to learn the essence of Judaism in a moment: 'What is hateful to thee, do not do to thy neighbour' (Shabb. fol. 31).

The first steps in the changing of this attitude were indirectly prompted by Muslim theologians, who created a speculative theology known by the name of *Kalām*. The Muhammadan criticism of the anthropomorphisms of the OT interfered with the Jewish antipathies to metaphysical research, and the struggle was carried right into the Jewish camp by the sect of the Karaites who, rejecting all Rabbinic tradition and attaching no value to the authority of Mishna and Talmud, took up the method of the Mu'tazilite (dissenting) Kalām for their own needs. The consequence was that Rabbanite Jews were compelled to follow suit and to employ philosophic arguments for the defence of revealed religion. This marks the beginning of the religious philosophy of the Jews, and its oldest expounder was Sa'adyā of Fayyūm, who died in 942 at Sura, in Babylonia. In his work on 'Creeds and Beliefs' he set aside the warning of the Mishnā against metaphysical speculation, on the plea that the Sages did not trabilly harrory reflevior. forbid honest reflexion (Amanat, ed. Landauer, p. 21). He was also the first to venture a defini-

tion of the idea of creed. 'Faith,' he says, 'is a notion arising in the soul with regard to a subject, the true nature of which has been recognized (ib. 11). What he really means is conviction gained by one of the various processes of recognition, such as personal perception, truthful evidence, and logical conclusion. As none of these applies to the tenets of the Jewish religion, he adds, as a fourth source, 'reliable tradition based on revelation'-a phrase which marks the difference between the creed of Rabbanite Judaism on the one side, and Muhammadan as well as Karaite Kalām on the other. Beyond this first attempt, however, Sa adyā has specified no real articles of faith, employing for the remainder of his theories the usual methods of the Mu'tazilite Kalām, which held sway among Jewish philosophers for two centuries afterwards.

The heterodox colouring of the Kalām in the writings of the famous Arab philosopher Avicenna (Ibn Sīnā), in connexion with the criticism of Muslim theologians and the growing pretensions of the Karaites, gradually brought about a reaction in favour of a more decided accentuation of the tenets of Rabbanite Jewish religion. As its doctors, however, had little practice in formulating articles of creed, they again turned to the Arabs, who employed the term 'aqīda' (plur. 'aqū'id) for this purpose. The first Muslim who formulated articles of creed was the famous Abul-Laith Nasr of Samarkand (†993), who laid down the tenets of his faith in a work entitled  $Aq\bar{\imath}da$  (Cod. Brit. Mus. Add. 19413), written in the form of a catechism. Of greater popularity, in fact the standard work on the subject, is the  $Aq\bar{a}^{*}id$  of al-Nasafi (†1142), which, it is probable, served Jewish writers as a model for the formation of their articles of creeds. For it should be noted that the first Jewish work which contained something approaching axioms of faith did not see the light till that period. About 1140 the poet and philosopher Judah Hallēvi of Castile composed his famous work al-Khazari in defence of 'the despised faith.' The book (which is written in Arabic) is based on a narrative dealing with the search of the king of the Khazars for the right belief. Being dissatisfied with the doctrines offered to him by a philosopher of the Avicenna type, a Christian scholastic, and a Muslim doctor of the Mu'tazilite school, he finally asks a Jewish Rabbi for his creed. The last named, in contradistinction to his predecessors with their more or less speculative theories, answers:

'I believe in the God of Abraham, Isaac, and Israel, who led the children of Israel out of Egypt with signs and miracles . . . our belief is comprised in the Torat' (al-Khazari, p. 44). This formal confession is subsequently supple-

mented by the following sentence:

"To this [prayer] the believer attaches the following articles of creed ['aqa'id] which complete the Jewish belief, viz. (1) the recognition of God's sovereignty, (2) His eternity, (3) the providential care which He bestowed upon our foresthers, (4) that the Töräh emanated from Him, and (5) that the proof of all this is found in the delivery from Egypt' (ib. 154).

From these words we conclude that the notion of articles of creed was familiar to Judah Hallevi. though he saw no necessity to formulate them for the benefit of his Jewish brethren. Sweeping away speculation of all kinds, he substitutes for it a priori belief, from which everything else follows as a necessary consequence (ib. 270). In order to show the contrast between his attitude and that of religious speculators, he reproduces in ten axioms the system of the Karaite Kalām (ib. 275-278). Judah Hallevi's omission to condense the results of his investigations into a similar system is thus far quite consistent with his views. A more definite attempt to formulate axioms of belief on Arab-Aristotelian lines was made by Abraham b. David of Toledo (1161)—the author of a work (like-

wise written in Arabic) which bears the name al-'Aqida al-rafi'a ('The Lofty Creed'). The first part is purely speculative, but the second consists

(1) God's existence and incorporeality; (2) His unity or onenees; (3) His attributes; (1) His rule of the universe; (5) belief based on tradition and belief in prophecy; (6) metaphorical names of God, Divine Providence, and human free will.

This attempt was subsequently eclipsed by Abraham's contemporary Moses Maimonides, who supplied what he considered to be a want, being, attacks of Muslim theologians, as well as by his inborn love of systematizing. It is to him that Judaism owes the famous 'Thirteen Articles of Creed,' which both in abridged Hebrew prose and in verse were introduced into the Jewish prayeramong Jews all over the world. It is doubtful, however, whether this was his aim. The Articles were originally composed in Arabic, and form part of his commentary on the Mishnā Sanh. x. 1 quoted above. A perusal of these Articles makes it clear that they were meant, in the first instance, as a protest against various Christian and Muhammadan statements: (1) that Biblical anthropomorphism was a departure from pure monotheism; (2) that Moses' prophetship was eclipsed by that of Muhammad; (3) that the Rabbis had altered the Töräh; (4) that the law of Moses had been abrogated by that of Muhammad; and (5) that the Messiah was still expected. The Hebrew version of these Articles by Samuel b. Tibbön (c. 1200) is attached to the ordinary editions of the Talmud. For the purposes of this sketch the following short abstract of the Articles must suffice:

purposes of this sketch the following short abstract of the Articles must suffice:

I. God exists, and is the cause of all existing beings.

II. God's unity is absolute, and is not to be compared with other units which are subject to division.

III. God's incorporeal and, therefore, exempt from any accidental attribute. The anthropomorphistic passages in the Bible must be taken metaphorically.

IV. God's unity is without beginning.

V. No other being besides God must be worshipped. This also holds good for angels, spheres, and elements.

VI. Prophecy is a distinction granted to human beings of superior degree, whose souls enter into intimate connexion with the Creative intellect.

VII. Moses is the father of all prophets both before and after him. He is distinguished from other prophets by four characteristics. (1) With no prophet did God hold direct intercourse as with Moses (Nu 129). (2) God did not appear to Moses in dreams, as to other prophets (v.9). (3) Other prophets experienced in the hour of vision a weakening of their vital power, and a great fear (Dn 103-10), whileh was not the case with Moses. (4) Other prophets were obliged to wait for revelations (2 R 879), whilst Moses was empowered to solicit them (Nu 98, Lv 102).

VIII. The Torah is of Divine origin: '16 is incumbent to believe that the whole of this law, as it is in our hands this day, is the Torah which was revealed to Moses. It is all Divine, which means that it ranched him by what is metaphorically termed speech.'

IX. This law will not be abrogated, nor will there be any other law of Divine origin. Nothing will be added to, or taken away from, it.

X. God knows the actions of all mankind.

XI. God rowards those who obey the Law, and punishes its trangeressors.

transgressors.

XII. The Messiah will arrive without fail, no matter how

long he tarry. XIII. Resurrection of the dead.

It can easily be seen that these thirteen Articles consist of three groups, viz. I.-V., VI.-IX., X.-XIII., reducing the whole system to the three fundamental principles of belief in God, Revelation, and Retribution after death. This reduction was, indeed, carried out and proved by Joseph Albo (first half of 15th cent.) in his work on 'Fundamental Principles' (Introd. and pt. i. ch. 4). It is impossible that Mainonides should not have been aware of this, but, the anti-Muhammedan as wall It can easily be seen that these thirteen Articles aware of this, but the anti-Muhammadan as well as anti-Christian tendencies of several of the paragraphs cannot be mistaken. The anonymous redactor of the most popular recension of these

Articles for liturgical purposes prefaced each paragraph with the words '1 believe with perfect faith —words which are absent from Maimonides' original. It was Samuel b. Tibbon who placed the word להממן ('to believe') at the head of several articles. Of the diverse attempts to reproduce these articles in poetic form the most popular is the Yigdal hymn by an unknown (but probably Spanish) author. Those who followed Maimonides, writing on the same subject, as Hisdai Crescas († 1410) and Isaac Abravanel (1437–1508), have added nothing new, and need not, therefore, be further considered.

There now remains a word to be said on the tenets of the creed of the Karaites. By rejecting the Rabbinic method of interpreting the Bible, they avoided the Muhammadan charge of having altered the Töräh, and, being disciples of the Mu'tazilite school, they were under no suspicion regarding their conception of Biblical anthropomorphisms. They had, however, to defend their belief in (1) the prophetship of Moses and the other prophets: (2) the validity of the Töräh, and their prophets; (2) the validity of the Törāh, and their own interpretation of it; and (3) the arrival of the Messiah. Now the ten axioms reproduced by Judah Hallevi (see above) touch only the meta-physical side of the question, and it was left to others to supply the religious element. Judah b. Elijah Hadassi (1149) was the first to attempt this Enjah Hadassi (1149) was the first to attempt this by grouping the Karaite laws round the Decalogue. Käleb Afendopulo, who (in 1497) wrote an introduction to Hadassi's work, extracted from it the following ten Articles:

I. God is the creator of all creatures.

II. He is one and eternal.

III. Every [other] existing being is created.

IV. God som Moses and all other prophets mentioned in the Bible.

V. The law of Moses is true.

V. The law of Moses is true. VI. Believers must have knowledge of the Töräh and its interpretation.

VII. The Sanctuary [at Jerusalem] is the palace of the Most

High King.

VIII. The resurrection of the dead [will take place] at the time of the arrival of the Messiah.

IX. There will be a final judgment.

X. Just retribution.

In view of the close relationship between the paragraphs I.-III., IV.-VIII., IX.-X., the artificiality of the number ten is conspicuous. Israel Haddayyān of Alexandria, who (in 1257) composed a digest of the Karaite laws, condensed the Articles into the following six: (1) God; (2) the messengership of Moses; (3) the other prophets; (4) the Töräh revealed through Moses; (5) Jerusalem; and (6)

revealed through Moses; (5) Jerusalem; and (6) the day of judgment.

HARTWIG HIRSCHFELD.

CREED (Muhammadan).—The Muhammadan ereed or profession of faith (kalimat al-shahāda, or, shortly, kalima) is the well-known formula, 'I testify that there is no god but God, and I testify that Muhammad is the apostle of God.' It is one of the articles ('aqā'id) of faith ('imān), and also one of the 'five pillars' of practical religion (dīn;

1 According to Lazzatto (klebo, Leghorn, 1856, p. 18) and Zunz (Literaturgesch. der synagog. Poesie, Berlin, 1865, p. 607), this hymn was completed in 1804 by Daniel ben Judah Dayyan of Rome. HARTWIG HIRSCHFELD.

see Islām). The creed as a whole is not formulated in the Qur'ān; but the first article is enunciated in Sūra exii.: 'Say, '' He is One God; God the Eternal; He begetteth not, nor is begotten, nor is there one like unto Him.'' The creed, however, occurs in a tradition of 'Omar, the second khalif, who related that the Prophet, on being asked to define Islām, said: 'Islām is that thou bear witness that there is no god but God and that Muhammad is His messenger; and be steadfast in prayer, and charitable; and fast during the month of Ramadān; and make the pilgrimage to the Ka'ba if it is in thy power' (Mishkāt al-Masābīh, tr. Matthews, Calcutta, 1810, I. i. 1). According to the Sharh al-Wiqāya (ap. Hughes, DI, s.v. 'Creed'), the kalima is to be recited by every Muslim aloud and correctly, with full comprehension of its meaning and belief in his heart, at least once in his lifetime, and to be always professed without hesitation until his death.

CREED (Parsi).—I. According to Yas. xxx. 2, man must make a choice between the two 'creeds' or 'confessions' (āvarenā). In the beginning the Holy Spirit said of himself and of his spiritual antagonist that their 'confessions' (varanā) did not agree (Yas. xlv. 2). The word translated 'confessions' implies a choice, and the corresponding verb is used in the middle voice with fra- as a technical term to express the profession of a religion, especially of the Mazdayasnian faith: fravaretar, 'confessor,' frāvarānē, 'I make my profession of faith,' etc. Although from the very beginning Zarathushtrian Mazdaism thus meant a sharp contrast with surrounding worship and practice (cf. Vend. xix. 6: Zarathushtra's mother had invoked the Ahra Mainyu), neither proselytizing aims nor doctrinal discussions produced a creed in the same sense as in Christianity. The Zarathushtrian reform was of a moral, economic, and ritual kind, rather than intellectual. But the Avesta contains several formulæ, used on different occasions, e.g. in putting on the sacred cord, on rising in the morning, in the nyāyishes and other prayers, etc. These formulæ sum up the most peculiar tenets and practices of the Parsi religion. It may be that some of them originated during the Sasanian restoration, owing to the need of briefly distinguishing their own faith from Christianity and other rivals. We shall mention only the most important formulæ. In the post-Avestan time the Parsis who settled in India were required to present a summary of their beliefs and sacred customs to Indian rulers.

customs to Indian rulers.

2. In its shortest form the Fravarānē (Yas.

2. In its shortest form the Fravarānē (Yas.

2. In its shortest form the Fravarānē (Yas.

3. 16, xii. 1, xxvii. 12; Yt. xiii. 89, etc.) contains four points: Fravarānē Mazdayasnē, Zarathushtrish, Vīdaēvē, Ahuratkaēshē; I profess myself a Mazda-worshipper, a Zarathushtrian, an anti-devil (enemy of the demons), a servant (or proclaimer) of the Lord.' That is, the believer declares himself (1) a monotheist; (2) a member of a historically founded religion; (3) a dualist. Or, to put it differently, (1) the revealed God is Ahura Mazda; (2) the revealer is Zarathushtra; (3) the peculiar higher form of life instituted by the revealer as the due service of God consists in the fight against the demons. Those points are co-ordinated in a way characteristic of revealed or founded religion (cf. Transactions of the 3rd Int. Congr. for the Hist. of Rel., Oxford, 1908, ii. 403 ff.). (4) The last word seems to sum up comprehensively the whole faith, yasnā designating more particularly the Divine worship, and thaēshā designating the doctrines and tenets of religion in general. Additions are sometimes made to the Fravarānē: homage to the genii of the gāhs (hours, watches), of the days, of the months, of the seasons, of the

years (Introd. to the Yasna; Yas. xi. 16, xxiii. 5; esp. in the five gāhs recited at the five hours of prayer of the day and contained in the Khordah Avesta [the book of prayer], etc.); or—a more authentic addition—homage to the Amesha-Spentas (Yas. xii. 1), or other amplifications. A still shorter form (Yas. xii. 8) runs thus: 'I profess myself a Mazda-worshipper, a Zarathushtrian, having made both my avowal and my profession (of faith).' Another short formula in Palilavi runs: 'I declare my adherence to the Mazda-worshipping religion, and renouncement of all evil beings and things' (E. S. Dadabhai Bharucha, Khorda-avestā-arthah, Bombay, 1906, p. 2).

3. A more explicit creed is formed by the Hās xii. and xiii. of the Yasna, designated, according to Anquetil Duperron, by the Parsis as Fraoreti, 'confession,' 'creed,' and called after the opening words Frastuyē, 'I praise' (Yas. xi. 17-xii. 7), and Astuyē, 'I avow' (Yas. xii. 8-xiii., as divided by Darmesteter). Astuyē, with the shortest Fravarānē, belongs, e.g., to the prayer of the investiture with the kosti. Frastuyē is placed at the head of each Yasht and of each Patēt, and it occurs in a shorter and in a longer—evidently more original—form, which contains elements of really ancient aspect. It begins with the usual Avestan triad: 'I avow good thoughts, good words, good actions.'
In the course of the confession, cattle-stealing and destruction of the villages of the Mazdayasnians are abjured; folk and cattle ought to live in peace. All communion with demons and their crew, with sorcerers and their crew, and with all kinds of adversaries and devilish, treacherous persons, is abjured. As Zarathushtra abjured the devils in his colloquies with Ahura Mazda, so the Mazdayasnian and Zarathushtrian gives up communion with them. In addition to the predominating fight against the devils, and in particular against savage disturbance of the regular cattle-breeding village-life ('the Mazda-worshipping religion suppresses battles and lays down arms'), two other features of this creed deserve attention: (a) the features of this creed deserve attention: (a) the importance of tradition; this creed has been professed by the waters, by the plants, by the cattle, by the Creator, by the first man, by Zarathushtra, by Vishtäspa, by Frashaoshtra and Jāmāspa, by all the Saoshyants; (b) the excellence of intermariage between the nearest relations, repudiated and interpreted in a different sense by later Parsiism. The xvaetvadatha, or next-of-kin-marriage, is also exalted by the Astuye.

4. Anquetil Duperron describes the ceremonies to be undertaken by an unbeliever desiring to join the Parsi faith. The Parsi creed belonging to that ritual and included by Spiegel in the Khordah Avesta is evidently much later than the Avestan formulæ. It runs: 'The good, pious, right religion, which the Lord of the created beings has sent, is the one brought by Zartūsht. The religion is the religion of Zartūsht,' The reception of ormazd, given to Zartūsht.' The reception of an outsider into the Parsi communion is, in fact, nowadays almost an unheard-of thing; such requests have been rejected lately.

5. The Mazdayasnian who confesses his sins and seeks absolution is, of course, in quite a different position from a proselyte not belonging to the sacred blood. The explicit formulæ of penance, Patēts, give a good idea of what was considered by later Mazdaism to be essential to the Parsi practice and faith. In the so-called Iranian Patēt, after having enumerated at length the sins and wickednesses repented of, and having referred to the fact

1 Translated by Spiegel, Av. übersetzt, Leipzig, 1852-68, iii. 219 ff., and Darmesteter, Zend-Avesta, Paris, 1892-03, iii. 219 ff.; ed. de Harlez, Manuel de Pehlew, Paris, 1809, -03, iii. 167 ff.; ed. de Harlez, Manuel de Pehlew, Paris, 1880, p. 144 ff. The Pazand Patits (cf. West, GirP ii. 1091) are now accessible in Antia's Pazend Teats, Bombay, 1909, pp. 118-162.

that the same faith had been professed by the men of the holy tradition, mentioned in the Frastuye, and by Adarbad Mahraspand (4th cent. A.D.), the believer proclaims that neither happiness nor a longer life, power nor wealth, nor even the penalty of death, can separate him from the right religion, because he dreads hell and hopes for paradise.

6. On the arrival of the emigrating Parsis at Sanjan in A.D. 716, they presented to the Indian prince of Gujarāt a list of sixteen ślokas, composed prince of Gujarāt a list of sixteen ślokas, composed by the most learned of their dasturs, and containing the principal rules and tenets of their religion, selected and stated in a way fitted to conciliate the ruler, without denying or concealing the real content of Mazdaism. The points were as follows:

(1) the adoration of Ahura Mazda, of the Sun, and of the five elements; (2) silence during the bath, in reciting prayers, in presenting offerings to the fire, and in eating; (3) the use of incense, perfumes, and flowers in religious ceremonies; (4) the honour accorded to the cow: (5) the use of the honour accorded to the cow; (5) the use of the sacred shirt, string, and cap; (6) singing and music at weddings; (7) the adornments and perfumes of ladies; (8) the precepts of generosity in

giving alms, and of digging tanks and wells; (9) giving alms, and of digging tanks and wells; (9) the precept to extend one's sympathies to all male and female beings; (10) the ablutions with gomātra (euphemistically called 'one of the products of the cow'); (11) the wearing of the sacred cord in praying and in eating; (12) the sacred fire fed with incense; (13) the five devotions every day; (14) conjugal fidelity and purity; (15) the annual ceremonies in honour of the forefathers; (16) the precautions to be observed by women after child-birth and during menstruation. There exist different versions in Gujarati and Sanskrit.

CRIMES AND PUNISHMENT and Savage) .- I. Introduction .- While revenge is the action of an individual against one who has done him wrong, punishment is the action taken by society against one who has transgressed its laws. Revenge may, however, be followed up by a group of persons in sympathy with the injured person, in this case passing over to the blood-feud  $(q,v_*)$ ; and this case passing over to the blood-reud (q.v.); and individual or collective revenge may be recognized by the society as the specific form of punishment to which it lends its sanction or its aid. Men seek revenge because they feel that their rights or interests have been encroached upon. The act of revenge is one strictly of self-defence, and is primarily a reflex action. It seeks to destroy or primarily a reliex action. It seeks to destroy or render powerless what constitutes a menace, but it contains a rough notion of justice, of the idea that no one can intrude upon the rights of another without suffering the consequences. The exercise of justice by a community or its representatives against an individual who is obnoxious to it, or to any of its members, is based primarily on the feeling which underlies revenge. Punishment is to some which underlies revenge. Punishment is to some extent vengeance—the vengeance of society for its own preservation. The criminal must suffer, must explate his crime, whatever other notions may in time enter into the idea of punishment. Private vengeance and public justice are thus so far similar vengeance and public justice are thus so far similar in their point of view and in their action, save that the latter tends to be more discriminating and impartial. Not the individual sufferer himself, but others judge and condemn the guilty person. Public justice at lower stages is extremely limited, and side by side with it exists private or collective vengeance (e.g. the blood-feud). This is to some extent justice, since society recognizes the right to its execution. It has become a specific form of punishment because society has sanctioned it. Or punishment because society has sanctioned it. Or public justice may, again, recognize private revenge by handing over the evil-doer to the injured person or his relatives, or by making him or them the

Hebrew (W. H. BENNETT), p. 280. Hindu (J. JOLLY), p. 283. Japanese (W. G. ASTON), p. 285. Jewish (H. LOEWE), p. 288. Muhammadan (TH. W. JUYNBOLL), p. 290. Roman (J. S. REID), p. 294. Roman (J. S. REID), p. 296. Teutonic and Slavic (O. SCHEADER), p. 300.

case of a few crimes which more particularly menace the existence of society as a whole, has to content itself with regulating private revenge, or with suggesting a system of compensations. Finally, as it advances, often through the growing supremacy of chiefs, it eliminates private revenge more or less completely, though this can hardly be said to be true of any savage society.

The simplest form of regulated revenge is the duel—the right of the injured party to challenge the aggressor to single combat, or the case where the aggressor must stand up to the throwing of spears (as in some Australian instances), or must submit to the plundering of his house. Or, again, revenge is regulated by being limited to a cretain period or to certain offences. The blood-fend is the best example of regulated revenge (see Post, Grundries der ethnol. Jurisprudenz, il. 236ff.; Westermarck, Moral Ideas, i. 408 ff.; see § 6, ii. (1) below).

In the earliest times, if men, like some of the higher apes, lived in separate families, the family cutors of justice. Public justice, save in the-

higher apes, lived in separate families, the family would, when necessary, assist any individual member of it in following up an act of rovenge, because they were bound to be in sympathy with him for the wrong done. Thus individual revenge easily passed over into collective revenge. It is out of this feeling of sympathy that justice, strictly so called, arises. Actions by which any individual feels aggrieved are generally those by which all individuals feel aggreeved when they are done to themselves; and the condemnation of such actions themselves; and the condemnation of such actions tends to formulate itself as a custom or law which cannot be transgressed without risk of incurring the hostility of the society or of individuals composing it. Custom is, in fact, a strong expression of savage man's sense of right and wrong, and it is the test by which actions are judged, although, indeed, some of the actions, from a strictly ethical point of view, may be indifferent. Hence, both collective revenue and public justice are the expression. collective revenge and public justice are the expression of moral indignation, though the latter expresses it more strongly. For, the more men realize their solidarity, the more is any ill done to one regarded with indignation by all, as a result of

the working of sympathetic emotion. And, as the ill done has transgressed that customary law,the expression of what is right and what is wrong, the punishment inflicted is an expression of moral indignation at the wrongdoer. It may be out of all proportion to the offence committed, and in such a case is on a level with mere unthinking revenge, but, generally speaking, at lower levels of savage society, punishment has some proportion to the offence. It is at higher levels, in barbaric and despotic societies, that punishment is most cruel and disproportionate to the offence.

The tendency of punishment to supplant mere revenge (which is occasionally regarded as wrong) is aided by the fact that the latter often causes great inconvenience to the society, and tends to multiply the revengeful actions. The society, by itself or by its heads, steps in, therefore, between the avenger and the wrongdoer, and decides upon the punishment, or restrains the amount of vengeful action. Thus the judgments of a central tribunal are gradually preferred to revengeful acts. Casalis says of the Basutos that the chief has been given powers over all the community because of the fear of anarchy arising out of private revenge (*The Basutos*, 1861, p. 225). The injurious results of the blood-feud are well recognized by savages, among whom the head-men or the chief will often interfere to stop its excesses; or it sometimes gives place to an appeal to them, or to the payment of a compensation by the offender, as a matter of private arrangement, or one suggested by them. This compensation generally tends to pass into a regular practice, with a graduated scale of payments according to the magnitude of the offence (§ 5). With the growth of the power of the chief, he not only adgrowth of the power of the enter, he not only advises or suggests, but determines and orders the carrying out of justice over a wider field. Moreover, where the injured person or his representatives are too weak to take revenge against a powerful tribesman, or, on the other hand, where revenge is out of proportion to the offence, the sympathetic emotions of the society, being aroused in the one case for the victim and in the other for the aggressor, gradually contribute to the forma-tion of a tribunal in some shape or form, and to the cessation of private revenge.

Yet private revenge often exists side by side with punishment by a tribunal or a chief. natural when we consider what savage character is. But, on the whole, there is a tendency to make such revenge the expression of judicial action. Thus it may be recognized as the right way of punishing certain wrongdoers, provided that it does not exceed certain limits. This is particularly true where the husband is allowed to avenge him-self on the adulterer. Or it may be permitted that the criminal caught red-handed in certain crimes, e.g. theft, should be slain at once. Or, again, the 2.9. thert, should be shain at once. Of, again, the blood-feud may be the approved method of punishing the murderer. Or the aggrieved person or his relatives may be chosen as executioners of the sentence passed by the tribunal. Thus, among many of the Bantu tribes, a murderer proved guilty is given over to the relatives of his victim to deal with him as they choose (Macdonald, JAI xxii. 108). Many other instances might be cited. xxii. 108). Many other instances might be cited. Private revenge sometimes continues alongside or in spite of established judicial tribunals in the case of large societies scattered over wide areas, and in which there is little feeling of homogeneity, and hence little prospect of general sympathetic action in favour of an aggrieved person. Revenge may also be pursued in all societies in matters not

usually taken cognizance of by the laws.

2. Crime, morality, and religion.—Even in the earliest stages of human history man may have dimly felt it ethically wrong to murder, commit

adultery, or steal, apart from the fact that the instinctive act of revenge brought it home to him that in committing such actions he was trespassing against the rights of another. These crimes are so against the rights of another. The sense of universally condemned that there can have been no time when they were not regarded as deeds which it was wrong to commit. The sense of which it was wrong to commit. The sense of wrongness with regard to these and other acts was largely increased with the growth of society, of the group in which men lived, because such actions tended to destroy the unity of the group. Custom laid down that there were certain things which must not be done, and it was, therefore, highly immoral to do them. Nor is it improbable that, even at the very earliest stages of the growth of the ideas of right and wrong, man may have thought vaguely that in doing wrong to another he was incurring the anger of whatever worshipful being or beings he was aware of. This thought also would become more definite with the growth Where a group of men living together of society. worship a being whom they believe to be interested in the group, any transgression of custom will be regarded as transgression against him, because the customs would certainly be regarded as having been instituted by him. Whatever constituted a menace to the group or any of the individuals composing it was also an offence against the divinity, who naturally favoured the community and not him who menaced its existence. The god is apt to punish the group for the breach of custom, and hence the offender is made to suffer speedily for hence the onender is made to suner specify for his evil-doing, in order to avert this. Some crimes are punished by the group as a whole. Others are not so punished, but the group approves of the act of revenge by which the offence is requited. Revenge or punishment is thus supposed to satisfy the anger of the god. Some support for the view here taken is found in the fact that the divinities of very primitive tribes are also to some extent moral governors, who are thought to dislike particular crimes and to punish them. Among savages at a higher level there is a certain amount of evidence proving that their gods take account of crime and are guardians of morality. Whether or not it be true that all morality from the first is connected with religion, it is at least certain that religion soon strengthened and assisted morality by its insistence on the fact that the god or gods of the group desired its welfare, and that all offences against that welfare were thus more than offences against laws imposed by men.

3. The administration of justice. - A regular organization for enforcing justice or maintaining custom hardly exists at the lowest levels of society, though its beginnings may be seen. Justice is a matter of individual action; and yet, as among the Yahgans of Tierra del Fuego, where the feeling of the community gives support to the existing customs, some help in avenging wrongs may always be looked for from relatives or neighbours (Hobhouse, Morals in Evolution, i. 46, citing Hyades and Deniker, Miss. scient. du Cap Horn, Paris, 1891). This is an approach to collective revenge, and, as a rule, the greater the wrong, the more likelihood is there of the avenger being supported. But, wherever crime is regarded as a serious breach of tribal custom, the breaker of a custom is the breaker of a law, and his action arouses strong disapproval. Hence, society approves the action of the avenger, e.g., in cases of murder or adultery; or it takes joint action against the wrongdoer. The latter course is most frequent in the case of crimes which are regarded as bringing the whole community into danger or subjecting it to Divine anger, e.g. sorcery and incest (breaches of exo-gamous custom). Or, again, a whole clan or tribe will put to death or banish a man who makes himself a nuisance to every one, as among the Eskimos, where a whole village has occasionally risen against and slain an atrocious murderer (Nansen, Eskimo Life, 1893, p. 163). Conjoint action by the community is found amongst the Mpongwe, who drown or burn the murderer (Burton, Two Trips to Gorilla Land, 1876, i. 105), and is common among Australian tribes, where the whole camp joins in punishing the ill-doer (Westermarck, op. cit. i. 171). But, even when such joint action occurs, individual revenge or blood-feud is commonly found, nor is it condemned by society. Indeed, it is usually the case that any one disregarding the duty of revenge is held in contempt, and this tends to show the general disapproval of

crime by the whole group or tribe.

Where public justice is administered by certain individuals, it seldom ousts the practice of private revenge, and in general takes cognizance only of public offences (sorcery, incest), or of various petty crimes. But this 'court' may be effective in enforcing or in regulating private revenge, or in arranging compensation. A council of elder men is frequently found among Australian tribes, who try various offences and decide upon the punishment (Fraser, Abor. of N.S. Wales, Sydney, 1892, 9.39 ff.; Woods, Native Tribes of S. Aust., Adelaide, 1879, p. 34 ff.). But it is probable that, as among the Central Australian tribes, these offences are breaches of the strict marriage laws (incest), and murder by sorcery. In such cases the elders arrange for an avenging party to go out and punish the offenders (Spencer-Gillena, pp. 15, 477; b25, 556 ff.). In some instances the council has nothing to do with cases of murder, adultery, etc.; and only those relating to property or to hitigation are brought before it (Nagas [Stewart, JRANBe xxiv., 1855, p. 609], Kandhs [Dalton, Eth. of Bangul, Cale., juridique, p. 94]). Or, as among some N. American tribes (Ojibwas, Wyandots, etc.), the avenger appears before a council, and, having obtained judgment in his favour, demands compensation. If this is not given, he falls back on revenge (Kohler, ZVRW xii. [1897] 407). In many cases, too, the council (as in the case of the chief) delegates the execution of justice to the person who would otherwise be the avenger. Sometimes the leading men of a group will intervene to prevent disputes or to arrange composition. Less usual are the instances where the decision of a council is taken as final in all private cases (Todas and other aboriginal Indian tribes [Shortt, TES, new ser. vii., 1868, p. 241; Forsyth, Hightands of Cent. India, 181. p. 361], Tagbuana [Worcester, Philippine Islands, New York, 1898, p. 107], and a few others). Thus, generally speaking, the savage council seldom constitutes a court in th

With the advancing power of the chief, the administration of public justice passes largely into his hands; yet even here private revenge—the bloodfeud, or the right of the husband to punish in cases of adultery—is still used and permitted, and often the chief's prerogative is exercised only when appeal has been made to him. But there now comes into great prominence, especially among higher savage tribes, a regular system of compensation or fines for various crimes, payable to the aggrieved person or his representatives, or, in some cases, to the chief. We find also in many places regular codes of laws, with punishments appointed for different offences. Sometimes the chief merely intervenes to prevent excessive revenge and to suggest compensation, as among many American Indian and African tribes; sometimes his power of intervention is limited to certain crimes, generally those of a public kind; or, again, he merely acts as arbiter or adviser rather than as judge. But,

the more his power is established, and the more autocratic he is, so much the more do his functions as judge increase. This is especially true of many of the chiefs and petty monarchs of Africa, and in general of all tribes whose social organization is high. Frequently the chief may associate with himself a council of elders; or, again, as among the Kafirs, village chiefs judge lesser matters, while chiefs of clans hear appeals against their judgments and try all more serious crimes, aided by the advice of a council (Letourneau, p. 87). With few excep-tions, where justice is administered by a chief he is careful to act in strict accordance with the established customs. There is, however, a tendency among chiefs to regard every real or imaginary offence against themselves as a serious crime, while where their power is autocratic and fines are paid there is great danger of injustice and of atrocious punishments being meted out. But, with the decay of private revenge, the administration of justice becomes more delinite and strict, especially as we advance from savage to barbarous societies. The court or chief maintains order, upholds the rights of every member of society, and punishes all crime. Generally speaking, wherever a tribunal exists, it is seen to be a guarantee, not found in the exercise of mere revenge, that all offenders shall suffer, and suffer proportionately to their offence.

Where cases are brought before a council or a chief, a palaver usually takes place, at which both parties are fully heard. Sometimes the method of the oath or ordeal is resorted to in order to discover the truth and to point out the guilty person. The oath is frequently in the form of a curse, and accompanies the drinking of a poison or of some liquid, which is supposed to act fatally upon the perjurer or the guilty. The oath is thus a species of ordeal. But the ordeal may occur by itself in various forms: the ordeal by fire, by redhot metal, or by boiling oil or water, in which cases the innocent person is not burned, or his wound heals within a certain time; the ordeal by water—remaining under water for a certain time without drowning, or passing safely through water in which crocodiles lurk; the ordeal by poison (see OATH; ORDEAL; Post, ii. 459 ff.). The person who is proved to be guilty, if he has not already succumbed to the ordeal, is then punished according to the nature of his crime. Among savages, secret societies, such as the Duk-Duk of New Britain, supplement the action of private revenge or public justice where these are imperfect, and punish any one who commits crime.

4. Variety of crimes.—The idea of what constitutes crime in savage society is largely akin to that entertained in civilized societies. But there are important exceptions to this, bound up with the nature of savage society and belief, e.y. breach of tabu or religious custom, sorcery, and the like. Again—perhaps as a natural outcome of uncontrolled revenge operating in later times—there is the idea that accidental woundings or homicides are equally punishable with those committed intentionally, though in many cases there is an approach to the modern view of accident, and a distinction is made in the punishment inflicted, or no punishment follows (cf. Westermarck, i. 217; Post, ii. 214). Sometimes killing in self-defence is punishable, though not to the same extent as murder; and, frequently, there is a distinction between meditated crime and that committed in the heat of the moment. More serious is the view entertained by most savage tribes that, while to kill or to steal from a fellow-tribesman is wrong, these actions when committed against strangers or members of another tribe are not crimes, and are

even praiseworthy. They are apt to be considered wrong, however, if they are likely to bring the vengeance of the other tribe upon the tribe of the offender. With the dawn of a higher morality and a wider sense of responsibility this view tends to disappear. Again, we generally meet with the idea that the weight of the crime varies both according to the rank (and often the age and sex) of the offender and according to that of the victim. Chiefs or men of rank may commit crimes with impunity or with slight punishment, but crime committed against them is generally punished more severely than that against lesser men. This is especially seen where the system of composi-tion for crime prevails, the blood-price or the fine varying strictly according to the rank of the victim, and often also according to the rank of the offender. These views continue to prevail in higher societies. Approximating to the custom of more advanced civilization, there is frequently a distinction made between a first crime and its repetition. A first offence may be punished comparatively lightly; a second or third will receive the utmost penalty—death or banishment.

Thus among the Bambara, for a first theft a hand is amputated; for a second the penalty is death (Letourneau, p. 78). The Aleuts punish a first theft with corporal punishment, a second with amputation of some fingers, a third with amputation of a hand and lips, a fourth with death (Petroff, 'Report on . . Alaska,' Tenth Census of the United States, Washington, 1884, p. 152). Among the Wakamba, a first murder is killed at once (Decle, Three Years in Savage Africa, 1898, p. 487).

In general, those crimes which may be considered public, inasmuch as they are committed against the customs, or to the danger, of the whole community, are sorcery (involving, according to current belief, all natural death), breaches of the customary marriage laws (incest), sacrilege (breaking of tabu), and treason. Private crimes—those committed against private persons—include murder, adultery, unchastity, theft, perjury, and the like. Some of the latter may be regarded as public crimes if they are committed against the chief, because of the relation in which he stands to the community. There are, of course, many lesser crimes, while, especially where chiefs have the power of making laws, there is a tendency to multiply offences. With the greater development of savage society, and with the gradual formation of a central administrative body taking the place of mere public opinion and custom, these private crimes are regarded less and less as offences against an individual, and more and more as breaches of law and transgressions against social order. But it is rather at the next higher stage, in barbaric and semi-civilized societies, that a real approximation to this view is found.

Punishments.—Punishment administered by public justice in savage society has generally the intention of making the offender suffer pain, and is thus analogous to punishment inflicted as an act of private revenge. The lex talionis, or principle of equivalence in punishment, is perhaps originally connected with the reflex and instinctive movements of the person who is hurt, and who attempts to make the aggressor suffer a similar hurt by a natural process of imitation. There must be blow natural process of imitation. There must be blow for blow. At the same time this movement is one of self-preservation, and this also is an element of all punishment. Such instinctive resentment is, however, indiscriminate in the amount of vengeance which it employs, and this primitive instinct of blow for blow, whilst suggesting the lear tablonis, is not sufficient as an explanation of it. We may, therefore, with Westermarck (i. 179), look for a further explanation of it in the feeling of self-regarding pride which desires to bring the aggressor to the same level as the sufferer, and in the social

feeling that members of the same society have equal rights, and hence, if one makes another suffer, he must suffer in a similar way and to the same extent.

The simplest form of the lex talionis is found in the idea of life for life, wound for wound, eye for eye, tooth for tooth. But it also assumes some curious forms; for example, especially in the case of the blood-feud, there is often the desire that the vengeance should fall on one of the same rank, or the same sex, or the same age, as the victim—the real aggressor thus escaping. Again, the ven-geance is exacted with the same kind of weapon, and in the same manner. Or, where a system of compensations and fines exists, these are in due proportion to the amount of pain caused. Or it is seen working in still another way: the thief is deprived of sight, of an arm or hand; the perjurer loses his tongue; the adulterer or ravisher is castrated; or, again, the thief must not only restore the goods stolen, but must submit to be pillaged to the same extent (see Post, ii. 238 ff. : Hobhouse, i. 84, 91).

But, while the lex talionis is found as an underlying principle both in savage and in more advanced systems (cf. e.g. the OT and the Bab. Code of Hammurabi), there is often a disposition to exceed it, so that methods of private revenge as well as public punishments are often out of all proportion to the crime committed, especially in places where the people are naturally cruel, where a despotic chief rules, or where it is held that a Divine as well as a human law is transgressed. In the last case, as well as in cases where the chief is regarded as Divine or as having Divine authority, any transgression of law is apt to involve the whole society in Divine vengeance. Hence the punishment is swift and proportionately severe (cf. Durkheim, 'Deux lois de l'évolution pénale,' ASoc iv. 64 ff.). Savage acts of revenge, unregulated or regulated, as well as methods of punishment, are also often excessive, since they involve the punishment of an innocent person in place of the real offender (in many instances of the blood-feud or of the lex talionis), or that of innocent persons in addition to the real offender (his wife and children, especially in cases of sorcery, and these as well as fellow-clansmen in some instances of the blood-feud), as a result of the idea of solidarity and collective responsibility-a principle lingering on in more advanced societies.

In a few cases capital punishment seldom or never occurs. But, as a rule, it is meted out in most tribes for one or other of such crimes as sorcery, murder, incest, treason, sacrilege, adultery, and theft. Some tribes punish capitally only for sorcery and murder, or for sorcery and adultery (especially with the wives of chiefs); but not un-commonly all these offences are liable to the punishment of death. Further, in such despotic kingdoms as Ashanti or other regions of Africa as well as sporadically elsewhere, even small offences are punishable with death, at the capricious will of the chief (Ellis, *Tshi-speaking Peoples*, 1887, p. 166; Kollmann, *Victoria Nyanza*, Berlin, 1899, p. 170 f.).

(cf. Cannibalism, § ii. 15; Codrington, p. 344; von Martius, Travels in Brazil, 1824, i. 88).

Of all these methods the most cruel are found in Africa, where also mutilation before death, as well as other tortures, is practised (cf. Letourneau, pp. 71, 81, 82, 88; Post, ii. 274; Westermarck, i. 195).

Other punishments consist of various bodily mutilations—cutting off legs or arms, hands or feet (or parts of these), nose, ears, lips; castration; and plucking out the eyes. All these are found commonly in Africa, among Amer. Indian tribes, in the South Sea Islands, and occasionally elsewhere. Flogging or beating with various instruments on various parts of the body—back, hips, shoulders, legs, stomach—is also used (in S. America, among the Mongols, in Africa). Enslavement is found as an occasional punishment for crime or for debt (commonly in Africa and in the Malay Archipelago, and sporadically elsewhere); or, where the criminal has failed to pay the due compensation, he is often enslaved, or the usual punishment is inflicted upon him. He becomes the slave of his victim or of the latter's family, or of the chief, or he may be sold. Confiscation of goods, in whole or in part, is a frequent punishment in cases of theft. Banishment occurs here and there (New Yorker). and there (New Zealand, Mongols, some African tribes) as a punishment for certain crimes, but it is often the result of general bad or unruly behaviour threatening the peace of the tribe (see behaviour threatening the peace of the tribe (see Westermarck, i. 172; Steinmetz, Ethnol. Stud. zur ersten Entwick. der Strafe, vol. ii. ch. 5). Lack of filial duty among the Kafirs, and lying among the Bannavs of Cambodia, are punished with banishment (Lichtenstein, Travels in S. Africa, 1812-15, i. 265; Mouhot, Trav. in Central Parts of Indo-China, 1864, ii. 27). Other punishments are various forms of dishonour-cutting off the hair, insulting exhibition or parade of the culprit dress. insulting exhibition or parade of the culprit, dressing in women's clothes. Imprisonment as a punishment is rarely found among savages, but instances are noted in various parts of Africa (Krapf, pp. 80, 84; Post, Afr. Jur. ii. 51).

There is also a wide-spread system of compensation or fine for certain offences. This method of

indemnifying the victim or his relatives is itself a species of punishment, though, where the aggressor species of pullsament, though, where the aggressor is wealthy, it is easy for him to pay for his crimes. The system probably originated in the custom of paying blood-money to the relatives of a murdered man. The aggressor, to avoid a blood-feud, would offer presents to the relatives to appease their anger, while at the same time appealing to their love of gain. This, defective as it may be from the point of view of justice, was soon seen to from the point of view of justice, was soon seen to have the good effect of staying the excesses of the blood-feud, and would be encouraged by the community or the chief. Similarly, compensation for theft may also have been suggested by the custom of subjecting the chief to pillage of his goods. The system of compensation was largely adopted, and passed over into the administration of public justice as a method of assessing criminal actions. was far from being universally accepted either in systems of private revenge or in public punishment, and, even where it prevails, certain crimes cannot be compensated for, e.g. sorcery and deliberate murder. It has a wide-spread vogue, however, as a regular custom, or as an alternative to punishment in cases of murder, adultery, seduction, theft, etc. (cf. Post, ii. 256 ff., for a list of peoples among whom it is found). Where it prevails, a regular system of payments is fixed according to the injury done, according to the rank or sex of the victim, and sometimes according to the rank of the

In many instances—in such serious crimes as sorcery, murder, or crimes committed against a chief or his household-the wife and children of the aggressor suffer with him, or are sold as slaves. Or, where compensation has not been paid, wife and children may be taken with the defaulting criminal and enslaved; or he himself may sell them in order to obtain the wherewithal to pay the compensation. In the first two instances the savage doctrine of human solidarity is seen at work-a principle emphasized in the blood-feud, where the murderer's family or clan is often held responsible for his act and the members are liable to be slain for it.

As a further form of indignity and punishment, the body of a criminal is often left unburied, or is the body of a criminal is often left unburied, or is thrown into the forest to be devoured by wild beasts (African tribes [Post, Afr. Jur. i. 46]; Eskimos [Rink, Tales and Trad. of the Eskimo, 1875, p. 54]; Cent. America [Preuss, Die Begräb. der Amer., Königsberg, 1894, p. 301]).

6. As has already been said, a distinction is drawn even by the meet healward necoles between

drawn even by the most backward peoples between public and private crimes. Some examples of both will now be discussed, showing the attitude of the savage with regard to them and the punish-

ments meted out to the aggressors.
i. Public Crimes.—As examples of public crimes may be taken sorcery, incest, and sacri-

(1) Sorcery.—As distinct from magic, which is authorized for the public good, soreery, though its methods may often be similar, is almost universally punished by the common action of a tribe or by the central authority acting in its name. The sorcerer is employing unlawful means for anti-social ends, especially to bring about the sickness or death of his neighbours, or to cause sterility in field or fold. Further, inasmuch as the crime is an anti-social one, it is for that very reason a crime against the divinity of the social group, its guardian or tutelary spirit. As among the Eskimos, it is adverse to the interests of the community and to the supreme rule of things in which the people believe (Rink, op. cit. p. 41). Further, where spirits invoked in magic are evil and maleficent, they are such as are opposed to the rule of the benevolent spirit or divinity, according to the usual dualism which prevails in savage religion. Thus, sorcery is condemned on religious as well as on social or moral grounds, and those who are most active in pursuing it are generally the approved fetish-men or priests. Moreover, the divinities are sometimes said to abhor witchcraft and to punish it in the future life (Rink, p. 41; Parker, Euchlayi Tribe, 1905, p. 79; Codrington, p. 274). As it is a wide-spread belief that all sickp. 274). As it is a wide-spread belief that all sick-ness or death is due to unnatural causes, one of which is sorcery, there is a wide field for the exercise of public justice against the sorcerer, who is generally regarded as a murderer of a particularly offensive type. offensive type. Hence, not only in the lower culture, but at higher levels, law, and custom condemn him. He is a danger to society; he offends against its gods; and, because of the solidarity of the society, it may be visited by them for his offence. Therefore he is almost invariably pun-ished with death. Sorcery is sometimes the only crime which is so punished, while the method of death is often very cruel. In most cases the authorized magician, medicine-man, fetish-man, priest, or witch-doctor, takes steps to discover the sorcerer. When he is found, he is often subjected to an ordeal, e.g. by poison. If this does not kill him but proves him guilty, he is then publicly put to death. The ordeal is thus equivalent to the trial of the suspected person.

Among Australian tribes, with whom all natural death is attributed to sorcery, death is the invariable punishment. The medicine-man identifies the guilty person, an avenging party

is arranged by the council of old men, and the culprit is followed up and slain (Spencer-Gillens, pp. 46f., 477; b25, 556). With the Eskimos, the angekuts are hostile to sorcerers and cause them to be put to death (Rink, pp. 34, 41; Petroff, op. cit. p. 162). The punishment of death was generally meted out to sorcerers, who were much feared among the American Indian tribes of all degrees of culture, from the lowest tribes up to the Astecs, the method of death being often crueleg. burning (Wyandots, Guatemalans) and cudgelling (Vera Paz). With the Astecs the victim was sacrificed to the gods (NR ii. 462; cf. Post, ii. 395; Kohler, ZVRW xii. [1887] 412-416; Waitz, Anthropologie, Leipzig, 1859-1872, iii. 128). Among the Nufors of New Guinea sorcerers are stabbed and thrown into the sea (ZB viii. [1888] 103), and the punishment of death is usual in N. Guinea and among the peoples of the Malay peninsula (Wilken, 'Het stafr. bij de volken van het mal. ras,' in Bijdragen tot de taal., land., en volkenkunde van Ned.-Indue, The Hague, 1883, p. 21). In Fiji, where witchcraft exerted the strongest influence on the minds of the people, the person detected in using it was slain (Williams, Fvp., 1870, i. 248). In New Caledonia, old women are often put to death as sorceresses, and men who are suspected of causing death by sorcery are formally condemned and forced to jump over the rocks into the sea (Turner, Samoa, 1884, p. 342). In W. Africa, any one may kill the sorcerer; but generally after detection by the witch-doctor an ordeal is necessary, and the spirit of the ordeal sometimes kills the sorcerer; otherwise he is put to death, and his private property is often confiscated (cf. Nassau, Fetichism in W. Afr., 1904, p. 123; Kingsley, W. Afr. Studies?, 1901, p. 159 ff.; Letourneau, p. 68; Post, Afr. Jur. ii. 66-67). Among the Lendu, a forest tribe of Uganda, the sorcerer in the sund with the sorcerers, who are thought to be very numerous and powerful. When discovered, they are put to death (Casalis, The Basutos, p. 229; Decl is arranged by the council of old men, and the culprit is fol-

(2) Incest.—While the civilized man's horror of incest is usually confined to cases of marriage or sexual relations between parents and children or brothers and sisters, among primitive and savage peoples the bars to marriage, while generally including these, usually extend much further. Where the classificatory system prevails, the society is divided into classes, from certain of which a man must not choose a wife. Or, again, he may not marry within his totem, his clan, his village, or even his tribe. Again, marriage may be prohibited within the kindred absolutely, or within the kindred on the mother's side, where mother-right prevails (generally a totemic prohibition). In the last case a man might marry his wife's daughter, or his brother's daughter; or a brother might marry a sister by a different mother, since they would be of different totems. But, as a rule, these unions are also looked upon with abhorrence. Thus, while in savage life consan-guineous unions are, with certain exceptions, re-garded as incestuous, the prohibitions have usually a much wider range, and all breaches of exogamous law are equally regarded as incestuous. adultery is mainly punished as a private offence, incest is an offence against the whole group, and is often considered to bring ill-luck and Divine punishment upon the group, who are collectively responsible. It is, therefore, punished as a public offence. Usually it is looked upon with so much horror that it is unheard of; but, where it does occur, death to both offenders is the usual punish-even where the automatic punishment may be ment, though lighter punishments are occasionally looked for, he is often punished by society as a

found. With rare exceptions, the prohibition extends also to all sexual relations outside marriage between persons belonging to exogamous groups. (For various theories of the prohibition of marriage, of exogamy, and of the horror of incest, see Westernarck, Marriage, 1894, p. 310 ff.; Lang, Social Origins, 1903; Durkheim, 'La Prohib. de l'inceste et ses origines,' ASoc i. [1898] 64.)

Some examples of the belief that incest brings

ill-luck or is obnoxious to the gods may be cited. Ruin to the crops, continuous drought, continuous rains, are the result of incest, according to the Dayaks, the Battas, the Galelareese (who also attribute earthquakes and eruptions to the same crime), and other tribes (Frazer,  $GB^2$ , 1900, ii. 212-213; Post, ii. 388). They must be atoned for 212-213; Post, ii. 388). They must be atoned for usually by a sacrifice, and the criminals are punished. Or, as in Kafir and Aleut belief, the offspring of incestuous unions are monsters, the Kafirs believing this to be brought about by an ancestral spirit (Shooter, Kafirs of Natal, 1857, p. 45; Petroff, op. cit. p. 155). The Samoans regard it as a crime abhorred by the gods (Turner, p. 92), and the Pasemah believe that those committing it are annihilated by the gods (Post. i. 41). mitting it are annihilated by the gods (Post, i. 41). As in many cases both adultery and unchastity are supposed to bring general misfortune, or to be abhorrent to the gods, it is possible that with such peoples the marriage-laws are believed to have been ordained by the deities.

such peoples the marriage-laws are believed to have been ordained by the deities.

Among the Australian tribes, the usual punishment for breaches of the exogamous customs was death, occasionally cutting and burning. As among the Central Australia, the punishment is determined by the head-men, who organize a party to carry out the sentence (Westermarck, Marr. p. 299 f.; Spencer-Gillen, pp. 15, 100, 495; b 186, 140). The Veddas, often wrongfully accused of practising brother-sister unions, abhor incest, and punish it with death (Nevill, in The Tarprobanian, Bombay, n.d. 'i. 178). The same punishment is usually inflicted throughout Melanesia (JAI xviii. 283; Macdonald, Oceania, 1889, p. 181). The Kandhs, Gonds, and other aboriginal tribes in India also punish incest (marriage within the same tribe, gens, etc.) with death (Percival, Land of the Veda, 1854, p. 345; Kohler, ZVRW viii, 11883 145). Among the Bhils it is punished with banishment (Kohler, ib. x. [1892] 38). Throughout the Malay Archipelago the death punishment was often of a very cruel kind—committing to sea in a leaky vessel, drowning, or throwing into a volcano, burying alive, killing and eating (Wilken, Globus, lx. [1891] 22; Frazer, GB2, ii. 213-214; Riedel, op. cit. pp. 195, 282, 460). Similarly, among the American Indians, death was the usual punishment (Kohler, ZVRW xii. [1897] 412-416; NR ii. 466, 659; Frazer, Totemaism, 1887, p. 59).

Possibly in some of these cases the victims were regarded as explatory sacrifices offered to the gods or spirits. In some instances of supposed incest, animal sacrifices are offered, or the blood is sprinkled on the ground to avert drought and sterility (Frazer, GF2, ii. 212-213; Post, ii. 389). The death of the criminals or of the animal victims averts danger and a curse from the community.

curse from the community.

As opposed to exogamy, most peoples have endogamous rules forbidding marriage outside a certain circle, narrower or wider as the case may be—the family, clan, easte, tribe, etc. Such a marriage is regarded as disgraceful, and in some cases as a crime which may be punished in various ways. But these rules have a different origin from those of exogamy, and result mainly from pride, antipathy, or prejudice (see Westermarck, Marr. p. 363 ff.; Post, i. 32 ff.).

(3) Sacrilege.—Of all forms of sacrilege in savage

life, that which concerns breach of tabu is the most general. Tabu is an interdiction upon doing or saying some particular thing, an embargo placed on some thing or some person or persons, the infraction of which is frequently supposed to carry its own punishment automatically, preconceptions about tabu bringing about the fatal result through auto-suggestion. But, as the person who breaks the tabu is supposed to spread the danger by a species of contagion, and as breach of tabu frequently brings disaster to the tribe or its land,

whole, because he has sinned against the gods, or has committed a breach of social order involving supernatural results. He is put to death, for such a dangerous person is safer out of the way. need be considered here only in so far as it illustrates the savage view of public crime. Many irrational tabus have probably been imposed at one time by public opinion for some definite reason arising out of experience, real or imaginary. If something is conceived to be dangerous for any reason, e.g. on account of its connexion with spirits or gods, then it is wise to avoid it. The avoidance constitutes a tabu, and it becomes sacrilege to brook it. break it. Other tabus, those on food-stuffs or animals at certain seasons, have been imposed as a wise precaution, or in the interests of a class or sex. Many others are wilfully imposed by chiefs or priests. Generally all tabus have a supernatural sanction, and the automatic punishment is regarded as the working of the Divine anger. Tabus are sometimes of a private sort (tabus on property), but more often they have a public character-protective (as in the cases of food-supply, interdiction of places, etc.), political, sexual (as in the case of incest), or more purely religious. Tabu the case of incest), or more purely religious. Tabu has to some extent subserved the growth of the idea that crime is wrong. Thus, where a tabu is placed on private property and the thief is believed to the contraction. lieved to suffer automatically for his theft (cf. Turner, p. 185 f.), it is obvious that this belief would foster the idea that theft is wrong. On the other hand, many breaches of tabu, though crime in the eyes of the savage, have nothing inherently immoral in them.

Where society imposes a punishment for breach of tabu, that punishment is generally death. In Polynesia, where the institution was most fully developed, every infraction of tabu, or even the merest suspicion of it, was visited with death, the victim being usually sacrificed to appease the gods, since all diseases and calamities were public manifestations of their wrath at breach of tabu (Letourneau, p. 61). But in some other cases it is the violation of conspicuous tabus which is

regarded as sacrilege meriting death.

is the violation of conspicuous tabus which is regarded as sacrilege meriting death.

Thus, with most savage tribes the fruits of the harvest cannot be partaken of until the firstfruits have been offered to a god or eaten sacramentally by selected individuals—chief or priest—or by all the people. In many cases to eat them before this solemn ceremony would be visited with Divine anger—madness (Fiji [JAI] xiv. 27]), or death (Tahiti [Ellis, op. cit. 1.350]). But, even where death is thus held to follow automatically the act of sacrilege, detection carries with it a public punishment, as among the Zulus (death or confiscation of all the man's cattle [Frazer, CB² ii. 326]) and Folynesians (Moerenhout, Voy. aux Ites du Grand Octan, Paris, 1837, i. 531). An analogous crime is that of boiling milk among the pastoral Masai. This is believed to cause cows to go dry, and is punished as an insult to the sacred cattle, with death or a very heavy fine (Johnston, Kilkmanjaro Expedition, 1886, p. 425).

A more obvious form of sacrilege is the viewing of various sacra by those to whom they are interdicted, e.g. women and children; or the communication of initiation secrets to the uninitiated; or intrusion upon sacred mysteries—those of men by women, those of women by men. Among the Australians, no woman may look upon the sacred mysteries of the men on pain of death, and the tandard, or bull-roarer, must never be shown to a woman or child. If it is, the woman and the man who shows it (and sometimes his mother and sisters) are put to death. Death is also the punishment to women who look upon the sacred totenic drawings, or (among the Arunta) intrude upon the place where the sacred objects are kept. Generally the danger of revealing these things is told to boys at initiation (see JAI il. 271, xili. 448, xxv. 811; Howitt and Fison, Kamilaroi and Kurnai, 1880, p. 263; Spencer-Gillen\*, pp. 11, 132, 500; also above, vol. il. p. 889). The same is truo of the natives of the Papuan (unif (JAI xxil. 425). Among the Indians of Brazil, wom

district of W. Africa are put to death or sold as slaves, and this is generally true of all swage 'mysteries, any intertion of caths and covenants by their members is believed to be punished by the god (Réville, Rel. des peuples non endisés, Paus, 1884, 1, 110; CF, p. 317). Similarly, as in the case of the female Njembe society in W. Africa, the mysteries of women must not be looked on by men under pain of death (Nassau, op. cit p. 261; CF, p. 318). In some cases, religious rites as well as carred places are tabu to women, as in the Marquesas Islands, where a woman is put to death if she touches the sacred ground where festivals are held (Melville, Marquesas Islands, where a woman is put to death if she touches the sacred ground where festivals are held (Melville, Marquesas Islands, 1849, p. 100).

Examples of the dangerous results of tabu-breaking by the automatic working of suggestion, even in cases where the breaker sometimes only after a long lapse of time, will be found in Dennett, Folk-Lore of the Fjort, 1898, pp. XXV, XXIV; Old New Zeuland, by a Pakelia Maori, London, 1868, p. 96; JAI ix. 468. Suggestion also produces similar automatic results where magic, ghostly warnings, etc., are believed in, and where a man thinks that he is a victim of these (see Erskine, W. Pacife, 1853, p. 169; Howitt and Fison, op. cit. passim; Thomson, Sarage Island, 1902, p. 98).

It should be observed that, where there are definite laws against the marriage of certain persons, the breach of which would be incest, these persons are generally tabu and must not speak to each other. Similarly, as a precaution against adultery, men's wives are tabu to other men, who must not even speak to or touch them (cf. Bastian, Loango-Kúste, Jena, 1874-76, i. 168, 244).

ii. PRIVATE CRIMES.—Among private crimes, those of myrdes of the server touch them (cf. Bastian, Loango-Kúste, Jena, 1874-76, i. 168, 244).

ii. PRIVATE CRIMES.—Among private crimes, those of murder, adultery, unchastity, and theft may be examined here in detail. Some of these, e.g. adultery and unchastity, tend to become public crimes, since they are sometimes believed to produce evil results upon the whole tribe or upon its land—a visitation by the offended spirits.

(1) Murder.—Tylor has pointed out that 'no known tribe, however low and ferocious, has ever admitted that men may kill one another indiscriminately' (CR xxi. 714). This statement is supported by the express ideas of the horror of murder entertained by many even of the lowest savages. In many tribes, murders are extremely rare, and are felt to be wrong. But generally the feeling of abhorrence is restricted, and it is considered a harmless or even praiseworthy action to kill outside the limits of the clan or tribe. But the limits of the restriction vary considerably among different peoples. Blood-revenge for murder is a duty or a custom insisted upon by public opinion in most savage societies, and often legally permitted, while it is probably a survival of the time when no supreme authority existed for the execution of justice. Though in many cases the relatives of the murderer or any members of his clan or tribe are slain in revenge, because of savage man's idea of human solidarity and of the collective guilt of the murderer's family, clan, tribe, or more speci-fically because of the working of the lex talionis (son for son, daughter for daughter, etc.), and, though the custom often gives rise to tribal wars, yet the evidence shows that the revenge is directed in the first place most frequently upon the mur-derer himself. Often his death satisfies the desire for vengeance, and it is only where it has been found impossible to lay hands on him that the vengeance falls on another. In the insistence upon blood-revenge as a sacred and moral duty, which it is disgraceful and irreligious to avoid (sometimes because the dead man's ghost finds no rest till the vengeance falls), and in its falling first upon the murderer, we see exemplified the general savage view of justice. Where a local tribunal exists, it may arrange the blood-feud and set the machinery in motion, or it may go further and, after hearing the respective sides, give judgment in favour of the avenger, and appoint execution to be done, sometimes by him; or it may try to arrange a compensation. But only where it is strong enough will its decisions be enforced or its suggestions be heeded. This action of the local tribunal may be regarded in the light of a compromise, where the custom of

1 Other occasional causes of a blood-fend are wounding, adultery, seduction, rape, and kidnapping (cf. Post, i. 239).

blood-feud continues after the rise of such tribunals. It is thus a step towards justice being done in the case of private wrongs. The progress to true justice is further seen where the central authority steps in to forbid revenge, to decide guilt, and to award punishment. Frequently the practice of compensation, the wergeld, takes the place of the blood-feud or is even obligatory, the relatives being satisfied with the payment of a heavy fine, fixed according to rank, sex, age, etc. (cf. Post, i. 249 ff.). Where the acceptance of compensation was seen to lessen the protracted hostilities in the case of the blood-feud, it would be fostered by custom and authority; and in many cases, though not all, its existence may be traced to the intervention of the central authority, the elders of the tribe, or the chief (see BLOOD-FEUD).

It should be noted that, though there are marked exceptions to the rule, infanticide is very widespread and meets with little or no disapproval, while the killing of the sick and aged, not out of wantonness but for certain definite reasons, is not uncommon in many parts of the world. Similarly, though by no means generally, it is often the case that a master has the right to kill his slave (Post, i. 373). In a few cases infanticide is punished with death or in some other way, or is regarded as wrong and liable to bring misfortune; and, where the killing of aged parents for the specific reasons referred to is not customary, parricide, when it does occur, is regarded with abhorrence, and is at

once punished (cf. Westermarck, i. 402 ff., 386; Steinmetz, op. cit. ii. 153 ff.).

Where blood-revenge does not exist, as well as in many cases where it does, the murderer is punished. ished by the community, or by some special authority, though it is not always easy to distinguish, from the statements made, between true blood-revenge and the administration of justice. In most cases the punishment is death.

blood-revenge and the administration of justice. In most cases the punishment is death.

Among the Fuegians, the murderer is placed under a ban, and perishes of hunger, or death is inflicted by his fellows (Hyades-Deniker, Mission scient. du Cap Horn, viii. 374, 243). Among some Australian tribes, as has been seen, the council of elders arranges the avenging party in cases of murder by sorcery. But, as among the tribes of N.W. Central Queensland, the camp or a council of the camp punishes the murderer (Roth, Ethnol. Studies among the N.W.C. Queensland Abor., 1897, pp. 139, 141). With some tribes a ceremony of spear-throwing at an offender appears to take the place of the blood-feud proper (Westermarck, i. 171). The Eskimos and Aleuts occasionally make common cause against a murderer and put him to death (Nansen, op. et. p. 162; cf. Petroff, op. ett. p. 152). With many N. American Indian tribes the murderer had to appear before the chiefs for trial, but he was often handed over to the relatives of his victim for punishment (Cooper, Mishmee Hills, 1878, p. 238; Morgan, League of the Iroquist, Rochester, 1851, p. 380; Schoolcraft, Ind. Tribes, Philadelphia, 1851-00, 1-277; Adair, Hist. of Amer. Ind., 1776, p. 150). Many African tribes also inflict capital punishment on the murderer, the chief frequently deciding his guilt and enforcing the sentence (Westermarck, 1.189; Letourneau, pp. 80, 83-84; Johnston, op. ett. ii. 882 [murderer executed by warriors among the Muteil), or, as among the Mpongwe, the community burn or drown him (Burton, Two Trips to Gorilla Land, i. 105). Capital punishment for murder is also tound in Polynosia and New Guinea (Turner, Samoa, pp. 178, 295, 394; Thomson, JAI xxxi. 143; Chalmers, Pioneering in Nick, 1837, p. 179). In other cases, banishment, usually followed by death, is found, or, as among the Omahas, a species of boyoothing and penilential expiation in the case of a murderer whose life has been spared (Dovesy, in 3 RBEW, 1884, p. 369). Or, in some instances, as in the commutation o

The vengeance of the society upon the murderer is in part due to the belief that he is a source of danger to the group. He is infected with the un-cleanness of death, or is surrounded by spirits,

especially that of his victim, who will afflict not only him but others. Hence he is tabu, and, if he is not put to death, he must undergo ceremonies of purification, or be isolated from his fellows, as in the case of the Omahas (see above, and cf. Kohler, ZVRW xii. [1897] 408; Frazer, GB<sup>2</sup> i. 331 ff.). These ceremonies, or the period of isolation, are then a species of punishment.

In some cases it is expressly said that murder is

In some cases it is expressly said that murder is punished because it is hated by a Divine being, or is a breach of his law. This is the case among the Omahas (Dorsey, loc. cit.), while in other instances murderers are believed to be punished after death (Australians by Baiame [Parker, op. cit. p. 79], Andaman Islanders [Man, JAI xii. 161-2], Melanesians [Codrington, p. 273 ff.], New Hebrides [Turner, Samoa, p. 326], Awemba [Sheane, JAI, xxxvi. 150 ff.], American Ind. [above, vol. ii. p. 685\*]). (2) Adulteru.—Since in all savaresocieties the wife

(2) Adultery. - Since in all savage societies the wife is regarded as the property of her husband, adultery is generally a serious crime. Before betrothal or marriage the woman may dispose of herself as she chooses, though here the father or guardian has sometimes the right of controlling her action, but after marriage her husband has entire right over her. Adultery is therefore regarded as an infringement of the husband's proprietary right, and is frequently a serious form of theft. Add to this the working of jealousy, and it is easy to understand why to the savage mind adultery is so serious an offence and often a capital crime. In many instances, even where there is a regular tribunal, the husband and those whose duty it is to help him have the right of dealing as he pleases with the culprits, especially if he catches them in flag-rante delicto. The local tribunal and, in any case, custom and opinion justify his action, and often, indeed, expect him to avenge himself. He may, however, in such a case be liable to hostilities from the relatives of the wife or her paramour; and in a few cases, where the established tribunal is jealous of all such personal action, he may be punished by it, especially when he has put the woman to death instead of inflicting a lighter punishment. Or he may appeal to the tribunal, with confidence that due punishment will be visited upon the offenders, the execution of this punishment being occasionally allotted to him.

upon the offenders, the execution of this punishment being occasionally allotted to him.

The punishment of death not only for adultery but, in some cases, for slight indiscretions or even for touching a wife, especially the wife of a chief (Bastian, op. cit. i. 244; Post, ii. 358; MacLennen, Studies in Ano. Hist., 2nd ser., 1890, p. 412), is visited upon the offending wife or the paramour or both, either by the husband or by a legal tribunal, among a large number of peoples (see Adultary Primitive and Savage); Westermarck, i. 290; Post, ii. 362, 371); and in some cases adultery is the only crime which is capitally punished (Mishmis | ThASBe vi. 11887; 3321). Occasionally the punishment is meted out to the wife only after repeated offences (Macdonald, Africana, i. 140). In other cases the seducer has to suffer slavery, mutilation, emasculation, beating, or some other bodily indignity; he must submit to his wife's being outraged; or he must pay compensation, usually equal to the value of the woman, to the injured husband (Post, ii. 368-9, 378; Letourneau, pp. 20, 48, 65-63, 78, 83, 95). Similarly, where the unfaithful wife is not put to death, she is mutilated, disfigured, beaten and ill-treated, enslaved, repudiated, divorced, or prostituted (Post, ii. 364-5; Letourneau, pp. 37, 65, 66). In a few exceptional cases the wife is not punishment (Westernarck, Marr. p. 122; Post, ii. 370). These various punishments are usually inflicted by the husband, but occasionally the cause of a blood-feud or of a species of blood-revenge (du Chaillu, Equat. Africa, 1861, p. 51; Letourneau, pp. 90.

The punishment of adultory is sometimes in proportion to the rank of the offenders or of the husband; or, where a system of fines is in use, the fine is similarly proportioned (Post, Afr. Jur. ii. 82-83; Letourneau, pp. 65-68; Johnston, op. cit. ii. 590, 689; Ellis, Eucs-speaking Peoples, 1890, p. 292). Generally, oo, adultery with a chief wite is more severely punished than with a lesser wife or concubine (see Concusinace).

As a general rule, in savage societies the wife can obtain no redress for the husband's adultery; but there are occasionally exceptions to this even at low levels (e.g. with some Australian tribes), and the husband is punished more or less severely, or

his adultery (or even bringing a second wife or concubine to the house) is a ground for the wife's divorcing him (see ADULTERY [Primitive and Savage], § 6; Westermarck, ii. 432; Post, Afr. Jur. i. 465, ii. 72).

There is a certain amount of evidence that among savage tribes adultery is regarded as a grave moral offence, which may bring general calamity, or must be expiated, or which is offensive to the gods, or will be punished in the next world (see art. ADULTERY, § 8; Crawley, op. cit. p. 143 f.; Mason, JRASE xxxvii. [1868] pt. 2, 147 ff. [Karens]; Westermarck, ii. 675; Perham, JEAS Straits branch, no. 8, p. 150 [Sea Dayaks]; Man, JAI xii. 157 [Andaman Islanders]; Sheane, JAI xxxvi. 150 ff. [Awemba]; Codrington, Melanesians,

p. 273 ff.; Jones, Ojebway Ind., 1861, p. 104).
(3) Unchastity.—Unchastity before marriage is variously regarded among savage peoples. In some instances a girl is allowed the utmost licence, but in many quarters unchastity is reprobated more or less severely. The difference in attitude doubtless involves differing moral conceptions, but there can be little doubt that much is due to the question of the girl's position. If she has been betrothed in early years to a prospective husband, she is expected to remain chaste, or she may be repudiated. Or, again, unchastity is held to lower her value in her father's or guardian's opinion, because a smaller bride-price will be obtainable for her. But, as the severity of the punishments shows, unchastity is frequently regarded as a moral offence even among some very low tribes (see Westermarck, Marr. p. 61 ff.), and it is sometimes thought to be offensive to the higher powers, or to bring misfortune on the tribe or the crops. Hence it must be expiated in one way or another, as well as punished (St. John, Forests of Far East, 1863, i. 63, 69 [Dayaks]; Mason, JASB xxxvii. 2 [1868], 147 [Karens]; Frazer, GB<sup>2</sup> ii. 212 [Battas]; Bastian, Indonesien, Berlin, 1884-99, i. 144 [Ceram]; Reclus, Prim. Folk, London, 1891, p. 52; Post, Afr. Jur. i. 460; Westermarck, Marr. p. 61 [Loango]; Casalis, Basutos, p. 267). sive to the higher powers, or to bring misfortune on

Basutos, p. 267).

The punishments are various, and may be inflicted by the house-lather, the tribunal, or the chief. Sometimes both seducer and seduced are put to death (Post, Afr. Jur. ii. 70 [Marca, Beni-Amer]; Cunningham, Uganda, 1905, p. 290 [Baziba]; Johnston, op. cit. ii. 471 [Kavirondo]; Dawson, Aust. Abor., Melbourne, 1881, p. 28 [W. Victoria]; Post, ii. 375 [Nias]). In other cases the girl is put to death (Post, ii. 375 [Nias]). In other cases the girl is put to death (Post, ii. 375 [Nias]). In other cases the girl is put to death (Post, ii. 375 [Nias]). In 21 [Bakoki]; Chanler, Through Jungle and Desert, 1896, p. 102 [Bakoki]; Chanler, Through Jungle and Desert, 1896, p. 317 [Rendile of E. Africa]; Post, ii. 380 [some Malay tribes]), or she is soourged (Post, Afr. Jur. ii. 71-72), or has to pay a fine to the chief (Post, ii. 380). In some of these cases the seducer shares the punishment, but generally he has to pay compensation or a fine, usually equivalent to the value of the girl (her bride-price or blood-price), and sometimes much heavier (Post, ii. 375-6; Westermarck, ii. 425-6, 436). In some instances he must also marry the girl, and often, if the fine is not forthcoming, he is enslaved. Seduction may at one time have been a common cause of a blood-feud, later compensated for by fine, but occasionally it still leads to a feud (Post, Afr. Jur. i. 81).

(4) Theft,—Proprietary rights are recognized by

(4) Theft.—Proprietary rights are recognized by all savage tribes, most of whom condemn or ablior theft, while all of them punish it in one way or another. The thief is frequently punished by the owner of the stolen property (more especially when he is taken red-handed); and in such cases the latter may even have the right to kill him or enslave him. Or he may force him to restore the stolen goods or their value, and sometimes two, three, or more times their value, or may subject his belongings to pillage. Here, generally, custom has arranged a system of regulated composition. In other cases the thief is punished by the tribunal, or the chief, with death, custavement, banishment, mutilation, or beating; or he is forced to pay a fine, or to restore the goods or their value. general, the higher the value of the goods stolen,

the heavier the punishment. Stealing such things as any tribe sets much store by-cattle, products of the field, weapons, and the like—is usually severely punished. Sometimes the punishment severely punished. Sometimes the punishment depends upon the place from which the theft is made (field, garden, or house), the time at which it occurs (night or day), or whether the thief is taken in the act, and also upon the social position of the person robbed or of the thief. Usually, too, the punishment increases when acts of theft are repeated, a notorious thief being usually put to death. Where a system of fines exists, there is generally found a regular scale of values for different things. And, when a fine or composition is not paid, the thief is often killed, enslaved, or punished in some other way. But, before undergoing punishment, the prisoner's guilt or innocence may be attested by oath or ordeal. In many cases property is protected by tabus involving the thief in an automatic punishment or in the results of a curse. Or, again, when a thief cannot be found, resort is often had to cursing him, a god being invoked to punish him (see Westermarck, ii. 63ff.). In some instances the gods are said to abhor and punish theft either in this world or the next (Andaman Islanders [Man, JAI xii. 161]; some Polynesian and Melanesian tribes [Turner, Samoa, pp. 301, 326; Codrington, op. cit. p. 274; Macdonald, Occania, p. 208]; some American Indian tribes [above, vol. ii. p. 685<sup>a</sup>; Bossu, Trav. through Louisiana, 1771, i. 256]; Dayaks [Brooke, Ten Years in Sarawak, 1866, i. 55; Perham, op. cit. p. 149]).

Louisianu, 1771, i. 256]; Dayaks [Brooke, Ten Years in Sarawak, 1866, i. 55; Perham, op. cit. p. 149]).

The thief is killed when taken in the act, by the Fuegians (King and Filzroy, Vonages, 1839, ii. 180), peoples of the Malay Archipelago (Westermarck, ii. 8), Maoris (Moerenhout, op. cit. ii. 181), some African tribes (Westermarck, i. 289, ii. 13; Johnston, ii. 501; Post, Afr. Jur. ii. 92-3); or he is enslaved (Post, ib. ii. 93). Anong peoples with whom capital punishment for various kinds of theft exists are some Australian tribes (Letourneau, p. 28); tribes of the Malay Archipelago (Javanese, Alfura, Bataks, Achimese, etc. [Post, ii. 431; Westermarck, ii. 8]]; the Shans (JAI xwi. 21); American Indian tribes (Post, ii. 434; NR ii. 668; Petroff, op. cit. p. 162; Harmon, Voyages, Andover, 1820, p. 348; Yon Martius, op. cit. 183; Polynesian and Melancsian tribes (Westermarck, ii. 9; Post, Anfänge des Staats- und Rechtslebens, Oldenburg, 1878, p. 224; Letourneau, p. 541, 7; African tribes (Letourneau, pp. 64, 67; Westermarck, ii. 12; Post, ii. 831.). Enslaving or banishment (especially in cases of repeated theft) is the punishment among the Fanis, Yolofs, Diagara, and other African tribes (Post, ii. 87; Letourneau, p. 64), the Karens (habitual thieves [Mason, JASB xxvii. 2, 146]), tribes of the Malay Archipelago (Westermarck, ii. 8), Maoris (Post, Anfänge, p. 224), Some Amer. Ind. tribes (AR ii. 68; Dodge, Our Wild Indians, Hartford, 1882, pp. 64, 79; Dall, Alazka, 1870, p. 382), Mongols (Post, op. cit. p. 224). Mutilations of various kinds as an application of the lex tationts (outting off fingers, hands, arms, feet, or less, plucking out the eyes, or even cutting off nose or ears, and castration) are found among several African tribes (Post, Afr. Jur. ii. 81, 88, 90-92; Westermarck, ii. 129, peoples of the Malay Archipelago (Westermarck, ii. 129, peoples of the Malay Archipelago (Westermarck, ii. 129, peoples of the Malay Archipelago (Westermarck, ii. 8). African tribes (Post, Afr. Jur. ii. 8, 911.).

Probably

An especially vile form of theft, always severely punished when it occurred, and perhaps to be regarded as a form of sacrilege, is that of stealing offerings, etc., from a grave (Westermarck, ii.

7. At those festivals which mark the beginning of a new year or the offering of firstfruits among savages, and which are usually accompanied by ceremonial confession of wrongdoing and by ritual purifications and riddance of the contagion of wrong, very frequently there is considerable licence, and such crimes as may be then committed are not afterwards punished. At such festivals there is great excitement, with much drinking, dancing, etc. Crimes would then be readily committed, but had not to be accounted for, because they occurred during a sacred season, while their contagion had already prospectively been got rid of, or would shortly be got rid of, by the ceremonial purifications usual at such periods.

Among most savage tribes the right of asylum or sanctuary for the criminal is clearly recognized, the sanctuary being generally a place sacred to gods or spirits, or the abode of sacred persons (priest or chief), in which it would be dangerous for the avenger or the executioner of justice to shed the blood even of a criminal (see art. ASYLUM:

Post, ii. 252 ff.).

SUMMARY.—The execution of justice among savage tribes is, on the whole, an extremely rough and ready process. Where the practice of private revenge is common, it militates against the independent and impartial weighing of the evidence by a disinterested tribunal. And, even where there exists a recognized tribunal, it generally lacks the most elementary requirements for the discovery of truth as found in a civilized court of justice. Impartiality is seldom found, the weighing of evidence and the reliance upon it alone being practically unknown; the common resort to ordeals is an extremely defective method of arriving at the truth; in many cases not only does the guilty escape, but, where he is punished, the innocent often share his punishment. Punishments, too, are often extremely severe. On the other hand, the evidence seems to show that there is a general hatred of crime among savages, and that it is probably of comparatively rare occurrence among many tribes.

many tribes.

J. A. MACCULLOCH.

CRIMES AND PUNISHMENTS (Assyro-Babylonian).—These are revealed to us mainly by the Bab. codes of laws, of which three have been found—the first and the last, fragments only; the second—that of Hammurabi—nearly complete.

I. The first (the earliest known) are the Sumerian laws, of which examples occur in the 7th tablet of the Ulutinābi-šu ('punctually') series. This work contains specimen-phrases for students of Sumero-Akkadian, the laws being among the legal and other phrases which the student had to learn. Though the tablet dates from the time of Ashurbanipal (c. 650 B.C.), there is no doubt as to the period during which these laws and their penalties were in force; their reproduction in the contracttablets of the time of the dynasty to which Hammurabi belonged indicates that the code of which

The language in which they are written (Sumerian) shows that they were drawn up during the Sumerian period, and they may, therefore, date from 3500 B.C., or even earlier. The crimes or misdemeanours referred to therein are not serious, and belong rather to the class of offences against morals than to really criminal acts. Nevertheless, they are exceedingly interesting, and are of considerable importance in that they contain the earliest ordinances in existence concerning punishment for wrongdoing:

"If a son say to his father, "Thou art not my father," they may shave him, put him in fetters, and sell him for silver."

'If a son say to his mother, "Thou art not my mother," they may shave his forehead, lead him round the city, and drive him forth from the house."

'If a wife hate her husband, and say to him, "Thou art not my husband," they may throw her into the river."

'If a husband say to his wife, "Thou art not my wife," he shall pay her half a mane of silver."

'If a map hire a slave, and he dies, is lost, runs away gets.

'If a man hire a slave, and he dies, is lost, runs away, gets locked up, falls ill, he shall pay as his hire every day half a measure of grain.'

Though the above laws refer only to adopted sons, the respect for foster-parents which the punishments for denial of them imply shows how strong the feeling of the Sumerians was in this matter. The adopted son might be sold as a slave, and it may be supposed that a real son would have been treated with even greater severity. The denial of a foster-mother brought upon the culprit all the disadvantages of slavery, as is implied by the shaving of his forehead. His being taken round in the city was probably for the purpose of making his misdemeanour known; and driving him forth from the house implied his being either left in utter destitution, or relegated to the position of a slave.

Inequality in the status of the husband and the wife is implied by the differing punishments for the same or similar offences. Divorcing a husband was punishable with death, but the divorcing of a wife only incurred the fine of half a mana of silver. There is no doubt that women had fewer rights than men in ancient Babylonia, but it must be admitted that they are not altogether their equals

even now.

The last law of the five shows the respect paid to property. The penalties inflicted are rather hard upon the hirer, who is responsible for a slave whom he has hired, even if a misfortune befalling him is not due in any way to the fault of the hirer. Perhaps it was necessary—the Sumerians may have been (criminally) careless of other people's property delivered into their hands; in any case, if the hirer thought the conditions too severe, he could easily stipulate, on hiring, that he should not be visited with the full rigours of the law in the case of an accident happening.

2. The next laws in chronological order with

which we come into contact are those drawn up by the great Babylonian legislator, Hammurabi, whose code is now preserved in the Louvre at Paris. Here we have a list of crimes and punishments far more complete than any which the ancient nations of the East preceding the Jews

have ever handed down,

How far these laws were regarded as binding is doubtful—the conditions of life probably changed from time to time; and it is unlikely that the same ideas regarding penalties and punishments for breaches of the law prevailed in Assyria as in Babylonia, notwithstanding that the Assyrians studied those old Bab. laws. Perhaps the tablets of the *Ulutinābi-šu* series, like many another ancient composition, and the laws of Hammurabi himself, were kept in the libraries at Nineveh, simply because they were ancient and venerable works, useful to the law-student. Upon this point, they formed part originated previous to c. 2000 B.C. | however, we shall be better able to judge later on.

VOL. IV .-- 17

In considering such a matter as that of crimes and punishments, it will probably be admitted that the Babylonian mind was not trained in so severe a school as that of the Roman or the modern legist. Moreover, the difference in the manners and customs of the East and the West, to say nothing of the question of period, must be taken into consideration. Thus, many offences against morality and decency were probably not thought worthy of punishment by the Babylonians, notwithstanding that they may have been regarded as most reprehensible. Bigamy was not a punishable offence, and the game-laws were probably merely rudimentary. Bribery was not punishable, except when it was intended thereby to pervert the ends of

Nothing is said, moreover, concerning bestiality, blasphemy, breach of ritual, drunkenness (except, perhaps, in the case of priestesses and devotees), lying (though we know, from certain texts—see Conscience [Bab.], above, p. 33—that this was a thing unpleasing to the deity), malice, prophesying falsely, the desecration of holy days, speaking evil of rulers (less majesté), uncleanness, usury, and many other things which are not only regarded as crimes or misdemeanours among the European nations, but also appear as such with the ancient Hebrews. Idolatry, magic, sorcery, intercourse with demons and spirits, and prostitution were naturally not counted as crimes; though blasphemy, sacrilege, and similar offences against the gods were probably severely punished—certainly the latter (sacrilege). Whether blasphemy was a crime or not probably depended upon the place and the latter (sacrilege). and the deity, for none would speak slightingly of a deity in the place where he was worshipped, except a fanatic. It is to be noted, however, that nothing certain can be stated with regard to many acts which modern Europeans would consider as crimes in law, for the simple reason that we have only one code in any sense complete, namely, that

of Hammurabi (c. 2000 B.C.), and even that has gaps.
The death penalty.—In the Code of Hammurabi, as is fitting, respect for what is just holds the first place, and the penalty for false accusation of killing is death (§ 1). In the case of a (false) accusation of sorcery, the accused person had to dive into the river, and, if the river refused to drown him, the accuser suffered the penalty of death, and the accused took the house of his dead defamer. Death, in fact, was the penalty of any false accusation in which a life was involved. In all other cases, a false witness bore the cost of the action

(§§ 2-4).

Next to the safety and integrity of the person, that of the property of a man was held to be the most sacred. Theft was not generally punished with death, unless the property stolen belonged to a temple or to the palace (of the king), in which case the receiver suffered the same punishment (§ 6). In later times, the penalty for sacrilegious theft (with the damage inflicted upon the images of

deities by stripping them) seems to have been death by fire (Pinches, *The OT in the Light*, etc. s, p. 561). Strange, however, is the severity of the law (§ 7) ordaining death for buying the property of a man, either from his own hands or from those of his slave, without witnesses or contracts; or for

his slave, without witnesses or contracts; or for receiving such property on deposit. Probably possession of a man's property without justifying documents suggested receiving it on false pre
1 In all probability the word siliatu, when applied to something spoken against a detty, corresponded with 'blasphemy,' as we understand it. The followers of Samaš-šum-ukin (Sacsduchinos), Ashurbanipal's brother, who uttered siliatu against the god Ašaur, were put to death after their lips (car. tongues) had been torn away (Ašsur-bani-apil, cyl. A, col. iv. 66 fl.). In another passage, referring to chiefs of Gambulu, the culprits were flayed after the tearing out of their tongues (G. Smith, Assurbanipal, London, 1871, pp. 137, 74 fl.).

tences, which the laws of the Babylonians evidently wished to discourage, the more especially as it presupposed the neglect of those legal forms to which the people seem to have paid special attention.

Though theft did not entail the death-penalty, the neglect or failure to pay lines and make restitution transformed it into a capital offence (§ 8). There were probably two reasons for this—the sacredness of property-rights, and respect for the law. Theft, with the sale of the stolen object, was even more severely punished, as the penalty was not only death, but the restitution of the property, in addition, to both parties (the owner, and the person to whom the property had been sold), the purchase-money being returned in full (§ 9). It seems not improbable that a purchaser of property sometimes found himself in serious difficulty, for, if he could not produce the seller or witnesses, he was regarded as a thief, and was executed accordingly (§ 10). This law naturally presupposes that he had no documentary evidence of the purchase. A claimant of lost property had likewise to be careful, as absence of witnesses was regarded as proving him to be a rogue; and the penalty in that case, again, was death, because he had falsely

accused the person claimed from (§ 11).

Housebreaking, too, entailed the death-penalty, probably because theft was regarded as being in contemplation, though the damage to the house was naturally taken into consideration. The house-breaker was killed and buried in front of the breach (§ 21)—an undesirable position in any country where the dead were regarded as returning to visit the living. Brigandage was also punished with death (§ 22). Theft at a house where a fire had broken out, under the pretence of entering to extinguish it, entailed being thrown into the flames (§ 25). One is left to surmise that the

thief got out if he could.

Offences against the person were likewise punished severely. Kidnapping a freeborn child was a capital offence (§ 14). Negligence which proved fatal to any person was punished with death; and such would be the penalty if a badly built house fell on the occupier and killed him; the builder had constructed a defective dwelling, possibly from notives of cupidity. In the case of the dependants of the owner, the lex talionis seems to have been applied, for the death of the owner's son was punished by the death of the builder's son (§§ 229,

The position of slaves as a man's property probably had greater importance than any respect that and the death-penalty was therefore applied in the following cases: allowing a palace slave or serf to escape, or sheltering him (§§ 15, 16); or detaining an escaped slave (§ 19). Evidently it was regarded as the duty of a citizen to restore a slave to his owner, especially if that slave belonged to the palace. Getting a barber to mark a slave wrongfully was, it seems, equivalent to stealing him (§ 227), and was punished with death and burial in his (the wrongdoer's) own gate. It was likewise a serious offence if a soldier (redu) hired a substituto; and, besides the death-penalty being enforced, the substitute might take the soldier's house (§ 26)—apparently the dwelling allotted to him by the State. In the same manner, a highly-placed official could neither himself hire a substitute, nor accept a mercenary as substitute (for another), and incorporate him, the penalty being death in both cases.

The duties of a 'wine-woman' (meaning, evidently, a woman keeping a public-house) included assisting the government by capturing criminals; and, if she failed in this, she also met with the

penalty of death (§ 109).

The real nature of these wine-houses, which were kept by the wine-women, has yet to be discovered. That they were places of evil repute seems certain, and a devotee not dwelling in a cloister who opened a wine-house, or who entered a wine-house for drink, was burned to death (§ 110). It seems to have been the duty of wine-women to accept payment for their drink in kind; and any such woman refusing to do this, or accepting a low tariff, might be thrown into the river (§ 108), she having thereby contravened the law.

Infidelity and incest were also under the pain of capital punishment. An adulterous woman and her paramour were to be tied together and thrown into the water, unless pardoned (apparently), the former by her husband, and the latter by the king (§ 129). Violation of a virgin-wife dwelling with her father entailed death to the man, but exile (?) to the woman (§ 130). A thriftless woman making her poverty an excuse for marrying again during her husband's absence, was condemned to be thrown into the water (§ 133)—the punishment meted out to a disreputable woman who repudiated her husband (§ 143). In the law reports (see Ungnad, Hammurabi's Gesetz, iii. nos. 1, 8; iv. 776), a rebellious or faithless wife was thrown down from the tower, or sold into slavery (no. 7); and slavery (as a milk-maid?) in the palace was the punishment a mink-mand? In the palace was the punishment meted out in such a case, in a text from the Khabur (Johns, in PSBA xxix. 177; Ungnad, op. cit. no. 5). For incest with a son's bride the penalty was drowning (§ 155); and for incest with a mother, 2 death by fire for both (§ 157).

Mutilation.—This penalty was not uncommon, and in some cases roughly indicated the crime by destructing that which was recorded as the offend

destroying that which was regarded as the offending member. Thus, if the son of a chamberlain (palace-favourite) or of a public woman denied his foster-parents, his tongue, the organ with which the denial was made, was cut out (§ 192). In the case of an adopted son learning who his real father was, despising in consequence his foster-parents, who had brought him up, and returning to his father's house, the punishment was loss of an eye (§ 193). A nurse substituting, without the knowledge of the father and mother, another child for one who had died whilst in her care, was punished by the cutting off of her breasts, thus ensuring, as in most punishments of this nature, that the offence should not occur again (§ 194). A son striking his father was punished by the loss of a hand—the limb with which the offence had been committed (§ 195). A slave striking a freeman's son received the same punishment as a slave denying his master, anamely, the loss of an ear—probably as a mark that he was a criminal, and a warning that he was untrustworthy (§§ 205, 282). As we have seen above (p. 258\*), defamation, when it was a question of a life, was a capital offence, but in other cases a less severe punishment was decreed thus, if a man 'raised the finger' against (accused of unchastity) a priestess or a married woman, the punishment was the shaving of the forehead—a proclamation to the world that a misdemeanour had been committed. Priests alone, in all probability, shaved the whole of the head, so that there was no danger of the obliteration of the distinguishing mark, whilst it lasted.

1 The severity of the penalty would seem to imply that unchastity was presumed in such a case.

2 'After the father,' apparently = 'after the father's death.' But perhaps 'step-mother' is meant, in which case 'after the consummation of the marriage' may be intended.

3 According to the tablets (Ungnad, op. ett. iv. nos. 14, 19), an adopted child who was rebellious was sent away, or, as in the Sumerian laws (see p. 257b), sold into slavery. Ill-treatment of an adopted child entailed loss of property to his benefit (ib. nos. 14, 16).

4 A slave-wife denying her husband's mother was marked (by a tonsure) and sold.

a tonsure) and sold.

Exceedingly interesting, and among the laws which have attracted the most attention, are those ordaining retaliation. Injury involving the loss of an eye entailed the loss of an eye to the person who had inflicted the injury, and it was the same for the other members of the body—bone for bone (i.e. broken limb for broken limb), teeth for teeth (§§ 196, 197, 200).

Fines, with alternatives (mutilations, etc.) .-Whether these punishments could be compensated for by a money-payment, or in any other way, is not stated. In each case, however, they refer to a freeman injuring a person of his own rank; but a freeman committing the same offence against a man of inferior rank got off by paying a fine (1 mana for the limb or the eye of a serf; and 1 mana for the teach with losser indemnities in the same for the teeth, with lesser indemnities in the case of a slave). For striking a man of equal rank on the head, also, the lex talionis did not apply, but a fine of 1 mana of silver was inflicted. If the man struck was of superior rank, the striker received (§ 202). A serf striking a serf paid 10 shekels of silver (§ 204), but a slave striking the head of a freeman lost his ear (§ 205). Thus were intentional

injuries atoned for.

For unintentional injury, even in a quarrel, things were different. In such a case, a freeman hurting another had only to swear that he had not struck him knowingly, and was then responsible only for the physician's fees (§ 206); and, if death ensued, he made amends by paying 1 mana of silver, and for the son of a serf 3 only (§§ 207, 208). Striking a freeman's daughter, so that she lost her expected offspring, entailed a fine of only 10 shekels of silver (§ 209), and, if the woman died, they killed the smiter's daughter. The punishment of the culprit was in such a case a sore affliction, calculated to sadden him for the rest of his days, but here, as in other cases, the innocent suffered for the guilty simply because the Babylonians would not admit that a woman was the equal of a man, and said that, whatever the sex, the penalty must be 'a life for a life.' Striking a slave-woman with the same serious result entailed a fine of 2 shekels of silver, and, if she died, \( \frac{1}{3} \) mana (\( \frac{1}{3} \) 213, 214). In this case it was not 'slave for slave,' probably because the expected offspring had to be allowed for, the fine, it appears, being more than the value

Among the worst examples of the mutilationpenalty, however, are those quoted by Ungnad (op. cit. iv. 63, no. 1049), where, if certain people bring action against each other, their noses are to be pierced and their hands dislocated, and in this condition they are to go to the market-place at Sippar. In another case (ib. no. 1051) the hair of the forehead was to be shaved on account of bringing an action, the alternative being a fine (no. bringing an action, the alternative being a fine (no. 1050). An attempt to rescind, by legal action, the gift of the king, entailed a fine of 10 shekels of silver, and covering the claimant's head with hot (?) bitumen (ib. vol. iii. no. 458). This last text comes from the independent State of Hana (Thureau-Dangin, RA iv. 17). The punishment for false witness was a fine of 2 shekels of silver (Ungnad, iii. no. 699), and shaving of the forehead (ib. 707). The lea talionis also existed for injuries inflicted unintentionally in the course of professional (surgical) attendance. For death or loss of sight

(surgical) attendance. For death or loss of sight after an operation for a grave injury or for a cataract (?), the penalty was loss of the hands—the same as for a son striking his father, the object in both cases being the same, namely, to prevent a repetition of the misfortune (§ 218). A serf's slave having been treated for a grave injury, and dying under the operation, the penalty was restitution ('slave like slave') (\$ 219). If the slave lost an eye after an operation, the physician had to pay the owner half his value in silver. A veterinary surgeon who had operated upon an ox or an ass, which had died thereafter, paid to the owner a quarter of its value (§ 225). The 'crime,' in these cases, was want of skill or judgment, and the penalties were probably as near as the framers of the Code could get to the 'just mean' in each case, for the slave or the animal might have been of greater or less value, taking the injury into consideration, but the penalty was the same.1 In the case of a man hiring an ox, and causing its death by negligence or by blows, the penalty was ox for ox (§ 245), and the same penalty was imposed if he had broken its foot or cut its nape, thus rendering the animal useless (§ 246). Destroying the eye of a hired ox entailed an indemnity of half its value in silver (§ 247); and breaking off its horn, cutting off its tail, or piercing its nostril was made good only by paying a quarter of the animal's value (§ 248). 'Act of God' left the hirer free from obligation (§ 249).

Though not a crime, an accident which brought an owner within the purview of the law arose from injury by a mad bull. On the first occasion, in which the bull's viciousness could not be known, there was no penalty (\$250); but the death of a man by a known vicious bull, horned and at large, entailed a penalty of ½ mana of silver (§ 251), and ½ mana if the person killed was a slave (§ 152).

In certain cases (see above, p. 258) the punishment for theft or dishonest dealing was death, but the case of an employé differed. Thus, if a man hired to do the work of a farm stole the wheat and the vegetables, and these things were found in his hands, his hands were cut off (§ 253). Here again, we seem to have an instance of vengeance against the offending members; for he who, instead of working for the benefit of his employer, used his hands to rob him, was accounted worthy of this mutilation. In one case not very clear in the Code, the person who took away necessary things and weakened the oxen had to make up the damage he had caused (§ 254); and in another, if he lent out the oxen or stole the grain, so that he was unable to cultivate it, he had to pay 60 gur for every gan of ground left uncultivated (§ 255). It seems strange that a thief, in such a case as this, should be let off so easily, but it was the same for other things—a man stealing a watering-machine paid 5 shelps of silver and the theft. 5 shekels of silver, and the theft of a shadouf or a plough entailed an indemnity of 3 shekels (§§ 259, 260). The question naturally arises whether, in this inscription, the verb sarāqu has always the meaning of 'to steal.' A herdsman was under the same liability as the farmer—if a man, duly in receipt of a salary, reduced the oxen or the sheep, or their natural increase, he had to make up the amount (§ 264); and, if he changed their natural increase, or sold it, the penalty was that he made up the amount to the owner tenfold (§ 265).

Deprivation of office.—Apparently only one kind of misdeed entailing this is referred to in Hammurabi's Code, and, as is fitting, it bears upon the administration of justice. If a judge changed a sentence, thus making it to be of no effect, he was punished with twelvefold restitution of the sum involved in the lawsuit.<sup>2</sup> In addition to this, he was dismissed from the justice-seat, never to return; nor was he to sit with other judges when

trying a case (§ 5).
Imprisonment.—It is noteworthy that, in all the enactments of the Code of Hammurabi, there is no mention of imprisonment. The Babylonians, how-1 Such are the disadvantages of the cut-and-dried legislation

2 Twelvefold restitution is frequently referred to in contracts of late date, but this is for changing the record, and is not confined to the judges.

ever, certainly had prisons, as the expressions bit sibitti and bit kili, and the fact that arrests were ordered by the king, show. In all probability, however, they were not houses of detention as a punishment, but simply places where an accused person or a criminal could be confined until tried or punished. An interesting text referring to this is printed in Cun. Texts, vi. pl. 8 (Ungnad, op cit. iii. no. 743), in which a man speaks of being placed in bit ararri by his judges, whose names he gives. He states that he was not to be released until he had fulfilled a certain order—probably the delivery of a document, but the details are not clear.

Possibly imprisonment was more common in later times than at the early period of Hammurabi's dynasty. A letter published in Recueil des Travaux, xix. 107-108 (82-3-23, 845), asks: 'Why takest thou my child and placest him in the prisonhouse (bit kili)? None shall take him, and thou must bring him forth (again). Send my son quickly.' Confinement was also effected in a man's own house: 'Shut up Arad-Bau (who sits in the city-gate of Hadad) in his own house with the men (Pinches, Outline of Assyr. Gram., 1910, p. ii). The reason of this order is not stated, but something of the nature of a revolt or conspiracy

may be suggested.

Resistance to Assyrian dominion entailed all kinds of horrors, and, though the Assyrian king may have regarded such resistance as among the worst of misdeeds, and worthy of all the pains and tortures which he inflicted, it hardly comes within the scope of the present article. Nevertheless, there is one noteworthy instance of punishment for what might be described as a crime, though those who suffered for it-were only obeying their king's orders. Certain Elamite magnates had been sent by Te-umman, the king, to Ashurbanipal, king of Assyria, asking for the delivery of certain fugitives. The message was an insolent one (sipir merihti), and the Assyrian king had the ambassadors de-tained. It seems not improbable that Te-umman made preparations to invade Assyria before the return of his ambassadors on the occasion of their final visit to Assyria; so, after the defeat and de-capitation of Te-umman, they were shown his cutoff head, the sight of which is said to have driven them mad. The success of the Assyrian arms had such an effect on Rusa, king of Ararat, that he sent ambassadors to Arbela to greet Ashurbanipal, who showed them the bodies of the Elamite am-bassadors with the 'insolent message' which they had brought.

Harper, The Code of Hammurabi, Chicago, 1904; Pinches, The OT in the Light, etc. 3, London, 1908, pp. 174, 175-177, 185, 485-525, 561; and, esp. Peiser, Kohler, and Ungnad, Hammurabi's Gesetz, Leipzig, 1904-1910.

T. G. PINCHES.

CRIMES AND PUNISHMENTS (Buddhist).-Crimes are for the most part committed by irreligious people; and the punishments are determined upon and carried out (even under hierarchies like Rome and Tibet) from political

hierarchies like Kome and Tibet) from political

1 The British Museum tablet D.T. I. generally called 'Warnings to kings against injustice' (WAI iv.2 pl. 48), which
refers to certain penalties, is rather a tablet of rewards and
punishments, mostly referring to the rulers of the laud; but
it is unfortunately not clear in every part. Among other
maxims given it is stated that a king's fil-favour towards his
princes or his burghers was likely to entail in the one case an
untimely end, and in the other rebellion. It is interesting,
however, on account of its references to imprisonment: 'The
son of Nippur, Sippar, Babylon, committing wrong, is caused
to enter the prison-house—where the wrong has been done, the
town shall pour out (I supply provisions) to the fortress (I).'
'The sons of Sippar, Nippur, and Babylon, giving their provisions to the stallions, ate the stallions for their provisions—
they were delivered into the cuspody of the foe,' etc.

2 'Treacherous' seems also to be a possible rendering.

or legal, rather than from religious, motives. It is, therefore, a complicated problem to decide how far a religion, dominant at any time in a country, is or is not an important factor either in deciding what acts shall be called crimes, or in determining the punishments for them. This is so even when the facts are known and classified; and no attempt has yet been made to write the history either of crime or of its punishment in any Buddhist country. The following remarks must, therefore, be tentative and imperfect. It will be convenient to discuss the subject (1) as regards the Order, and (2)

I. The Order.—The standard text-book of Canon Law consists of the ancient Rules of the Order, as current in the time of the Buddha (see 'Pātimokkha,' in art. LITERATURE [Buddh.]), edited, about fifty years after his death, with notes and a commentary, and accompanied by twenty supplementary chapters. These additions by the editors show the development that had taken place, during snow the development that had taken place, during that interval, in the interpretation of the Rules themselves as well as in the method of enforcing them. Of the 227 Rules, more than 200 relate to matters of deportment, to the common property of the Order and the proportion allowed to each member, to the time and manner of taking food, and so on. The penalty for any infraction of these minor regulations was reapprepared, that of these minor regulations was repentance; that is, the offender had to confess his fault to a brother bhikkhu, and promise not to repeat it. This penalty involved forfeiture of any property held contrary to the regulations.

The major offences were divided into two classes -pārājika and samahādisesa. The former class comprised four crimes—the sexual act, theft, comprised four crimes—the sexual act, there, murder, and putting forward a false claim to religious insight. The penalty was expulsion from the Order, or, to use the words of the Rules, 'he has fallen into defeat, he is no longer in communion.' The notes and supplements discuss does not amount to an infringement of one or other of these four Rules. The cases put are ingenious, and the decisions harmonize in a remarkable way with the equitable views of modern

writers on criminal law.

The second of the above two classes comprises five offences depending on or inciting to sensual impurity; two connected with building a residence without obtaining the approval of the Order; two with slander; two with stirring up discord in the Order; one with intractability; and one with general evil life (being a disorderly person). The penalty for these offences was suspension for as many days as had elapsed between the offence and its confession. A suspended member of the Order is under disability in regard to 94 privileges of an ordinary member-he is to take the worst seat or sleeping-place, cannot sit on a Chapter, cannot travel without restriction, and so on. When the fixed number of days has passed, the suspended bhikkhu may be rehabilitated. Both suspension and rehabilitation can be carried out only at a formal Chapter, where not fewer than twenty regular bhikhhus must be present. There are some what complicated rules to ensure the regularity of the proceedings, the equity of the decision, and opportunity for the putting forward of the defence. These are too long even to summarize. We must be content to note that, for instance, the rules as to the constitution of the court are given in *Vinaya Texts*, ii. 263 ff., iii: 46; those as to the accusation being invalid, unless brought forward under the right heading, in ii. 276 ff.; those as to both parties being present, in iii. 47.

1 Vinaya Texts, i. 4 f. 2 The whole of the 94 are given in Vinaya Texts, ii. 386 ff.

Every member of the Order resident in the locality had the right to attend such a Chapter; and, if the matter were too complicated to be adequately considered in so large a meeting, it could be referred to a committee of arbitrators chosen by the

Chapter (ib. iii, 49 ff.).

The above are rules and practices evolved by the early Buddhists, for use among themselves only; they do not give, or pretend to give, any adequate treatment of the question of crimes, or of that of punishments, but they show that the early Buddhists had a very fair grasp of the general principles underlying the equitable administration of criminal law, and that in the matter of punishment they took, as might be expected, a lenient view. They show also that, at the time when Buddhism arose, such crimes as murder and theft were no longer looked upon as offences against individuals only, but had already come to be considered as offences against the community, as moral offences in themselves—in other words, that this step forward in the treatment of crime was not in any way due to Buddhism, but was the outcome of Indian civilization.

2. Laity.—The Buddhist scriptures frequently refer to their ideal of a perfect king, a righteous king who rules in righteousness, without punishment, and without a sword (adandena asatthena). In the Kūṭadanta,¹ King Wide-realm's country is harassed by dacoits, who pillage the villages and townships and make the roads unsafe. He thinks to suppress the evil by degradation, banishment, fines, bonds, and death, but his Buddhist adviser tells him that there is only one method of putting an end to the disorder, that is, by providing farmers with food and seed-corn, traders with capital, and government officials with good wages. capital, and government officials with good wages. If this method be adopted, 'the king's revenue will go up; the country will be quiet and at peace; and the people, pleased with one another and happy, dancing their children in their arms, will dwell with open doors.' In the legend the plan succeeds; and it represents, no doubt, fairly accurately the Buddhet respections of the product of the p rately, the Buddhist vague ideal of the right theory of crime and punishment. In the Buddhist historical chronicles we have no instance of its having been realized. Crime and its punishment have been dealt with according to the views current at each time and place, and it would be impossible, with our present evidences, to attempt any statement as to whether, and in what degree, those views have been modified by the Buddhist ideal.

LITERATURE.—Vinaya, ed. H. Oldenberg, London, 1879-88; Rhys Davids and H. Oldenberg, Vinaya Texts (SEE, vols. xii., xvi., xx), Oxford, 1881-85; Rhys Davids, Dialogues of the Buddha, Oxford, 1899. T. W. RHYS DAVIDS.

CRIMES AND PUNISHMENTS (Celtic).— 1. The treatment of crime and of criminals among the ancient Celts is wrapped in great obscurity. Casar (de Bell. Gall. vi. 13) informs us that the Druids of Gaul were judges in both public and private disputes, and that they awarded damages and penalties; and we are told (ib. vi. 16) that, when human sacrifices were offered, criminals were sacrificed in the first instance, before recourse was had to innocent victims. It is not improbable, therefore, that among the Celts, as among the Greeks, Romans, and other races, the idea prevailed that certain forms of conduct were dis-pleasing to the gods, and that, in consequence, communion with deity could not be re-established without the purification of society by the death or expulsion of the persons who were guilty of such conduct (see Communion with Deity [Celtic], vol. iii. p. 749). In this treatment of its un
1 Digha, i. 135; tr. in the present writer's Dialogues of the Buddha, 1.475 t.

desirable members by the community it is probable that attention was paid to the general type of character no less than to specific acts of wrong conduct, just as, in the process of compurgation by oath in Welsh law (see below), the witnesses who were called to testify on oath gave evidence quite as much to the general character of the accused as to his non-performance of a particular act. The types of character which are always abhorred by communities where custom rules, as it did among the Celts, are those which are indifferent to the observance of customary prohibitions (in Homeric language those of men lacking in albas, such being conspicuous by their want of scruple and by the quality of  $i\beta\rho us$ . One of the Celtic roots for 'good' (Ir. dech, Welsh de [now obsolete], cognate with Gr.  $\delta\epsilon\chi o\mu au$ ), meant 'acceptable'; and the other Celtic terms relating to character show the prevalence among the Celts of the same moral conceptions as among other men of Indo-European speech. The idea of a defilement attaching to crime is found in a statement made in the Ancient Laws of Ireland (iii. 97), that body and soul are both defiled by committing crimes.

2. Side by side with the penalty of sacrifice, and probably connected with it, was that of exclusion from participation in religious rites. Cæsar (vi. 13) tells us that any contumacy with respect to the judgments of the Druids was punished by exclusion from the ritual of sacrifice; and this sentence, he says, was the severest among the Gauls, since the men so punished were treated as outlaws, and were men so punished were treated as outlaws, and were cut off from all the rights and privileges of human society. In Gaul there appears to have been a measure of centralization in the administration of justice, since the assembly of the Druids, meeting, according to Cæsar, in the territory of the Carnutes, held a court for the trial of cases brought from every district record that there were district to record the theory. brought from every district around. In the case of the Druids it is clear that the decision was in the hands of the religious leaders of the community; and this suggests that among the Celts, as in other early communities, the ethical and the religious aspects of crimes and their punishments were not very clearly distinguished. The conception of outlawry, or the loss of civil status, was a marked feature of the Celtic treatment of wrongdoers in the historical period, but this form of punishment was resorted to only in extreme cases. In Irish law, and to a somewhat less extent in Welsh law, recourse appears to have been had with extreme reluctance to the punishments of death and outlawry

3. In Irish law, also, it is remarkable that imprisonment and all forms of corporal punishment, whether by mutilation, beating, or torture, are conspicuous by their absence, and mutilation and imprisonment are rarely alluded to in the Welsh laws. It is not impossible that ordinary crime was almost as rare in Ireland and Wales in ancient times as it is to-day and that the comancient times as it is to-day, and that the com-munities in question seldom found it necessary to

have recourse to very extreme punishments.

4. Another feature of Celtic law, which links it to certain ancient forms of social organization, is the emphasis laid by it upon the responsibility of the emphasis laid by it upon the responsibility of the family group for the conduct of its members, as is seen especially in the case of the crime of homicide (see, further, art. BLOOD-FEUD [Celtic]). Both in Ireland and in Wales the family group of the slayer had to pay compensation to the family group of the slain for the loss of one of their number. This collective aspect of criminal jurismudence is one of the chief differences between prudence is one of the chief differences between the older Celtic point of view and that of the more

In Ireland the family groups in question were known as the gelijene, derbitne, tarfine, and indine.

individualistic jurisprudence of the present day; but even in Ireland (Anc. Laws of Ireland, iii. 245) the penalties for all crimes except killing fell on the offender, provided he had the means of

5. Sources of information.—In the case of Ireland there is a large body of knowledge relating to crimes and punishments, as well as to other branches of law, contained in the Ancient Laws of Ireland (Rolls Series, 1869-73). This work comprises various legal treatises, such as the Seventus Mor, the Corus Bescna, the Book of Aivill, etc. These treatises are the work of the Brehons (the hereditary lawyers of Ireland), who decided the cases that were brought to them. The body of law in question retained its authority among the Irish until the beginning of the 17th century. The law of England, which was introduced into head of the law of t The law of England, which was introduced into Ireland by Henry II., was for a long time hardly followed except within the English pale, which consisted of Louth, Meath, Westmeath, Kildare, Dublin, and Wicklow. A statute of Henry VIII. (Stat. 13, c. 3), promulgated in 1522, mentions that English law was not observed beyond the counties named. The main body of Irish law is called the Ctim; local modifications of general laws were called urradhus, and inter-territorial regulations cairde. cairde.

6. In the case of Wales there is abundant information concerning criminal procedure in the Ancient Laws of Wales, published under the editorship of Aneurin Owen in the Rolls Series (London, 1841). There is also a very convenient edition of the so-called Gwentian Code, published by A. W. Wade-Evans, under the title Welsh Medieval Law, from a Harleian MS (Brit. Mus. 4353) of the 13th cent. (Oxford, Clarendon Press, 1909), to which references will be made in this article. The Welsh laws consist partly of a Code, issued under the royal sanction and authority of Hvwel Dda, and partly of a collection of legal 6. In the case of Wales there is abundant Code, issued under the royal sanction and authority of Hywel Dda, and partly of a collection of legal maxims arranged in groups of three, or triads. The Welsh laws are based on a recension of existing customs by the prince Hywel Dda ('Howel the Good') (c. 930), and vary somewhat for the different regions of the Principality. The oldest MS is the Black Book of Chirk, now in the National Library of Wales, Aberystwyth (12th cent.), which appears to have been a form of the code of Gwynedd (N.W. Wales); hence its usual name, the Venedotian Code. Another form of the Code is known as the Dimetian, or the Code of Dyfed (S.W. Wales), perhaps better regarded as that of the larger area known as Deheubarth (the Southern region), while another form is usually Southern region), while another form is usually known as the Gwentian, from its supposed association with the district of Gwent (S.E. Wales). It is probable, however, that this Code, as Wade-Evans has shown, was that of Powys (Mid-Wales). The Code of Hywel is found in a Latin as well as a Welsh form, but the precise relation of these two forms is uncertain.

7. Attitude of the community to crime. - Among the Celts the community recognized the right of vengeance (Ir. digal, Welsh dial), whereby the individual or his family might themselves obtain satisfaction or compensation for a wrong done to them. This right, however, was one that was greatly restricted in practice, and was not to be put into operation except when other remedies failed. Ancient Irish law, and probably at one time Welsh law, made no distinction between crimes and torts (though originally some offences may have been viewed as offences against religion, and dealt with them alike as cases for compensation through payment. Whereas in modern communities crime is regarded mainly as an offence against the State, though individuals may be

wronged thereby, Irish legal practice, which was in the hands of a hereditary caste of arbitrators called Brehons, developed to an unusual degree the remedial aspect of compensation for wrong to the sufferers-an aspect which in the English law of crime has sunk largely into the background. In Welsh law there are abundant traces of an earlier state of things resembling that of Ireland, but there are also signs of the growth of a point of

view resembling that of modern States.

8. In Ireland, if the guilty party did not pay the amount which the Brehons awarded, the party that was aggrieved was allowed to exercise his right of vengeance by means of reprisals or private war. In Wales, the latter process was called myned ar herw ('to go on a plundering expedition'), and the regular term in Welsh for plunder was aurhaith ('absence of law'). The aggressor, if his family cared to support him, might offer resistance, or might become an outlaw, and, in that case, the avengers, if they chose, might put him to death. There are indications, however, that this power was restricted in Irish law by

that this power was restricted in Irish law by making the right purely personal, to be exercised only by the person who had been specially wronged. The Welsh legal triads state (Wade-Evans, Welsh Medieval Law, p. 264) that there are three legal periods for avenging a dead body:

"Between two kindreds who do not originate from the same gulad ("a district under one rule"), commencing a claim on the first day of the week following that wherein the dead was murdered; if there comes no answer by the end of a fortnight, the law makes vengeance free. The second is, if the two kindreds are in the same cantrev ("hundred"), commencing a claim on the third day after the dead is slain; if there comes no answer by the end of the ninth day, the law makes vengeance free. The third is, if the two kindreds are in the same cymud ("commot"), commencing a claim on the third day after the dead is murdered; if there comes no answer by the end of the sixth day, the law makes vengeance free.

In three MSS of the Welsh laws (X211b, W99b, and U55a; see Anc. Laws of Wales, i. 778, and Wade-Evans, op. cit. p. 306) there is found the

following statement:

inclinating statement:

'There are three incitements to revenge; one of them, the shricking of female relations. The second is, seeing the bier of the relative going to the graveyard. The third is, seeing the grave of their relative without enjoying satisfaction.'

The Welsh laws make the following exceptions as

to the persons who could take part in a blood-feud

(Wade-Evans, op. cit. p. 187):

'And if there be any one of the kindred of the murderer or the murdered who is an ecclesiastic in holy orders or a religious or leprous or dumb or an idiot, he neither pays nor receives any of the galancs ("blood-fine"). They are not to take vengeance for a person murdered, nor is vengeance to be taken on them; and it is impossible to compel such by any law to pay anything, nor are they to receive.

9. Family champion.—In Ireland (see Anc. Laws of Ireland, iii. 83, note) there existed the institution of family champion, whose place it was to avenge family quarrels. The championship in question formed one of the seven grades of a The Welsh laws contain no reference territory. to this institution.

ro. Outlawry.—In the Book of Aicill—the most important treatise on Irish criminal law (Anc. Laws of Ireland, iii. 381)—the question is asked, What is it that makes a stranger of a native freeman and a native freeman of a stranger? The

answer is as follows:

That is, an outlawed stranger: he is defined to be a person 'That is, an outlawed stranger: he is defined to be a person who frequently commits crimes, and his family cannot exonerate themselves from his crimes by suing him for them, until they pay a price for exonerating themselves from his crimes, t.e. seven cumhals (a cumhal = 3 cows) to the chief; and seven cumhals for his seven years of penance are paid to the Church, and his two cumhals for cainte-relations are paid to each of the four parties with whom he had mutual cainte-relations; and when they (the family) shall have given in this way, they shall be exempt from his crimes until one of them gives him the use of a knife, or a handful of grain; or until he unyokes his horses in the land of a kinsman out of family-friendship. And, if they give him these, they shall not be exempt from his crimes, until they pay the same amount again for exonerating themselves from his crimes' (tb. p. 285).

'The son whom he had begotten before he had been made an outlaw is to be like every other lawful man of the family. As to the son whom he may have begotten after he had been made an outlaw, his liabilities shall be on the family of his mother, i.e. they pay the full debt of a stranger out of their own rightful seds ("legal units of value") for his liabilities, and they obtain his body-fine. . . . The case in which a man may be killed with impunity—i.e. every man is exempt from liability for killing him—is when these things before mentioned were given for him, and the king has not neglected to restrain him, and he is not on the land of any particular person, and there is no particular person who feeds him. But, if the king has neglected to restrain him, and if he is not in the employment or hire of any particular person in the territory, he (the king) shall pay for his crime; and, if he be killed, the body-fine of a stranger who has a besonar ("modus vivendi") compact shall be paid for him. Neglect of restrain to n the part of the king means that he did not restrain him to the employment of a particular person, or did not have him living on a particular land, or fed by a particular person.'

This passage is of interest as being one of the

This passage is of interest as being one of the few passages in the Ancient Laws of Ireland which refer to the royal power or responsibility. reference is important, inasmuch as it shows that, even in Ireland, the king had a clear place in the legal system of the community, though the Brehons made little mention of it. In Wales the term direit, though not used in the Laws, meant originally a person who was outside the

social order.

II. In the Anc. Laws of Ireland (iii. 463) the text of the Book of Aicill says, 'The life of every law-breaker is fully forfeited,' but this is explained in the commentary as follows:

'That is, it is lawful to kill the thief without name, who is not known, when there is no power at the time of committing the trespass; and he (the slayer) is exempt on account of every person killed in his (the thief's) guise.'

The various cases that might arise under this head are then considered, and it is said (op. cit. p. 469):

are then considered, and it is said (op. cit. p. 469):

'The person who is exempt from liability for killing the thief is he from whom he came to thieve, or who is entitled to driefine for the theft. If he (the slayer) be the person to whom driefine is not due for the theft, full body-fine is due from him for killing him, whether there was or was not power to arrest him. Or, according to others, it may be lawful for any person to kill him, whether the person to whom he came to thieve, or the person to whom he did not come to there.' 'It is then there is no exemption for killing a person in the guise of the thief, when he is seen stealing the sdds ("chattels"), or when the track of any particular thing stolen was found after him. If he was not seen stealing the sdds, or if the track of the particular thing stolen was not found after him, there shall be paid tull body-fine for killing him, whether there was or was not power to arrest him. The person who came to inflict a wound upon the body may be safely killed when unknown and without a name, and when there was not power to arrest him at the time of committing the trespass, and there is exemption for every one killed in his guise.'

12. Administration of justice.—In Ireland the picture presented by the Brehon legal treatises is that of a community without an official magistracy or police, where the remedy in the case of any wrong done (whether a crime or a tort) was in the form of damages assessed by an arbitrator pos-sessing hereditary expert knowledge of Irish custom, the main problem for the arbitrator being in each case the accurate assessment of damages, which varied with the status of the person wronged, with the act committed, and with other circumstances. Allusions to the king's power or laws are very rare in these legal treatises. In Anc. Laws of Ireland (iii. 409) we are told that the crimes of the man who violated the king's laws were adjudged on the seven houses in which he got beds, that the penalty for violating the king's laws varied according to the nature of the tenancy and local laws, and that there was a penalty for supplying lodging to the violators of the king's laws, and similarly for the violation of a king's inter-territorial law; but it is clear that the idea of a crime in its relation to the community as a whole was in Ireland more implicit than explicit. In Wales the Laws refer to brawdwyr ('judges'), who had a recognized status in the community but whose payment appears to have come mainly from the parties to the action.

13. Effect of intention.—The distinction between criminal and non-criminal injuries was recognized in Irish law, though without altering the type of compensation required. Whenever a wrong action was shown to be due to malice aforethought, the fines on account of it had to be doubled. Intention had always (see Anc. Laws of Ireland, iii. 469, 471) to be taken into account in the case of theft, wounding, and homicide. In op. cit. iii. 139 there is a minute discussion of the fine due for the interest of the control of the cit. tention to wound, when the attempt to wound was not successful. The Welsh process of galanas ('recovery of compensation for murder') was always combined with the recovery of the fine for sarhad ('insult')—a combination which shows that, in historic times at any rate, intention was clearly recognized. It is said, for example (Wade-Evans, op. cit. p. 255), that an unintentional blow is not sarhad.

14. Responsibility.—In Irish law (Anc. Laws of Ireland, ii. 45) it is recognized that certain persons could not be considered responsible for their actions,

and the rule is laid down that

'a fool, a madman, a male idiot, a female idiot, and a dumb person shall not be distrained: their adult guardians who bear their crimes and get their wages shall be distrained.'

In op. cit. iii. 157, it is said:

'The man who incites a fool is he who pays for his crime, in which case the man who commits the crime, i.e. the tool, is exempt; for this is the instance in which fines of design are paid, another man who paid had not designs.'

In some cases (see op. cit. iii. 159) there was a

difference of opinion, and we read :

'When a fool has committed a furious assault alone, of his own accord, without cause, without enmity, it is then lawful to give every fool up for his crime; or, according to others, compensation must be paid on his account by his family or the person with whom he is. If there be enmity, each of them pays compensation.'

In op. cit. iii. 501 it is stated that neglect on the part of the sane in not looking after the insane would have to be compensated for; and, according to op. cit. iii. 507, damages would have to be paid for leaving an epileptic lunatic unguarded. The same conception underlies op. cit. i. 157, 161, where it is stated that a person is liable to distress for the crimes of his messenger and of his hired woman, and a man is also liable to a fine for the crime of his jester. In Welsh law (Wade-Evans, op. cit. p. 255) it is

stated that

'a free man is to answer for his alltud ("foreign servant") in every claim for which he is not to lose the tongue, and life, and limbs; for no one is to lose tongue and life and limbs by the tongue of another person.' It is further stated (ib. p. 259), that no one is to make answer or satisfaction for an act of his

bondman, except for theft.'

The extent to which children could be held responsible was carefully considered in Irish law, and the Anc. Laws of Iriland (ii. 66) discuss minutely the question of their responsibility at various ages, as well as that of their parents and

foster-parents. In op. cit. v. 151, it is stated; 'Little boys are safe in all the rights of lawful sports, until they have come to the age of having to pay damage of dire ("restitution-fine") for violence.'

Women, in respect of their first and second crimes, were placed on the same footing as boys.

15. Advocacy. - The Irish treatises make no mention of advocacy, but the Welsh legal triads contain the following statement:

'Three persons who are entitled to an advocate for them in court: a woman, and one with a natural impediment in speech, and an alien of foreign speech.'

16. Crimes in Irish law.—The forms of what would now be called crimes, or serious wrongs, with which Irish law deals, are homicide, wounding and mutilation, criminal assault, theft, assault, perjury, insult, libel, slander, using charms, trespass, damage to property (both living and dead), gross negligence, absconding and harbouring a fugitive, abduction, stripping of the dead, and disturbance of the peace.

17. Crimes in Welsh law.—The above were crimes or serious wrongs also in Welsh law, with the omission of the using of charms, and the addition of arson, waylaying, indecent assault, and

18. Penalties in Irish law.—The normal penaltics of Irish law consisted in the payment of certain fines, which were assessed by the Brehons (see above). The principle underlying these lines was that they were viewed as the equivalents of the amount of vengeance which the person or persons aggrieved would be justified in exacting in a particular case. Hence an important consideration which entered into the assessment of every fine was the value and status of the person injured. Irish law (as well as that of Wales) was based upon the principle that each person and thing in the community had a definite legal worth. In the community had a definite legal worth. case of persons, various considerations entered into the calculation both of a person's dire-fine ('honourprice') and of his éric-fine ('hody-price'). In the Anc. Laws of Ireland (v. 97) it is asked what it is that gives dire ('honour-price') to a person, and the reply is 'desert and worth and purity.' Of desert it is further explained that it refers to property, of worth that it refers to the person's word, and of purity that it refers to his deed. In the matter of rank as conferring status, there were in Ireland two chief grades: (1) the sacr-nemed, and (2) the daer-nemed. In op. cit. v. 15, the former are said to consist of 'churches, chiefs, poets, and feine' (free tenants), while the latter consist of the practisers of every art in general. A passage from one of these grades into the other (with a consequent change in honour-price) was possible. A saer ('free')-man might become a daer ('unfree')-man by selling his land or his property or his body into servitude, while a daer-man might become a saer-man by purchasing land or law or freedom by his act or by his husbandry, or 'by his talent which God bestowed upon him.' A loss of 'honour-price' might result from a defect of character. In op. cit. 1. 55 it is said:

'There are four dignitaries of a territory who may be degraded: a false-judging king, a stumbling bishop, a fraudulent poet, an unworthy chieftain who does not fulfil his duties.'

rent poet, an unworthy chieftain who does not fulfil his duties.' Again, in op. cit. p. 57:

'False judgment and false witness and false testimony and fraudulent security and fraudulent pledging and false proof and false information and false character-giving and bad word and false information and false character-giving and bad word and false information and false character-giving and bad word and false information and false character-giving and bad word and false information and false character-giving and bad word and false information and false proof the second to the false proof them with regard to every one of them until the third time.'

The Irish law-treatise referred to enters minutely into the question of the loss of full and half honour-price in the case of kings, bishops, chief-tains, poets, and others; and it is of interest to note the importance attached in Irish law to character and right conduct.

It was not character alone, however, that determined honour-price, and Irish law reflects differences of opinion as to the extent to which it depended upon a man's profession, his separable property, or the rank of the chief under whom he

served.

Apart from the cases already mentioned, where it is stated that under certain circumstances a wrongdoer might be put to death (see above), there is no reference to the death-penalty in Irish law, nor is there any reference to imprisonment. The king appears to have had power to assign a wrongdoer to the service of a particular person, but no mention is made of imprisonment as a form of punishment. The only reference to castigation as a form of punishment is in the case of a child under seven, who could be chastised only by its parent. In certain cases other fines called airer 'redemption') and smacht ('discipline') were exacted, and there are occasional references to pen-

19. Penalties in Welsh'law.-Welsh, like Irish, law was based upon a consideration of the status of the individual, and upon the determination of the legal worth of every person and object (living or dead). These ideas enter prominently into the questions of sarhad and galanas, the former being compensation for insult, and the latter compensation for homicide. Thus the same dominant conceptions govern Welsh and Irish law, and they clearly go back to a similar stratum of ideas. Welsh law, however, the central power of the king in each territory had attained greater prominence than in Ireland, with the result that the fines called dirwy and camlwrw for various offences were not paid to the individuals wronged, but usually to the king; and the same rule governed a third of each galunas ('body-fine'), while sarhad was paid to the person or persons wronged. In certain cases a part of the camlwrw was payable to persons other than the king, and in the case of a religious community the whole of the camluruv appears to have been paid over to the abbot and the lay impropriators. The dirwy was a larger fine, paid directly to the king (according to a Latin text of the Laws written about 1250), for fighting, theft, and criminal assault. The penalty of emasculation was imposed upon a ravisher who could not pay the fine, and a bondman striking a freeman was liable to have his right hand cut off.

Though there is no allusion in the Welsh laws to imprisonment as a penalty for any specific offence, yet the fact of imprisonment is implied in more than one passage. For example, in Wade-Evans (op. cit. p. 177) we read that the smith of the court was to receive four pence from every prisoner off whom he should remove irons. Again, of the court-porter it is said that he is to get four pence from every prisoner who shall be lawfully imprisoned in the court. One MS (U45a) gives imprisonment as one of the lawful excuses for neglecting a summons. The Welsh word carchar ('prison') is derived from the Latin carcer, and is a term used in Welsh for the fetter placed on an animal to prevent it from straying. It is therefore probable that liberty was impeded, whenever necessary, more by the use of chains and fetters than by confinement in a building.

Though Irish law contains no reference to a death penalty, Welsh law has a few allusions to the penalty of hanging. This was in Wales the recognized punishment for theft (as is stated in the Mabinogi of Manawyddan fab Llyr). In Wade-Evans (op. cit. p. 213) we read:

'One person escapes from an admitted their with flesh and skin on his back [viz.] a necossitous alltud ("alien") who shall have been three nights and three days without alms, without relief, and who shall have traversed three trevs ("townships") daily, with nine houses in every trev; and then, owing to hunger, shall commit theft, and then shall be caught with flesh and skin on his back. He is to be let free without gallows and without payment.'

Similarly, if a thief was found burning a house stealthily, and was caught, his life would be for-feited. In the case of a thief the Welsh laws

recognize the penalty of sale.

Among the fines mentioned in the Welsh laws is that of dilysdod ('acquittance'), which was enforced as a payment to a woman by her ravisher. This was probably meant as a payment to guarantee her status as a virgin in the eyes of the law. There was also a similar payment called *gwaddol*, payable by a man who failed to rebut a charge of criminal assault upon a woman walking alone.

20. Medium of payment of fines.—In Irish law the terms used in estimating fines are cumhal and séd. By a cumhal was originally meant 'a female bond-slave,' but, in course of time, the word came

to mean the equivalent in value of three cows. The method of payment of fines was in a fixed proportion of certain goods. When half a cumhad had to be paid, it had to be in one species of goods; when one cumhal was required, it had to be in two species; and, when three or upwards of three cumhals were required, they had to be in three species. In that case one-third would have to be in cows, one-third in horses, and one-third in silver. Of the cattle one-third had to be male, one-third of the horses had to be mares, and one-third of the silver by weight might be copper alloy. A sed was defined as follows (Anc. Laws of Ireland, iii. 463):

'A common easily divisible séd means two live chattels or dead chattels, or one dead chattel the value of which is not lessened by its being divided.'

Of séds the most prized was a milch cow. Welsh law the fine called camluru consisted of three kine, paid as a rule directly to the king, and sometimes doubled. The fine called dirwy consisted of twelve kine, paid directly to the king, and was also sometimes doubled. Sarhad and galanas were paid in various ways, as directed in the Laws. The coins mentioned in the Welsh the Laws. The coins mentioned in the Welsh laws are: (1) keinhawe kyfreith, 'a legal penny' (see Wade-Evans, op. cit. p. 330); (2) keinhawe cota, 'a curt penny' (ib.); (3) dimei, 'a half-penny'; and (4) punt, 'a pound.'

21. Initiation of legal process.—In Ireland the aggreed party compelled the aggreesor to submit the case to arbitrators, by levying distress (Ir. athanhail) upon the latter. In its most solemn

athyabhail) upon the latter. In its most solemn form the levying of distress required that the person aggrieved should 'fast against' the aggressor (see ASCETICISM [Celtic], vol. ii. p. 72), that is, call Heaven to witness that he would starve to death if his opponent did not submit the case to a Brehon. The consideration of questions connected with distress is one of the most elaborate sections of Irish law. In Wales, in keeping with the greater development of the central power, a man greater development of the central power, a man could be called to appear in answer to a gwys ('summons'). The legal method of accusing for theft is described in Wade-Evans (op. cit. p. 245). Even in Ireland certain people (Anc. Laws of Ireland, i. 105, 107) might be arrested for their liabilities, instead of being distrained upon, and the circumstances under which this process might

take place are fully considered.

In Irish law a pledge had to be given (op. cit. in frish law a pledge had to be given (op. etc. i. 277) to stop the process of fasting, especially in judgments of theft, robbery, and violation; and the contingencies arising from the giving of the pledge and its possible loss form an important section of the Law of Distress. In Wales, the term mach ('pledge') was used in the Laws only in connexion with civil matters. In criminal procedure the sequence person had to obtain a garrandor cedure the accused person had to obtain a gorvodog, i.e. a personal surety, for one who was charged with crime (see Wade-Evans, op. cit. pp. 258f., 312). In the Irish legal treatises the question of evidence is not discussed to the same extent as it is in the Welsh laws, and it is noticeable that the latter assign considerable prominence to the oath, both of the accused and of his compurgators, as a means of clearing his character. The Welsh term for this process was to put a person upon his rhaith (a word cognate in formation with Lat. rectus), and, in this process, he had to bring forward a certain number of persons to swear on his behalf to the justice of his claim or defence as a whole.

22. Penalties for particular crimes.—(1) Homicide.—(a) In Ireland homicide was divided into intentional and unintentional. The fine for the former was double that of the latter. The account given in the Senchus Mor suggests that there was

some difference of opinion as to whether homicide

should in all cases be treated as a matter for compensation through payment, but the customary law with its *eric* ('body-fine') appears to have prevailed. In the case of secret homicide the concealment was regarded as a separate act, and compensation had to be paid for it accordingly. When a freeman was slain by a freeman, the slayer had to pay the amount of his own honour-price, together with a fine of seven cumhals, as compensation for the death. For concealment the slayer paid honour-price, together with seven cumhals. If the body was found, the fine for concealment was remitted. Looking on at a murder was a wrong which was liable to a fine. Whenever a person found a dead body, he had to give information at once; otherwise, he was liable to the fine of a looker-on, or, according to others, of an accomplice. The Anc. Laws of Ireland (iii. 101, etc.) consider with great fullness the various cases that might arise in connexion with homicide.

As illustrating the growth of a different mental attitude from the preceding, it may be stated that the commentator to the Corus Besona treats homicide, and all other wrongs done with malice aforethough, as being in the nature of exceptions to the ordinary law, and holds that the slayer should be given up, with all his property, to the family of the slain man.

(b) In Wales the term for a 'murder-fine' was galanas, and, along with the murder-fine, in every case of homicide sarhad ('compensation for insult') had to be paid. The amount of the murder-fine varied with the status of the person murdered. The murderer was helped to pay by his kinsmen, to the fifth cousin, and the liabilities of these were fixed by law. According to the Welsh law (Wade-Evans, op. cit. p. 193), a third of every galanas was paid to the king, and also whatever of the murderer's chattels was from time to time obtainable. The reason given is that it is for the king to enforce where it is not possible for a kindred to do so. The murder-fine of a king was three times the amount of his surhad with three augmentations; the amount of his sarhad being as

iollows: 'a hundred kine for every cantres ("hundred") in his kingdom, and a silver rod which shall reach from the ground to the king's pate, when he shall sit in his chair, as thick as his ring finger, with three knobs at the top and three at the bottom as thick as the rod; and a golden cup which shall hold the king's tall draught, as thick as the nail of a ploughman who shall have ploughed for seven years, and a golden cover thereon as thick as the cup, as broad as the king's face.'

There was a similar murder-fine for the heir-apparent. The galanas of a chief of the household was a third of the king's, 'without privileged gold and silver.' A steward, a judge of a court, a falconer, a chief huntsman, a chief groom, and a page of the chamber all had the same galanas, consisting of 'nine kine and nine score kine with three augmentations. For the galunus of the other officers, except the chief of the household and the priest of the household, six kine and six score kine 'with three augmentations' had to be paid. In the case of the priest of the household the murderer had to submit 'to the law of the Synod.' The laws fix the galanas of various other persons, but it is sufficient to mention that the galanas of a free Welshman of pure descent consisted of 'three kine and three score kine with three augmentations.' This was also the amount of the galanas of a king's serf, while the galanas of a nobleman's serf was half of this amount. For a thief there was no galanas. (For various questions connected with homicide, see Wade-Evans, op. cit. pp. 236, 248, 252 f., 264, 294, 299 f., 320.) In the case of a fratricide the kindred were not to pay galanas with the murderer.

(2) Wounding and mutilating.—(a) In the Anc. Laws of Ireland (iii. 349, etc.) there is a very full discussion of the penalties due for wounding and mutilating, and the various wounds and losses that might be inflicted are considered in great

detail. For a foot, a hand, an eye, or a tongue, half the *éric*-fine of every person was to be paid, and in the opinion of some the full *éric*-fine should be paid for the mouth, the nose, and the tongue. According to op. cit. iii. 472, the sick maintenance of a wounded person had to be compensated for, and a substitute had also to be provided. Among the wrongs requiring compensation was that of shaving bare the beard or the whiskers.

(b) In Welsh law there is an assessment of the worth of each part of a person's body (see Wade-Evans, op. cit. p. 190 f.). The following quotation will suffice to illustrate the list of values:

"All a person's members when reckoned together are eight and four score pounds in value. A person's fluger is a cow and a score of silver in value. The worth of the thumb is two kine and two score of silver. A person's nail is thirty pence in

With reference to a serf's limbs there is a passage

in MS U27a which reads as follows:

'The worth of the serf's limbs by law is as much as the worth of the king's limbs according to worth. The galanas and the sarhad, however, of every one are paid according to his status when a limb shall be broken.'

(3) Arson.—The Welsh laws alone deal with this offence, and refer to the necessity of compurgation to meet it:

'If an accusation of the crime of burning stealthily be brought against a person, the oaths of fifty men will be necessary for him. If he obtain his *rhaith* ("acquittance"), it will be sufficient for him; if he obtain it not, he becomes a saleable thief. A saleable thief is worth seven pounds. The case of attempted arson by a thief has been

mentioned above.

(4) Waylaying.—This crime is also specifically mentioned only in Welsh law, as follows:

'Whoever shall waylay pays twofold, because it is a violence against a person to kill him, and a theft to conceal; and that is the one place in law where violence and theft become connected. And it is to be thus denied; the oaths of fifty men to deny wood and field, and three of them under vow to abstain from flesh and woman and horse-riding.'

This offence was punished by hanging and confis-

(5) Criminal assault.—(a) Irish law required the payment of a heavy line for attempting to violate a person's wife, and a still heavier fine for

violate a person's wife, and is still heavier line for actual violation (see Anc. Laws of Ireland, i. 163, 167, 177, 181). In op. cit. ii. 405, we read as follows: 'If the girl has been defiled within the age of seven years, full body-fine shall be paid for her, and honour-price in right of God; full body-fine also till she reaches the age of ten, and half the honour-price of her father; two-thirds of body-fine for her from the age of ten forth till she reaches fourteen, and half the honour-price of her father; and there is no division of the body-fine from that forth.'

(h) Walsh law manished oriminal assault accord

(b) Welsh law punished criminal assault, accord-

(0) Weish law punished criminal assault, according to one account, as follows:

'Whoever shall commit a rape on a woman, let him pay her gobr ("maiden fee") to her lord; and her dirwy ("fine") and her dirwy ("fine") and her dirwy ("fine or insult") he pays to the woman; and, if she be a maid, let him pay her covyll (a gift payable by the husband to the wife on the morning after the marriage). Some texts add: 'and a silver rod to the king in

the manner he is entitled; and, if the man cannot pay, his testicles shall be taken. (For the oath of the woman and the oaths of fifty men required for compurgation, see Wade-Evans, op. cit. p. 237 f.) In Wade-Evans, op. cit. p. 240, the case of assault

by two men upon two women is considered as

follows:

'If two women shall be journeying through any place and there be no one with them, and two men meet them and violate them, they are not to be compensated. If, however, there be one person with them, although ever so little, unless he be a carried child, they lose none of their right.'

In MS U42a the following is added:

'A woman who shall be violated, if she know not who has violated her, is not to pay amobr ("maiden fee"); since the king preserved her not from violation, he loses her amobr; and, it the woman be doubted in that respect, let her give her oath that she knows not who violated her, and that she was violated

One legal triad speaks of the violation of a woman as 'one of the three disgraces of a kindred. (6) Indecent assault. - In the Welsh laws (WadeEvans, op. cit. p. 270) the following statement

occurs: Three sarhads of a woman there are, one of which is augmented, and one diminished, and one is a complete sarhad. When a kiss is given her against her will, a third of her sarhad is wanting to her then. The second is feeling her with the hand, and that is a full sarhad to her. The third is being connected with her against her will, and that is augmented by the

(7) Theft.—(a) Irish law deals very fully with the various fines which have to be paid in the case of theft, the amount of compensation varying chiefly with the nature of the object stolen. Among such objects are land, cattle, grass, rushes, turf, fruit, fish, boards, firewood, wattles, etc.; and among the special cases considered are that of stealing from a house and from a hunter's cooking tent, and that of stealing a smith's tools. According to the Anc. Laws of Ireland (iii. 463), it was lawful to kill the unknown or nameless thief, but this right was personal only (op. cit. iii. There was a further rule that no one was to trade with a thief.

(b) Welsh law dealt severely with thieving, and

(b) Welsh law dealt severely with thieving, and punished it (probably when habitual) with execution by hanging. In Wade-Evans (op. cit. p. 188) there is a list of naw affeith Wedrat ('the nine accessaries of theft'), which are given as follows: 'The first of the nine accessaries of theft is devising deceit and seeking an accomplice. The second is agreeing concerning the theft. The third is giving provision. The fourth is carrying the food while accompanying him (the thief). The fifth is tearing down the cattle-yard, or breaking the house. The sixth is moving what is stolen from its place, and walking day or night with it. The seventh is knowing and informing as to the theft. The eighth is sharing with the thieves. The ninth is seeing the theft and concealing it for reward, or buying it for worth. Whoever shall deny one of these accessaries, let him give the oaths of fifty men without bondman and without alien.'

There is a reference to the death-penalty for stealing in the following statement, where it is

seeming in the following statement, where it is said (ib. p. 189) that one of the nine persons who are to be believed in giving their testimony, each one of them separately on his oath, is 'a thief without hope of mercy concerning his fellow-thief, when brought to the gallows; because credible is his word concerning his companions and the chattels they thieved, without a relic; and his companion is not to be destroyed on his word, but is to be a thief for sale.'

In the case of the steeling of small contracted to

In the case of the stealing of goods entrusted to a guardian, if the keys are safely in his custody and a breach has been made into the house,

and a breach has been made into the house, 'the Book of Cynog (a text of the Laws) says it is easier to believe him if there be chattels of his own taken together with the other chattels which were taken by stealth from him. He is, however, to swear conjointly with all the persons in the house as to his being clear as to those chattels. If the soil, however, be excevated under the house, after he has carried out the law that he is clear, the king owns the soil, and there is to be no guardian answerable for it. Every chattel which a guardian asserts to have been brought to him to be kept, let him make good, except the chattels conveyed through the soil.' soil.

The case of theft by a necessitous alien has been already mentioned. The theft of a king's cat had to be made good as follows:

'Whoever shall kill a cat which guards a barn of a king, or shall take it stealithily, its head is to be held downwards on a clean level floor, and its tail is to be held upwards; and after that wheat is to be poured about it until the tip of the tail be hidden, and that is its worth. Another cat is four legal pence in value.'

A dog, on the other hand, might, according to some MSS, be stolen with impunity:

'There is no dirruy for a dog, although it be taken stealthily, nor canharu. The oath of one man is sufficient to disown a dog, for it is a back-burden of an unclean animal.'

The triads in the Dimetian Code, however, say that a dog-stealer should pay a camlwrw. Regulations as to the manner of bringing a charge of

theft legally and of compurgation in the face of a charge are given in Wade-Evans, op. cit. p. 244 f.

A thief might be punished by being sold, and the value assigned to 'a saleable thief' is seven pounds. In Wade-Evans (op. cit. p. 259) are found the following further provisions as to theft:

'A thief who shall be placed upon sureties is not to be destroyed. No one is to make satisfaction or answer for an act of his bondman saving for thett.'

(8) Assault.—(a) Irish law dealt with assault

under the same section as wounding and mutilating, and drew a distinction between a 'red wound' (with bloodshed) and a 'white wound' wound' (with bloodshed) and a 'white wound' (without bloodshed). In the Anc. Laws of Ireland (iii. 352 n.) a 'lump-blow' is defined. For a clean lump-blow two cows were an adequate compensation, while for the foul lump-blow airer-fine (one of the lesser fines of Irish law) was exacted.

(b) Welsh law (Wade-Evans, op. cit. p. 193) punishes assault as follows:

'Whoever shall strike a person, let him pay his sarhad, first because attack and onset constitute a sarhad to every person; and a penny for every hair pulled out from his head by the root; and a penny for every finger which shall touch the head; and twenty-four pence for the front hair.'

Again, 'If a person strike a bondman, let him pay him twelve pence; . . if a bondman strike a free man, it is just to cut off his right hand, or let the bondman's lord pay the person's sarhad' (ib. p. 194).

It is clearly stated (ib. p. 259) that a blow received unintentionally is not sarhad, and the following three buffets did not need expiation: one by the lord on his man in ordering him in the day of battle and fightling; and one by a father on his son to punish him; and one by a chief of kindred on his relative in order to counsel him.'

(9) Treason.—Irish law, though severe upon lying, treachery, and all forms of deceit, does not deal specifically with treason, but in Welsh

not deal specifically with treason, but in Welsh law the following passage occurs (ib. p. 202):

'Whoever shall commit treason against a lord or waylay, is to forfeit his father's trev; and, if he be caught, he is liable to be executed. If he be not caught and he will to be reconciled to his lord and kindred, a twofold payment of drwy and galanas is to be levied on him; and, if he repair to the court of the Pope and return with the Pope's letter with him, and show that he is absolved by the Pope, he has his father's trev ("homestead").'

In Iraland tree shows described.

In Ireland, treachery deprived a person of his full

honour-price.
(10) Perjury.—(a) Irish law dealt with false swearing, more especially in the case of contracts, and visited it with a fine (Anc. Laws of Ireland, iii. 397). False witness also lowered a man's honour-price.

(b) Welsh law deals chiefly with perjury (anudon) in relation to suspected testimony (see Wade-Evans, op. cit. p. 260 f.), but denial of suretyship and contract is also discussed (ib. p. 230).

(11) Insult.—(a) In Irish law the maintenance

of a man's honour was a primary consideration, and certain fines in addition to the dire-fine ('honour-price') appear to have been specially instituted for the defence of personal honour. Among these are the enech-gris ('blush-fine'), the enech-ruice ('defamation'), and the enech-lann ('reparation of honour'). To ask a question with a view to exposing a blemish (Anc. Laws of Ireland, iii. 347), and to give a person a nickname, rendered the offender liable to a fine (op. cit. iii. 93), while one form of insult specifically mentioned (op. cit. iii. 409) was that of opposing a bishop on a 'hill of

meeting.'
(b) Welsh law attached the utmost importance to the maintenance of a person's dignity, and com-pensation for sarhad ('insult') plays a prominent part therein. The violation of a person's protection constituted one specified form of insult.

(12) Libel.—(a) In Ireland the fort of a man who tolerated satire or satires (Anc. Laws of Irewho colerated state or sattres (Anc. Lancs of Ireland, v. 169) lost its dire, or honour-price, but in another passage (op. cit. i. 59) it is stated that satirizing, though done intentionally, did not cause loss of the full honour-price until a person evaded the law with respect to it. Satirizing a dead person was also liable to fine (op. cit. i. 185, 180)

(b) There is no specific mention of libel or satire

in Welsh law, and, in view of the practice of the Welsh poets, at any rate after 1300, it would appear that satirizing on their part was tolerated. At an earlier date, libel was probably counted under sarhad.

(13) Slander.—(a) In Ireland the Ancient Laws (i. 175, 177) specifically mention a fine for slander. A fine was also obtainable for circulating a calumnious story (op. cit. i. 195, 199), or for wrongfully questioning a person's legitimacy (i. 185, 193).

(b) The Welsh laws make no specific mention of slander (cnllib) other than slander against women (Wade-Evans, op. cit. p. 238), or against an innocent man for murder, and probably included other slander, along with libel, under sarhad.

(14) Using charms.—There is no reference to

this offence in the Welsh laws, but in Ireland the person committing it was liable to a fine, whether it was committed against a human being or against a dog (see Anc. Laws of Ireland, i. 177, 181).
(15) Trespass.—(a) Irish law in several passages

defines the compensation required for various forms of trespass, such as 'dirlying a road' (op. cit. iii. 76 n.), bringing a horse into the narrow part of a road (ib.), the digging of a churchyard, and the removal of bones from a churchyard. The type of fine called the smacht-fine was levied chiefly in the case of trespass by men or animals (see Anc. Laws of Ireland, iv. 83, 87, 89, 93, 95, 107, 109, 111, 115, 117, 119, 121, 123, 141, 145, 153)

(b) The forms of trespass which are specifically mentioned in the Welsh laws are: excavating the land of another to hide anything therein, making a snare, digging a kiln-pit, or building a house on another person's land. The fine inflicted was four legal pence, with certain additions in particular

(16) Damage to property.—(a) Irish law had much to say regarding offences arising under this head (Anc. Laws of Ircland, i. 167, 169, 171, 175, 185, 189, 233, 235, 237). The Book of Aicill (op. cit. iii. 357, 358) deals very fully and humanely with the maining, mutilation, and over-working of animals.

(b) In Wales all damage to property, whether living or dead, had to be compensated for in accordance with a scale of legal worth laid down

in the laws.

(17) Gross negligence.—(a) In Irish law cases of the kind are, for the most part, dealt with under other heads, such as trespass and damage to property; but the expression 'trespass of viciousness with neglect' is used for the offence of bringing a also inflicted for neglect of fencing. Attendants, too, were punishable for not guarding the houses of persons of dignity (op. cit. iii. 511), and a similar penalty was inflicted for neglect in not guarding a captive (iii. 499 f.). A judge who was negligent was liable to a fine (iii. 305), and so were sane adults for not guarding the insane. The Irish believed that blotches arose on the cheeks of judges who pronounced false judgment.

(b) The two instances of punishable neglect mentioned in Welsh law are the following (Wade-

Evans, op. cit. 258, 268) :

(1) It two persons shall be walking through a wood, and the one in front let a bough strike the one in the rear so that he loses an eye, he is to pay the worth of an eye to the other.

(2) If a spear were not so placed as to prevent its point from accidentally killing a person, its owner, in case of such a death, had to pay a third of the slain person's galanas.

(18) Absconding and harbouring a fugitive.—

(2) It was an allowed in Thich lear to retartive.—

(a) It was an offence in Irish law to entertain a fugitive who was known, and there was also a penalty for supporting and advising the women and children of foreigners, as well as for feeding

or sheltering a stranger generally (Anc. Laws of Ireland, iii. 385, 387, 389). In the same manner a person feeding a houseless person was liable to a line, the intention in all these cases doubtless being to make it difficult for persons to escape

from justice.
(b) In Wales the law (see above, p. 265a) appears to have been a little more sympathetic towards necessitous aliens, and Welsh law also provided that an alien of foreign speech should have an

advocate.

(19) Abduction.—(a) Irish law (op. cit. iii. 403, 541, 543, 545) deals very fully with the question of abduction in its effects upon family life. The children of the abducted woman belonged to her mother's family, and might be sold by them, but the father was bound to buy them if they were sold, and if he got them gratis he was bound to educate them.

(b) Abduction was a punishable offence in Welsh law, and the various contingencies which arose in connexion therewith are fully dealt with in the

connexion therewith are fully dealt with in the Laws (see Anc. Laws of Wales, pp. 86, 88, 92, 204; and Wade-Evans, op. cit. pp. 237, 238, 239).

(20) Stripping of the dead.—In Ireland there was a fine for stripping the dead in general, and the slain in battle in particular (see Anc. Laws of Ireland, i. 175, 177); and a Welsh legal triad speaks of the 'three disgraces of a dead body'—when it is slain, when it is stripped, and when it is left lying

is left lying.
(21) Breach of the peace.—The Welsh laws contain no explicit references to offences under this head; but Irish law (op. cit. i. 231, 235) required a fine for quarrelling in an ale-house, and also for

disturbing a fair.

(22) Adultery.—It is probable that in Irish law adultery should be counted with the above offences, but the absence of a clear distinction in Irish law between crimes and torts makes it difficult to class adultery with crimes, as was done in some countries. In its effect upon the honour-price of a person, adultery, according to the Anc. Laws of Ireland (i. 57-61), was more disastrous for ecclesiastics than for laymen; but, in the case of all alike, adultery and cohabiting with a kinswoman had the same effect upon the honour-price as unhad the same effect upon the honour-price as unfaithfulness in word (op. cit. i. 59). In the case of adultery by a married man the Welsh laws require (Wade-Evans, op. cit. p. 230) that he should pay six score pence to his lawful wife as her wynebwerth ('compensation for insult'). When a wife committed adultery, her husband was entitled to thrice the sum of his sarhad (ib. p. 242), and it is further stated (ib. p. 244) that she loses her agweddi ('dowry'), while her chattels are brought by her kindred to her husband. One of the three disgraces of a kindred, according to a of the three disgraces of a kindred, according to a Welsh legal triad, is to bring another woman to the house, supplanting the wife and driving her forth.

In the present article Celtic crimes and punishments have been considered chiefly with reference to Ireland and Wales, owing to the fact that it is only for these countries that legal treatises of the type here considered are obtainable. In Celtic Scotland the law was based upon a development of the same ideas as those which are embodied in the law of Ireland. The legal practice of Brittany and Cornwall, too, doubtless closely resembled that of Wales; but it would be highly interesting, if it were possible, to know what modifications of the Irish system were developed in Scotland, and, similarly, what local variations of the British system arose in Cornwall and Brittany. In the absence of legal treatises such an inquiry would have to be based mainly on historical and linguistic evidence.

LITERATURE.—Ancient Laws and Institutes of Wales, ed. Aneurin Owen (Rolls Series, London, 1841); Wade-Evans, Welsh Medieval Law (Oxford, 1909); The Ancient Laws of Ireland (Rolls Series, London, 1869–1873); W. F. Skene, Celtic Scotland 2 (Edinburgh, 1890).

E. ANWYL.

CRIMES AND PUNISHMENTS (Chinese). -The Chinese character for 'crime' is significant of the attitude of the nation towards the infraction of law, being composed of the radical for 'failure,' under that for 'net,' representing the net of the law descending upon the offender; in other words, 'crime' or 'sin' (for the terms are used interchangeably) is regarded as consisting not so much in the commission of a condemnable act as in the discovery of the fact and the infliction of penal consequences. For this reason the term is an unfortunate one when applied by Christian mission-aries to a Chinese audience, for the majority of those thus addressed would strongly object to be denominated 'criminals,' although the intention in the mind of the speaker is merely to bring home to them a sense of sin.

r. Early enactments.—The Chinese penal code is based upon enactments for which a remote antiquity is claimed, and the earliest system of punishments is ascribed to the 'Emperor' Shun (2255 B.C.), who is said to have established the 'Five Punishments' which were in vogue to the end of the Chow dynasty (255 B.C.), viz. (1) branding on the forehead, (2) cutting off the nose, (3)

maining, (4) castration, and (5) death.

The founder of the Han dynasty (202 B.C.) enacted the 'Three Penal Sentences,' viz. (1) life shall be given for life, (2) compensation for wounds, and (3) imprisonment for robbery.

The first regular code of penal laws is represented as being brought into operation in the Ts in dynasty (249 B.C.), comprehended under six heads, the 5th of which, represented by 11 vols., is occupied with criminal laws concerning treason, robbery, theft, homicide, criminal intercourse, disturbing graves, quarrelling and fighting, and incendiarism; and, though each succeeding dynasty has contributed some modification or addition to the original enactments, the ultimate source of inspiration may still be traced even in the existing legislation.

The laws of the present Manchu dynasty, which in China bears the name of the Ta Ts'ing, or 'Great Pure Dynasty,' may be grouped as follows:
—(1) The Ta Ts'ing Lu Li, or 'Penal Code of the
Ta Ts'ing dynasty,' which is subject to revision
every 5 years. The sections included under the every b years. The sections included under the first term, Lu, may be described as the original laws or statutes; and those under the second head, Li, as the supplementary clauses, or common law, established by precedent or usage. (2) The Ta Ts'ing Hui Tien, or 'Regulations of the Ta Ts'ing dynasty.' (3) The edicts and decrees issued by Emperors and high provincial officials. (4) Customary law.

The first of these, the Lu Li, is comprehended in 2906 octavo pages, the criminal laws being enumerated in the 6th division, arranged under the following heads: (1) robbery and theft, (2) homicide, (3) quarrelling and fighting, (4) abusive language, (5) indictments and informations, (6) bribery and corruption, (7) forgeries and frauds, (8) incest and adultery, (9) miscellaneous offences, (10) arrests and escapes, and (11) imprisonment, and escapes, and (11) imprisonment,

judgment, and execution.

2. Punishments.—The modes of punishment which are recognized by the code are five:

which are recognized by the code are nve:

(1) Flogging on the thighs with a light bamboo cane, about 3 ft. 6 in. long by \(\frac{1}{2}\) in. wide, and \(\frac{1}{2}\) in. thick at the end. The punishment admits of 5 degrees of severity, nominally from 10 to 50 blows; but in actual practice only 4, 5, 10, 15, and 20 blows respectively are administered.

(2) Flogging with a heavier cane of bamboo, about 3 ft. 6 in. by 11 in. by 1 in., in cases of greater gravity, the number of blows ranging from for to 100 nominally, but reduced in universal practice to 20, 25, 30, 35, and 40 respectively. Manchu subjects, or 'Bannermen,' are punished with a whip instead of the bamboo.

In administering the punishment the lictors are so expert that they can apply 1000 sounding blows to the bare flesh without raising a blister, or draw blood if required with three strokes, and actually make the flesh fly if they set themselves seriously to work. (This is done by the 'dragging' stroke, which is different from the usual up-and-down method; the cane when it reaches the flesh is drawn back along the surface, and in a short time the skin is literally torn off in strips.) This skill in applying the bamboo is said to be attained by long practice on a block of bean-ourd, a substance resembling a stiff custard, the beaters kneeling face to face, and striking alternately on the bean-ourd which is placed on the ground between them. When they have learned to strike the substance a great many times, producing an appreciable 'note' each time, without breaking the delicate surface of the 'custard,' they are supposed to be proficient, and are allowed to exercise their art on the un-fortunate human beings who may be surrendered to them. Another power which they must cultivate is that of counting alternate numbers at a great rate whilst administering the strokes; the man kneeling on one knee at one side of the victim calls out the odd numbers, whilst the other counts the even numbers, and this requires long and frequent rehearsal; it also presents an opportunity for 'sharp practice,' for the number called does not necessarily correspond with the blows struck; and it is very easy for skilful performers to run up a very large total of figures without applying an equal number of strokes. Thus a man condemned to receive 1000 strokes may be let off with 700 or so if he has a proper understanding with the lictors, though the full number is reported by them viva voce at the time of imposition. The rod is steeped for some months in a saline bath before it is con-The rod is steeped sidered fit for use, as this is said to ensure that mortification will not set in when the flesh is lacerated; it no doubt also increases the sufferings of the victim.

(3) Banishment, for a limited period, to a distance not exceeding 500 li (= 170 miles). Here again 5 degrees are admitted, viz. 1 year and 60 blows, 1½ years and 70 blows, 2 years and 80 blows,

2½ years and 90 blows, 3 years and 100 blows.

(4) Transportation, for life, to any distance varying from 2000 to 3000 li (= 1000 miles), with 100 blows; in extraordinary cases the distance is increased to 4000 li, or the criminals are condemned to reside in malarious or savage districts. exiles are nominally required to render military service, but are usually permitted to engage in humble occupations, such as the managing of inferior pawn-shops, etc. The wives of criminals are expected to accompany their husbands into exile, and their children and other relatives may do so if willing. Bannermen are subjected to the 'cangue' (see below) in lieu of banishment.

(5) Death by strangulation, decapitation, or the so-called 'lingering-process.' The death sentence is usually confirmed by the Emperor; but in cases of murder, piracy or highway robbery, rebellion, uttering false coin, forging official seals, arson, robbery with violence, criminal assault on girls under 12 years of age, fraudulent methods at public examinations, or smuggling salt, the local authority is empowered to put the sentence into execution at once, unless extenuating circumstances can be urged for delay. In cases of piracy, 

highway robbery, etc., the criminals are decapitated, and their heads exposed over the city gates

as a warning to all.

(a) Strangulation.—The penalty of strangulation is inflicted in the cases of murder of a stepson by a stepmother, abuse of parents or paternal grandparents, abuse of husbands' parents or grand-parents; also in certain cases of homicide where premeditation is not alleged, or where death is brought about by indirect means; also in cases of opening coffins and rifling the dead, refusing to pay tribute, or inciting to riot. In extreme cases the process is aggravated by the method known as 'three strangulations and three recoveries,' which means that the victim is throttled into unconsciousness three times, and restored to animation before the final garrotting takes place. In some instances high officials who have offended are presented by the Emperor with a silken scarf, with which they are expected to strangle themselves in lieu of the heavier and more disgraceful punishment of decollation.

(b) Decapitation.—Decapitation is the penalty inflicted in the case of a large number of offences, especially those of a treasonable nature—a classifi-cation which includes: (1) rebellion, (2) disloyalty (as, e.g., destroying or attacking the Imperial tombs, palaces, etc.), (3) desertion, (4) parricide, (5) massacre (i.e. where three or more persons are killed), (6) sacrilege, (7) impiety, (8) discord, and (9) insubordination. The treasonable character of these offences consists in their being hurtful to the Sovereign either in his person, his property, or his honour, or the persons and property of his subjects.

The principal offenders are sometimes sentenced to the ling chi.

(c) The ling cki.—The third form of capital punishment, i.e. the ling cki, or 'lingering process,' which is popularly supposed to consist in an indefinite number of cuts inflicted on the victim's body, before the administration of the coup de grace, does not amount, in ordinary cases, to more than a few slashes on the face and body before the final blow is struck. It is intended to make the death process more lingering and shameful, as the words process more lingering and shameful, as the words ling chi mean; but the degree of aggravation of the penalty is left very much in the hands of the executioner. The lingering process is ordered in the case of treason against the Imperial person, release or tembs, no distinction being made by palaces, or tombs, no distinction being made be-tween principal and accessaries; also in the case

tween principal and accessaries; also in the case of parricide, murder of a husband, etc.

(d) The death cage.—Another form of capital punishment is the 'standing cage,' which consists of a tall frame or coop, in which the victim is placed, the floor being a foot or so from the ground. His neck is enclosed by the bars which form the top or lid of the cage. In this position he is unable to touch the floor with his feet, but a number of brieks are insarted upon which he is he is unable to touch the floor with his reet, but a number of bricks are inserted upon which he is permitted to stand, and these are gradually removed until at last he is practically suspended by the neck, unless death intervenes, as generally happens, the process being hastened by the administration of an opiate supplied by a relative or friend. Victims of this form of punishment have head known to survive four days of forture, even been known to survive four days of torture, even when exposed to the burning rays of the summer

sun.

sun.

(6) The cangue. A minor form of punishment which is recognized by the Li, or 'supplementary laws,' is that of the 'great collar,' or 'wooden neck-tie,' as it is nicknamed, generally known amongst Europeans as the 'cangue' (from the Portuguese canga = yoke). It consists of a heavy wooden framework in two parts, through which the head of the victim is introduced by means of the head of the victim is introduced by means of a scallop on the inner edges of each; the two parts 

· . . .

are then brought together and fastened in position upon the wearer's shoulders, and an inscription is added stating the nature of the crime committed, etc. The weight of the cangue is generally from 20 to 30 lbs., but larger frames are sometimes used, in which as many as five men can be secured. In some cases the hands of the sufferer are also inserted in smaller holes as in a pillory. In either instance it is impossible to reach the mouth with the hands, and the prisoner has to be fed by others. The cangue is generally exhibited in the daytime at the spot where the offence was committed, and at night the bearer of it is removed to the prison, where, in the majority of cases, he is relieved of his burden until the next day. The imposition of the cangue may cover a period of a few days or may continue for three months, and is ordered in

may continue for three months, and is ordered in cases of stealing, gambling, damage, extortion, etc.

(7) Branding is also in vogue in cases of stealing, and the designation of the crime is indelibly stamped upon the forearm, e.g. 'Stealer of grain,' 'stores,' or 'silver,' as the case may be.

3. Methods of Chinese thieves.—Chinese thieves are divided into various classes, whose methods differ very considerably, for interest in order to see the case in order to see

differ very considerably; for instance, in order to obtain entrance to a building, some elect to prise open the window or doors, or lift them off the hooks which do duty for hinges, while others prefer to throw a root with any other attached to the to throw a rope, with grapplers attached, to the balcony or roof, and climb up hand over hand; others drill holes in doors with the usual carpenters' instruments, or burn out a piece of the woodwork by means of a blow-pipe and a brazier of lighted charcoal, so as to insert the hand and withdraw bolts and fastenings; others, again, employ a bamboo pole for vaulting or scaling walls; ancesthetics are used by some thieves for rendering the occupants of a house unconscious; holes are also bored in walls, or subterranean tunnels are made

by experts in these departments.

The 'swift-horse,' or constable (see below), being himself an ex-thief, is familiar with the methods of the several classes, and the individuals composing them; and can always diagnose with accuracy the

cases which are submitted to him.

4. Punishment of women.—Special punishments are reserved for women, such as piercing the breast with a hot iron, in the case of attempts on the life of a husband, assaulting a mother-in-law, etc. When the bamboo is ordered, the blows are usually inflicted on the mouth or hands, in order to avoid

exposure of the body.

5. Martial law.—Martial law is particularly severe, and summary punishment is meted out to offending soldiers by their officers. In ancient days the penalty of tearing asunder by five horses was exacted in certain cases; even now the death penalty is prescribed for such offences as circulating

false rumours, attempted rape, etc.

6. Character of enactments.—The punishments above enumerated may seem to be exceedingly severe, but it must be remembered that, until quite recent years, there was no police force of any kind in China, the only substitute being the local beadle, or tipao, in each district or division, with his subordinates, including the 'swift-horse,' or thief-catcher; and the result of long experience or thief-catcher; and the result of long experience was the conviction that severity, at all events in the promulgation of the law, was necessary, though its application might be tempered with mercy; and the Chinese penal code, though it may not satisfy the high ideals of 20th century Christianity on the score of justice and equity, for the repression of disorder, and the gentle coercion of a vast population, appears to be equally mild and efficacious' (G. T. Staunton, The Ta Tsing Leu Lee). Leu Lee).

7. The conduct of law.—The almost total absence

of legal machinery is another feature which is worthy of notice. There is no such thing as the empanelling of a jury; no assistance of counsel for the prosecution or the defence; no association of judges on the bench; no demand for asseveration upon oath. The magistrate sits alone to try the case, unless he decides upon inviting another magistrate to assist him. The cases for and against are prepared by self-constituted lawyers, a somewhat degraded class of literary men, who do not appear in person before the court. The magistrate is furnished by his secretaries with whatever information he may require as to law or precedent, and decision is given, ordinarily, without long delay. The accused cannot be punished until he confesses his crime; and, should he hesitate to do so, the means are available by which such confession may be elicited. Some of these methods have the special of law which there are an area. have the sanction of law, whilst others are enforced without such authority. The legal instruments of torture consist of wooden presses for squeezing the ankles or fingers, and the bastinado; in addition to these, however, there are many others which have been in force until quite recently, but which have now been nominally abolishedsuch as forcing the victim to kneel upon hot bricks, iron chains, powdered glass, sand, or salt; twisting the ears; suspending the body by the thumbs or fingers; tying the hands to a bar placed under the knees, so as to bend the body forward in a kneeling posture, etc.

8. Popular courts.—So great is the terror inspired by the law-courts and the 'pens' which do spired by the law-courts and the 'pens' which do duty for prisons (the Chinese word for prison means originally a 'corral,' or stable for cattle), that many people prefer to settle their cases out of court, by resorting to the 'tea-houses,' which are the equivalents of our public-houses, and submitting the question to the arbitration of those present—the nearest approach to trial by jury; and the practice has become so well established that these tea-houses are often called 'I little Halls'. that these tea-houses are often called 'Little Halls

of Justice.'

9. Standard of guilt.—An interesting feature of the Chinese enactments is that the standard of punishment, in many cases, is not measured by the character of the offence, but by the amount of profit secured by the offender; the penalty, for instance, of stealing 120 oz. or more of silver is out of all proportion to that which is incurred by stealing 1 oz.; it is assessed on a scale indeed which would seem to place the act in an entirely different

category of crime, for the latter is punished by 60 blows, the former by strangulation.

10. Treason.—The punishment of treason is particularly severe, and the list of crimes which are classified as treasonable is very comprehensive. The penalty of making even an attempt against the persons, palaces, or tombs of the Imperial house is execution by the lingering process, and no distinction is made between principals and accessaries (though in ordinary eases of crime a careful discrimination is made, and accessaries before the fact are punished one degree less severely than the principals). All male relatives of the condemned, in the first degree, i.e. father, grandfather, sons, grandsons, paternal uncles and their sons of the age of 15 or older, are sentenced to decapitation, together with all other male relatives, within the same limit of age, who may be living with the offender at the time. Male relatives of the first

cases being included under the term, viz. (1) killing with deliberate intent, the penalty of which is decapitation; (2) killing in an affray, where perhaps no special individual is singled out for slaughter (the punishment in these cases is strangu-lation); (3) killing by depriving of food or clothing, by the removal of the ladder by which the victim has reached an inaccessible position and is unable to return, by taking the bridle from a rider's horse so that he cannot continue his journey and is stranded in the wilds, by the administration of noxious substances to the mouth, eyes, ears, etc. (in such cases strangulation is decreed); (4) killing by means of dangerous weapons, such as firearms, etc., though used only in play; by luring a person into danger by false representations, e.g. leading a man to walk into deep water, assuring him that it is abelieve and food-file (translations). him that it is shallow and fordable (strangulation is the penalty in these cases also); (5) killing a person by mistake when intending to kill some one person by mistake when intending to kill some one else (the penalty for this offence is beheading); (6) killing accidentally when using legitimate instruments or weapons (compensation is deemed sufficient in such cases); (7) killing through carelessness (punished by beheading); (8) killing by the administration of improper medicines (punishable by beheading, but, if inadvertence can be urged in defence, compensation and retirement from medical practice are ordered); (9) killing by means of trans and snares (punishable by blows means of traps and snares (punishable by blows and banishment); (10) killing by the utterance of threats which lead to suicide on the part of the threatened person (punished by strangulation).

The removal of a body from the spot where the

murder has been committed is treated as a capital offence. In cases of injury produced in fighting and quarrelling, a careful assessment is made of the amount of damage done; e.g., the tearing away of one inch of the opponent's hair is punishable by 50 blows, the breaking of one tooth by 100 blows, of two teeth by 60 blows and a year's imprisonment. Causing a person to be incapable of becoming a parent is punished by 100 blows and banishment to a distance of 3000 li, and, in the

case of male offenders, with forfeiture of estates.

12. Privileged classes.—There are no fewer than ten instances where privilege is claimed, as in the case of those enjoying hereditary rank, or high office, or relationship to the reigning dynasty. These classes are excepted from the ordinary processes of law and the Inversal sention must be cesses of law, and the Imperial sanction must be obtained before the law can be put into operation against them. No privilege, however, of whatever kind can avail in a case of treason. The circumstances of the accused, in ordinary cases, are taken into account: as, e.g., extreme youth, i.e. under the age of 15 years; or extreme age, i.e. 70 years and upwards; infirmity, too, is recognized as an occasion for the exercise of lenity and the relaxation of the heavier penalties, with exemption from torture. The condition of the parents of the accused is also taken into account, and an erring son is mercifully dealt with if it be shown that his parents depend upon him for support; even the death penalty may be remitted in the case of an only son, lest his parents should be deprived of the worship which is expected from him after their decease.

13. Favourable treatment of women.-Women are seldom imprisoned, except on capital charges, are seldom imprisoned, except on capital charges, or for adultery, but are placed in the custody of their nearest relatives; and, if they are arrested when in a pregnant condition, the full penalty of the law is not exacted until 100 days have passed after parturition. Injured husbands are permitted to kill, out of hand, the guilty wife and her paramour, if discovered in flagrante delicto; but, if the parties have already left the apartment where the degree under the age of 15, and all females similarly related, are distributed as slaves amongst the great officials. The property of the condemned is confiscated by the State. All who renounce country and allegiance are liable to decapitation.

T. Homicide.—The definition of homicide is also very comprehensive, no fewer than 10 possible to kill, out of hand, the guilty wife and her parameter where the Part of the state of the state

act was committed, or surrender themselves to the husband, or some little time has clapsed since the event, the husband is not justified by law in exacting the extreme penalty. A master who is accused of killing a slave is not regarded as guilty of a capital offence, but a slave who murders his master

is sentenced to *ling ch'i* as guilty of petty treason.

14. Patria potestas.—The patria potestas is still in force in China, and the slaughter of one's offspring is dealt with as a minor offence, or indeed as no offence at all, if, for instance, a parent has been struck by a son or daughter. The law decrees that the penalty for striking or cursing a parent is death, as was the case with the Hebrews.

15. Professional bullies.—The killing of a professional pugilist, or 'strong man,' is not regarded as murder, on the ground that such persons voluntarily subject themselves to danger and death, and must be prepared to take the consequences of

their rashness.

16. The law of debt.—In cases of debt a stated period is allowed by law for repayment, viz. three months after the expiry of the time stipulated in the original arrangement between the parties. In the event of this period of grace being allowed to elapse, the debtor is liable to the bastinado. In some cases the creditor will take up his quarters at the house of the debtor, and continue to live at his expense until the debt is discharged. The fear of being unable to meet one's obligations before the Clinese New Year causes many suicides to take place at that season.

17. Bad company.—Amongst miscellaneous en-actments it is worthy of notice that the sons of families enjoying hereditary rank, and officers of government, are prohibited from associating with

prostitutes and actors, under penalty of 60 blows.

18. Treatment of domestic animals.—Special laws are enacted with a view to the proper treatment of domestic animals; e.g., when draught animals are improperly harnessed, and sores are thus produced on the back or withers, the penalty of such carelessness is 20 to 50 blows. Similar of such carelessness is 20 to 50 blows. penalties are imposed in cases of insufficient feeding, etc.

19. Care of the young.—Amongst the laws relating to the care of the young, it may be noted that the 'age of consent' in China is 12 years in the

case of both boys and girls, and that a recent edict decreed that smoking on the part of boys under 18 was a punishable offence.

20. Improper conduct.—The comprehensiveness of the Chinese penal code is remarkable; there is hardly a circumstance connected with law and its infraction for which provision is not made; and a large liberty is extended to judges in the treatment of what is described as 'improper conduct' —an expression which is interpreted to mean offences against the spirit of the laws, though not necessarily involving an actual breach of the letter

21. Lynch law .- In addition to the ordinary legislation there are many unorthodox methods in practice amongst the people in country districts. Lynch law is very common, and the treatment of crime by the people themselves often induces cruelties which fully deserve the designation of 'savage.' Theft is severely punished, as are also 'savage.' Theft is severely punished, as are also fraudulent practices in connexion with marriage negotiations. A favourite method is the suspension of the culprit by his thumbs and great toes to a horizontal branch, so that the body is arched like a bow; sometimes a large stone is placed in the middle of his back to increase his sufferings. In extreme cases, where death is decreed by the village tribunal, a fiendish ingenuity is exhibited in the invention of new methods of torture. In the case of village feuds 'a life for a life' is the

universal standard of justice; annual outbreaks of a kind of vendetta are common in some districts, and continue until the blood-feud is settled by the slaughter of an equal number of persons on both

22. Reform.—The revision of the penal code, so as to bring it into conformity with Western models, is at present under consideration; and a number of Chinese commissioners visited Europe last year [1910] for the purpose of studying Western prison methods, with a view to a reform of the Chinese houses of detention.

NOUSES OF GETCHION.

LITERATURE.—G. T. Stannton, The Ta Tsing Lett Lee, London, 1810; A. Lind, A Chapter of the Chinese Penal Code, Leyden, 1887; J. Dyer Ball, Things Chinese<sup>4</sup>, Shanghai, 1903; Herbert A. Giles, A Glossary of Reference, Shanghai, 1900; W. Gilbert Walshe, Ways that are Dark, Shanghai, 1900; W. GILBERT WALSHE.

CRIMES AND PUNISHMENTS (Egyptian).—There is no reliable record of the principles which guided the Ecvutian index in the punish.

which guided the Egyptian judge in the punishment of crime. There may have been much that was arbitrary in the administration of justice, was arbitrary in the administration of justice, even in the best bureaucratic period of the New Empire, but that rules dating from a remote age, and attributed to the god Thoth, were appealed to is certain. A charge given by the king to his newly appointed vizier is preserved, but scarcely touches this question.

The Negative Confession in the Book of the Dead (see CONFESSION [Egyptian]) contains a long list of moral and religious obliquities, including adultery, falsification of measures and weights, and cursing the king. More to our purpose is a list of charges brought against a shipmaster at Elephantine, preserved in a papyrus at Turin; amongst his offences are breaking into stores and stealing the grain, embezzling corn put in his charge, exterting corn from the people, burning a boat and concealing the fact, also adultery, and apparently the misuse of cattle bred by the sacred Mnevis sire. There is no record whether the charges were proved, or of the punishment. A decree of King Horemheb to repress military exactions and oppression in Egypt imposes a severe penalty on the unauthorized commandeering of boats; the offender loses his nose and ears, and is transported to the frontier city of Zaru (agreeing with Diodorns' account of the city of Rhinocolura); and soldiers who stole hides were to be beaten with 100 lashes so as to open five wounds, and to restore the property to its owners. Other documents indicate Ethiopia as the place of banishment, where perhaps convicts were forced to toil in the gold mines. The condition of suspected persons after examination 'by beating on their hands and feet' must have been miserable in the extreme, but probably the law contrived to make it still worse for the convicted criminal to the convention of successive the convicted criminal to the convention of successive the convicted criminal trials. in the end. Accounts of several criminal trials are preserved—of robbers of the royal tombs (in Breasted, Anc. Records, London, 1906-1907, iv. 499-556), and of a conspiracy in the harem against the life of the king (ib. pp. 416-456). The punishment of the men and women condemned for particle of the king (ib. pp. 416-456). ticipation in, or guilty knowledge of, the conspiracy is not specified, but it was evidently death in some form, and many seem to have been permitted to commit suicide. Two of the judges and two custodians who had misconducted themselves with female criminals during the time of the trial were condemned to lose their noses and ears; one of these committed snicide, while a fifth was perhaps let off with a severe reprimand.

From the end of the Middle Kingdom there is a

decree of a King Antef deposing a nomarch (?) and high official of the temple of Coptos, apparently for harbouring the king's enemies. He and all his descendants were deprived for ever of the power

to hold the office. The consequences of desertion to another country are hinted at in the story of the fugitive Sinuhe, who was plainly in peril of death (Maspero, Contes populaires<sup>3</sup>, Paris, 1906, p. 62). In the treaty between the Hittite king and Ramses II. restoration of deserters and free pardon for them are stipulated for on both sides.

F. LL. GRIFFITH. CRIMES AND PUNISHMENTS (Greek). I. A crime may be considered as an act of disobedience to a Divine command, and, as such, punishable, if at all, by Divine retribution; or else, in its stricter sense, as an offence against the ethical sense of the community, for which a definite punishment is prescribed by law. But it is only gradually that the latter notion has been reclived. In the Charle States were added to the construction of the charles of the control of the charles o evolved. In the Greek States, none of which succeeded in working out a scientific system of jurisprudence comparable with that of Rome, many crimes continued to be treated, as in primitive communities, as wrongful acts done to an individual, for which he was entitled to claim compensation in a court of law (see Maine, Ancient Law 10, ed. Pollock, London, 1907, p. 379). Although the familiar distinction between a crime and a tort was increasingly recognized with the progress of time, acts definitely criminal in character (as being injurious to the community, such as homicide and theft under certain conditions) were technically made the subject of a civil action  $(\delta i \kappa \eta)$ rather than of an indictment  $(\gamma\rho\alpha\phi\dot{\eta})$ . Even in the latter the State was only indirectly concerned; for a further distinction was made between a private and a public prosecution, and in private prosecutions, which formed by far the more numerous class, the prosecutor was regarded as acting for his own satisfaction rather than as fulfilling a public duty (see Demosthenes, xxi. 25).

own satisfaction rather than as fulfilling a public duty (see Demosthenes, xxi. 25).

It would be impossible, within the limits of an article like the present, even if the material existed, to describe in detail, or even satisfactorily to summarize, the progressive development in the establishment of legal penalties for crime by the various divisions of the Hellenic race, from the dawn of history down to the time when their independence was finally lost. All that we shall attempt is a short survey of the general ideas relating to the subject of crimes and punishments which prevailed from time to time according to the most important liferary records, together with some account of the particular remedies provided by the Athenian law-courts, in the period for which our information is most abundant, namely, the 5th and 4th cents. B.O. For States other than Athens the necessary evidence is almost entirely wanting, and there is not much advantage in recording such scraps as have come down to us, when it is impossible to present them in their proper setting, or to make a trustworthy estimate of their value. There is the less inconvenience in taking this course, inasmuch as the pre-eminence of the Athenian judicial system is reflected in the remark that the Athenians invented the regular administration of justice (Ælian, Var. Hist. iii. 38). Still, it would be a mistake to suppose that the Athenian courts were a unique product of Hellenic civilization. Of the better-known Greek States it seems probable that Sparts was the most backward; and the existence of an elaborate judicial organization in remote and semi-barbarous communities such as Gortyn and Western Locris leads to the conclusion that great commercial cities like Ægina, Megara, and Corinth had a legal system as highly developed, if not so famous, as that of Athens herself (L. Whibley, Greek Oligarchies, London, 1896, p. 177).

2. With crime in the wider sense, as a breach of religious obligation, and the Divine punishment which it thereby merits, we do not propose here to deal, since they will be sufficiently discussed elsewhere (e.g. Erinys, Eschatology [Greek]). Nevertheless, the gradual growth of a system of jurisprudence was so largely conditioned by religious belief that we cannot entirely put out of view the religious as distinct from the legal aspect (see, generally, Maine, p. 381). Their connexion is most strongly marked in the case of the most important of all crimes, that of homicide. In the primitive age, for which our authority is to be found not only in the Homeric poems, but also in the writings of the Tragedians, so far as they reproduce the old legends, beliefs, and customs voll. IV.—18

prevalent in the Epics now lost, it was universally believed that the shedder of blood was pursued and punished by the avengers (Epuvés) of the slain man (Æsch. Cho. 401; Soph. El. 113). These supernatural visitants may be regarded as the embodiment of the curse pronounced by the injured victim against the wrongdoer (Æsch. Theb. 70), or even as the punishment itself (Howat). In Homer, however, they never appear as punishing murder, but rather as protectors of parents against wrongs done to them by their children, and as guardians of the sanctities of family life. The mother of Meleager cursed her son for slaying her brother, and prayed for his death; her prayer was heard by the Erinys that walks in darkness (II. ix. 571). Similarly, we find Edipus visited by the curse of Iocasta (Od. xi. 280); the Erinyes were summoned to avenge the dishonour done by Phœnix to his father Amyntor (Il. ix. 454); and, so far as can be seen, they were ready to visit every crime committed against the ties of family or society (Ameis-Hentze on Od. ii. 135). There is nothing in Homer to show that the Erinyes did not punish homicide in a proper case; and, inasmuch as they avenged wrongs done to kindred, they might well have been found harassing Orestes for the murder of his mother, if Homer had narrated this version of the story (T. D. Seymour, *Life in the Homeric Age*, New York and London, 1907, p. 89). The subjects handled by the Tragic poets, being more nearly concerned with the ideas of crime and punishment, regularly present the Eripyes as the punishment, regularly present the Erinyes as the avengers of bloodshed, and more particularly of the murder of kinsfolk. Their victim, driven from place to place, in his vain effort to escape (Æsch. Eum. 210), was attacked by madness (Eur. Iph. Taur. 1481) or wasting sickness (Or. 398 ff.), until he either was released by death or effected a reconciliation with those whom he had wronged; such was the fate of the matricides Orestes and Alcmeon.

3. Again, in primitive times punishment was believed to be exacted in this life (II. iii. 278 is exceptional), and the vigilance of the retributory power to be as unvarying as it was relentless. And, when experience seemed to show that the offender often escaped with impunity, it was easy to reply that vengeance was certain, even if it was slow to come (Æsch. Ag. 58, ὑατερόποινον 'Ερινύν; Soph. Ant. 1074; Jebb on Œd. Col. 1536); and that retribution would visit his descendants, even if the original offender was allowed to escape (17. iv. 160; Solon, frag. 4. 27 ff.; Rohde, Psyche<sup>4</sup>, ii. 228). Until a comparatively late date this was one of the excuses alleged by the Stoics, who were hard put to it to reconcile the existence of moral evil with their doctrine of Providence (Cic. Nat. Deor. iii. 90). But these crude notions failed to satisfy the curious inquirer or the ardent champion of Divine justice. Æschylus, a profound religious thinker, attempted to justify the gods by the asser-tion that the sin of the ancestor begets a tendency to sin in his descendants (Ag. 755-766), so that the actual sufferer is punished, not directly for his ancestor's guilt, but because he himself has yielded to temptation. But popular superstition required a less subtle solution. Even if the innocent must suffer for the guilty, it could not be supposed that the guilty themselves escape altogether. came the belief in punishment after death, which may properly be called post-Homeric, though it appears in an isolated passage of the Nevola (Od. xi. 576-600; see Seymour, p. 468). It was a leading tenet in the creed of the devotees of Orphism (Plat. Rep. 364 E; Rohde, Psyche\*, ii. The same doctrine took firm root in the convictions of the initiated, who had availed themselves of the reward offered to the participators in the Eleusinian mysteries, that they, and they alone, could look forward to a blessed existence after death (Soph. frag. 753); though how far it is correct to speak of the 'symbolism' of the mysteries themselves is a difficult and doubtful question (Rohde, i. 294 ff.). From such sources the doctrine spread even to philosophic circles, where it provided the material for several of the myths in the writings of Plato (Placdo, 110 B, Rep. 614 B, Gorg. 523 Å), as well as for those of his imitator Plutarch (Sera Num. Vind. p. 563 ff.; Gen. Soer. p. 590), and was countenanced by the Stoics in their efforts to make common cause with the upholders of the popular religion (A. C. Pearson, Fragments of Zeno and Cleanthes, Cambridge, 1891,

p. 146). 4. The belief in the power of the spirit of the murdered man to exact vengeance persisted throughout the historical age, but the practical consequences to the murderer in the attitude of his fellows were widely different in Homeric society from those which prevailed at a later time. The homicide in Homer was under no disability, so long as he kept outside the range of the influence exercised by the clan among whom the murder was committed; but within those limits his life was forfeit to the kinsmen of the murdered man (Od. xv. 271 ff.). long as the murderer remained at home, the kinsmen were bound to exact the blood-penalty, if they themselves wished to avoid the wrath of the dead man's ghost; only by permanent exile, by renouncing for ever the ties of home and country, could even one who had accidentally caused the death of another escape from the vengeance of the blood-feud. Such is the inference to be drawn from the fate of Patroclus (*II.* xi. 769 ff., xxiii. 85 ff.). But once he reached a new country, no moral disgrace and no religious tabu attached to the person of the fugitive murderer, although his act was deliberate. Even assassination seems to excite no moral disapprobation (Ott. xiii. 267). Exile, however, was not always inevitable. If the relatives were willing to accept a fine, the murderer might by a payment acceptable to them compound for his life, and remain at home (*II*. ix. 628-632). There is nothing here of ceremonial uncleanness, or of the provision of a constant of the provision or of the propitiation of an offended deity (Rolde, which has lost a member, and it is for them to exact a suitable expiation. The only reference to judicial proceedings in connexion with homicide is in the description of the chief of Advillac (7). in the description of the shield of Achilles (II. xviii. 497-508). Unfortunately, however, critics are not agreed on the nature of the trial scene; and the question is still open whether the issue to be tried before the elders was one of fact-had the blood-price been paid or not?—or whether the community had undertaken to decide the question of right, when a blood-price had been offered and refused. (See, on the one hand, Seymour, p. 89, and Lipsius, Das attische Recht, p. 4; and, on the other, Leaf, in loc., and Maine, p. 406.)

5. When we pass to historical times, we find an entirely different state of affairs. The only adequate application of the change some to be

5. When we pass to historical times, we find an entirely different state of affairs. The only adequate explanation of the change seems to be that in the interval a new religious influence had grown up, strong enough to modify completely the Greek conception of murder. This was the Delphic cult of Apollo, which at one and the same time emphasized the moral guilt of the shedder of blood, and by its ceremonies of purification opened the means of escape from the need for a blood-requital. But it is not easy to understand why the possibility of compounding by a money fine, which the Honoric poems attest, should have given way to a stricter estimate of guilt (Rohde, i. 267; Demosthenes, xxiii. 28, 33), which appears to be a reversion to the primitive rule that every

murder must be expiated by blood (Æsch. Cho. 311). It has usually been interred that the practice of Homeric society was a temporary deviation due to special conditions, which suspended the normal development of Greek ethics (T. Gomperz, Greek Thinkers, Eng. tr., 1901, ii. 4).

6. The Athenian criminal code.—However this may be, when we at length reach the system administered by the Athenian courts, we find that the punishment no longer depends upon the choice of the individual avenger, but is prescribed by the State (Demosth, xxiii. 69), although the kinsman is still required to appear as the instru-ment which sets the law in motion, unless the murderer has been forgiven by his victim before his death (ib. xxxvii. 59). The circumstances and motive of the homicide are no longer regarded as indifferent, but the various grades of guilt are distinguished with precision. Thus (1) the supreme court of the Areopagus, instituted, ac-cording to the legend, on the occasion of the trial of Orestes, had jurisdiction in cases of wilful homicide (φόνος ἐκούσιος). The judges were the Council of the Areopagus, a body recruited from those who had served the office of archon and had passed a subsequent scrutiny, under the presidency of the 'king' archon, who, as exercising the priestly functions of the old kings, testified by his presence to the religious character of a trial for blood-guiltiness. The penalties of death and confiscation of goods followed a conviction (Demosth. xxi. 43). The Areopagus also had jurisdiction over cases of wounding with malicious intent (τραθμα έκ προνοίας), of arson (πυρκαϊά), and of poisoning (φαρμάκων εάν τις ἀποκτείνη δούς). The penalty for wounding and for poisoning, if death did not result, was banishment and confiscation of property; if the poisoning was followed by death, it was punished in the same manner as murder committed by violent methods.

(2) The second of the courts dealing with homicide sat at the Palladion, a sanctuary of Pallas, outside the walls, on the east side of Athens. Here were tried cases of involuntary homicide, and of conspiracy against the life of another (βούλευσιs: Arist. Resp. Ath. 57. 3), as well as those relating to the killing of a slave, a resident alien, or a foreigner. The sentence on a person found guilty of involuntary homicide required him to remain in exile until he had appeased the relatives of the deceased, or, if he failed to do so, for a definite (but not ascertained) period. The death of a non-citizen seems also to have been punishable with banishment.

(3) Not far from the Palladion was the Delphinion, or Temple of Apollo Delphinios, where all were tried who alleged that the homicide committed was justifiable or excusable. The examples given are the slaying of an adulterer taken in the act, death on the battle-field in consequence of mistaken identity, and the fatal result of an athletic contest.

(4) Of minor importance was the court in the precinct of the hero Phreatus (Lipsius, p. 130), on the Piræus peninsula, where any person was tried who, while in exile for involuntary homicide, was accused of murder or malicious wounding committed before he went into exile. In such circumstances the accused pleaded his case from a boat moored off the coast.

The judges in the three courts last-mentioned were a hody known as the  $\dot{e}\dot{p}\dot{\epsilon}\tau a\iota$ , 51 in number, about whose qualifications and mode of appointment there is no information except the vague statement that they were chosen from among the well-born citizens. Their number may be explained by the 'king' archon being counted as one of them, or may be due to the same principle as prevailed in the jury-courts—the necessity of an odd number in

order to secure the decision of a majority (Lipsius, p. 18; otherwise Gilbert, *Handbuch d. gr. Staatsatterthimer*<sup>2</sup>, p. 186). This system seems to have lasted from the time of Draco until about the year

1asted from the time of Draco until about the year 400 B.C., when, in place of the ephetæ, a panel of ordinary jurymen (ἡλιωσταί) was substituted (Lipsius, p. 41). The president in these courts was always the 'king' archon.

(5) Lastly, there is the court of the Prytaneum, composed of the four tribal 'kings' (ψυλοβασιλεῖs) together with the 'king' archon, who, when the actual criminal could not be discovered, conducted a ceremonial trial of the weapon or of any other inanimate object, such as a stone or a piece of timber, by means of which a death had been caused. At the conclusion of the trial the inanimate instrument of death was cast beyond the boundaries of the State. A similar proceeding took place if the death was due to an animal (Arist Resp. Ath. 57. 4). Here we have obviously the sur-vival of a custom which went back to a remote

antiquity.

In regard to trials for homicide, the following points of interest may be noted. (a) The connexion of the trial with the primitive blood-feud is preserved in the requirement that the prosecution served in the requirement that the prosecution must be undertaken by the nearest relatives of the deceased. (b) The trial always took place in the open air, in order to avoid any possible pollution to those present from being under the same roof with the accused. (c) The fact that the place of trial was always a temple is derived from the time trial was always a temple is derived from the time when the slayer was protected by the right of asylum, until he had agreed with his adversaries on the amount of the blood-price. (d) The accused could withdraw himself from the trial not later than the conclusion of his opening speech (Demosth. xxiii. 69), and, so long as he remained abroad, his life was protected; but, if he returned to Athens, he could be put to death with impunity. (e) Ceremonial purification was required before even an involuntary homicide could be restored to his full rights. (f) The court of the Areopagus was closely associated with the cult of the Erinyes, who appear as the accusers of Orestes not only in Æschylus, but in the account preserved in Demosth. xxiii. 66 (Rohde, p. 269). (Rohde, p. 269).

(Rohde, p. 269).

At Sparta, cases of homicide were tried before the council of elders (γερουσία), where other public proceedings also took place (Arist. Pol. iii. 1, 1275b, 10). From a case in which permanent exile was the penalty for an act of involuntary homicide committed in childhood (Xen. Anab. IV. viii. 25), it has been inferred that the rule of primitive society had received hardly any modification. For offences punishable with death the Spartans adopted the criving rule that if a man was once acquitted. the curious rule that, if a man was once acquitted, he remained still liable to stand a second trial (Gilbert, p. 89). The death penalty was carried out by night; and the condemned man was either strangled in prison or thrown from a height into a hollow called καιάδας (Plut. Ages. 19; Thuc. i. 134). We hear also of banishment, disfranchisement, and money fines being inflicted as punishments; but our information is so meagre that we can seldom distinguish the various crimes to which they were distinguish the various crimes to which they were assigned; it appears, however, that cowardice in battle was punishable with exile (Thuc. v. 72), and παιδεραστία with permanent disfranchisement (Plut. Mor. p. 237 C). In Bœotia murder trials took place before the council (Xen. Hell. VII. iii. 5).

To return to Athens: it is desirable, before pro-

ceeding further, to mention certain salient characteristics of the administration of the Athenian criminal law which distinguish it from the system established in Great Britain. Every criminal proceeding was assigned to the office of a magistrate or board, who took charge of the necessary docu-

ments, heard all the preliminary applications, and presided at the actual trial. But these officials were very far from exercising the functions of a modern judge. They had no legal training or experience, but were simply laymen holding office for a year, a few being chosen by election, but the majority owing their position to the chance of the lot. Their duties were for the most part ministerial, and at the trial they exercised no control over the jury, who were supreme as representing the sovereign people. These latter—in criminal trials a panel, generally 501 in number and often far larger, chosen by an elaborate system from a body of 6000 dicasts annually enrolled—were little body of 6000 deasts annually enrolled—were little apt to stop an irrelevant argument, if it appealed to their fancy, or to require every statement of an advocate to be proved by strict evidence (Mahaffy, Social Life in Greece\*, London, 1877, p. 387 ff.). Their freedom from responsibility tempted them to decide according to the caprice of the moment, and their ignorance enabled advocates to misrepresent the law without any check but the speech of the other side. Moreover, they were often swayed by political prejudice and passion, and even, as we are credibly informed, were prepared to swell the State revenues by confiscation of the goods of the accused revenues by common the goods of the accessed in order to improve the security for the jurymen's pay (Aristoph. Eq. 1359 f.; Lysias, xxvii. 1). They voted by ballot, and a simple majority prevailed. In many cases the sentence was fixed by law (ἀγὼν In many cases the sentence was need by law  $(a\gamma\omega)$   $a\tau(\mu\eta\tau\sigma)$ ; but, where it was left to the discretion of the court  $(\dot{a}\gamma\dot{\omega})$   $\tau(\mu\eta\tau\dot{\sigma})$ , the jurors had only a choice between two alternatives, as presented to them by the contending parties. It is obvious that any wider liberty would have been attended with serious practical difficulties.

If the crime of treason (προδοσία) was not precisely defined in their code, it was not because the Athenians cared little about the security of their constitutional liberty. On the contrary, the names of Harmodius and Aristogiton were always cherished, and special privileges granted to their descendants, in order that the Athenians might descendants, in order that the Athenians might never forget the dangers from which their ancestors had been liberated. Charges against the oligarchical party of conspiring against the democracy (Aristoph. Eq. 236), or against some popular leader as aiming at a tyranny, were freely bandied to and fro during the troublous times of the Peloponnesian War: 'Aye "conspiracy" and "tyrant," these with you are all in all, | Whatsoe'er is brought before you, be the matter great or small '(Aristoph. Vesp. 488 f., tr. Rogers). The importance attached to the safety of the democracy is attested by the to the safety of the democracy is attested by the provision of a special process (εἰσαγγελία) for the impeachment of traitors. Historically, indeed, it may be regarded as a survival of the only form of criminal procedure known to the primitive State, in which there is no distinction between a criminal trial and an act of legislation (Maine, pp. 383, 393).
But in practice this solemn proceeding was reserved for the trial and punishment of serious public offences which do not admit of delay (Harpoer. s.v. clrαγγελία). A law of Solon entrusted the Areopagus with the trial of those who conspired to overthrow the democracy (Arist. Resp. Ath. 8.4); but it was at a later date—which has been fixed as either about the middle of the 4th century (Lipsius, p. 192), or soon after the fall of the Four Hundred (Thelboin in Hundred Aryshi [1902] 240 ft. thet (Thalheim, in *Hermes*, xxxvii. [1902] 342ff.)—that a comprehensive enactment enumerating and defining various treasonable acts (νόμος εἰσαγγελνικός) was passed into law. The offences comprised in it may be divided roughly into four classes: (1) attempts to overthrow the constitution, either actual or constructive; (2) the treacherous surrender of a fortified place or of a military or naval force; (3) desertion to the enemy, or assistance given to, or bribes received from, them; 1 (4) corrupt advice given by a speech in the assembly (Hyperid, iii. 22). Either as included in the scope of this enactment or as authorized by earlier or separate legislation, we find provision made for proceeding by impeachment against those who made deceitful promises to the people, and against ambassadors who were false to their duty (Demosth. xix. 277, xx. 135). The procedure, as might have been expected, was entirely different from that of an ordinary criminal indictment. An impeachment might be either instituted before the Council of the Five Hundred or brought direct to the Assembly. In the former event, if the Council approved the prosecution, the accused was forthwith arrested (or held to bail in a case of lesser importance), and the θεσμοθέται were authorized to bring the matter before the Assembly. If the matter came in the first instance before the people, it was customary to direct a preliminary investigation by the Council; and from that point the procedure was the same as if it had been initiated before the Council. The trial was either held in the Assembly, or, according to the more usual practice, remitted to one of the ordinary law-courts. If the trial took place in a law-court, the number of dicasts was at least 1000, and we read of as many as 2500 being empanelled (Dinarch, i.52). The penalty was usually death and confiscation of goods, and invariably so after about the middle of the 4th cent.; but there are grounds for thinking that before this time it was subject to assessment, or was sometimes fixed beforehand by the people, conditionally upon conviction. As an additional penalty, in order to mark the enormity of the crime, the body of a traitor was refused burial in Attica (Hyperid. ii. 20). In early times, in order to encourage prosecutors to undertake proceedings, it was provided that any one who failed to obtain a fifth part of the votes should not be liable to the usual fine of 1000 drachmæ; but in the year 330, when the facilities thus given were abused, the privilege had been withdrawn (Demosth. xviii. 250).

The remedy of cloayyella was also prescribed for certain offences of a less serious character, such as official maladministration, particularly in the office of an arbitrator or in the dockyards; and also to rectify wrongs committed against those who were in a dependent position, or had special claims to protection, such as orphans or heiresses. In the latter case the process, though called by the same name, was altogether different, but was distinguished from the ordinary indictment in various respects, to the advantage of the prosecution. Thus the prosecutor (1) was not restricted in point of time, but was allowed to speak as long as he wished; (2) was subject to no penalty, if he failed to secure a fifth part of the votes; and (3) was not required to make use of a writ of summons (πρόσκλησιs) when laying his plaint (Wyse on Iseus, iii. 46). But, instead of going to the Council or to the Assembly, the prosecutor made his 'denunciation' to the chief archon (ἐπώνυμος), who exercised a criminal jurisdiction in this matter corresponding to his official superintendence of inheritance cases. The chief archon was, in fact, in a position similar to that of an English Lord Chancellor, who, as represented nowadays by the judges of the Chancery Division, has full jurisdiction over the persons and properties of his wards, and can punish for con-tempt of Court those who offend against his decrees (cf. Demosth. xliii. 75). But, whereas the

Eur. Phoen. 1630).

English judge exercises plenary powers, the Athenian archon, apart from a limited power of imposing a fine, only conducted the interlocutory proceedings and prepared the case for the decision of the dicasts. In this connexion we are informed that the analogous offence of injuring parents included, besides corporal injury, refusal of food and lodging, and neglect in performing the customary rites at the tomb. A son convicted of maltreatment of parents was punished with complete disfranchisement  $(\alpha \tau \mu l a)$ , but the procedure in his case was by way of an ordinary indictment before the archon (Lipsius, p. 351). Whether there was any other penalty is unknown; but, even apart from a prose-cution, candidates for office were liable to be rejected on the scrutiny ( $\delta o \kappa \iota \mu a \sigma t a$ ), and speakers in the Assembly ran a similar risk, if it could be shown that they were guilty of undutiful conduct. Proceedings for injury done to orphans and heiresses (ἐπἰκληροι) might be taken against their guardians, and in the latter case also against their husbands, or their nearest male relatives, if these attempted to avoid the obligation imposed upon them either to marry the herees or to furnish her with a suitable dowry. The penalty was assessable by the court; but, though Isæus (iii, 47) speaks of the extreme punishment as applicable to such cases, it is unlikely that the offence usually entailed more than a heavy fine together with disfranchise-ment. There was also the offence of injuring an orphan's estate (οίκου δρφανικοῦ κακώσεως), which appears to include misappropriation or unlawful retention, as well as fraudulent or negligent mis-management. As another parallel to the Lord Chancellor's powers, it may be mentioned that the chief archon had jurisdiction in lunacy; for to him was preferred an indictment by the relatives, when it was alleged that any one had become incapable of managing his private affairs (Arist. Resp. Ath. 56. 6). The chief archon had also jurisdiction in the indictment for idleness (ἀργίας γράφή), generally supposed to have been capable of enforcement against a man who had no property and refused to exert himself in order to obtain an honest living. Unfortunately, the information respecting it is scanty, but it has recently been suggested (Lipsius, p. 340) that its real purpose was not so much educational as to vindicate the concern of the State for the due preservation of family property, and to punish the dissipation or improper alienation of an inheritance. Draco is said to have made death the penalty (Plut. Sol. 17), but Solon (or Pisistratus) substituted a fine of 100 drachmæ on the first and second conviction, and complete disfranchisement on the third (Poll. viii. 89). The 'king' archon, whom we have already met

in connexion with murder trials, was the presiding magistrate in prosecutions for implety (ἀσέβεια). This offence had a wide ambit, ranging from acts of sacrilege to the expression of speculative opinions on the origin and government of the universe. It corresponds, therefore, in part to blasphemy, which is still an indictable offence in England, although prosecutions are nowadays practically unknown. A prosecution for implety was a convenient weapon in the hands of the obscurantists, if they desired to check the growth of revolutionary opinion, or to interfere with the teaching of a successful op-ponent. Thus it was used against Diagoras of Melos and Theodorus the Cyrenaic, for publishing atheistic doctrine (schol. on Aristoph. Ran. 323; Diog. Laert. ii. 101); against Anaxagoras for calling the sun a fiery mass (Diels, Fragmente der Vorsokratiker, i.<sup>2</sup> [Berlin, 1906] 294); against Pro-

The best-known instance is that of Sophocles, against whom proceedings of this kind are said to have been taken by his son lophon (Vit. Soph.; Plut. Mor. p. 785 A)—although the story may well have arisen from the malicious gibe of a comic poet (Lipsius. p. 356).

<sup>1</sup> A famous instance of a trial of this kind was the prosecution instituted by Lycurgus against Leocrates, who was alleged to have abandoned his country after the fatal bathle of Cheronea.

2 It is interesting to find that the last-named provision was a traditional usage of immemorial antiquity, since it is implied in the story of the burial of Polynices by his sister Antigono (see

tagoras for opening his treatise on the gods with a profession of inability to say whether they existed or not, or what they were (Diels, ii. 2 [1907] 525); and against Socrates, whose indictment charged thim with corrupting the young men by introducing the worship of deities other than those recognized by the State (Plato, Apol. 24 B). On the other hand, Alcibiades was impeached  $(\epsilon l \sigma \eta \gamma \gamma \epsilon \lambda \theta \eta)$  on the delation (μήνυσις) of an informer for holding a mock celebration of the Eleusinian mysteries in his own house (Plut. Alcib. 22); and an information (ἔνδειξις) was laid against Andocides for taking part in a sacrificial act, while under a disability previously imposed (Andoc. i. 71). The sacrilegious robbery of sacred property from a temple was treated as a distinct crime, and was punishable with death, deprivation of the right of burial, and confiscation of goods, on an indictment preferred before the thesmothetæ (γραφή leροσυλίας). Thus various forms of procedure may have been open to the accuser, as Demosthenes (xxii. 27) takes occasion to remark; but, so far as our information goes, the trial always took place before a heliastic court. A single exception, known to us from the 7th speech of Lysias, relates to the charge of uprooting the stump  $(\sigma\eta\kappa\delta s)$  of a sacred olive-tree. Here the cause was pleaded before the Council of the Areopagus, under whose supervision these olive-trees had been placed. In this case the punishment was fixed by law—death for destroying a tree, and banishment for removing a stump. For impiety in general, however, the penalty—death, banishment, confiscation of goods, or money fine-was left to the assessment of the jury, as is known from the celebrated trial of Socrates.

Adultery (μοιχεία) was treated at Athens as a criminal offence, and was punished with severity, as was natural in a society which tolerated concubinage. The adulterer might be prosecuted on an indictment laid before the thesmothetæ (Arist. Resp. Ath. 59. 3), and the sentence was probably left to the decision of the court (Lipsius, p. 432). But the injured husband could also take the law into his own hands. He might either kill the adulterer, and plead justifiable homicide in answer μοιχόν) against the husband, and, if successful, was released from any undertaking he had given under duress. If the husband continued to live with a declared adulteress, he suffered disfranchisement; and the adulteress herself was forbidden to enter the temples or to wear the customary ornaments of free women. If she infringed these restrictions, she might be subjected with impunity to any injury short of death ([Dem.]lix. 87). Stringent penalties were in force against those who procured youths or girls for immoral purposes (προαγωγείαs), and a total disability was imposed automatically upon those who had prostituted themselves, so that, if they exercised any civil right, they became liable to an indictment (γραφή ἐταιρήσεωs), and, if convicted, to be sentenced to death. Cf. also art. ADULTERY (Greek).

In dealing with other crimes of violence against persons or property, we have to take into account a large variety of procedure. Thus Demosthenes (xxii. 25 ff.), having occasion to point out that Solon, in providing different remedies for single crimes, intended to ensure that no law-breaker should go free by reason of the poverty or incapacity of his accuser, illustrated his remarks by the example of theft, in which the injured party might proceed either by way of arrest (dπαγωγή), by leading the magistrates themselves to the spot

where the culprit was to be found and requiring them to seize him  $(\epsilon \phi \eta \gamma \eta \sigma \iota s)$ , by an ordinary indictment  $(\gamma \rho a \phi \dot{\eta})$ , or, lastly, by a civil action  $(\delta l \kappa \eta)$ . Similarly, he thinks it difficult to imagine that any one who was proved to have committed assault and battery could escape punishment at Abhens (liv. 17). For, in the first place, an action for slander ( $\kappa a \kappa \eta \gamma o \rho l a s \delta l \kappa \eta$ ) had been devised to prevent the commission of the offence at all, or at least to minimize its occurrence; and, if it was committed, in addition to the ordinary indictment for assault ( $\gamma \rho a \phi \dot{\gamma} \ \ddot{\nu} \beta \rho \epsilon \omega s$ ), there was an action for battery ( $\delta l \kappa \eta \ a l \kappa l a s$ ), or, if the offence was so grave as to require it, a prosecution for unlawful wounding (τραύματοs) before the Areopagus (see above). In certain circumstances there was still another remedy. When Demosthenes, acting as choregus at the Dionysia, was grossly assaulted by Midias, instead of contenting himself with a personal suit, he made a public complaint (προβολή) before suit, he made a public complaint ( $\pi\rho\sigma\rho\delta\lambda\eta$ ) before the Assembly in order to obtain the authorization of the people for the institution of proceed-ings. The object, of course, was to make full use of the prejudice which would be excited against the defendant by a decree of the people; and perhaps, in the case of an aspiring politician, it might be more advantageous to obtain the advertisement of a public debate on his wrongs than to rest content with the satisfaction to be gained from a heliastic court alone. But the  $\pi\rho\rho\beta\delta\lambda\eta$  had only a limited range, being confined, according to our authorities, as now interpreted (Lipsius, p. 214 f.), to charges against sycophants, i.e. false accusers, or those who had made use of legal proceedings in order to extort money, or for some fraudulent purpose, but only when their false professions had misled the people; and against those who committed an outrage during the progress of certain religious festivals, such as the Dionysia or Eleusinia. If a vote was given against the accused (καταχειροτονία), the prosecutor proceeded to lay his complaint before the thesmothete (Arist. Resp. Ath. 59. 2), and the trial proceeded in the ordinary way. There was, however, one peculiarity which, according to a recent view, attached to the trial of a προβολή as distinguished from all other prosecutions in which the punishment was assessable by the court. In ordinary cases, as we have already seen, judges were compelled to select one of alternatives; but, in the speech against Midias, Demosthenes invites the jury to assess any penalty which they think adequate, and implies that this may range from death or confiscation of goods to a paltry fine (§§ 21, 151, 152). (See Goodwin's Demosthenes against Midias, Cambridge, 1906, p. 161; otherwise, Lipsius, p. 218.)

Of the other processes mentioned above, the most important was the arrest, which was applicable to certain classes of offenders, when openly detected in crime. These were known comprehensively as malefactors (κακοῦργα), and specifically as thieves (κλεται, a term not including every offender of this kind, but only such as stole by night or in a gymnasium, or, if the theft took place by day and under other conditions, stole property of the value of more than fifty drachmae, or, if the crime was committed in the harbours, of more than ten drachmae [Demosth xxiv. 118]], kidnappers (ἀνδραποδισται), highwaymen (λωποδίσται), burglars (τοιχωρύχοι), and pickpockets (βαλλαντιστόμοι). Such cases came under the jurisdiction of the police magistrates known as the Eleven, and the punishment was death. If the crime was admitted, punishment followed at once; but, if it was denied, the culprit was kept in durance until trial (Arist. Rasp. Ath. 52. 1], unless he was bailed out by three citizens (Antiph. v. 17). The process of arrest

seems gradually to have been extended, so that it was sometimes employed against murderers, as in the speech of Antiphon, de cede Herodis, and in that of Lysias against Agoratus. An entirely distinct application of the process must be recogmized when it was directed against those who, while under disability (ἄτιμοι), had usurped the privileges which they had forfeited, and against exiles who had returned home. In the lastmentioned cases the penalty was assessable, except for those who were already under ban of death. If the intending prosecutor had not sufficient strength or courage to arrest the felon himself, he could fetch a magistrate to the spot and get him to act (ἐφήγησις). It is probable that this proceeding was the complement of arrest, and applicable to the same crimes; but the evidence is scanty, and touches only the cases of theft (Demosth. xxii. 26), the harbouring of fugitives, and the secret retention of State property (Suid. s.v.).

There is often mentioned, in conjunction with arrest, the process of information (ἐνδειξές). This

answers to the second kind of arrest mentioned above, and was employed against State-debtors, returned exiles, murderers, and generally all who, being under disability, frequented places or performed acts from which they were excluded by law. In the case of State-debtors the presiding officers were the thesmothetæ (Demosth, xxiv. 22); in other cases the Eleven (Arist. Resp. Ath. 52. 1). The penalty naturally varied according to the gravity of the offence, and was often assessable, as in the case of a disqualified dicast assuming to act as such (Arist. Resp. Ath. 63. 3); but, if a State-debtor usurped the functions of a public official, he was liable to the death-penalty (Demosth. xx.

If a man whose goods had been stolen was either unable or unwilling to use the process of arrest, he might proceed by way of indictment for theft (γραφή κλοπη̂s) before the thesmothetæ, as an alternative to the civil action for the same delict. Draco's code had made death the sole penalty for theft (Plut. Sol. 17), but later legislation allowed the court to fix the penalty. Imprisonment might be inflicted in addition to the main penalty, and disfranchisement followed a conviction.

For personal injury resulting from an assault, or for acts of shameful and indecent insult to the person of child, woman, freeborn man, or slave, the appropriate remedy was an indictment for wanton assault (εβρεως γραφή), before the thesmothetie. The essence of the offence, as distinguished from the battery which might be made the foundation of a civil action (askas 8ixn), lay in the motive which prompted the outward act. A mere blow, according to Aristotle (Rhet. i. 13. 1374a, 13), is not necessarily a sign of wantonness, but only when the object to be attained is the disgrace of the sufferer or the pleasure of the striker. The penalty was assessable, and might amount to death in serious cases; but it was subject to the peculiar provision that the vote was taken immediately after the verdict on the main issue, without the usual op-portunity being given to the parties to recommend their respective assessments (Lipsius, p. 428 f.).

We must next consider offences connected with the unlawful assumption or fraudulent exercise of civil privileges. Perioles had carried a law that an Athenian citizen must be the offspring of a father and mother who were both Athenians (Arist. Itesp. Ath. 26. 4); and it was re-enacted in the archonship of Euclides, with a saving clause to guard existing rights. Any one who exercised the rights of a citizen without being entitled to them was liable to indictment by a common informer as an alter (feeler years), and, if convicted, was sentenced to be sold as a slave. Further, if such a fraud the State had been prejudiced were liable to

person procured his acquittal by bribery or collusion, he was amenable to the same penalty (δωροξενίας γραφή). Similarly, a resident alien (μέτοικος), who neglected to enroll himself under a patron, could be indicted (ἀπροστασίου γραφή) before the third archon, known as the 'polemarch,' who exercised over μέτοικοι the same jurisdiction which belonged to the chief archon in regard to full citizens.

thie chief archon in regard to full cilizens.

It is obvious that the existence of such proceedings opened a favourable field for the crime of malicious prosecution, and helped to swell the class of persons who made their living by preying on the fears of their fellow-cilizens. The plays of Aristophanes are full of references to the contemptible class of sycophants which flourished during the latter part of the 5th cent., and, in order to protect society against their depredations, the fullest opportunity was given to proceed against them by indictment or otherwise (Isocr. xv. 313 fl.), and the assessment of the penalty was in the discretion of the court.

It is removaled blat that the offence of regimes—the

It is remarkable that the offence of perjury—the only crime which Homer (Il. iii. 278) mentions as visited with punishment after death-was considered, if committed by a witness in the course of a trial, to demand nothing more than a civil remedy (ψευδομαρτυρίων δίκη); although disfranchisement was one of the consequences which might result if the defendant lost such an action (Isaus, v. 17); and it followed automatically if he was convicted three times. On the other hand, falsely to swear to the service of a summons rendered the perjurer liable to criminal proceedings (ψευδοκλητείας γραφή), in which he might even be punished with death (Demosth. liii. 18). A triple conviction led to the same result as the similar conviction of a perjured witness.

An indictment for bribery (δώρων) might be laid not only against officials, but against all others who received, or gave, or promised a bribe, with the object of conferring or procuring an advantage to the detriment of the State or of any individual citizen. Moreover, a magistrate who, at the expiration of his term of ollice, was convicted, at the scritiny conducted by the λογισταί, of having embezzled or taken bribes, was fined ten times the amount in question (Arist. Resp. Ath. 54.2). The penalty of tenfold compensation also attached to a conviction on the general indictment, and was exacted from any official convicted of the embezzlement of public funds, on an indictment before the thesmothetic ( $\kappa \lambda \sigma \pi \eta$ )  $\delta \eta \mu \omega \sigma(\omega \nu)$ , or  $i c \rho \omega \nu$ ,  $\chi \rho \eta \mu d \tau \omega \nu$ ). A separate indictment ( $\delta c \kappa \alpha \sigma \mu \omega \theta$ ) existed to meet the case of bribes given to, or received by, a member of the Assembly, the Council, or the jury-panel, or an advocate (συνήγορος), for the purpose of influencing a decision by any of the bodies concerned. The

decision by any of the bodies concerned. The only penalty mentioned is that of death (Isocr. viii. 50).

The earliest recorded instance of the bribery of a jury is that of Anytus, afterwards notorious as the accuser of Secretes, who succeeded by this means in ecaping an adverse verilict after the failure of the expedition to Pylos in 409 (Arist. Resp. Ath. 27). Demosthenes is said to have been ordered to pay a fine of fifty talents in connexion with the affair of Harpalus (Plut. Dem. 26); but neither from this not entirely credible statement, nor from the mention by Dinarchus of the death-penalty (i. 60), can any inference be drawn as to the penalties incident to an ordinary prosecution for bribery.

Debasing the coinage was a crime punishable

Debasing the coinage was a crime punishable with death (Demosth. xx. 167, xxiv. 212).

Military offences were tried before the generals,

with a jury composed of the comrades of the offender. Our authorities distinguish refusal to join when summoned (ἀστρατείαs), cowardice in the ranks (λιποταξίου), loss of the shield in flight, and corresponding delinquencies in the naval service (drauμaxlov, λιποναυτίου). Conviction was followed by loss of civic rights, but not by confiscation of

property.

If a State-debtor procured the erasure of his

indictment before the thesmothetæ (ἀγραφίου); and any one whose name was wrongly inserted could take similar proceedings against the wrongdoer (ψευδεγγραφήs), or if the proper officer did not erase his name after he had paid (βουλεύσεωs).

The general formula defining grades of punishment distinguishes bodily suffering and money payment (ö,τι χρη παθεῖν η ἀποτεῖσαι). Death, as we have seen, was not infrequently imposed by law; but, on the whole, the temper of the administra-tion was lenient, and a death sentence was less frequent in practice than might have been expected from the place which it occupies in the code. A striking testimony to the humanity of the Athenians is the abhorrence excited by any punishment involving torture or mutilation; and penal acts of this kind are hardly ever mentioned in literature except as characterizing the excesses of tyrants or the savagery of barbarians (see esp. Æsch. Eum. 186 ff.). Imprisonment is rarely mentioned as a penalty (Lys. vi. 22; Plat. Apol. 37 C); and it might be said that, where we immure the criminal for the benefit of society, the Athenian code secured the same end by disfranchisement (ἀτιμία). This requires a few words of explanation. For the members of a modern State, who are more conscious of the burdens attaching to citizenship than of its privileges, an effort of imagination is needed in order to realize what complete disfranchisement meant to an Athenian. Athens was a comparatively small city, as measured by the standards of to-day, with a proletariat slaveclass, and a considerable number of resident aliens and yet at the same time an imperial city, proud of its past and with a world-wide reputation. An Athenian citizen valued his civic privileges as highly as his life. To be excluded from holding any office or exercising any public function in a community where all citizens aspired to share in the government, and to be forbidden to appear in the market-place or to take part in any public festival where every one lived in the open air, and where the frequently recurring festivals were the chief enjoyments of life, placed a ban upon the convicted man which made him an outcast from all his fellows. Thus we find disfranchisement, with or without confiscation of goods, as a normal punishment for all kinds of serious offences, such as sacrilege, treason, bribery, embezzlement, and injury to parents (Andoc. i. 74). In these cases the disability was permanent; but it was also adopted against State-debtors as a means of enforcing payment, and was removed as soon as the liability was discharged. There were also cases of partial disability, as when a man was forbidden to speak in the Assembly, or to become a member of the Council (Andoc. i. 75). So, if the prosecutor in a public indictment threw up his case, or failed to obtain a fifth part of the votes, he lost the right of again instituting another proceeding of the same kind (Demosth, xxi. 103). Cf. also art. ATIMIA.

Lastly, it remains to notice the formalities attending the execution of the sentence. If the sentence was one of death, or if imprisonment was involved in it, the convicted person passed under the charge of the Eleven, who had control over the State prisons. Common criminals, known as malefactors (κακοθργοι), were fastened in a frame and endgelled to death (ἀποτυμπανισμός) by the executioner (δήμιος). The same official undertook the duty of 'throwing into the pit' (εἰς τὸ βάραθρον ἐμβαλείν)—a form of execution which was at one time employed for traitors (Plut. Aristid. 3; Xen. Hell. 1. vii. 20). The more familiar penalty, however, which is mentioned for the first time during the domination of the Thirty (Lipsius, p. 77), was to give to the condemned criminal a cup

of hemlock-juice (κώνειον), which was administered by an official acting under the orders of the Eleven.1 If the accused was condemned to be sold as a slave, he was handed over to the πωληταί, who sold him to the highest bidder. Confiscated goods were sold by the same board, and, in order to prevent concealment, a common informer was permitted to make a schedule (ἀπογραφή) of any property which he alleged to be liable to confiscation, and, if he succeeded on the trial of the issue, he was entitled to retain for himself three-quarters of the value (Demosth. liii. 2). Sometimes, in important cases, a special body of commissioners (ζητηταί) was appointed to make an investigation of the property liable to seizure. Fines imposed by the court were collected by the πράκτορες, who handed the money over to the treasury officials (ἀποδέκται). The enforcement of the negative penalty of disfranchisement was secured by the severe punishment provided for those who ventured to infringe the limitations imposed upon them by their

7. Such, in rough outline, was the criminal code which was administered in the Athenian law-courts at the height of their power. That a legal system so searching and comprehensive should have come into existence within so comparatively short a time is remarkable enough; but the spirit of humanity and enlightenment which it displays, the variety of procedure, the minuteness of subdivision designed to meet every possible manifestation of crime, and the securities taken against every form of personal violence, alike show that, in the province of law, Greek civilization did not fall far short of the eminence which it attained in art and literature. The defects of the system, as has already been indicated, were due to its faulty administration by the juries, to the absence of a trained legal profession, and to the non-existence of records to secure continuity of decision.

8. Views of Plato and Aristotle.—The laws of

Athens were the expression of the best opinion of an unusually intelligent community, and even the most advanced thinkers, who were ready enough to criticize defects in the constitution, found but little to improve upon in the criminal code. When Plato set out, in the 9th book of the Laws, to provide the citizens of his pattern State with a revised series of statutes, the amendments which he advocated were made, not so much from dis-satisfaction with the Athenian code, as from a desire to preserve intact the essential features of his reformed community. Thus, he objected to the punishment of disfranchisement, and to that of perpetual banishment, because they would interfere with the permanent occupation of the lots which were assigned to the citizens (855 B, C). For similar reasons, fines were to be inflicted more sparingly than was usual at Athens; and a more frequent resort to flogging and the pillory—forms of punishment odious to the Athenian mind, however familiar at Sparta (Grote, Plato, London, 1865, iii. 433)—was recommended. The motive which prompted these changes, and which informs the whole body of his legislation, is derived from his conception of the real nature of crime and the object which punishment should seek. It should, however, be remembered that, as his citizens were a carefully selected and highly educated body, he anticipated that crime would be a rare occurrence; and that legislation was needed only by way of precaution against the perversity of human nature (853 C-E). Now, Socrates had taught that virtue is fundamentally a matter of knowledge, and that

1 There are occasional references in Greek literature to stoning as a traditional mode of execution for heinous offences; but it was rather a survival of the custom of human sacrifice than the enactment of a legal code. See J. G. Frazer, Pausantus, London, 1898, iii, 417; Verrall on Æsch. Ag. 1107.

wrongful action necessarily proceeds from ignorance. Hence the paradox that no one is willingly unjust; for, if a man knows the good, he will follow it. To this doctrine Plato consistently adhered in his latest work (860 D, E), and it is obvious that it cuts at the root of the common distinction of jurisprudence between voluntary and involuntary wrongs. But Plato did not deny the existence of injustice or of voluntary wrong (ἐκούσια ἀμαρτήματα); only he gave a new connotation to these terms, based upon the principles of his own psychology. Thus, injustice is due to the dominance in the soul of unreasoning emotion—either anger or desire, the stimulus of pain or of pleasure; but if, on the other hand, the emotions are controlled by the reason, it is no longer possible for a man to commit an unjust act, although his actions may be misguided and harmful to others. For, though the reason may be strong to master the lower impulses, yet its successful operation may be impeded by ignorance or prejudice; and in this manner voluntary error is possible (Grote, iii. 399). It follows that the chief aims of the law-giver will be at once by education to subdue the passions, by compensation to make amends to the sufferer, by prescribed penalties to deter, and by enforced penalties to chasten and reform.¹ Above all, the spirit of his laws must be such as to strengthen and guide the rational faculty by prescribing such beliefs as are agreeable to absolute reason. It is only when the evil is recognized as incurable that death is a suitable penalty, best for the criminal himself, and useful as an example to others.

Plato recognized two aspects of punishment, the corrective (Adam on Rep. 380 B) and the preventive, both of which are to be distinguished from a purely vindictive exercise of authority (Gorg. 525 A; Prot. 324 A; Legg. 854 B, 934 A). In the same way Aristotle distinguished vengeance, the object of which is the satisfaction of the inflicter, from chastisement directed to the good of the criminal (Rhet. i. 10, 1369b, 13; Eth. Nic. ii. 3, 1104b, 16); and, in entire agreement with Plato, he held that, whereas good men may be admonished, others, whose vice is incurable, must be cast out (ib. x. 9, 1180a, 9). Elsewhere he speaks of corrective justice (διορθωτικόν δίκαιον) as proceeding by arithmetical proportion, indemnifying the injured party by subtracting from the gain of the wrongdoer an amount equivalent to the loss of his victim (ib. v. 4, 1132a, 10), as distinguished from distributive justice, which seeks to establish a geometrical proportion according to the respective merits of the individuals concerned; but in the Politics, where we might have looked for a reasoned treatment of punishments, nothing of the kind is to be found.

It is unnecessary to detail the provisions which Plato recommended for the punishment of sacrilege, homicide, and wounding; but it deserves to be remarked, as showing that he was alive to the defects of the Athenian jury-courts, that he refrained from drawing up precise enactments to fit every possible contingency, because he trusted largely to the discretion of his select and well-trained court, which was established to take the place of the Council of the Areopagus (876 B-E). It should further be noticed that, while generally adopting, with slight alterations, the provisions of the Athenian code, in dealing with the offence of battery he left the beaten person to defend himself as best he might, unless he happened to be twenty years older than his assailant (879 C). In thus

years order than his assailant (879 C). In thus 1 Similarly the Stoics, as reported by Seneca, de Clem. i. 22. 1. As practical reformers they were very far from carrying to its logical conclusion the doctrine that all crimes are equal, notwithstanding the banter of Horace (Sat. i. 8, 121) and Cicero (pro Mur. 61).

training the young to endure blows, and in inculcating reverence for old age, Plato was showing his preference for the methods of Spartan discipline. But the most extraordinary of all Plato's legislative experiments was the intolerant enactment against religious heresy. He distinguished three classes of heretics: (1) those who do not believe in gods at all; (2) those who believe that gods exist, but do not concern themselves with human affairs; (3) those who believe that the gods may be propitiated by prayers or sacrifice (885 B). Of these classes the third is the most pernicious; but any one who was found guilty of implety as falling under any of the three classes, even if his conduct was otherwise free from blame, was to be imprisoned for five'years; and, if at the end of that time he was still unrepentant, he must be put to death (909 A). Further, if the offence of heresy was found aggravated by bad conduct, the offender must be kept in solitary confinement until he died, and, after death, refused the rites of burial.

died, and, after death, refused the rites of burial.

LITERATURE.—The chief authority on Athenian jurisprudence is J. H. Lipsins, Das attische Richt und Rechtsverfahren, pt. i., Leipzig, 1905, pt. ii., 1908; but, as the work is not yet complete, it is still necessary to refer to the same writer's revised edition of Meier-Schömann, Der attische Process, Berlin, 1833-1887. See also C. F. Hermann, Lehrbuch der griech. Rechtsatterthümer, ed Thalheim, Freiburg, 1884; G. F. Schömann, Lehrbuch der griech. Alterthumer's, ed. Lipsius, Berlin, 1807, esp. vol. i. pp. 506-537; G. Gilbert, Handbuch der griech. Staatsatterthümer's, Leipzig, 1803, esp. vol. i. pp. 421-467. There are also numerous articles bearing on the subject by T. Thalheim, in Pauly-Wissowa. For the primitive beliefs connected with the blood-feud, see E. Rohde, Psyche's, Tübingen, 1907, i. 259-277.

A. C. PEARSON.

CRIMES AND PUNISHMENTS (Hebrew).—Crime, strictly speaking, is an offence against the law of a State, which the State punishes, as distinguished from sin against God, and other wrongdoing of which the State takes no cognizance. This idea had not been formulated by the Israelites, and there is no Heb. word exactly equivalent to our 'crime.' A crime was a form of 'evil' (y7, ra'). In the same way there was no one general term for 'punishment'; it might be denoted by bod (g'mal) and other words for 'recompense'; or by hy ('āwôn) and other words for 'sin' or 'iniquity' (punishment being regarded as an effect of sin), or by forms of the root pp (pqd), 'visit.' The crimes and punishments recognized by the Israelites may be classified thus (only the more common Heb. words are given):

Israelites may be classified thus (only the more common Heb. words are given):

I. CRIMES: I. Religious offences: blasphemy (derivatives of 712 brk, 713 gdp, 783 n's, Lv 24<sup>10-16</sup>); breaches of ritual, as to food (Lv 7<sup>25</sup>), uncleanness (7<sup>20</sup>), sacrifice and offerings (19<sup>8</sup> etc.); idolatry, or the worship of false gods (Dt 13); illogitimate assumption of the priestly or prophetic office (Nu 16. 17, Dt 18<sup>20</sup>); magic, divination, sorvery, and witch-craft (Dt 18<sup>0-14</sup>); Sabbath-breaking (Nu 15<sup>226</sup>); perjury (Ex 20<sup>16</sup>); war against Israel on the part of idolatrous nations, which was regarded as an offence against Jahweh (cf. II. 1).—2. Offences against the State: treason (1 K 21<sup>18</sup>, 2 K 14<sup>5</sup>); bribery and oppression (Ex 23<sup>1-9</sup>).—3. Sexual offences: bestiality (Ex 22<sup>18</sup>, Lv 18<sup>23</sup>); mostitution (Lv 19<sup>28</sup>); incest (Lv 18<sup>86</sup>); sodomy (Lv 18<sup>22</sup>).—4. Offences against property: adultary (derivatives of 781, n'p, Ex 20<sup>14</sup>); kidnapping (Ex 21<sup>16</sup>); leaving pit uncovered, or otherwise causing damage through carclessness (Ex 21<sup>28-96</sup> 22<sup>6-15</sup>); theft (Ex 22<sup>1-5</sup>); usury (Ex 22<sup>25</sup>); seduction or rape of daughter (Ex 22<sup>16t</sup>, Dt 22<sup>25-29</sup>).—5. Offences against the family: cursing parents (Ex 21<sup>17</sup>).

—6. Offences against the family: cursing parents (Ex 21<sup>17</sup>).

II. PUNISHMENTS: 1. Religious penalties.— Many ritual offences might be atomed for by sacrifices, seclusion, washings, and other rites; e.g. touching an unclean thing was atomed for by sacrifice (Lv 51-13); eating flesh of an animal not properly killed was atoned for by washing one's clothes and person, and remaining unclean until the evening (Lv 1716). Sacrifices seem to be required in connexion with all sins which could be forgiven. A person in a state of uncleanness could not be present at the Temple services, or

partake of the Passover.

Excommunication was practised in later Judaism, but it is doubtful how far it had any equivalent in ancient Israel. The Priestly Code prescribes the penalty of 'cutting off from the people' for numerous offences, mostly against the ritual laws, but sometimes for gross forms of immorality. A comparison of parallel passages shows that in some cases offences punished in one chapter by 'cutting off' are punished in another by 'duath' (cf. Liv 18. 20). On the other hand, some offences punished by 'cutting off' seem to us trivial, e.g. omitting, without valid excuse, to observe the Passover (Nu 913), but such matters might not seem trivial to the Israelites. It is practically certain that death was never regularly inflicted for the various offences which were to be punished by 'cutting off.' The difficulty is explained by the history of the Priestly Code; it was compiled by Babylonian Jews; its authors had no experience in inflicting death penalties, and no immediate prospect of such experience. They indulged in a theoretical severity, untempered by practical necessities; they used the term 'cutting off,' because it would also serve to describe excommunication from social fellowship and religious privilege—a penalty within the power of the exiles to inflict.

Heathen nations stubbornly fighting against Israel were to be Excommunication was practised in later Judaism, but it is

Heathen nations stubbornly fighting against Israel were to be subjected to the ban (D<sub>1</sub>), \$\tilde{p}\_{e}rem\$, i.e. to be massacred in honour of Jahweh, according to certain texts (e.g. Dt 72). The leading instance is Jericho (Jos 62). In later Judaism, exommunication of varying degrees of severity was inflicted for ecclesiastical and other offences; and the ancient name herem was used for the according to

was used for the severest form.

Some laws and historical precedents show that God Himself was held to inflict punishment on certain occasions by direct intervention—Divine visitation. Thus (Lv 10<sup>1f.</sup>) Nadab and Abihu are struck dead by Jahweh for offering the wrong sort of incense; and the adulteress who has denied her or intense; and the administratives who has defined her guilt and submitted herself to the trial by ordeal by drinking 'the bitter water which causeth a curse' is smitten by God with disease—'her belly shall swell, and her thigh shall rot' (Nu 5<sup>27</sup>). No

instance is recorded.

2. Secular penalties.—(a) Death.—This penalty is often prescribed without specifying how it is to be inflicted. In many instances the culprit was slain with sword, spear, or dagger, according to the convenience or choice of the executioner (e.g. Elijah and the prophets of Baal, 1 K 19<sup>1</sup>). There is no clear case of beheading in the OT, though the head was often severed from a dead body (e.g. Goliath, 1 S 17<sup>51</sup>). In the NT, John the Baptist (Mk 6<sup>37</sup>) was beheaded, and James (Ac 12<sup>3</sup>) 'slain with the sword.' 'Hanging' is referred to in Dt 21<sup>23</sup>, but what is in view is probably exposure Jos 8<sup>20</sup>, the king of Ai). Stoning seems to have been the most usual mode of capital punishment, and burning to death was inflicted for some offences

(see below).

The Bible and the Apocrypha refer to other forms of execution practised by heathen nations. Thus 2 Mac, in describing the Syrian persecution, mentions throwing down from the wall of a city (6<sup>10</sup>), beating to death on a wheel or drum (τύμπανον, 6<sup>19, 28</sup>), and torturing to death with fire (7<sup>5</sup>). Crucifixion, a common Roman punishment, was used in the case of our Lord; and He 11<sup>27</sup> speaks of martyrs being sawn asunder. Daniel and his accusers were thrown to the lions (Dn 6).

and his accusers were thrown to the hons (Dn 6). The severity of the death penalty was sometimes enhanced by refusing to allow the relatives of the culprit to bury the corpse (2 S 21<sup>10</sup>).

The following is a list of the crimes for which death was inflicted; the mode of execution is given in square brackets; where nothing is stated on this point, we have no information:

Various forms of homicide: murder (Ex 2112, Lv 2417); child-sacrifice (Lv 202 [stoning]); manslaughter, if the avenger of blood caught the slayer outside the city of refuge (Nu 3527);

keeping an ox known to be dangerous, if the ox killed a human being (Ex 21<sup>29</sup>).

Bearing false witness on a capital charge (Dt 19<sup>18-21</sup>).

Kidnapping (Ex 21<sup>19</sup>).

Insult or injury to parents (Lv 20<sup>9</sup>, Ex 21<sup>15, 17</sup>, Dt 21<sup>21</sup>

Insult or injury to parents (Lv 209, Ex 2115.17, Dt 2121 [stoning]).

Various forms of sexual immorality: incest (Lv 2014 [burning]); unchastity (Dt 2221.24 [stoning]); adultery or unnatural vices (Lv 2010 19); fornication on the part of a priest's daughter (Lv 219 [burning]); fornication on the part of a betrothed woman (Dt 22224 [stoning], Gn 3824 [burning]).

Various religious and ritual offeness: witchcraft, magic, etc. (Ex 2218, Lv 206 27 [stoning]); idolatry (Ex 2220, Dt 1310 [stoning]); blasphemy (Lv 2410-28 [stoning]); false claim to be a prophet (Dt 135.10 [stoning]); intrusion of allen into sacred place or office (Nu 151 310 38 187); Sabbath-breaking (Ex 3114).

According to Lv 27<sup>28t.</sup>, human beings may be made hērem ('devoted') to Jahweh; and, if so devoted, must be put to death. Probably only criminals or heathen enemies (cf. above) were subject to such treatment.

(b) Martiation is invalidation.

(b) Mutilation is involved in the principle an eye for an eye, etc. (Ex 21<sup>24t</sup>). No instance is mentioned of the application of this law, but we

mentioned of the application of this law, but we may compare the cutting off of the thumbs and great toes of Adonibezek (Jg 16-7). Mutilation is mentioned in 2 Mac 74, and blinding in the cases of Samson (Jg 16<sup>21</sup>) and Zedekiah (2 K 25<sup>7</sup>).

(c) Flogging, limited to a maximum of forty stripes (Dt 25<sup>3</sup>), was inflicted on a betrothed slavegirl guilty of fornication, and on her partner in the offence (Lv 19<sup>20</sup>), and for other minor offences. The references in Proverbs imply a large use of this punishment, especially for children; and in the NT it is spoken of as used in the synagogues for it is spoken of as used in the synagogues for religious offences (2 Co 11<sup>24</sup>). The actual practice in ancient Israel was much more severe than the prescription of the Deuteronomic and Priestly laws. Ex 21<sup>207</sup> deals with cases in which a master flogs a male or female slave to death, and decides that he is not to be punished unless the victim actually dies under his hand (cf. Jg 8', 1 K 12"). The Roman scourging, the Egyptian bastinado, and the various forms of flogging amongst heathen peoples, were much more severe than the Jewish 'forty stripes save one.

(d) Exposure of the person.—The figurative description of the punishment of Jerusalem in Ezk 1639 may imply that this punishment was inflicted on adulteresses in Israel; but, as these chapters were written in Babylonia, the imagery

chapters were written in Babylonia, the imagery may have been suggested by heathen practices.

(e) Stocks (e.g. Jer 20<sup>2</sup> πρρφ, mahpeketh; Ac 16<sup>24</sup> το ξόλον).

(f) Slavery, for theft (Ex 22<sup>3</sup>), or as a result of debt (2 K 4<sup>1</sup>, Neh 5<sup>5</sup>).

(g) Imprisonment is not appointed in the Law as a very subment. It was used for the detention of

a punishment. It was used for the detention of offenders before trial, or pending execution, as well as in cases where it was desired to keep a dangerous or obnoxious person under restraint, or to secure the persons of slaves and captives. There

is no evidence that terms of imprisonment were appointed expressly as a punishment, except in Ezr 7<sup>26</sup>.

(h) Exile is not appointed in the Law; the fugitive from justice might exile himself (Absalom, 2 S 13<sup>27</sup>). Exile is mentioned as a penalty inflicted by the Persians (Ezr 7<sup>28</sup>).

(i) Chitdlessness for immorality is probably a Divine visitation (Lv 2020).

(j) Penalties in money and goods.—Compensation is required for theft, and in cases where person or property has been injured through carelessness or malice. In cases of mere carelessness an equivalent

1 The Hebrew (nume numerical biggoreth tihyeh) means literally 'there shall be an examination' (EV 'they shall be punished'). The interpretation given in the text is commonly adopted, and is probably correct. Cf. the use of the term 'examine' for 'torture.'

<sup>2</sup> The Aram. אָרשׁי, sheroshū (Kethîb), or ישׁישׁ, sheroshī (Qerê; AVm and RVm rooting out'), is interpreted in this sense by RV, etc.

. .

compensation was required (Ex 225); but, where there was moral guilt, the compensation was heavier, e.g. for theft the thief must restore fourfold, fivefold (Ex 22), or sevenfold (Pr 631). Compensation for the killing of a slave by an ox known to be danger-ous is fixed at thirty shekels (Ex 2121); for the seduction of a daughter at fifty shekels, the seducer to marry her (Dt 22<sup>20</sup>); for a false accusation of unchastity against a newly married wife, one hundred shekels, to be paid to her father (Dt 22<sup>19</sup>). In some cases times might be accepted in place of capital punishment (cf. below, III. 5). See also Ezr 726

(k) Unspecified penalties.—Numerous acts are enjoined or forbidden without any penalty being attached to the breach of the law; e.g. hybrids

must not be bred (Lv 1919).

III. MORAL AND RELIGIOUS SIGNIFICANCE.—

1. Progress.—We may distinguish, on the one hand, the practice of the Israelite monarchy, and, on the other, the system of law embodied in the Deuteronomic and Priestly Codes. The practice of the monarchy is shown in the Book of the Covenant (Ex 21<sup>1</sup>-23<sup>19</sup> [E]) and in the references in the narratives. This practice was a development from earlier times; changes must have come about as the Israelites passed from the nomad period to that of the Judges, and again to the monarchy; but our information is not sufficiently full to enable us to trace this development. Even for the monarchy our data are meagre; our extant narratives were intended to edify later generations, and references to objectionable features in early practice have probably been largely omitted, especially when they were connected with David and others who were regarded as representatives of true piety. Moreover, the Deuteronomic and Priestly Codes never had a fair trial as the working laws of an independent State; they always remained more or less religious ideals. Such theoretical codes may be both higher in some respects and lower in others than the actual practice of their own time. For instance, provisions that call for large sacrifices on the part of the powerful and wealthy in the interests of the poor are easy to prescribe on parchment, but difficult to enforce in real life. On the other hand, the cruel penalties by which enthusiasts seek to promote and safeguard religion are mitigated in their practical application by considerations of humanity. A Deuteronomic scribe in the quiet seclusion of his study, or whatever corresponded to a study in those days, might enjoin wholesale massacres without compunction; but he might have shrunk from putting into force his own laws on real living men, women, and children.

At the same time, the available evidence makes it probable that, if Judah had continued an independent State, the development of its legal system would have been in the direction of humanity and righteousness, under the influence of the prophets of the school of Isaiah, Jeremiah, and Ezekiel, and of the priests who shared their views. For instance, according to ancient law, if a man were guilty of a heinous offence, his family might share his punishment (e.y. Achan, Jos 7<sup>247</sup>, and the kinsfolk of Saul, 2 S 21<sup>1-9</sup>). But Dt 24<sup>16</sup> forbids the practice. Again, marriage with a half-sister was regarded as lawful for Abraham (Gn 20<sup>12</sup> [E]) and for Amnon (2 S 1313), but is forbidden by Lv 180.

On the other hand, the later legislation shows a tendency to religious fanaticism, and towards the subordination of public welfare to the material interests of the priesthood; and probably this tendency would not have been altogether defeated if Judali had remained an independent State.

The final redactors of the Torah combined the various earlier and later codes, without attempting to reconcile or co-ordinate them; equal sanction was given to inconsistent laws; crude, primitive customs were placed on the same level as the more humane enactments of later times. Obviously this happened because these Babylonian Jews were compiling a record, and not providing for practical

needs.

2. Classification.—There is no formal classification, but certain principles are implied. The inclusion of secular laws in the Torah indicates that all crime was regarded as sin against God, and that the administration of justice rested on Divine authority. This is an axiom of all religions as to the ideal State; but it was more emphasized in ancient times than it is now, because religion and the State were more intimately associated. Hammurabi, for instance, receives his laws from the sun-god, Shamash. Ezk 20<sup>26</sup> is a striking illustration of the way in which the actual legal system of Israel was regarded as a Divine institution; even iniquitous laws are imposed by God as a punishment: 'Moreover also I gave them statutes that were not good, and judgments wherein they should not live.' On the other hand, the protests of the pre-exilic prophets against the corruptions of their times involve a distinction between secular and Divine law; the two might clash.

The modern recognition of purely religious offences, with which the State does not deal, is not found in the OT. As in mediaval Christendom, such offences might incur secular as well as religious penalties; the idolater was to be put to death. Again, the Law does not clearly distinguish between human punishment and Divine visitation; the penalties of similar offences may include both; e.g. in Lv 20 some forms of sexual immorality are to be punished with death; in other cases it is said that the culprits will die childless. The prominence given to Divine visitation suggests a distinction between crimes which can be detected and punished by men and those hidden from men, but known to God, and dealt with directly by Him. The imposition of a fine for such offences as homicide and seduction (II. 2. (j)) shows that these were regarded

partly as offences against property.

There is a distinction drawn between wrongs done to a free Israelite, to a slave, and to foreigners respectively; e.g. the slaying of a free man is severely punished, but a slave may be beaten to death provided he does not actually die under the rod (Ex 21201.); if an ox known to be dangerous rot (Ex 21<sup>20</sup>); If an ox known to be dangerous kills a free man, the owner may be put to death (Ex 21<sup>20</sup>); but, if the victim is a slave, thirty shekels are paid to his master (v, v). 'The stranger within thy gates' (the  $g^{\rho}r$ , or 'resident alien') enjoyed the protection of the law, and alliances were maintained with some neighbouring States; otherwise history suggests that might was mostly right along the borders; cf. David's doings in the Negeb (1 S 27<sup>8t.</sup>), the Danite conquest of Laish (Jg 18), and the exploits of Samson (Jg 14 f.).

3. Range of offences.—The list of omissions and

commissions recognized as crimes indicates a high moral standard. The wrongfulness of ritual irregularities is, indeed, exaggerated by treating them as sins and crimes. On the other hand, the Penta-teuch strives to promote social righteousness in many matters which modern law does not venture to deal with; e.g. Dt 2415 enjoins the prompt payment of wages, and Lv 1911 forbids lying. But the difference is only apparent; the Pentateuch com-bines moral admonition with legislation, and draws no hard and fast line between the two. Again, the comparatively low stage of social development reached by the Israelites excuses such blots as the toleration of polygamy and slavery, and the absence of any full recognition of international morality

4. Subjects of punishment.—In some cases

animals were put to death; e.g. an ox that had gored a man or woman was to be stoned, and its flesh might not be eaten (Ex 21<sup>28, 29, 32</sup>, cf. Liv 20<sup>151</sup>). Animals and even goods which could be burnt might be destroyed in the hērem, or ban (Jos 7<sup>24</sup>). In earlier times the family might be put to death for a crime committed by its head (cf. III. 1), but the practice is forbidden, as already noted, in Dt 24<sup>16</sup>.

practice is forbidden, as already noted, in Dt 24°.

There is nothing to show at what age young persons became legally responsible for their actions. The census in Nu 1° included all males from twenty years old; and the age at which Levites began their service is variously given as twenty-five (Nu 8°), or thirty (4°), although responsibility must have begun earlier. Nothing is said as to exemption from punishment on account of mental weakness.

Naturally the legal codes did not recognize the principle that the powerful and wealthy might commit crimes with impunity; but they often enjoyed much licence in practice, as is shown by the narratives of Micah and the Danites; of David and Uriah; Amnon, Tamar, and Absalom; and the frequent protests of the prophets.

5. Humanity: adjustment of severity of punishment to heinousness of crime.—The legal codes were evidently anxious that the punishment should be justly proportioned to the offence, hence the obvious principle of equal retaliation, found in the codes of many peoples, of an 'eye for an eye, and a tooth for a tooth,' and the laws providing for compensation for injury to property or person.

The list of capital offences (II. 2. (a)) is a little

The list of capital offences (II. 2. (a)) is a little long, and includes some which, according to modern ideas, do not permit so severe a punishment, e.g. insult to parents, Sabbath-breaking, etc. But, as we have said, it is doubtful whether death was ever regularly inflicted for ritual offences; and, at any rate, the laws are due to an exaggerated sense of the wickedness of such acts rather than to reckless severity. The use of barbarous punishments—burning alive, mutilation, and flogging—is strictly limited; and there is no trace, either in the Law or in the history, of the torturing of witnesses or accused persons in order to obtain evidence.

The principle of blood-money is recognized only to a very limited extent: Ex 21<sup>28-82</sup> provides that, if an ox known to be dangerous kill any one, the owner shall be put to death, but that 'if there be laid upon him a ransom, then he shall give for the redemption of his life whatsoever is laid upon him —in the case of a slave thirty shekels to the slave's owner. Similarly, any one flogging his slave to death, without the slave actually dying under the rod, is sufficiently punished by the loss of his slave (Ex 21<sup>201</sup>); and in the case of injury to slaves the lex tationis is not to be enforced, any mutilation of slaves being atoned for by emancipation (Ex 21<sup>261</sup>). So, too, Ex 21<sup>18,19</sup> permits compensation for bodily injury to a free man. On the other hand, Nu 35<sup>31,32</sup> (P) prohibits the acceptance of blood-money for intentional murder, or even the release of a man who has committed unintentional homicide from the obligation of remaining in a city of refuge till the death of the high priest.

6. Connexion with methods of administration of justice in other nations.—Israel was always part of the international system which comprised Western Asia and Egypt; and there was a constant action and reaction between the various members of this system. At the outset, Israel was a group of nomad tribes, and the original basis of its Law was the tribal custom of the Bedawin. The position of the  $g\bar{v}^*\bar{c}l$ , the next-of-kin, the avenger of blood, goes back to this source. The settlement in Canaan must have led to the adoption of many Canaanies laws. Now, Canaan and all Western Asia were, from a very early period, dominated by Babylonia;

the conquests of Sargon I. of Akkad (c. 2700 B.C.) extended to the Mediterranean, so that the institutions of Canaan were partly shaped by Babylonian influence. But, again, both the Canaanites and the Babylonians probably sprang originally from Arabia; so that Israel, Canaan, and Babylon all drew from an original common stock of tribal customs; and it is very difficult to determine whether a law is a purely Israelite survival from this common stock, or has been derived through Canaan or Babylon. Moreover, during long periods the Egyptian kings exercised a suzerainty over Syria; and Egypt had its share in moulding the life of Canaan (cf. the Amarna tablets, c. 1400 B.C.). Something, too, may perhaps be due to the 'bondage' in Egypt; but not much, for the Israelite tribes for the most part lived a nomad life in the border provinces.

The recently discovered Code of Hammurabi (king of Babylon, c. 2100 B.C.) shows how much the Israelite institutions had in common with those of Babylon. There are numerous parallels between this Code and the Pentateuch, especially the ancient Book of the Covenant, Ex 20<sup>22</sup>-23. Both, for instance, lay down the principle of an 'eye for an eye,' etc.; both prescribe the punishment of death for kidnapping; and both direct that if a man is in charge of some one else's cattle he may clear himself by an cath and need not make compensation. As the Code of Hammurabi was certainly known in Babylonia and Assyria as late as the Exile, Israelite legislation may have been influenced by it at any time; but the parallels may be largely due to common dependence on the

primitive tradition of Arabia.

In comparing the ethical and religious value of Israelita justice with that of other nations, we have

Israelite justice with that of other nations, we have to distinguish the practice of the monarchy and earlier times, as depicted in the history and Ex 20<sup>22</sup>-23, from the ideal set forth in Deuteronomy and the Priestly laws. It will have been seen that our knowledge of the early practice is fragmentary. It is possible, too, that the redactors of the literature suppressed evidence that was discreditable to Israel, though it is not likely that this has been done to any great extent. But, as far as our information goes, it does not appear that the administration of justice in ancient Israel differed conspicuously from that of neighbouring Semitic nations in the same period, as illustrated, for instance, by the Code of Hammurabi. And in such matters Israel would compare favourably with Greece, or Rome, or China, or with most Christian nations before the close of the 18th cent. A.D.

The Deuteronomic and Priestly ideal aims at a level of social righteousness which has never been attained in practice, and ranks with the Utopias of modern social reformers. The Priestly legislation is, indeed, disfigured by an undue care for the material interests of the sacerdotal caste; but neither the practice nor the theory of the religious law of Israel includes anything like the Inquisition and similar systems instituted by the Christian Church

Chitch.

W. H. BENNETT.

CRIMES AND PUNISHMENTS (Hindu).

—r. Most of the terms designating 'crime' or 'offence' in Sanskrit are essentially religious in their nature, and no strict line between sins and punishable offences has ever been drawn. The Dharmasatras (law-books) contain long lists of the

various degrees of crime or guilt-from mortal sins, such as sexual intercourse with one's mother, daughter, or daughter-in-law, down to crimes merely rendering the perpetrator unworthy to receive alms, such as receiving gifts from a despicable person, subsisting by money-lending, telling lies, serving a Südra, or to crimes causing defilement, such as killing birds, amphibious and aquatic ment, such as well as the substitution of the substit animals, worms or insects, and cating nutmegs and the like. Analogous lists of sins may be found in the ancient religious literature of the Buddhists of India. Many of these sins recur among the offences mentioned in the secular laws of the Brahmans. Thus the killing of a cow, the sacred animal of the Hindus, is a punishable offence as well as a crime. The commission of a heavy sexual offence is to be visited with punishment by the king, and at the same time the stain caused by such sin is to be same time the stain caused by such sin is to be removed by religious atonement. Killing a Brahman, or depriving him of his gold, is a crime deserving capital punishment of an aggravated form, no doubt because the religious law affords special protection to the sacred person of a Brahman. Many eccentricities of the criminal law are due to the religious element entering largely into it. Thus the sacredness ascribed to the Vedas comes out in the following rules: a Sūdra listening intentionally to a regitation of the Sudra listening intentionally to a recitation of the Veda shall have his ears filled with molten tin or lac; if he recites Vedic texts, his tongue shall be cut out; if he remembers them, his body shall be split in twain. The sanctity with which Bralimans spitt in twain. The sanctity with which Brahmans are invested has led to establishing the principle that no corporal punishment shall ever be resorted to in the case of a criminal of the Brahman caste. Nor could the banishment of a Brahman be connected with the confiscation of his property, the ordinary consequence of banishment. The Sudras, on the other hand, were treated very badly, be-cause they were considered to have no share in the cause they were considered to have no share in the re-birth caused for the higher castes by their initiation with a sacred prayer from the Vedas. Thus, e.g., a Brahman who abuses a Sūdra is condemned to pay no fine. A Sūdra, on the contrary, undergoes corporal punishment, if he only assumes a position equal to a member of a high caste, in sitting, in lying down, in conversation, or a read. Meant leveling is riouved as a public on a road. Money-lending is viewed as an unholy act; Brahmans are, therefore, forbidden to practise usury. Certain kinds of interest on loans are entirely prohibited. Among sexual crimes, inter-course with the wife of a spiritual teacher is looked upon as a very heavy offence, equal to incest, and so is intercourse with a Buddhist nun. Gambling is stigmatized as a sinful practice, though some is stigmatized as a sinful practice, though some legislators do not object to gambling in a public gaming-house, where the king may raise a certain percentage on the stakes. False witnesses are designated as thieves of words. Heaven is the reward of a witness who speaks truth; in the contrary case, hell will be his portion. Other crimes of the Brahmanical law savour of Oriental despotism, as, e.g., when the forgery of a royal document is visited with capital punishment. The caste system becomes visible in the gradation of crimes and punishments according to the caste of the offender, as will be shown below.

sa will be shown below.

2. 'Punishment' (danda) in the Code of Mann (vii. 14 ff.) is personified as a god with a black hue and red eyes, created by the Lord of the World as his son, and as an incarnation of Law, formed of Brahman's glory. Punishment is declared to keep the whole world in order, since without it the stronger would oppress the weaker and roast them, like fish on a spit; the crow would eat the consecrated rice; the dog would lick the burnt oblation; ownership would not remain with any one; and all barriers would be broken through. Punishment

is declared to be in truth the king and ruler, although it has to be inflicted by the king on those who deserve it. The king in person should every day decide causes in the court when brought before him, or else he should send a Brahman acting as his deputy. A king when punishing the wicked is comparable to the god Varuna, who binds a sinner with ropes. If a king does not strike a thief who approaches him, holding a club in his hand and proclaiming his deed, the guilt falls on the king; the thief, whether he be slain or pardoned, is purified of his guilt. The king should first punish by admonition, afterwards by reproof, thirdly by a fine, after that by corporal chastisement (Manu, viii. 129). As a matter of fact, lines are by far the most common kind of punishment in the criminal code of the Sanskrit law-books, and they were equally common, shortly before the times of British rule, in common, shortly before the times of British rule, in the Hindu kingdoms of Rājputāna (Tod), Mysore (Dubois), and others. The fines might extend to confiscation of the entire property of a criminal; but in such cases, according to Nārada (xviii. 10 f.), the tools of workmen, the weapons of soldiers, and other necessary implements are to be exempt from confiscation. Capital punishment, in various aggravated forms, such as impaling on a stake, trampling to death by an elephant, burning, roasting to wings devouring by does and ing, cutting to pieces, devouring by dogs, and mutilations, are also frequently inflicted, even for comparatively light offences. The jus talionis, which is so universally represented in archaic legisbations, becomes especially conspicuous in these punishments. Thus a criminal is condemned to lose whatever limb he has used in insulting or attacking another. The thievish fingers of a cutpurse, and the evil tongue of a calumniator, are to be cut off. A Sudra using insulting language is to have a red-hot iron thrust into his mouth, or boiling oil dropped into his mouth and ears. The breaker of a dike shall be drowned. The killer of a Brahman shall be branded with the figure of a headless corpse, a drunkard with the flag of a distillery shop. Banishment, public disgrace, imprisonment, fetters, forced labour, beating, and other forms of chastisement are also mentioned. Brahmans, however, are not to be subject to corporal variables. ever, are not to be subject to corporal punishment. Nor is this the only privilege enjoyed by Brahmans, who are allowed special indulgences in almost every case, the reduction of punishment in consideration of the rank of the person being one of the most salient features of the ancient legislation of India. Thus a Kṣatriya insulting a Brahman must be fined 100 paṇas; a Vaiśya doing the same, 150 or 200 paṇas; a Sūdra doing the same must receive corporal punishment. On the other hand, a Brahman shall pay only 50 paṇas for insulting a Kṣatriya, 25 paṇas for insulting a Vaiśya, and nothing at all for insulting a Sūdra. A similar gradation of fines may be observed in the punishment of adultery and many other crimes. If a man insults a Brahman by offering him forbidden food, he shall be amerced in a heavy fine; and, if he gives him spirituous liquor to drink, he shall be put to death. Another characteristic feature of the Indian criminal code is the infliction of worldly case, the reduction of punishment in consideration the Indian criminal code is the infliction of worldly punishments for violations of the religious law, as, punishments for violations of the religious law, as, e.g., when an apostate from religious mendicity is doomed to become the king's slave. King Asoka, as early as the 3rd cent. B.C., appointed censors who were charged to enforce the regulations concerning the sanctity of animal life, and the observance of filial piety. King Harsa, in the 7th cent. A.D., inflicted capital punishment on all who ventured to slay any living creature. King Kumārapāla of (lujarāt, in the 12th cent., is said to have confiscated the entire property of a merto have confiscated the entire property of a mer-chant who had committed the atrocious crime of cracking a louse. A Hindu Rājā of Kolhapur, in

A.D. 1716, issued a rescript ordaining due punishment for all those who should be discovered to entertain heretical opinions in his kingdom. This union of Church and State was specially marked under the rule of the Marāthā kings; but even in 1875, when Dr. Bühler visited Kashmīr, he found the Mahārājā eagerly intent on looking after the due performance of the prāyaśchittas, or penances prescribed for breaches of the commandments of the Smrti. The enforcement of these religious punishments otherwise rests with the caste, which levies fines for every breach of the caste

caste, which levies fines for every breach of the caste rules, and, in serious cases, excludes the offender. (See Explation and Atonement [Hindu].)

Steele, The Law and Custom of Hindoo Castes, new ed., London, 1808; J. Jolly, Recht und Sitte, Strassburg, 1806, pp. 115-448 (=GLAP) ii. 8).

CRIMES AND PUNISHMENTS (Japanese).-Long before the dawn of Japanese history, Chinese travellers to Japan brought back accounts of that country which contain our earliest informadynasty (A.D. 25-220). One of these notices says:

'There is no theft, and litigation is unfrequent.
The wives and children of those who break the laws are confiscated [sold as slaves], and for grave crimes the offender's family is extirpated.' Another account says: 'The laws and customs are strict.'
There is not much to be learned about crimes and punishments from the mixture of myth, legend, and chronicle which takes the place of history in Japan for a thousand years previous to the 7th cent. A.D., though we hear of a staff or gild of executioners, and of capital punishment by decapitation; and a punishment by fine had its origin at this time, but it was only for such offencesparatively few in number-as involved ritual uncleanness according to Shinto. An ordinance, enacted in 801, regularized what was, no doubt, an old practice, by which neglect in connexion with the *ohonihe*, or coronation ceremony, the cating of flesh, visiting the sick, being concerned in any way with capital sentences, or touching in any way with capital sentences, or touching anything impure during the month of special avoidance of impurity, subjected the culprit to an *ohoharalii* ('greater purification'), *i.e.* he was obliged to provide the materials for the ceremony of his own purgation. This eventually became simply a fine. Other ritual offences which required purgation were incest, wounds given or received, bestiality, and leprosy. Homicide had to be atoned for in the same way, but the ritual character of the offence appears from the circumstance that even justifiable homicide caused uncleanness.

justifiable homicide caused uncleanness. Weipert thinks that in these fines for ceremonial pyrification we have 'the first source of Japanese criminal law' (quoted by Florenz in TASJ xxvii. [1899] 57); but, in the opinion of the present writer, the evidence hardly bears out this conclusion. Weipert's theory does not account for the gravest of all punishments, that of death, nor does it apply to robbery, rebellion, adultery, arson, and other grave offences. Moreover, the absolution ceremony was seldom performed for individual offences. The Mikado twice a year celebrated a 'great purification' of the offences of the nation, and similar minor celebrations were usual before all the great ceremonies of Shinto. In such cases, of course, the idea of a fine was out of the question. There is abundant evidence that a criminal law existed from very ancient times which had nothing to do with the purgation of ritual offences.

ritual offence

Eventually the fines for ceremonial offences fell into abeyance, owing to a strong current of Chinese influence which set in during the 6th and 7th cents., and which led in 702 to the enactment of the code of civil and criminal law known as the Taihōriō.

It was based on the laws of the Tang dynasty of China, though modified somewhat in accordance with Japanese usages. The penalties prescribed were five, viz. capital punishment, exile, penal serwere five, viz. capital punishment, exile, penal servitude, beating (with a stick), and scourging (with a whip). These are simply copied from the Clinese code. Of the older five punishments of China—branding on the forehead, cutting off the nose, maining, castration, and death—only the first and last were ever practised in Japan. A History of Japan, published by order of the Japanese Government (1893), mentions 'treason, contumely (slander [?]), unfilial conduct, immorality, and so forth' [sic], as the eight great crimes of the Taiforth' [sic], as the eight great crimes of the Tai-hōriō. Perhaps the excuse for this very unsatisfactory enumeration is the circumstance that a very substantial part of this code has not come down to us. It is the basis of all subsequent legislation. When the Taikō Hideyoshi came into power, in the latter part of the 16th cent., he contemplated

its re-enactment for the whole country, but he died before giving any practical effect to his intention. At first the Tokugawa Shoguns (1600–1868) fol-lowed the old method of making the laws known to those only who were required to enforce them. But this rule was subsequently modified. New laws were read to the people, and inscribed on notice-boards set up in conspicuous places. Towards the end of the Tokugawa period, a reaction to the former policy took place. The authorities considered it expedient to keep the people in ignorance of all but the most general principles of criminal law, thinking that the unknown would inspire greater terror. Such meagre information as they vouchsafed to the people was contained in a few brief edicts inscribed on notice-boards at the Nihonbashi in Yedo and other conspicuous places throughout the Empire, prohibiting the evil sect called Christian, conspiracy, insurrection, plotting to leave the village to which one belonged, murder, arson, and robbery. That was all. This system left room for much that was arbitrary in the administration of the law, which varied considerably in different parts of the Empire. The judicial officials did very much as they pleased.

A Japanese servant of a member of H.M.'s Legation stole a few dollars, and was handed over to justice. Three months later, a visit was received from an official, who gave his master the option of having him released—there was no room for him, it was explained, in the prison—or decapitated. Needless to say, the former alternative was accepted.

One of the worst features of the early Tokugawa legislation was the implication of the offender's family in the crimes of its head.

family in the crimes of its head.

'If a man or woman, sentenced to be crucified or burned, had male children above 15 years of age, they were similarly executed, and younger children were placed in charge of a relative until they reached that age, when they were banished. Even when a parent suffered the ordinary capital punishment of beheading or hanging, it was within the discretion of the judge to execute or exile the male children. Wives and daughters were exempted from the rule of implication, though they might be reduced to the ranks of slaves' (Brinkley, Japan, iv. 56).

Thun herro (Taganels in Baurone, A frica. Asia. Eng.

Thunberg (Travels in Europe, Africa, Asia, Eng. tr. 1795-96) says that, in the towns, a whole street was often made to suffer for the malpractices of a single individual, the master of a house for the faults of his domestics, and parents for those of their children. These cruel provisions were greatly modified in 1721, but the more lenient rules were not applicable to the samurai class. Theft was severely punished, usually with death, which was the penalty also for swindling or attempted extor-tion by force. Pickpockets, however, were let off with branding, or rather tatuing, though a repeti-tion of the offence involved death. Not before the close of the 18th cent. was the execution of a pregnant woman deferred until after her delivery.

The law up to the close of the Tokugawa period required that an accused person must be induced to confess before his guilt was finally determined. The result was that, in many cases, torture was freely applied. The commonest device was to bind a man with ropes in some constrained position, or to make him kneel upon a grating of wooden bars placed edge upwards, and then to pile weights on his knees. On the whole, the tortures employed judicially in Japan were not so cruel as those used in mediaval Europe. A sumurai was not sent to prison. If his offence was not grave enough to call for immediate suicide, exile, or decapitation, he was ordered to go into confinement in his own house. There were different degrees of this kind of imprisonment, the most severe of which involved a complete cessation of egress and ingress for him-

self and his family.

Siebold, writing early in the 19th cent., gives a description of the penal code of Japan at that time, which was similar in all essential respects to the Taihōriō, introduced from China 1100 years before. He draws a broad distinction between the punishments of the sumurai and those of the common people. In the latter case, the culprit might be simply cut down by the man of higher rank whom he might have insulted or injured, or if he had been caught in the act of committing a grave offence. Decapitation was more usual. Crucioffence. Decapitation was more usual. Crucifixion, burning, and sawing off the head with a bamboo saw were also practised. There were two kinds of crucifixion. In one the criminal was lashed—not nailed—upside down to a cross which had two bars, one at the head and one at the feet, between the two being a small seat upon which the weight of the victim rested. At a given command an expert spearsman stood on each side, and the two drove their spears simultaneously so that they passed crosswise through the vital organs. Death was instantaneous. Burning was a matter of form. The culprit was tied to a stake and strangled before the fire was lit. Sawing off the head was of rare occurrence, and was limited to such heinous crimes as chief- or parent-murder. The name and offence of the criminal were usually inscribed on a board which was set up close to the place of execution. Sometimes the offender was mounted on a sorry nag and led round the city, with a similar placard fastened to his breast. The head might be set on a post, and allowed to remain from five to ten days. Sometimes the body was hacked to pieces, or made a subject on which the samurai might test their skill and the temper of their swords. In later times it might be handed over for dissection. Among minor punishments at this period were branding, the pillory, and degradation to the hinin, or pariah caste. For political offences by men of the samurai class, banishment to an island was the usual form of punishment; and there is an ancient instance of a Mikado being so punished. The term was commonly for life, though there was a minimum limit of five years. A milder form was an injunction to live under supervision at a distance from the capital. Whilst his case was under trial, the accused was confined to his own house, with the same forms as if he were in mourning. When the same forms as if he were in mourning. When the offence was committed unintentionally, a partial or complete confiscation of his property might be the consequence. Deprivation of office or incapacity for holding office was not unusual. Occasionally the offender was allowed to become a monk of a certain order, known as komuso, who wore a baskethat with a small grating in front, completely con-cealing his face. This was never removed, and practically he was a beggar who roamed the highways, playing on a flute in order to attract the attention of the charitably disposed.

Harakiri.—This well-known institution is of

considerable antiquity. It is of purely Japanese origin, and consists in making a cruciform incision on the belly, whence its name, which means 'belly-

The second secon

cut.' The 'happy dispatch' of some writers is only a joke. Sometimes a determined man succeeded in ending his life in this way, or he might complete the act of suicide by stabbing himself in the throat with the same instrument-a short sword or dagger with a blade nine inches in length. Hardkiri might be simply a form of suicide, or it might be the duty of a man of the summer class under various cir-cumstances, such as hopeless family troubles or loyalty to a dead superior, or as a protest against loyanty to a dead superior, or as a protest against the wrongful conduct of a superior. For example, when the Japanese Government yielded to the demands of France, Russia, and Germany for the retrocession of Liaotung, forty military men emphasized their protest by committing suicide in the time-honoured fashion. A common motive was to free from punishment the family and relatives of the person involved, who would otherwise, under the person involved, who would otherwise, under the old law, have shared his guilt. Very frequently, however, harakiri was no more than an honourable form of execution. It was carried out with great ceremony, the incision being only for form's sake, and the real execution consisting in decapitation by a friend. In 1869, a motion was brought forward in the Japanese Parliament in favour of the abolition of harakiri, and 200 memhers out of a house of 200 voted against this proposal. Harakiri is no longer recognized by law, though it cannot be said to be extinct.

Vendetta.—A Japanese sumurui was permitted by law to avenge the murder of a parent or chief; but, before exercising this right, he was bound to down his enemy, to repeat some such formula as this: 'I am A. B. You are X. Y., who murdered my father at such a time in such a place. Therefore do I now slay you. In justification of this law, an ancient Chinese saying is often quoted to the effect that 'a man must not allow the same heaven to cover himself and his father's enemy.' It is now abrogated, but was in vogue up to the Restoration of 1868. A teacher of the present writer was a victim. It is to be observed that fines have no place in the pre-Restoration legislation-a circumstance which is adverse to Weipert's view that Japanese criminal law had its origin in the imposition of fines on offenders against the ritual law of the older Shinto. Kaempfer (History of Japun, Glasgow, 1906, ii. 114) notices this feature

Extra-territoriality.—When the treaties were negotiated which opened Japan to foreign trade in 1859, the criminal code was in a very unsatisfactory condition. It was scarcely known to the people, and was administered in a most irregular, arbitrary, and often cruel fashion. It was quite out of the question to ask foreign Powers to make their subjects amenable to it, and, indeed, the Japanese were probably not sorry to be relieved of such responsibilities. Hence arose the so-called 'extra-Government transferred to foreign Powers the jurisdiction over their subjects when the latter were defendants in a civil case, or the accused under a criminal charge. When in 1863 the Mikado resumed the reins of authority, it was felt that such an arrangement was contrary to the dignity of the Japanese nation, and in any case a radical reform was a palpable necessity of the situation in the interests of humanity and good government. A code was, therefore, drawn up and promulgated in 1871. It was simply a selec-tion from the codes of the two Chinese dynasties— Ming and Tsing—modifications being introduced into the amount and nature of the punishments prescribed for different offences. Barbarous modes of execution were eliminated, the death-penalty was greatly circumscribed, merciless and excessive

whippings were abolished, and the punishment of imprisonment with corrective labour was introduced for the first time. A second code was notified in 1873, by which many new and more humane provisions were added. By these codes, an offender who has been sentenced to a term of penal servitude is placed in the penitentiary of the district in which he has been tried and sentenced, and work suited to his age, physical condition, and acquirements is allotted to him, so that 'by toil and labour he may be gradually brought to repent of his past misdeeds and be restored to virtue.' The punishment of death was by hanging or decapitation, the latter form being considered more severe owing to the prejudice entertained by most Japanese against any mutilation of the body. In certain cases, the pillory in iron stocks within the prison yard was substituted for imprisonment, and fines might be permitted in the case of offences by officials, persons inadvertently implicated, aged people, infants, maimed or deformed persons, or females.

But these codes still preserved an essentially Chinese character, and they contained many provisions which unduly favoured officials and the samurai class. A husband was permitted to kill the lover of his wife or concubine along with the woman herself, if caught in the act; but, if a certain time had elapsed, the punishment was penal servitude for one year, while under the older law the husband could, in this case, only recover a penalty of no great amount. If a woman who had been guilty of adultery or incest was, on the dis-covery of her guilt, driven by shame to commit suicide, the punishment of the male offender was increased one degree, even though he might have had no knowledge of the woman's intention to do so. Masters and parents were punished with much less severity for offences against their servants and Abusive lanchildren than in the contrary case. guage to an official entailed penal servitude for one year if the person insulted was of the highest rank; for ninety or sixty days if of lower grades. In Jan. 1879, the practice of using torture to compel confession-rendered necessary by the old principle that confession must precede condemnation-was abolished, and it was enacted that the evidence of witnesses, documents, or circumstances, or the admissions of accused persons, should alone be taken

as bases for determining guilt.

It will be seen that, although these codes marked a considerable advance on the Tokugawa system, they still left much to be desired, when viewed from the more enlightened standpoint of Europe. New legislation was therefore initiated, after a thorough study of the various systems of European law, with the assistance mainly of French jurists. Distinguished sorvice was rendered by G. Boissonade in framing the new codes, which, after arduous labour and repeated revision, came into operation from 1st Jan. 1882. They have an essentially French character. A further revision of the Code of Criminal Procedure was effected in 1890. B. H. Chamberlain, in his Things Japancse<sup>2</sup>, gives the following account of the present system:

the following account of the present system:

'Crimes are of three kinds: (1) against the State or the Imperial Family, and in violation of the public credit, peace, and health, etc.; (2) crimes against person and property; and (8) police offences. There is a sub-division of (1) and (2) into major and minor crimes. The punishments for major crimes are: (1) death by hanging; (2) deportation, with or without hard labour, for life or for a term of years; (3) imprisonment, with or without hard labour, for life or for a term of years. The punishments for ninor crimes include confinement, with or without hard labour, and inces. The punishments for police offences are detention for from one to ten days without hard labour, and fines varying from 5 sen to 195 yen. The court which tries persons accused of unajor crimes consists of three judges; that for minor crimes, of one judge or three, according to the gravity of the charge; and that for police offences, of one jugge de puiza. Contrary to Western usage, an appeal is allowed, in the case of major crimes, for a trial of facts. Criminals condemned to deportation are generally sent to the island of Yezo, where

they sometimes work in the mines. A person who has suffered injury by crime lodges his complaint at the police office, or with the procurator of any court having jurisdiction over the crime in question. Policemen can arrest an offender whose crime was committed in their presence, or which the complainant avers to have seen actually committed. In all other cases they can arrest by warrant only. Ball is allowed at the discretion of the judge. Accused persons are often kept in prison for a considerable time before trial, and no lawyer is allowed to be present at the preliminary examination. The conducting of criminal cases, from the very beginning down to the execution of the criminal, if he be condemned to suffer death, rests with the procurator, who unites in his own person the functions of public prosecutor and grand jury.\*

The reforms of 1882 extended to the indicinary

The reforms of 1882 extended to the judiciary, which was now separated from the executive. Judges, procurators, barristers, notaries, and a new system of police, as well as law-schools, were established. Under the new régime there are far fewer capital punishments. In Tokugawa times the number of persons consigned to jail in Yedo was about 7000 annually, and of these over 3000 were executed. At present the yearly number of capital punishments for the whole Empire averages above eighty.

It is claimed that, on the whole, the new legislation has resulted in a body of law in unison with the most advanced principles and the most approved procedure of Western jurisprudence—all punishments not recognized as consonant with modern civilization being abolished, due provision being made for adapting penalties to degrees of crime (the previous legislation left the judge too little discretion), the rights of suspects and criminals being guarded, and the privilege of appeal guaranteed. This contention is substantially correct, though traces of old usage remain. All men are not equal before the law, the military retaining some special privileges. Robbery with violence is still punishable with death, and a man does not render himself liable to any penalty for beating his servant, unless death ensues. The preliminary examination of prisoners is secret, the assistance of counsel not being allowed. This last feature will soon be modified. Trial by jury is unknown.

In 1899, after protracted negotiations, treaties were concluded with foreign Powers, by which the extra-territorial jurisdiction was abolished, and all foreigners became subject to Japanese law.

Prisons.—Under the old régime, imprisonment was not one of the recognized forms of punishment, though it was necessary to provide some places of detention for prisoners who were awaiting their trial, sometimes for long periods. The immates suffered very great hardship. The cells were wooden cages open to the four winds, and the arrangements for sanitation, food, and clothing were of the most wretched kind. The internal discipline was entrusted to the elder prisoners—generally hardened criminals—with results which may be imagined. Soon after the restoration of the Mikado's authority in 1868, a commission was sent to visit a number of foreign prisons and make a report, and ultimately a complete change was effected. Sir Henry Norman, who recently visited the convict prison of Tokio, says (Real Japan, 1892):

the convict prison of Tokio, says (\*Real Japan\*, 1892):

'The domitories are enormous cages formed of bars as thick as one's arm. There is not a particle of furniture. Thick quilts, or futon (the Japanese bed), are provided. Each dormitory holds 96 prisoners. The sanitary arrangements could not well be improved. No vermin could harbour anywhere. It was almost an ideal prison structure. The punishment cells were hardly ever occupied. There was no flogging. Two hurdred prisoners were employed making machinery and steam boilers, working nine hours a day. Wood-carving, weaving, pottery-making, and paper- and cloisonné-making are also among their occupations. Only a few are so clumsy or stupid as to be employed in pounding rice or breaking stones.'

W. G. ASTON. CRIMES AND PUNISHMENTS (Jewish). -The transition from the Biblical to the Mishnic period is marked by external and internal limitations in the functions of the Jewish tribunals. Externally, the Jewish courts of justice lost the power of inflicting capital and other punishments, -a power exercised by the Roman procurators and officials,—and in the course of time the limits to the jurisdiction of the Beth Din were still further narrowed. Internally, we note a growing tendency towards the restriction of certain forms of punishment, by making it a matter of difficulty to secure a conviction. In practice, capital punishment was obsolete long before the fall of the Jewish State, and, in all probability, long before the courts were deprived of the legal power of inflicting it. This is clearly shown by such NT passages as Jn 18<sup>31</sup>, and the Talmud. Thus, in Jerus. Sanh. 18a (p. 228 of M. Schwab's tr., Paris, 1888) it is stated that this right was suspended some forty years before the fall of the Temple, and that the right of giving decisions in questions involving financial matters had been already abolished in the time of B. Simon b. Shetah, that is to say, during the reign of Alexander Janneus (d. 76 B.C.). Bab. Sanh. 41a brings out this fact even more emphatically. Nor may the trial and crucifixion of Jesus be cited as an instance to the contrary. It is now the generally accepted opinion, among both Jewish and Christian scholars, that the trial of Jesus was not carried out in accordance with Jewish law, and that His execution was an act in which Pharisaic Judaism had neither initiative nor share.

Pharisaic Judaism had neither initiative nor share. Thus Robertson Smith (EBr<sup>9</sup> xxii. 812, at end of art. 'Synhedrium') writes: 'The meeting in the palace of the high priest which condemned our Lord was exceptional. The proceedings also on this occasion were highly irregular, if measured by the rules of procedure which, according to Jewish tradition, were laid down to secure order and a fair trial for the accused.' So also Monteflore (Synoptic Gospets, I. London, 1909] 2845.1: 'The trial of Jesus—it trial it can be called—... violates that (Rabbinic) law in almost every particular. ... It does not follow because the trial of Jesus ... violates Jewish law in many important points, that therefore the account given of it cannot be true. There have been illegal trials at all times, and even the filmsiest legal forms have suificed to get rid of an enemy. ... That there was any meeting of the full Sanhedrin is most doubtful; doubtful also is the part played by the "Scribes" and Pharisees; but that the Sadducean priesthood was at the bottom of the arrest and of the "trial"... cannot reasonably be doubted.'

In the passage from the Jerus, Talmud mentioned

In the passage from the Jerus. Talmud mentioned above, R. Simon b. Yohai, a tanna of the 2nd cent., expresses his gratitude for escaping the responsibility of condemning a human being to death. Other passages, of a similar character, in the Talmud and Rabbinic writings point to the same conclusion-that the Romans took away from the Beth Din the right to inflict capital punishment.

In addition to these restrictions imposed from In addition to these restrictions imposed from without, the sentences of Jewish tribunals were mitigated by various internal and voluntary limitations. It may perhaps be that, in proportion to the severity with which Rome exercised the power removed from the local courts, these felt themselves drawn to the side of leniency in other directions. But this tendency to leniency was originally spontaneous, however much it may have developed afterwards in consequence of external developed afterwards in consequence of external harshness; it began while the Sanhedrin still held the power of life and death. An exact date cannot be given; it is difficult to tell whether and when punishments enacted in the Pentalouchal legislation were | no additional suffering or humiliation was incurred

carried out in all literalness, and to what extent and with what frequency. Does that legislation represent primitive practice, or did the mitigating force of the Mishnic recensions of these laws at all times modify their execution? The orthodox Jewish belief, which regards the Oral Law as a contemporary concomitant of the Written Law and of equal force, would take the latter view, namely, that the traditions embodied in the Mishna accompanied the practice of all Mosaic enactments. It is, however, held by many that the Tannaitic law was new and original; that in early Mishnic times it was felt that the Pentateuch demanded the death sentence too readily, and that the Rabbis took steps to prevent such sentences from being carried out. This subject need not be discussed here; it is sufficient to show that the death penalty was almost abandoned, without entering into the question of whether this was brought about by new

prescriptions or not.

The infliction of death was surrounded by many preliminaries and obstacles. The law demanded not only the presence of two satisfactory eye-witnesses, whose testimony must support vigorous scrutiny (see Mishn. Sanh. iv. v., ed. Strack, from which all quotations are taken), but also, before received formal warning from the bystanders as to the consequences of his act (אַרְאָרָה, ib. v. 1; Bab. Sanh. 8b, 80b; Tos. Sanh. xi. 1, ed. Zuckermandel, Pasewalk, 1880, p. 431). No circumstantial evidence whatever was admissible, nor could the accused be convicted on his own confession. The stringency in examining and in challenging witnesses, the necessity of proving hathrwah, the elaborate aids given to the accused—all tend to show that the indiction of capital punishment must have been practically impossible; and this seems to have been the precise aim which the Rabbis had in view. Mukkoth 7a records the dictum that a Sanhedrin which condenned a prisoner to death once in seven years earned the reputation of 'destructive' (פּיִלְיְבָּה): according to R. Eliezer b. 'Azarya, once in seventy years sufficed; while R. Tryphon and R. 'Aqiba state that, had they been present, they would always have succeeded in advancing some plea to invalidate the proceedings in favour of the prisoner. Nor was this tendency limited to cases of capital punishment alone; it was extended to other branches of criminal law, e.g. to the lex talionis. The eighth chapter of Baba Qamma shows quite clearly that even in early days this command could not have been interested to the command could not have been intended to receive literal interpretation, for a man who had lost his eye could receive no compensation through a similar injury being done to his assailant. Compensation could consist only in the worth of the eye being restored to the loser, and this was estimated by assessing the value of the injured party, if sold as a slave, before and after the accident, the difference representing the amount of the damages (incidentally, cf. Rashi on Ex 2124).

Even when a capital sentence had been pronounced and was about to be carried into execution, every chance of proving his innocence at the eleventh hour was accorded to the accused. The court remained sitting all day in order to receive appeals, and an elaborate system of signals was devised to stay the execution in the event of any unexpected piece of evidence becoming known (Mislin. Sanh. vi.). Punishment was to be so arranged as to prevent the repetition of the offence by other parties, in other words, to act as a deterrent, and to secure the extinction of the crime itself and of its consequences: 'Thou shalt put away the wrong from thy midst'; 'and all Israel shall hear and shall sin no more.' Care had to be taken that

by the guilty party. Any dishonour to the body resulting from the punishment was to be avoided, in so far as it was not expressly provided by the sentence. In executions and in flagellations, particular caution had to be exercised in this

respect.

Capital punishment as ordered by the Bêth Dîn could be effected by lapidation (מְּלֶיבֶה), burning (אַרְפָּז), decapitation (אַרְפָּז), or strangling (אָרָס) (see Mishn. Sanh. vii. 1: אַרָּטְר לְבִית רְיוֹן (בְּיִת רְיוֹן ; and Singer's Prayer Book, London, 1900, p. 262). Crucifixion, as a means of death, was a Roman form. The last two methods are not mentioned in the Pentateuch, where, in fact, stoning is most usual. There seems no reason to doubt that segilā and serephā in the Pentateuch mean what is commonly known as stoning and burning; but the provisions of the Mishna show a great alteration in the manner of the execution. In the case of burning (Mishn. Sanh. vii. 2), the criminal was firmly fixed in pitch, up to his knees. A strong cloth, covered with a soft wrapping, was twisted round his neck, and its two ends were pulled by officials. The soft cloth was added to avoid unnecessary pain and in order to prevent death by strangulation. The criminal was thus forced to open his mouth, into which there was poured a stream of molten lead which instantly consumed his vitals, death being speedy and merciful. The Parthians treated the body of the Roman general Crassus in a similar manner after Carrhæ (53 B.C.). R. Eliezer b. Sadoq, a tanna of the 1st cent., relates that once he saw the daughter of a priest who had committed unchastity (Lv 21°) bound in vine tendrils and burnt (Sanh. vii. 2; Tos. ix. 11, etc. Contrast the burning of R. 'Aqiba, in A.D. 135, after the Bar Cochba revolt, when 'sponges of wet wool' [אַרָּיִי שֶׁל עָּבֶּיר ] were placed round his heart to prolong the agony). In Bab. Sanh. 52b, R. Hama b. Tobia ordered Imarta, a priest's daughter who had lived unchastely, to be wrapped in vine tendrils and burnt. Both these cases are distinctly reprobated. In the former, the Sanhedrin which could have permitted such a method is said not to have been competent In the latter instance it is suggested that the Bêth Dîn may have been Sadducean, or that the narrator was too young to remember details. Any departure from the procedure described above is stated to be illegal.

In the case of stoning also, modifications were adopted with a view to hastening death. Mishn.

Sanh. vi. 4 states:

'The height of the place of stoning was twice a man's length. One of the witnesses pushed (গ্রন্থ) the criminal on the loins so that he fell down (forward) on to his breast, and the witness immediately turned the body over on to its back. If the criminal was already dead, then the duty was accomplished, but, if he still lived, then the second witness took a stone and cast it on to his heart.

If necessary, all the bystanders followed suit until death intervened. According to the Pentateuch, the witnesses had to cast the first stone, since it was through their testimony that the execution took place (Dt 177). With the hurling down of the criminal may be compared the procedure with the scape-goat in Mishn. Yoma, vi. 5. The official pushed (707) the goat backwards, so that it rolled down and immediately became dismembered. In some cases the body was hanged, or rather crucified, after execution, for a limited period (Mishn. Sanh. vi. 4).

Decapitation (Mishn. Sanh. vii. 3; Bab. Sanh. 52b) was practised with a sword, in the same way as with the Romans; but R. Judah b. Elai, a tanna of the 2nd cent., objected on the ground that it involved degradation. To strike off the head of a man who was standing caused the body to fall down, and for this additional humiliation there was no authorization, consequently R. Judah

describes a different method, viz. beheading with an axe ( $\nu$ ),  $\kappa o \pi is$ ) on a block. The other Rabbis considered this method even more humiliating, and rejected it. It seems that the criminal was tied to a post, in order that the body should remain upright. Finally, strangulation (ib.) was carried out as in the preliminary process of burning, only that the two ends of the cloth were pulled so hard that they caused death.

The object of these modifications was, in the first place, to mitigate the horrors of death. On this account a cup of drugged wine and incense (אָרָם שָׁל לבנָה בְּנִם בְּנִם שָׁל מְּלֵים שָׁל לבנָה בְנִם שָׁל מוֹן) was given to the criminal in order to produce insensibility (e.g. Bab. Sanh. 43a, Mk 15<sup>23</sup>, and other references). The second motive was to avoid descerating the body beyond the necessities of the death penalty. The pursuit of both these aims caused a great internal restric-tion of the functions of the Jewish tribunal.

The various crimes for which the penalty was death are enumerated in Mishn. Sanh. vii.-xi. Lapidation is the punishment for eighteen offences -including incest, sodomy, bestiality, blasphemy, idolatry, the giving of one's children to Molech, necromancy, sorcery, Sabbath-breaking, the cursing of parents, criminal intercourse with a betrothed virgin, the inviting of others to idolatry, the perverting of a whole city, the practice of magic, and for the stubborn and rebellious son. Burning was reserved for a priest's daughter who violated her chastity, and for nine forms of incest —only, however, when committed during the life of the legal wife. Murderers and the inhabitants of an apostate city (Dt 1313) were beheaded, and the following were strangled: one who beat a parent (cf. Vergil, Aen. vi. 609), one who kidnapped a Jew for slavery, a sage who opposed his superior authorities, a false prophet, one who prophesied in the name of false gods, the adulterer, and one who bore false witness against a priest's daughter.

The number of crimes for which stripes could be inflicted was very large (Makkoth, iii. etc.). This penalty could, with certain restrictions, be imposed by the judges at their discretion, unless the Scripture demanded a specified punishment for some particular sin. In no case could the stripes exceed thirty-nine, and, whenever possible, fewer were given. The presence of the judges was obligatory. (For full details, see Mishn. Sanh. xiv. =Makkoth, iii.; also Abrahams, Jewish Life.)
The Mishna (Makkoth) enumerates fifty transgressions punishable by flagellation. Maimonides, in the Yadh hā-Hazaqa, gives a far longer and more comprehensive catalogue. A culprit who received stripes was ipso facto freed from excision (np), and recovered all those rights from which his crime might have debarred him (Mishn.

Sanh. xiv. 15).

The principle of making the punishment as lenient as possible, suaviter in re, operated also in respect of those sins the punishment of which was reserved for the future life. The famous tenth chapter of Sanhedrin gives a list of those who have no share in the world to come, but every endeavour is made to make the list short. The principle is that all Israel are entitled to a share (מָל יִשְּׁרָאֵל יַשׁ לְּחָשׁׁה אַרִּאַר בְּשׁׁ לְּחָשׁׁה אַרִּאַר בְּשׁׁ לְּחָשׁׁרְאַה אַרְאַרְאַל בְּשׁׁ לְחַשׁׁה אַרִּאַר בְּשׁׁ לְחַשְׁׁה אַרִּאַר בְּשׁׁ לְחַשְׁׁה אַרְאַרְאַל בִּשׁׁ לְחַשְׁׁה אַרְאָרָאַל בִשְׁׁ לְחַשְׁׁה אַרְאָרָאַל בִשְׁׁ לְחַשְׁׁיִּשׁׁ לְחַשְׁׁה אַרְאָרָאַל בִשְׁׁיִּ בְּשִׁׁ לְחַשְׁׁה אַרְאָרָאַל בִשְׁׁיִּ בְּשִׁׁ לְחַבְּאַר בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁׁ בְּשִׁׁיִּ בְּשִׁׁ בְּשִׁׁיִּ בְּשִׁׁ לְחַבְּאַל בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁׁ בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁיִּי בְּשִׁיִּ בְּשִׁיִּ בְּשִׁׁיִּ בְּשִׁׁיִּ בְּשִׁיִּי בְּשִׁיִּי בְּשִׁיִּי בְּשִׁיִּי בְּשִׁיִּי בְּשִׁיִּי בְּשִׁיִּי בְשִׁיִּי בְּשִׁי בְּשִׁיִּי בְּשִׁיִּי בְּשִׁי בְּשִׁי בְּשִׁיִּי בְּשִׁי בְשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְשִׁי בְשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְּשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְשִׁי בְּשִׁי בְּשִׁי בְּשִׁי בְּעִּי בְּעִּי בְשִׁי בְּשִׁי בְּעִּי בְּעִּי בְּשִׁי בְּשִׁי בְּשִׁי בְּעִּי בְּעִּי בְּעִּי בְּעִּי בְּעִּי בְּעִי בְּעִּי בְּעִּי בְּעִּי בְּעִי בְּעִּי בְּעִּי בְּעִּי בְּעִּי בְּעִּי בְּיִי בְּעִּי בְּעִּי בְּעִּי בְּעִּי בְּעִי בְּעִּי בְּעִי בְּעִּי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִּי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִּי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִיבְּע בְּעִי בְּעִי בְּעִיי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִי בְּעִיי בְּעִיי בְּעִי בְּעִיי בְּעִיי בְּעִיי בְּייִי בְּעִיי בְּעִיי בְּיבְּיי בְּעִיי בְּיי בְּעִיים בְּייי בְּיבְּיי בְּיבְּייִים בְּייים בְּיייים בְּיבּיים בּיייים בּיייים בְּייים בְּייים בְּייבְיייִים בְּייבְּיים בְּיבְּייִים בְּייבְּיים בְּייבְייים בְּיייבְּייִים בְּייבְּייִים בְ יהלק לעולם הבא unless they forfeit it.

'He who says that the doctrine of the resurrection is not contained in the Pentateuch (according to other readings, 'he who denies the doctrine of resurrection'); he who denies the inspiration of Scripture; the Epicurean; according to R. Aqiba, he who reads external (i.e. uncanonical) books; he who utters enchantment over a wound . . .; Abba Saul says, whoso pronounces the Tetragrammaton.' In all these cases reference should be made to the commentary of Maimonides (ed. Holzer). Seven persons—three kings (Teroboam, Ahab, and Manasseh) and four private individuals (Balaam, Doeg, Ahithophel, and Gehazi)—are deprived of their Inture life, but in each case the Rabbis soucht for extenuating circumstances in order to find a

Rabbis sought for extenuating circumstances in order to find a

loophole from perpetual doom. Similarly, excuses are made for the generation of the Flood, and for the generation of the Wilderness.

Excommunication could, according to Bab. Berakh. 19a, be imposed for a variety of offences, all of a less heinous nature than those punishable by stripes. It consisted of three grades of separation: (1) n'zifā, (2) niddui, and (3) hērem. The period of n'zifā was one day, of niddui seven days, while hērem could be indefinite. One who died impenitent under niddui was not buried with the usual ceremonies, and the force of hērem was very severe. In the Middle Ages the power of hērem was great owing to the institution of the Ghetto, but it was always felt to be a terrible weapon, e.g. in the cases of Uriel Acosta and Spinoza. The very gravity of hērem caused great reluctance to inflict it, and it was very sparingly employed (see Abrahams, Jewish Life, pp. 52, 292). Cf. art. BLASPHEMY (Jewish).

The penalty of excision (n,z) prescribed by the Pentateuch was not carried out by human agency, except in so far as guilty parties were scourged; hence this mode of punishment scarcely calls for consideration in this article. But, just as in the case of exclusion from a share in the future life,—a fate which also could not be determined by human agency,—so, too, in the case of excision, the Rabbis attempted to find pleas for the wicked. In Mishn. Sanh. xiv. 15 it is stated that all those condemned to excision find immediate pardon after receiving their scourging, if they are penitent. This conclusion is illustrated by a play on the words of the text (Dt 25°), 'Lest thy brother be brought to dishonour in thy sight' (n½n). R. Haranya b. Gamaliel says: 'as soon as he is scourged (n½½n) he becomes thy brother in thy sight.' Fines were imposed by the Bible for breaches of moral conduct in sexual matters (Dt 22, Ex 22), and for allowing a dangerous ox so much freedom that it killed a slave. In other cases the Mishna knows nothing of this means of punishment. In the Middle Ages fines were sometimes paid to the

Imprisonment, though known in the Bible (e.g. Joseph and Jeremiah), was not frequently practised in Mishnic times. As a means of punishment, it was employed in what may be described as indirect crimes, that is to say, for the contunacious and for the suborner. It could be imposed if conclusive evidence was not forthcoming though there was a strong presumption of guilt, or if a person punished twice by flagellation had committed the offence a third time. These cases are dealt with in Mishn. Sanh. ix. 5, and Bab. Sanh. 81b.

general funds of the community by persons liable to be scourged for a breach of Pentateuchal legisla-

'He who has been scourged, and has repeated the offence, is sent by the Beth Din to a dungeon, and fed with barley bread until his belly bursts. One who slays another without witnesses is sent to a dungeon and fed on scanty prison fare (בְּיָהַ זְיֶב בְּיָהָ בְּיִךְ מִיִּבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְיִי בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְיִי בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִ בְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִי בְּיִבְּיִי בְּיִבְיִי בְּיִבְּיִי בְּיִבְיי בְּיִבְיי בְּיִבְיי בְּיִבְיי בְּיבְיי בְּיִבְיי בְּיבִּי בְּיבִי בְּיבִּי בְּיבִּי בְּיבִּי בְּיבִּי בְּיבִי בְּיבִּי בְּיבִי בְּיבִּי בְּיבִי בְּיבִּי בְּיבְיי בְּיבְּיי בְּיבְּיי בְּיבִי בְּיבִּי בְּיבִי בְּיבִי בְּיבְיי בְּיבְּיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיִי בְּיבְיי בְּיבִי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבִי בְּיבְיי בְּיבִי בְּיבִי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיי בְּיבְיי בְּיבְיי בְּיי בְּיבְיי בְּיי בְּיבְיי בְּיי בְּיבְיי בְּיי בְּיבְיי בְּייבְיי בְּיבְיי בְּיבְייבְיי בְּיבְיי בְּיבְיי בְּיבְייִבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְּיבְיי בְיִיבְיי בְּיבְיי בְּיי בְּייבְיי בְּיבְיי בְּיבְייִבְיי בְּיבְיי בְּיבְיי בְּיבְייי בְּיבְייי בְּייִי בְּייִי בְּייִבְיי בְּייִבְייי בְּיי בְּיי בְּייבְייי בְּיי בְּייבְיי בְּייבְייי בְּייבְייי בְייבְייי בְּייבְייי בְּייבְייי בְּיבְייי בְּייבְייי בְּייבְייים בְּיבְייבְיייבְייי בְּיבְיבְייבְייי בְּיבְיבְייבְייבְייי בְּיבְ

The Gemara explains that the scourging refers to the stripes which always accompanied the penalty of excision; the difference in the two expressions for food is also explained. According to R. Shesheth, the method is the same, only in each instance different stages are quoted: the prisoner was in each case first given very scanty fare until his belly contracted, then harley was given to him so that it caused him to burst. The impractical nature of the treatment is clear proof that no Rabbi had ever heard of a case of its application. Such a rare situation as the Mishna presupposes makes it plain that the penalty of imprisonment could scarcely ever have been inflicted.

It must be remembered that, in the time of which the Mishna speaks, most of the decisions

were theoretical (see Strack's introduction to his edition of Mishn. Sanhedrin-Makkoth, p. 5\*); consequently we have there recorded the practice of an earlier period. In the Middle Ages there was a great revival of Jewish jurisdiction (see Abrahams, Jewish Life, p. 49, etc.). In Spain (ib.), up to 1379, Jewish courts could impose punishments and even pronounce a death sentence, which was carried out by the civil courts. Imprisonment was a form of punishment adopted by Jews, though it seems probable that they made use of the ordinary prison—or some separate portion of it—for their own offenders. The institution of the Jewish Quarter gave the Bêth Dîn greater power and fostered the growth of two principles:

it was unpatriotic for a Jew to cite another Jewish tribunal in secular matters can scarer to said to have survived the breakdown of the Gazaid to have survived

of Jewish courts has long ceased.

LITERATURE.—The Mishna Gemara (Pal. and Bab.), and Tosephta of Sanhedrin-Makkoth should be carefully studied. For the Mishna there are critical editions: (1) with vocab, notes, and trans., by H. L. Strack, Leipzig, 1910; (2) by Samuel Krauss, Leyden, 1900, with introduction, notes, and glossary; (3) for those who are ignorant of Hebrew, a tr., with notes, etc., has been prepared by Holscher (Fiebig's Series), Tübingen, 1910, with special reference to NT questions; Maimonides' comm. is edited by J. Holzer, Berlin, 1901. The Jerus, Talm. is translated by M. Schwah, Paris, 1888. The best edition of the Tosephta isthat of Zuckernandel, Pasewalk, 1850. See articles in EBr's on 'Synthedrium,' in JE on 'Capital Punishment,' 'Stripes,' 'Excommunication,' 'Orime,' 'Punishment,' 'Huttu'ah,' 'Admission in Evidence,' etc.; in the present work, see Anutzer (Jewish), BLASPHEMY (Jewish); cf. I. Abrahams, Jewish Life in Middle Ages, London, 1896; A. Büchler, 'Das Synthedrion of Jerusalem und die Todesstrafen der Bibel und der judnachbiblischen Zeit,' in MGWJ, 1906; see also bibliographies in JE ii. 558, iv. 359.

CRIMES AND PUNISHMENTS (Muhammadan).—I. Introduction.—In Ancient Arabia, crime was often regarded as impurity, and punishment as purification. In Muslim tradition also it is mentioned that a certain adulterer who desired to do penance for his sin said to the Prophet, tahkirnī ('purify me'), whereupon he was stoned to death.¹

In the heathen period, manslaughter and other crimes often gave rise to bloody feuds among the Arab tribes. The revenge of the injured party or of the members of his family or tribe extended not only to the guilty person who had killed or injured any one, but also to all who belonged to the same family or tribe. It is true that by this solidarity of family and tribe the public safety was in some respects benefited; but, on the other hand, there was the disadvantage that many innocent persons had to suffer for the sins of their relatives, and that long-continued blood-feuds often arose from insignificant beginnings. Usually on both sides an attempt was made to put to death as great a number as possible of enemies of high rank in return for each fallen tribesman; for many regarded as insufficient mere retaliation (qisās), by which no greater injury was done to the other party than had actually been suffered. Blood-guiltiness was sometimes bought off by means of a great number of camels, but the acceptance of such a price of

<sup>1</sup> See I. Goldziner, 'Das Strafrecht im Islam' (loc. cit. infra, pp. 101, 104 a. 2), and Huhamm. Studien, 1889-90, i. 27 a.

blood ('aql or diya) was often regarded as a humilia-

tion. See, further, Blood-Feud (Muslim).

The blood-feud was so deeply rooted in the customs of the Ancient Arabians that it was impossible for the Prophet completely to forbid it. In Islam, therefore, retaliation remained permissible, though with important restrictions. Not long after the Hijra, circumstances at Medina compelled the Prophet to issue regulations as to this matter, in order to prevent the old blood-feud from continuing even among the Muslims; he therefore strictly forbade a Muslim to revenge himself on a fellow-believer for blood-guiltiness dating from the heathen period. If, however, a Muslim were attacked unjustly by a fellow-believer, he retained the right of retaliation; and, if he were killed, his heirs had also this right, but the question must henceforth be properly investigated, and only the guilty person himself might be punished after his guilt had been proved. It was, moreover, established that for Muslims only the qiṣāṣ, i.e. the talio in the most restricted sense of the word, was permissible; the attacked party must not do any greater injury to the attacking than he had him-self suffered. Redemption of the blood-feud was permitted for Muslims, but the acceptance of the price of blood instead of retaliation was not

expressly made a religious duty.

See Qur'an, ii. 178-174: 'If any one gains forgiveness from his neighbour, [the one party] must conduct his case [concerning the price of blood] with moderation, and [the other party] must pay the price of blood willingly. That is a mitigation from your Lord.'

If the guilty person had acted deliberately, he must in future pay the price of blood himself, as a personal punishment; only if he had killed or wounded some one accidentally did his relatives remain obliged to support him in the payment of

the price of blood.

For other crimes not consisting of killing or wounding, the Prophet did not in general issue express regulations. Only in consequence of special circumstances he prescribed a hadd ('fixed penalty') for some misdemeanours. The best-known instance is described in art. ADULTERY (Muslim). When Muhammad's wife 'A'isha was accused of adultery, it was prescribed in Qur'ān, xxiv. 1-5, that a person who was guilty of fornication (zinā) should be henceforth punished with 100 stripes of the whip, but that they who accused an honourable woman of that crime unjustly must an nonourable woman or that crime unjustly must be punished with 80 stripes (see, further, art. ADULTERY [Muslim]). Other instances of fixed penalties are the hadd for theft, which is prescribed in Qur'ān, v. 42-43, and the hadd for highway-robbery (ib. v. 37-38). In other cases, when no special punishment is prescribed, the judge is entitled to inflict such punishment on the culprit as seems to be the most suitable in view of the circumstances. This form of punishment is called Muslim canon law thus distinguishes three

categories of crimes and punishments: (1) the socategories of crimes and punishments; (1) the so-called jināyāt, i.e. misdemeanours consisting of killing or wounding, which must be punished either with retaliation (qiṣāṣ) or with payment of the 'diya ('price of blood') or other damages; (2) adultery, robbery, and other crimes, which must be punished with a fixed penalty (hadd); and (3) all other kinds of transgressions, which must be

punished with tazīr ('correction').

According to Muslim canon law, the punishment must be regarded in some cases as a hagq Allāh ('right of Allāh'), in other cases as a hagq ādamī ('human right'). When, for instance, a Muslim has the right to exact retaliation or the payment of the price of blood, such a case concerns hagg ādamī, just as when he reclaims stolen or loaned property, or demands the payment of a sale price.

In these cases the injured person (or his heir) may also give up his right and forgive the injurer.

In cases in which the judge has to decide as to a 'right of Allah,' certain special principles apply. In many traditions it is expressly put in the foreground that God will base His relation to man, above everything else, on compassion and forgiveness; that He is, therefore, always ready so far as is possible to cover the sins of His servants with the cloak of love, but only on condition that they also act in this way and cover both their own sins and those of their fellow-men.
